We are undertaking, in co-operation with the National Sweet Pea Society, a similar line of work. We have planted about 600 varieties of Sweet Peas and we have quite an elaborate descriptive system for the purpose of checking off the character of different varieties of Sweet Peas. The work is exactly along the line of the Peony work and is for the purpose of sifting out the best varieties and giving results of the work to everybody interested in Sweet Peas. This is a work I am very pleased, indeed, to see. It is co-operative work for florists and others, men who are in the business to make money, but you know that men at the commercial end cannot afford to start an experiment. They have not the means to spend a long period in investigating the cause of anything. Therefore, right here is the place for the experiments and if it is possible in Illinois, so it is in New York State and it is your business to see that it is done. Tell us how we can help you.

Solving Problems of Under Glass Culture

In the line of work under glass we have had a considerable number of problems started which have not been carried to completion by any means, but we have gained some useful information as far as we have gone. One of the subjects taken up about ten years ago, was the influence of artificial light on plants. We first studied it, and later on when acetylene light came to be a factor it was added, and results with acetylene, so far as we have been able to carry on the work, have promised to be valuable. In the forcing of plants, such as Lilacs, especially for Winter crops, during the dark days of December and January, we have found that artificial light, particularly acetylene, was an influential agent, but we cannot say it is commercially successful because we have not had the glass to do it with. The acetylene has been very successful and has no injurious qualities in it, so we should apply that light if it could be used commercially to advantage. We have tried it on a great many plants and found it to have much influence. This line we should push much further.

Etherizing Plants

Another line of work is etherizing plants. This process has been tried very extensively in France, and we have tried it briefly. In the work of this year in that line there was a good deal to find out, the amount of dose, the length of time to give it and the proper time to force, was determined; 50, 70 and 90 grams to the hectolitre were used and the times varied from 48 to 72 hours. We went over a large line of bulbs. In the case of Narcissus, the greatest gain was 16 days in bringing it to the complete flowering stage. That means a good deal in the saving of heat and labor. In Hyacinths, the greatest gain was only 10 days; in Tulips, only 5 days were gained. With Lily of the Valley very interesting results were secured. The test strength was 90 grams with 48 hours of exposure. This hastened the flowering period 4 days. We found that if we used as much as 120 grams the plants were killed outright. The Valley treated with the 90 grams of sulphuric ether were readily forced without bottom heat, but those untreated not having bottom heat made no show whatever.

Our untreated pips made no show of foliage to say nothing of flowers, while those which were treated came into bloom. The cost was ridiculously low, one dozen Narcissus bulbs required 5c. worth of ether.

Lines of Work Projected

Some of the lines of work which we are projecting I will enumerate. In the first place, I should like to see our grounds as a clearing house for the novelties of each season so that they may be tested under uniform conditions and careful descriptions made of all things of promise. Each year we have a large crop of novelties, and the men who originated them are the only fellows who know anything about them, and naturally must be biased. In the general line of crops new novelties continually come up.

When I referred to the acetylene light, I might have said that we wish to use the Tungsten burner for comparison with the arc light and acetylene light.

Then there is the great question of fertilizers. We know little of them. We go along by general observation but do we know as much about the influence of mineral elements as we should? Do we know how we can improve the texture of our plants by the food we can give them? It is a line of experiments which should know no end and we can carry it on for a series of years. The aim is to describe the influence of the combination of fertilizers and the broad influence of one fertilizer. In New York soil we have potash and phosphoric acid. Make them valuable by handling them properly! Perhaps many of you here can give me valuable points along these lines.

In the production and improvement of plants magnificent work has been done by our florists, especially in selection of commercial types. They have been trained to see very small differences. I think a good deal of valuable work of that kind has been done here in the East, although we have been led to believe that west of the Rockies only such work can be done. When you look over the whole field of plant culture, you will be astonished how many good things have been brought out through chance. There are principles which should guide our work in the future and it is up to us to find out what they are.

In all our work, however, we need classification and grouping, so that we know the qualities and types and the qualities that belong to the types. Classification work is very important and can only be done to advantage by the experiment station.

The consideration of artificial cooling of glass houses in Summer is one that has a practical bearing, and with a proper refrigerating plant we may achieve something. The preservation of cut flowers, which might come under the head of cold storage investigation, is another line that should receive attention at the hands of the experiment station.

Then the whole question of the method of forcing flowering shrubs should be taken up. Our methods of forcing shrubs are somewhat crude yet and there is good opportunity for experimental work in this direction.

The use of carbonic acid as an agent in forcing plants we know little about, but the field is promising.

Practical methods of sterilizing greenhouse soils present another line of work. The value of different processes of sterilization should be taken up.

The influence of electric currents in the soil on plant growth is important. Some of our Swedish friends have

made excellent experiments in this line. A current can be introduced at small cost, and experiments are much needed in this direction.

A practical type of question comes up in the controlling of insect pests, and fumigating methods. In hydrocyanic acid gas the florist has a most efficient weapon against sucking and biting insects.

I need not continue this line of talk further, but these are some of the things we are considering and hope to get under way as soon as facilities are available, which I trust will be before long. I am pleased to see the interest taken in floricultural work. Do not let me give you the impression that the station is asking assistance on these lines. The station is busy, but those who are in horticulture would like to see the horticultural group placed upon a good basis and on a par with other interests. The field for experiments in floriculture is large, and I would like to see a better co-operative effort between us and the workers in the future."

Discussion

Referring to the experiments mentioned with Lily of the Valley, on the natural pips, on which there was no foliage in some cases, Harry Turner asked whether the same experiment had been tried with refrigerated pips. Prof. Craig replied in the negative. Pips used were simply held back in a cool cellar and the different lots behaved practically in the same way. It was to be expected that the refrigerated pips might act similarly. Etherization he said takes the place of the resting period, and it was, therefore, expected that late in the season refrigerated pips might respond as promptly.

Mr. Turner also asked in regard to sterilization of soil which had been used for one season's crop, whether sterilization of that soil would make it right for the growing of another crop successfully. The professor replied that in the forcing of Tomatoes they had been affected by nematodes, but they had grown three crops in the same soil successfully. Sterilization was effected by means of a perforated gas pipe with a number of holes bored in the same, 3 in. apart. This was laid in the soil and connected with a steam service. The operation was quickly done and at small expense. The professor added that when he spoke of sterilization as a whole, it was on lines of something yet to be developed. The florist was the most intensive farmer in the world, and there was no reason why he could not rotate the crops under glass just as it is done outside.

Mr. O'Mara pointed out the fact that great ignorance had prevailed among the legislators as to the immensity of the florists' interests. The question really in his mind was, "Would the State continue to help the farmer to grow a few scabby Apples and let the florists stay where they are without any help?" As Prof. Craig had stated so forcibly before the meeting, men in business could only experiment just so far. When such men began to see they were losing money in pursuing investigations, they stopped. Investigation was work which the experiment station could do, and he believed if the florists got at the question promptly in the State of New York there should be no difficulty in getting the State to do that work for them. At the convention of the S. A. F. next August it might be a proper beginning to organize interests. There were two vice-presidents of the Society in the State of New York, and it seemed to him that it was up to them to organize florists' interests and have some one appear before the authorities to state the exact nature of the case. It should be shown the legislators that the money spent would add to the wealth of the State by strengthening the florist business. If floricultural interests were properly organized, so as to bring the matter home to the authorities, and if experiments could be conducted at Cornell that would be beneficial to the trade, it would be a good idea. He believed a committee should be appointed by the Club to take the matter up and attempt to crystallize the movement into such form as to allow of its being presented at the next Legislature. He, therefore, moved that a committee of seven be appointed to promote the matter, which motion was carried.

Prof. Craig, referring to Mr. O'Mara's motion, suggested that the Club should later on, when organization was effected, appoint a committee to act as an advisory committee in carrying on experiments at Cornell.

James Dean thought that such a committee should be appointed at the present time, and made a motion to that effect, which motion was also carried.

President Miller announced that he would later name the committees.

Carnation Brooklyn

Carnation Brooklyn, the fringed pink variety, which is to be disseminated next season by Charles Weber, Lynbrook, L. I., N. Y., and Robert G. Wilson of Brooklyn, is still in excellent shape at the Weber establishment at Lynbrook, and will continue so until late in Summer. As a variety always "on crop" it has given splendid satisfaction. At the present time, notwithstanding a heavy daily cut for months past, there is a mass of bloom with no end of it in sight. A photograph in this issue taken May 8, shows a house of the variety, the flowers with long, stiff stems, 30 in. to 40 in. long. Mr. Weber will plant 15,000 plants of it in his large house this season.

The Haarlem Show

Inside view showing an arrangement of Hardy Azaleas, with purple Wisterias at the corners, presenting a beautiful harmony of color. The background is composed of Palms, Hydrangea Hortensia and Viburnums.

Summer Roses from a Grower's Point of View

A paper by Charles T. Guenther, read before the Buffalo Florists' Club, May 3, 1910.

Not so many years ago there was practically no demand for good Summer Roses, and, in consequence, none, or very few, were grown. Whatever demand there was had to be filled with Roses which were grown for Winter cut or all the year around. Of course, a lot of La France Roses were grown during the whole year, and it was certainly a beautiful flower—I am at a loss to understand why it is not grown now.

About 1892 or 1893 Testout was sent out and first grown for Winter flowering, but was found to be too expensive. Kaiserin followed about the same time and, while I was working at a well-known Rose grower's place around New York, it gave such poor satisfaction during the Winter months that it was thrown away after two years' trial. But what a grand flower for Summer cut! After trials in several places for Summer flowering it gave such good satisfaction that it is today the only good white Summer Rose grown. It has several faults but these can be overlooked when you get the grand flowers which the plants will produce all Summer long. Testout was tried the same way and extensively grown on the same principle, in the East.

Shortly after, President Carnot was sent out, and while wanting as a Winter bloomer the fine flowers produced on long stems during Summer were very pleasing to the grower. The public, however, were slow in taking hold, and I remember that we were growing this Rose for about a year and a half before there was any real demand for it. Now it is well liked, and a Rose of the same color for Winter cut would be very welcome.

A few years after, Killarney appeared, and while disappointing when first seen, we must say that it has since conquered the world. It is a free bloomer during Winter and the same plants will produce good flowers during the Summer. It is more particular about treatment than other Roses, but when well grown the color is good, also the stem. The foliage takes mildew easily and the flowers are somewhat single, but the public like the flower just the same.

La Detroit made its appearance shortly after, and we always liked the variety. We are growing a few for the Summer cut at present, but as it opens so quick during warm weather we will probably replace it with another pink one, called Ideal. Ideal is a sport of La France, somewhat darker than the parent, but the plants we have have given such satisfaction that we may grow more for pink for Summer cut. When you cut the flower it seems quite single, but the flowers open so nicely and are so full that you can scarcely improve it; and what a nice odor the flowers have!

Wellesley is another good pink Summer Rose, but as we have not grown many I cannot give you my opinion on it until later.

In the darker red Roses we have practically only the American Beauty, which gives good satisfaction to the buyer at any time of year, if not always to the grower.

Of the newer Roses My Maryland is very well spoken of, but what it will do can be seen only next year, as the limited stock in this country is used this year for propagating.

White Killarney showed up fine in several places where I have seen the flowers, and if it will prove as good a seller as the Pink Killarney it may become a standard Rose for all the year round. President Taft is another new Rose and from what I have seen of the flowers I think that it will make a fine Summer Rose. All these Roses have to be grown in greenhouses around Buffalo to give good satisfaction.

But one Rose has been very successful with us outdoors, and that is Cochet. Flowers from outside are better than those grown inside, unless the former should get spoiled through rain. After several trials of keeping plants of this variety outside, all Winter, we dug up the plants in the Fall, pot them and store them in a cold house, where they begin to grow slowly in the Spring. At the end of May we plant them outdoors, and if watered well you will get a lot of good flowers all Summer long, and I think that Cochet and its white sport should have the widest dissemination among owners of gardens who like to cut a few Roses during the Summer. Around Baltimore this Rose will stand the Winter outdoors, but here we have not succeeded in keeping them in good shape under such conditions.

the passengers were on deck most of the time and "mal de mer" was little noticed.

Harry Bayersdorfer of H. Bayersdorfer & Co. of Philadelphia, and Mrs. Bayersdorfer, were passengers and expect to spend three or four months in Europe.

Now about flowers, on account of which I write these lines. We had an abundance of them on board in the dining saloon and in the cabins, also the "boutique," or shop, had some for sale. What attracted my attention was the keeping qualities. We had Roses, Carnations and Tulips principally, besides Lily of the Valley and some outdoor blossoms. The best and most lasting were Carnation pink Lawson, which are in fair condition yet today, after being one week on the ocean; a few other sorts did not keep as well.

Roses did not stand so well; Bride and Killarney wilted in a few days; the former held out better than the latter. American Beauty kept well and were very showy when fully expanded. Tulips are splendid keepers, about the best flowers at this time of the year for an ocean voyage. A few cut sprays of Cherry and Plum blossoms were fine for four days.

No particular care is given to the flowers which are mainly used on the tables, exposed to draughts at times, and receive very little attention as to change of water and clipping of stems, and it is remarkable how well they keep under such conditions. Carnations are undoubtedly the best blooms for steamer use, and I believe, that if some attention were given to Roses they would stand nicely for four to six days.

I expect to be in Haarlem in a few days and will probably see the tail end of the flower show, also will be at Brussels to see the show there.

3 p.m.—Just passed the wrecked steamer Minnehaha, at the Scilly Islands; she is well out of the water and will be saved. How she got in between the rocks at that place is certainly a mystery!

E. C. REINEMAN.

On board S. S. Lapland, April 30, 1910.

Washington (D. C.) Retail Notes

Gude Bros. of 1224 F st. have a well arranged store, with splendid facilities for decorative work and a good cellar for storage purposes. The rear part of the building extends back to an alley, and teams can drive into the cellar for loading; everything being thus under cover greatly assists in the expeditious handling of stock. This firm supplies the city with Sweet Peas, American Beauty Roses, Lily of the Valley and Stephanotis.

Geo. A. Conley, 1204 Wisconsin ave., Georgetown, has 7000 sq. ft. of glass to hedging stock. The past season was the best in the four years in which he has been in business. The store is a new one, having a good location and fine windows. Some White Lilac in full bloom were shown here, the first of the season, locally.

F. H. Kramer has 75,000 sq. ft. of glass at Anacostia

devoted to mixed stock suitable for retail stores, one at 916 P st., one in Centre Market. He has a fine establishment, which is the largest of decorative stock for city. At the rear of this store is a cold storage of decorative stock for city. is one of the largest advertisers of the retail florists of the country, and the ideas of his own origin. Per 1000 been his custom for some time and he him good returns. \$15.00

John Robertson, the president of a club, has a good location on H st., about the middle of May for the Summer a new location next Fall, his present Mr. Robertson was formerly employed in House and in the Agricultural Department. \$5.00

W. Marché, 14th st. and H, N. W., recasket cover of Enchantress Carnations and Valley with a spray of Easter Lilies on top. was 8 ft. long by 3 ft. 9 in. in width and a favorable comment owing to its unique Marché reports unusually good business in funeral and a splendid trade during the Easter season store has a large amount of window space very attractively decorated.

W. W. Kimmel, 1139 14th st. N. W., exp. give up his present location about June 1, of the property being taken over by an owner who to be inclined toward having more drug stores in Mr. Kimmel reports considerable funeral work. landscape work is the leader here, however, and some excellent jobs are reported.

Geo. C. Shaffer of 14th and I sts. N. W., is kept busy on dinner and wedding decorations and on one day recently had four orders for table decorations. Funeral work is very brisk and a large casket cover of white and pink Enchantress was a recent order. Electric auto delivery is in use at this store and gives great satisfaction.

Mayberry & Hoover have a roomy shop at 1339 14th st., N. W., with two splendid windows for display. Business is excellent and has been unusually brisk.

Henry Pfister, 1120 Conn. ave., has his store finished in white with numerous mirrors. The past Easter was the best he has enjoyed in the eight years he has been in his present location; during past season he has been very busy with reception, dinner and wedding decorations.

Geo. H. Cooke makes a specialty of dinner decorations and all hands are kept busy on this class of work. A recent order was for 700 bunches for a large cotillion. His store, at Conn. ave. and L st., is well arranged and the corner location lends to good window displays.

Joseph M. Hardy is doing considerable outside work in landscape gardening and found it necessary to open a show room and retail store last Summer at Vermont

House of Carnation Brooklyn at Charles Weber's, Lynbrook, L. I., N. Y. Photograph taken May 8

The Retailer

Flowers at Sea—How They Keep

After a splendid trip across the ocean, we expect to reach Dover tomorrow (Sunday) about noon, where our first mail leaves the steamer, then proceed on our way to Antwerp. The trip across was the best in my experience, smooth sea and fairly warm weather so that

ALBANY, N. Y.
11 North Pearl Street
Flowers or floral designs delivered to any part of Al- Cut flo nd vicinity on telegraphic order. Personal atten- tion given and satisfaction guaranteed.

Leading Florist
AMSTERDAM, N. Y.
SCHENECTADY, N. Y.
Etab. 1877

Atlanta Floral Co.
ATLANTA, GEORGIA
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin
BOSTON, MASS.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons
BOSTON, MASS.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Zinn the Florist
BOSTON, MASS.
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of NEW ENGLAND. Also special delivery to any outgoing steamship without extra charge.

Robt. L. Wilson
BROOKLYN, N. Y.
Fulton St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Hauswirth
CHICAGO, ILL.
The Auditorium Florist, 232 Michigan Ave.
The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

ave. and L st., N. W. He has numerous specimens of shrubs and trees, arranged in large tubs, setting upon his lawn and sidewalk which affords an object lesson to inquiring customers.

J. M. Hammer & Sons, 64 Florida ave., N. E., have some 10,000 sq. ft. of glass devoted to bedding plants and also maintain stalls in two of the local markets. Mr. Hammer is fortunate in being able to make his own pots, having been connected with the pottery trade in former years; in fact, he was the only member of the family for several generations who did not follow the pottery trade.

Z. D. Blackstone, 14th and H sts., N. W., reports a number of big receptions, one being that given at the Arlington by Mrs. Math. T. Scott of the D. A. R.. A unique bridal luncheon table decoration was a center piece showing a church aisle having four arches and five Dresden figures dressed in costume. The piece was 30 in. long and 18 in. wide, with 8-in. figures. The flowers were Marguerites, with Asparagus. The Blackstone store is well located and has several show windows. The interior is well decorated and finished in white.

C. E. Brooks, 1527 14th st., reports the best Easter trade he ever had. The store is well decorated with bedding stock arranged in tiers along its sides. The window is well filled and funeral work is very brisk. Mr. Brooks has been in his present location for about eight years. P. M. R.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS
When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(117) Plant for Identification.—T. L., N. Y.

—The name of the plant of which you sent us a specimen flower is Streptosolen Jamesonii; it is native of the United States of Colombia.

(118) Out of Door Rose Buds Blighted.—H. A. C., Fla.

—Perhaps the Rose buds blighted just before expanding because the season was very wet, and the buds were covered by the foliage. The later crops will probably expand all right. It would be well to trim out such foliage as covers the buds and tie up the flowers so that they will get the sun and air. Good culture, so as to promote vigorous root action, will also help.

(119) Colons Name Wanted.—B. V. Greenhouses, N. Y.

—The sample sent was so small as to be impossible of identification. Read directions for sending specimens.

(120) To Kill Small White Worms in the Soil.—E. F., Cal.

—Use "Vaporite" on the soil of your Fern houses; this preparation is advertised in another column of this paper.

(121) Remedy for Primula obconica Poisoning.—M. C. D.

—Primula obconica is a mild external poison to some persons. Wash the affected parts with imported white Castile soap and warm water, repeating as often as necessary.

(122) Carnation Foliage and Blooms Affected.—C. R. L., N. H.

—The specimen submitted appears to be affected with a kind of blight; spray with Bordeaux mixture.

RENO, NEV.—F. J. Fisher, florist, was seriously injured recently through the collapse of the front wheel of a bicycle he was riding.

LOUISVILLE, KY.—The family of H. G. Walker, florist, had a narrow escape from suffocation recently during a fire at his residence.

WEST QUINCY, MASS.—George F. Elcock has just received, from Germany and France, forty new Cactus Dahlia plants, all of which were prize winners last year.

SALT LAKE CITY, UTAH.—Maurice Charvoz, a veteran gardener of this city, who had laid out numerous artistic gardens in the fashionable section of this city, died May 1, aged 70 years.

LEWISBURG, PA.—During the recent flood a low spot on the farm of Florist Rine, below the river bridge was flooded. When the water receded a number of large carp were left in the water, unable to escape. Mr. Rine made a raid on them and captured 21, weighing all the way from four up to ten pounds.

HOLLAND, MICH.—Jones & Ebelink, florists and nurserymen of Central Park, have dissolved partnership. Mr. Ebelink takes the greenhouses and will continue that end of the business. Mr. Jones takes the Glenwood Fruit Farm with all nursery stock, and will conduct a general nursery business under the style of the Glenwood Nursery.

NEWARK, N. J.—Frank Penek, the florist, recently boasted that he had for a long time kept several boxes of Pansies in front of his place of business, and that because of the honesty of Newarkers the flowers had been unmolested. "I still believe our citizens are honest," said Mr. Penek subsequently, "but I have, nevertheless, changed my mind about the safety of prized articles when placed on the sidewalk. Superintendent Shipman, of the board of works, and his gang got my Pansies."

The Florists' Exchange, 2 to 8 Duane St., N. Y.

Newport (R. I.) Horticultural Society

A regular meeting of the above named Society was held on Tuesday evening, May 8, President James Robertson in the chair. The executive committee reported progress on the premium list for the Fall show. So far, the list shows quite a reduction in the amount offered for premiums, and many of the usual classes are cut out entirely, the general sentiment being that in the past the Society has been too generous, and that a spirit of rivalry, without considering alone the amount of money offered, should be engendered. The president named two committees on awards for the year, composed each of three members, as follows: John T. Allan, John Mahan and Wm. McKay; Alexander MacLellan, Bruce Butterson and John A. Forbes. As the Society has among its friends, not in membership, some who annually donate money or kind toward the premium list, it was voted that all such be elected to honorary membership, as follows: thirteen individuals, ladies and gentlemen, were so elected. It is proposed that the revision of the constitution and by-laws be taken up at an early date.

Some of the gardeners are a little disturbed over a garbled story regarding them and their help which appeared in an out-of-town sensational Sunday newspaper; but the statements made are so far from facts that they are not considered worth taking notice of.

ALEXANDER MACLELLAN.

ORCHIDS**Cattleya Trianae**

AND
A Postal Card Brings the Samples
of Ribbons from
The Pine Tree Silk Mills Company

Philadelphia, Pa.

806-808-810 ARCH STREET

Why should you be satisfied with second rate Ribbons, when the best Ribbons made cost no more than second rate qualities?

Pine Tree Ribbons are the best Ribbons, for there is more Silk Value in them for the money than in ordinary qualities. Most Ribbons must have a profit allowance for the manufacturer and the jobber.

We are manufacturers and sell direct, and give the best Ribbon Values on the market for the money.

Let us send you samples of TAFFETAS, SATIN TAFFETAS and NEW CHIFFONS?

ATLANTA, GA.—The Atlanta Floral Co. had a most effective window display May 2 in honor of the Music Festival and of Madame Fremstad's husband, thanking them for flowers sent to her at the Piedmont Hotel in the morning, in behalf of the company and of the Swedish residents of Atlanta, and Madame Fremstad also paid a visit to the store in the evening to view the decorations in her honor.

large picture of the singer's birthplace, Stockholm, Sweden. The company received a highly appreciative note from Mr. Sutphen, Madame Fremstad's husband, thanking them for flowers sent to her at the Piedmont Hotel in the morning, in behalf of the company and of the Swedish residents of Atlanta, and Madame Fremstad also paid a visit to the store in the evening to view the decorations in her honor.

This New Book Free

It contains several interior views of recently equipped Flower Shops that are of vital interest to every progressive Retail Florist. It also shows reproductions of letters from successful Florists who have used

McCray Refrigerators

for many years. The distinctive thing about these Refrigerators is that the ice capacity is scientifically determined so that just the right temperature is maintained. The McCray System saves money because it saves ice and saves flowers, and *besides this* brings in new trade on account of its attractive appearance.

Write while you think of it for this new book—Ask for catalog No. 72.

Florists' Club of Washington, D. C.

The Club held its regular monthly meeting at Gude's store, 1214 F St., on the evening of May 10, as the banquet of last Tuesday interfered with the regular routine of meeting which is on the first Tuesday of each month.

Edw. G. Shultz, proprietor of a local agricultural and seed store, W. A. Ward of Small & Sons, J. G. Schattmaler with Z. D. Blackstone and Jos. J. Goudy, were proposed for membership; a committee was appointed in accordance with the new constitution and by-laws, to look into their eligibility.

The question of delinquents came before the Club and the secretary was instructed to write them, requesting an early settlement.

The banquet was reviewed in its various features. There was a general expression that it was the finest yet given by our Club.

Fres. Robertson, by request of the members present, allowed an intermission of half an hour to discuss unofficially a few personal matters. Prior to adjournment it was moved that a committee of three be appointed by the President to look over and endeavor to make certain corrections in the by-laws of the Club.

The committee appointed with full power to act in connection with the next annual Fall flower show of the Club is as follows: Wm. F. Gude, Chairman; Geo. H. Cooke, E. C. Mayberry and Jas. L. Carbery. Place and date to be made known later.

JAS. L. CARBERY.

Helenium Grandicephalum, July Sun

As its name implies, this seedling of Helenium grandicephalum striatum is an early bloomer among the Helenium varieties, appearing in July and continuing to bloom until the middle of August. Its flowers are larger and stouter than those of the parent plant; the color of the petals is a magnificent dark golden yellow with a slightly brownish shading at the tips, while the disc is a blackish brown. The plant grows only to a height of a little over three feet and its habit is erect and quite compact. The flowers have long stems and, when cut, they keep for a remarkably long time, making it especially suited for decorative purposes. But July Sun is also very showy in gardens and parks, planted either singly or grouped in masses as a foreground to larger shrubs, or in beds. It will be introduced this Summer by its discoverer, Heinrich Junge, nurseryman at Hamelo, Germany.—Moeller's.

CULTURAL DIRECTIONS

For the benefit of Seedsmen and all who retail Seeds, Bulbs, Trees, Shrubs, Fruits, etc., we have had written by experts over fifty single page leaflets covering the raising and care of these various subjects. Their free use will save your clerks much valuable time. A sample set will be forwarded on application.

Helenium grandicephalum July Sun

The four blooms to the left represent H. g. July Sun and the picture was taken July, 1909. The blooms to the right show H. g. striatum, of which July Sun is a seedling.

GROWERS' CUT FLOWER CO.

Cut Flowers at Wholesale

J. J. COAN, Manager

Consignments Solicited

41 West 28th Street, NEW YORK

Telephone 4237 Madison Square

NEW YORK, May 11.—The supply of cut flowers in the market this week is greatly in excess of the normal requirements. It seems that the only way to create an artificial demand is by a slaughter of prices, and even this is not sufficiently effective to clean up the market. Everyone is now looking forward to Memorial Day, and as outdoor Spring flowers will be about over, the Memorial Day requirements will doubtless temporarily help the situation.

The price of American Beauty Roses, specials, is 20c. each and downward. There is a very large cut of Killarney and My Maryland Roses now on, for which there is no unusual demand. The best grades of these Roses are selling at 5c. each, except in the case of small sales for some very choice selected stock, and the sales are very slow at the figure mentioned. Some very choice Richmond realizes 8c., but most sales are on a lower basis.

Bride and Bridesmaid, special grades, realize about the same as Killarney and the same is true of Kaiserin. The highest grades of Carnations scarcely reach the 3c. figure, and most sales are from \$2 down.

There is an abundant supply of Orchids, and the best grade Cattleyas with difficulty are made to bring 50c. each. In Gardenias, best grade, 2 per dozen is high water mark, and most sales are from \$1.50 down. Lily of the Valley top grade brings \$3 per 100. Easter Lilies are arriving in very large numbers and are moving slowly, at 5c. each for best grades in small sales and at almost any price in quantities. Best grade Callas are bringing 75c. per dozen.

The cut of Sweet Peas is now heavy, the quality excellent, and for the best grade 75c. per dozen bunches is obtained. Gladioli is now in the market at \$1 per dozen for top grades.

Southern Peonies are coming in, but mostly of inferior quality, and the best grades only \$1 per dozen. Lilacs are nearly over and so are other Spring shrub stock. Other miscellaneous stock is moving slowly with a decided preference for Snapdragons and Stocks, which have been very popular all this Spring.

INDIANAPOLIS, May 9.—A good line of business was maintained throughout the past week, and work was well distributed among the various branches. Funeral work, counter trade, and decorations kept the shop men well occupied. The bedding season has opened in earnest, and any surplus help is easily used. Prices generally are about the same as those for the preceding week.

Carnations are very plentiful just now, and good grades are offered as low as \$2 per 100, although \$3 would be a fair average; 50c. to 75c. per dozen is the customary retail figure. Harrisii Lilies are unusually abundant at \$12.50 to \$15 per 100. Callas are a trifle lower, \$10 per 100. Smilax, Adiantum and Asparagus are being offered from several quarters, an unusual occurrence in this vicinity.

The home supply of Roses is far ahead of the demand. Many Bride, Bridesmaid and Richmond are being shipped away, \$6 to \$7 per 100 is obtained for the better grade. American Beauty is mostly shipped in at \$5 to \$25 per 100, but the sale for it just now is limited.

Sweet Peas are still a prominent factor at 50c. to 75c. per 100, wholesale, and \$1 to \$1.50 retail. Field grown Valley is obtainable in basketfuls at 15c. to 25c. per 100. The forced stock naturally suffers, and is disposed of at cost price when possible.

A quantity of well grown Lupines, something of a novelty here, sell well to flower lovers. Selected Hydrangea plants beautify several of the downtown windows, as do a quantity of well grown Calceolarias. I. B.

PHILADELPHIA, May 9.—During Friday and Saturday of last week the market was somewhat stimulated both in volume of sales and in prices, especially in the direction of white Carnations and other white flowers by the near advent of Mothers' Day, but it has now fallen back to normal conditions. 33 1-3 per cent. more business for Mothers' Day was transacted this year than last. The cut of flowers now coming in is abundant and there is no shortage in any stock. Gladioli of good quality are coming in, also blue Cornflowers, and some Peonies of medium grade.

American Beauty Roses, specials, are selling for 20c. each; a few fancy specials in small sales bring \$3.00 per dozen. Both the Killarneys, best grade, realize 10c. each in smaller transactions but most sales are around the 8c. mark for this grade. My Maryland, Kaiserin, Liberty, the best grade, and fancy special Bride and Bridesmaid are selling at the same price as Killarney. Some very fancy Richmond and Mrs. Jardine realize as high as 15c. each in limited sales, but 10c. is about the top figure on these varieties.

The highest grade Carnations realize 3c. each, though some very choice blooms have passed hands at 4c. each.

Some very choice, long stemmed Gardenias are selling for \$3.00 per dozen, but most of sales of other grades are from \$2.00 per dozen down. There is a good supply of Orchids, and Cattleya Mossiae is selling for 60c. each for best grades. Lily of the Valley is firm, the best realizing \$3.00 per 100, with a few sales for extra choice stock at \$4.00 per 100. Easter Lilies and Callas in limited transactions realize 10c. each, but most sales are below the 8c. mark. Sweet Peas, choice flowers, bring \$1.00 per 100, but in most sales 75c. per 100 is the top figure.

Miscellaneous stock is moving fairly well at low prices. Lilac and Spring flowering shrubs are no longer strongly in evidence.

BOSTON, May 10.—Prices have stiffened up considerably this week, owing probably to a shortage of most kinds of flowers. Dull, cloudy weather is another probable cause, as it held crops back. There is no surplus this week and every one seems happy. During the latter part of last week Mothers' Day had something to do with strengthening prices, especially as regards white Carnations, which were all cleaned up at 4c. each.

Roses are not quite so plentiful, but there are enough to go round, and prices are firmer. The quality is good but four dull, sunless days did more harm to the flowers than to any other crops.

Carnations are scarcer, but are still of good quality. Prices are much improved, especially on pink and white varieties. There is no surplus, everything is cleaned right up.

Snapdragon is quite plentiful and is harder to dispose of than it was a few weeks ago.

The supply of yellow and white Daisies is shortening, but there is still enough to supply the demand and the price runs from 75c. to \$2 per 100. Spanish Iris is quite plentiful and of very good quality. The best bringing 75c. per dozen. Sweet Peas are rather scarce now and most of them have short stems; the price is 75c. to \$1 per 100.

Bulbous material is about all gone most of what is around comes from outdoors. Easter Lilies are seen in small quantities but the quality is good at prices of 8c. to 10c. Gladioli Blushing Bride is quite plentiful. There isn't much demand for forced Lily of the Valley as there is an abundance from outdoors, consequently prices are lower. Orchids, Cattleyas, are

plentiful, but prices are holding up well.

Green goods in the way of Asparagus and Adiantum are still on the scarce side. Lilacs have made their appearance this week for the first time.

R. C.

ST. LOUIS, May 9.—Business is still quiet in all lines, except funeral work; so the report comes from all the leading retail florists. The weather has been against the trade in all lines. The plantmen and seedsmen have suffered for the past two weeks owing to the cold and unseasonable weather and, judging from the report of the daily press, all other business has suffered, too, so we are not alone.

The commission men have had plenty of stock all of last week, but the demand was so slow that the prices were away down. Roses, especially, are in abundance, and in big lots sell as low as \$15 per 1000 for fairly good stock. American Beauty Roses are also too plentiful for the demand; \$2 to \$3 for long fancy, others according to length of stem. Carnations, Saturday and Sunday, went up in price, that is white ones, for Mothers' Day, to 4c. and 5c., other stock from 2c. to 3c.

Harrisii Lilies and Callas are in abundance at from 6c. to 10c.; Sweet Peas, 26c. to 60c.; Lily of the Valley, \$3 and \$4 per 100; Peonies, \$3 to \$4. Greens are in plenty except common Ferns.

ST. PATRICK.

CHICAGO, May 10.—The market conditions during last week were more encouraging than for some weeks past, owing to the demand for flowers for use in the floral parade, and for white Carnations for Mothers' Day. On Monday there was a big demand for Roses, to be utilized for the decoration of the new bank. However, Tuesday morning found the market very quiet and stock moving slowly. The influx of stock continues to decrease, while the quality in nearly all lines holds up to the standard for this season. While the shortage has not advanced prices it has had a tendency to stiffen prices.

American Beauty Roses still hold at from 75c. to \$4 per dozen, according to grade. Other varieties of Roses bring from \$3 to \$8 per 100, the top figure being for extra fancy stock of Killarney and Richmond.

Carnations are still commanding from \$2 to \$3 per 100, and while white sorts

soared as high as 6c. each Friday and Saturday they have dropped to quoted prices again. In Lilies there are just enough to fill orders, and the price still holds at \$12 to \$15 per 100. Lily of the Valley has dropped a little in quality, but moves nicely for wedding occasions. Outdoor Iris is making an appearance in fine condition; it brings \$3.00 per 100. Peonies are coming along, but not in any great profusion; prices range from 4c. to 6c. each.

There is at present but very little showing of miscellaneous stock. Sweet Peas still remain a staple article, with prices from 75c. to \$2 per 100. Gladioli are arriving in beautiful colorings, well filled spikes, and are bringing from \$1.50 to \$2.00 per dozen.

Cattleyas, both Mossiae and Mendelii, are coming in a little more plentifully and meet with a ready sale. Gardenias have dropped a little in price. Asparagus is getting scarcer than for some time past.

Greenhouse Construction

The H. H. Mishler Produce Co., Johnstown, Pa., are to erect this Summer five greenhouses, 25 ft. wide by 325 ft. long.

Yeatman & Way, Kennett Square, Pa., are to erect one house 60 ft. wide by 200 ft. long.

King Construction Co. material will be used for each.

Growers Building

CORNWALL, CONN.—J. E. Calhoun is building a large new greenhouse.

DULUTH, MINN.—R. Latney will erect a new greenhouse near the high school.

WEST MILAN, N. Y.—Ernest Dyle and C. A. Williams are erecting greenhouses.

Firms Incorporated

HOBOKEN, N. J.—Henry Nungesser & Co., capital \$50,000. Incorporators, Henry Nungesser and Geo. S. Mitten-dorf of New York, and Wm. A. Proescholdt of South Orange, N. J.

SPECIAL ANNOUNCEMENT

The firm of **FORD BROTHERS, 48 West 28th Street, New York, Wholesale Commission Dealers in Cut Flowers**, was dissolved by mutual consent, May 1, 1910; William Ford retiring from the firm.

In reference to the above I wish to state, that I have taken over the business and removed to 121 West 28th Street, New York, a locality where the leading wholesalers are now locating; and where I will continue the business under the former methods. Asking a continuance of our past cordial business relations, I am

Yours very truly,

M. C. FORD 121 West 28th Street
NEW YORK CITY

Please mention the Exchange when writing.

San Francisco

The Market

Market conditions have undergone considerable change since last week; flowers are more plentiful and prices are not so good. Carnations have become so abundant that it doesn't pay to cut them. Of course, growers who sell nothing but the very highest grade flowers probably net good returns for their blooms, but the average price for Carnations brought in by the Italian and Japanese growers is so small that they don't pay for carefare. One florist this week bought twenty-eight dozen Carnations for a dollar. Another buyer parted with \$1.30 and received in return forty dozen, very fine Eucharantess, and these figures are the general run so far as Carnations are concerned.

Roses of all descriptions have been cleaned up in pretty good shape this week, owing to one or two fashionable weddings, where Roses were used principally in decorations. Killarney is disposed of at from 25c. to 75c. per dozen, while really good blooms fetch \$1. American Beauty is by no means abundant and brings from \$3 to \$3.50 per dozen.

Spanish Iris is beginning to be a drug on the market; \$1.50 per 100 is the best figure obtainable and during the course of the week prices will probably drop below the dollar mark. Japanese Iris is to be seen in quantity, and long stemmed blooms bring 50c. per dozen. Sweet Peas are very prominent at present, and while they are undoubtedly popular the best price obtained is about 75c. per dozen bunches. Tulips and other bulbous stock are a thing of the past; what few Tulips are left are sold at 50c. per dozen. Lilies are not quite so plentiful this week and really good blooms fetch good prices.

In the choicer grades of flowers Orchids are plentiful and prices are good, 60c. apiece for Cattleyas being the rule. Lily of the Valley is in good demand and sells well at \$3 per 100. Gardenias are scarce and such blooms as are available have sold at three for a dollar. Other flowers to be seen in quantity are Peonies, Marguerites, Pansies, Gypsophilla, Anemones, and Ranunculi. Smilax is

very scarce; what little there is brings good returns.

Various Notes

The MacRorie-McLaren Co. has been awarded the contract for the constructions and laying out of San Carlos Park. Considerably over six hundred acres will be involved in their plans.

Domoto Bros. of Elmhurst are handling a fine lot of dwarf Japanese trees at present. This firm have quite a monopoly in this class of stock.

Large quantities of pink and white Hawthorn blossom is being brought into the market at present. Hawthorn seems to take well in the stores, judging from the quantity of it sold last week.

The Art Floral Co. had some exceptionally well-grown Hydrangea Otaksa in their store window this week.

Sydney Clack, the veteran grower of Palo Alto, has had a very successful season with his Carnations. Mr. Clack has a splendid local trade, and manages to clean up his surplus stock in pretty good shape all the year round.

The Oakland Traction Co. has been devoting a good deal of money this year toward beautifying the wayside stations and embankments on its car route. Both sides of the tracks outside Piedmont have recently been planted with Ivy-leaved Geraniums.

Strawberries are being picked in fairly large quantities at present. The crop will be exceptionally heavy this year.

The Californian Nursery Co. reports having a heavy demand for nursery stock of all descriptions this Spring and, in consequence, they have been continually on the move for the past two months.

A hedge of pink Cherokee and yellow Banksian Roses, fully two hundred yards long, at El Ceritto, near the county road, is a glorious sight at present. The hedge is fully 8 ft. high and simply one mass of bloom. Cherokees and Banksian Roses are good paying stock in this section.

The new W. H. Crocker estate at Hillsborough is rapidly nearing completion. This estate when completed will probably rank as one of the finest estates, from a horticultural point of view, in California. Mr. Eldridge, the head

gardener, is to be congratulated upon the results of his labors.

Outside Roses are coming into bloom very fast at present, and are making a great show wherever they are planted in any quantity. Another week should see Roses at their best in this section.

The C. C. Morse Co., on Market st., have purchased over eight hundred acres of land near Hollister, for seed purposes.

The old Dingee estate at Piedmont, which was sold to the Realty Syndicate, will be cut up and sold as building lots this year.

Weather conditions continue to be ideal, and fruit growers around the Santa Clara Valley and other large fruit growing centers are in hopes of a record fruit harvest this year. The orchards in the Santa Clara Valley, when in bloom, are a sight unexcelled the world over, and have been visited this year by thousands of people from all over the State.

John Flond, gardener to the Fernwood Co. of Oakland, was a recent visitor in town. Mr. Flond, though well over eighty years of age, is as hale and hearty as ever, and contemplates another visit to England in the near future.

Cattleya Mossie was a prominent feature in the Sievers' store decorations on Powell st. this week. One window devoted entirely to pot plants also looked very attractive.

Frank Haven of Oakland has done a lot of planting on his Piedmont estate this Spring. He intends planting over two thousand Himalayan Rhododendrons this Fall.

Four million and eighty thousand dollars was the amount raised in two hours at a great mass meeting held in San Francisco last week for the purpose of raising funds for the World's Fair of 1915. San Francisco florists turned out in force and subscribed liberally.

Santa Rose is *en fete* this week, the great Rose carnival being the principal attraction.

The Oakland park commissioners have asked the city for an appropriation of one million dollars for the coming season.

Daniel MacRorie has returned to town from an extended trip through southern California. Wm. Mc. M. B.

Kalamazoo, Mich.

Trade in cut flowers averages fairly well since Easter, and as there is no surplus prices are maintained at rather better values than usual at this season. The present prospects for cut flowers for Memorial Day seem to the writer to be less promising than usual, and unless a speedy change occurs in the weather there is likely to be a shortage in the supply of both indoor and outdoor stock of all kinds.

The weather during the past three weeks has been cloudy and cool, and several sharp frosts have occurred this week, conditions unfavorable to the early bedding plant trade, and which have also delayed the planting out of Carnations, so that when a change does occur there will be a rush all along the line to catch up with the work.

The damage to the fruit during the cold spell was not so great as at first reported, yet with the frosts of the past week quite considerable losses have been sustained, especially among the Grapes, which form an important industry in this section.

The nurserymen have been very busy the past few weeks and again report good business.

The local papers are reporting a remarkable cure in the case of lockjaw, the treatment being anti-toxin and milk, the success attracting considerable attention in the medical circles. The case is interesting to the florist trade, on account of the patient being a son of Mr. Jeffrys, who is an old and well respected nurseryman of Kalamazoo, and it is hoped that entire success may be reached.

Among the city appointments this month is that of a new park gardener. Thomas Kennit, the appointee, is a man of considerable ability and experience and will no doubt make a good man for the place.

L. P. Thurston is placed on the parks and boulevards committee of the Commercial Club, the object of which is to beautify the city streets and avenues.

CUT FLOWERS AT WHOLESALE

New York

The firm of Ford Bros., wholesale commission dealers, 48 West 28th st., have dissolved partnership, by mutual consent, William Ford retiring from the firm. M. C. Ford will continue the business at 121 West 28th st., where he will be pleased to see all old customers and friends. Mr. M. C. Ford has been a member of the defunct firm for fifteen years and connected with the flower business for twenty years. His many friends wish him great success in his new quarters. Note his special ad. elsewhere in this paper.

The business conducted under the name of Charles Smith's Sons at the N. Y. Cut Flower Exchange will hereafter be conducted by Alexander Smith.

Jasper McMullen, Whitestone, L. I., a director of the N. Y. Cut Flower Exchange is very sick with pneumonia. H. Pritchard, Astoria, L. I., and George Lask, College Point, L. I., have given up their stands at the Exchange. The vacant stands will be quickly assigned to other applicants. George Golsner, a director of the Exchange, with his wife, will sail for Europe about June 1 and be gone several months. This is Mr. Golsner's first visit to his native land for thirty-three years.

Philip F. Kessler, John Donaldson, Victor Dorval, Philip Einsmann, and John Miesem visited Philadelphia on Thursday of this week.

The Wilson-Hoyt Co. are making preparations for a large exhibit at Rochester, N. Y., at the S. A. F. meeting, where they will show both a completed concrete-steel bench and steel molds for the making of same. W. H. Hulse, the former treasurer of the company is no longer connected with the concern. The offices of secretary and treasurer have been incorporated into one which is held by Charles E. Perry.

The annual meeting of the stockholders of the New York Cut Flower Exchange was held in the Coogan Building, West 26th st., on Saturday, May 7. John Donaldson, the president, presided. Three hundred and one shares were represented in person and by proxy. The president reported that nothing definite had been done about the proposed new market under Queensboro Bridge. Treasurer Philip Einsmann made his report which showed a satisfactory state of finances. John Leach moved that the secretary cast one ballot for the re-election of the directors whose term of office then expired. A. S. Burns insisted upon withdrawing his name, and F. Smith was nominated in his place, and the ticket was elected. The directors are G. Golsner, F. Smith, G. Mathews, J. Schneider, and P. Einsmann. The inspectors of election, Adam Greene and L. J. Kreschover, were re-elected. A meeting of the directors immediately followed adjournment and the old officers were re-elected, as follows: John Donaldson, president; Philip Einsmann, treasurer; V. S. Dorval, secretary. Finance committee: J. Schneider, G. Mathews, F. Smith, J. Leach. Several new applications for market space were handed in.

Charles H. Totty of Madison, N. J., is to disseminate the Carnation White House, originated by Dailledouze Bros., and which was awarded the bronze medal of the American Carnation Society at Pittsburgh, in January last. Mr. Totty has also secured the stock of the white Carnation Wodeneth, which scored 90 points at the exhibition of the Am. Carnation Society, and will disseminate the variety.

Geo. T. Schuneman of Baldwins, L. I., sailed on the Kaiser Wilhelm II last Tuesday for a continental trip. On the Saturday previous he entertained at his home Archie Henshaw, Joseph Fenrich, C. H. Totty, R. M. Schultz and an EXCHANGE scribe, the party going out in Mr. Henshaw's automobile, which was ably driven by its owner, and which later in the evening was the subject of most earnest discussion as to its speed merits.

Henry Weston of Hempstead is the most recent addition to the list of florist autoists.

M. Matheron, for many years Carnation grower for the Cottage Gardens Co., Queens, L. I., severed his connections with that concern last March and is now building a greenhouse plant for himself at Baldwins, L. I. John Graff, who has been Mr. Matheron's assistant for the past eight or nine years is now in charge of the Carnation department at Cottage Gardens.

The proposed plant and flower market under Queensboro Bridge was a subject which had great prominence in most of the New York dailies last Monday.

"Floral Row" as it was called, or that part of Vesey st. which carries the auction rooms, was also the subject of a column article in the N. Y. Herald of Sunday last.

The Cottage Gardens Co. of Queens will this season be a factor in the Peony supply of the New York market, having arranged to send its immense cut to the N. Y. Cut Flower Co. It is a long time since the Cottage Gardens Co. has cut its Peonies for the general market, preferring to leave the growths on the plants in order to promote the development of the roots. This year, however, about one-half the total production of flowers of the best commercial varieties will be marketed, which means a tremendous influx.

Anton C. Zvolanek of Bound Brook, N. J., left this city on Thursday, May 12, going by rail to certain points in northern Mexico which he intends to inspect with a view to the adaptability of such locations for seed raising. From thence he will go on to Santa Barbara, Cal., where the acreage he has planted to Sweet Peas is now in full bloom and the crop of which, it is expected, will be harvested from the middle of June on. Mr. Zvolanek will probably see to the gathering in of some of the earlier maturing varieties, and expects to return East about July 15.

Syracuse, N. Y.

Trade is keeping up remarkably well, and the craft wear smiles of satisfaction. The call for cut flowers has been so good that stock is kept well worked up, and there has often been a shortage, especially of Carnations.

Flowering plants are moving fairly well, although there is not much bedding out being done yet, as the weather is unsettled and the nights quite cold. There were two frosts the past week, but not hard enough to do any serious damage.

The florists are looking forward to a record-breaking Spring trade, and as there has been a large increase in the number of good residences built the past year their hopes should be realized.

The great problem now is what shall we do in the way of cut flowers for Decoration Day. In several of our cemeteries plants are not allowed on the graves and cut flowers only may be used.

H. Y.

BOOKS

Every one who would become successful in his pursuits should "fill himself full" on all subjects appertaining thereto; in other words, he should buy every practical book relating to his business from which he is sure to reap some advantage.

We are in a position to supply these as far as concerns the florist, nursery and seed trades.

Philadelphia

The following visitors have been in town recently: Mr. Mulitoid, of the Secaucus Nursery Co., Secaucus, N. J.; F. B. Delthra, Phoenixville, Pa.; Mr. Heck, of Heck Bros., Wyomissing, Pa.; and J. B. O'Connor, Mahanoy City, Pa.

The S. S. Pennock-Meehan Co. are now receiving some extra fine Gladiolus America, and Cattleya Mossiae. Their consignments of Duchess of Wellington and Harry Kirk Roses from Robert Scott & Sons of Sharon Hill are coming in in good shape. Alfred Jones has returned from the Washington branch store, as William J. Moore has sufficiently recovered to resume the management. The installation of a Stromberg Chromograph at the Philadelphia store is noted.

William Muth is no longer with the Philadelphia Cut Flower Co. George Aengle is the new manager.

H. Bayersdorfer & Co. were never so rushed before. Both factory and sales forces are working nights as well as days to keep up with Memorial Day orders.

W. E. McKissick & Bros. report that they were able to supply all calls for white Carnations for Mothers' Day, from their own consignments. They are receiving some good My Maryland and Mrs. Jardine Roses.

The Robert Craig Co. is making very heavy sales of all kinds of bedding plants and large shipments of Crotons, Pandanus and Ferns.

The low prices of Roses the past season and at this present time is a disappointment to those who grow Roses for cut flowers. It has been suggested by a veteran grower that if the Rose growers would get together and agree to use half their glass for growing Tomatoes, that not only the Tomato growing would be very profitable, but the price of Roses would at once double. As compared with a hot house Tomato, a Southern outdoor grown Tomato is a very poor fruit.

Pennock Bros. have this week a very attractive window display, consisting of shell pink Snapdragons of rare beauty, and Cibotium Ferns. In their conservatory, which is now filled with large Palms and Ferns of many kinds and sizes, are noted, in large tubs, a pair of blue Hydrangeas, literally covered with immense trusses of bloom. They are now making for a G. A. R. Post a standing wreath, six feet in diameter, to be placed on General Grant's tomb on Memorial Day. The wreath is made of Magnolia leaves, and in the center is a large shield made of vertical stripes of red and white Immortelles, with a heading of blue Immortelles, and an oblique band of white Cape Flowers.

The wholesale price for white Carnations for "Mothers' Day" was from three to eight cents each. The retail florists all report a brisk business for that day in white Carnations and to a lesser extent in other white flowers. The day in this city was very generally observed. This city is its birth place, and the home of its originator, Miss Anna Jarvis. Governors of twenty States and mayors of fifty cities gave official notice of the day. Mayor Reyburn on Saturday issued a proclamation requesting all good citizens to observe Sunday, May 8, in memory of their mothers. It is estimated that fully half the people seen on the street Sunday wore a white Carnation.

Boston

Weather's Vagaries Affect Trade

Business is very erratic and it seems strange to have to report one week the fine condition of the market and the following week just the reverse. But this is exactly how the market has been shaping ever since Easter. There have been good prices obtainable this week, but there has been a shortage in nearly all departments, chiefly the result of the great glut of flowers that were forced upon the market right through the month of March owing to its unreasonable weather. Probably another reason for the shortage of flowers during the week has been the exceptionally sunless weather. For four days the sun was never seen; this is quite unusual at this season and, no doubt, held flowers back.

There is much uneasiness at the present time lest many of the crops for Decoration Day will be gone; Lilacs and many other plants are in full bloom now. The weather has been quite cool in this section. On the night of May 5 the thermometer went as low as 26° and caused great loss to truck farmers and others. One grower of Beans in Arlington had ten acres of that product com-

grow MUSHROOMS

If you do not know how, procure that simple but complete and practical book called "How to Grow Mushrooms." The price is ten cents and it can be secured from this office.

Special rates will be made to the trade who wish to supply their customers.

pletely spoiled with frost that night. Tulips were lying flat on the ground in the early morning, and those receiving the full benefit of the morning sun have not fully straightened out yet. Peonies that were in bud may have also suffered. Lilies which were making young growth were badly frozen and so were Strawberries and other fruits.

As far as we can learn, the Carnations which were planted out of doors have not suffered with the frost.

Mothers' Day Quite a Feature

Mothers' Day was quite a feature in this city and early on Saturday every white Carnation was picked up at good

prices, some going as high as four cents per flower. All "special" days which give an increased business to grower, wholesaler and retailer, should be encouraged in every imaginable way.

The Coming Orchid Exhibition

The Exhibition Committee of the Mass. Hort. Society has been busy this week allotting spaces to the various exhibitors. There is going to be an extraordinary exhibition. The entries which have been made are far in excess of what the committee anticipated, and the large spacious halls will be taxed to their utmost. Every prize is strongly contested for and there will be good competition.

Every person connected with the exhibition feels gratified at the enthusiasm

and interest that is being shown by Orchid growers all over the country.

No money is to be spared to make the exhibition a success. The services of the best musicians to be had in Boston have been secured and music will be furnished in the afternoons and evenings for the entire week. Several other attractive features are planned for and will be announced later.

John T. Butterworth of South Framingham has a superb show of Orchids at his houses. His Miltonias are exceptionally well flowered and of these he has 200 plants in bloom. One would be well repaid to make a journey to this commercial establishment if there was only the Miltonias to see, but there are some fine Cattleya Mossiae and C. Mendelii in su-

Charles McKellar was not to be outdone in the floral auto parade, and entered the contest with his six-cylinder Winton car, with Mrs. McKellar at the wheel. The car, which is a brilliant red, was decorated with Asparagus, Ferns and artificial Poinsettias; a large umbrella surmounted the car, elaborately decorated and hung with many electric lights, which made a very effective decoration. Jos. L. Raske of Jackson Blvd. had the decorations of several cars entered in the natural flower class in the same parade.

J. A. Peterson of Cincinnati was in town last Saturday and Sunday, and was showing a beautiful colored plate of glory of Cincinnati Begonia. While the plate is a good reproduction it does not do full justice to the color of the flowers. Mr. Peterson visited several of the out-of-town growers during his visit.

Poehlmann Bros. Co. are still receiving fine shipments of Orchids from Morton Grove. Their stock of Roses and Carnations are for this season unexcelled.

A new florist shop has opened this week at 27 Jackson Blvd., in the Wellington Hotel, and will be under the management of Strail & Hahn. Fred Strail who was with A. Lange until a few months ago, and with the Bohannon Floral Co. since that time, is one of the partners, and J. Hahn, a florist and landscape gardener of Belvidere, Ill., the other. The location promises to be an excellent one for a florist store. Mr. Strail, who has already made his reputation as a designer and decorator, has the well wishes of the trade in general.

The lease for space for a florist stand in the tea room of the Congress Hotel has been secured by O. J. Friedman. The prospect for this to be a prominent stand is excellent, as the hotel is well patronized by the elite of the town.

Fred Sperry, who has been on the sick list, is at business again.

A. Lange was laid up last week for three days with lumbago, but was on deck again Monday.

The young son of Mr. Brooks of Morton Grove, who has been in the hospital for many weeks, has been removed to his home. Charles Zapfe of the Budlong Estate, who was operated on last week for appendicitis, is reported to be getting along splendidly.

H. C. Blewitt of Des Plaines, Ill., is so encouraged by the Sweet Pea situation this season that he will add one large house to his plant, which he will devote to Sweet Peas alone.

Willard Edward is adding to his range of greenhouses at Hinsdale, Ill.

J. Kruchten's small son, who was badly bitten by a dog a week ago, is reported, to be out of danger and doing nicely.

Harry Rowe had the order for the bridal bouquet for the Ruth Bryan Leavitt-Owen wedding, which took place at Lincoln, Neb., May 3.

O. P. Bassett and bride arrived from California Sunday evening, taking their friends by surprise. Mr. Bassett, with Mrs. Bassett will tour Europe this Summer.

Vaughan's Seed Store has again assumed its usual busy condition since the weather has warmed up. The respite, however, has given them the opportunity of catching up with their mail orders.

Visitors: M. Ebbinge, Boskoop, Holland; C. H. Woolsey, Rockford, Ill.; J. E. Meinhardt, Webb City, Mo.; Frank Stuppe, St. Joseph, Mo.; P. N. Oberline, Kenosha, Wis.; Geo. A. Heintz, Toledo, O.; Wm. Desmond, Minneapolis, Minn.; Mr. and Mrs. Long, Dixon, Ill.; Martin Reukauf, of Bayersdorfer & Co., Philadelphia, Pa.

The Floral Parade

On Saturday last, the day scheduled for the parade, about 12 o'clock a drizzling rain started, and as the starting time was an hour later it was thought advisable to postpone the affair until Monday. This was a great disappointment to the owners of cars decorated

"THE EVERGREEN BRAND FLOWER FERTILIZER"

is pure plant food, immediately available. It permanently enriches the soil. It prevents the onslaughts of plant disease, or insects and pests. Can be used at any time during the growing season, dry or in solution.

A natural Plant Food and Soil Improver, guaranteed to contain no acid or chemicals. Try it! \$25.00 per ton, \$7.50 per 500 lbs., \$2.00 per 100 lbs.

WILLIAM M. DAVIDGE, Selling Agent
156 Madison St., BROOKLYN, N. Y.

Please mention the Exchange when writing.

with natural flowers, as all were by this time completed and ready to start. This meant much time and labor lost as much of the work had to be done over again Monday morning. Needless to say the flowers had lost much of their freshness by Monday noon. Out of the 150 cars that started, only 14 were decorated with natural flowers. The number, however, would have been greater if more flowers had been available for the purpose. The prizes awarded to the different classes were due to the artistic tastes and designs of our florists. The decoration of D. J. Joyce's Alcoa, which was a veritable bower of American Beauty Roses, was the work of J. Raske, Jackson Blvd.; while that of Tom Murray's limousine, a mass of Killarney Roses, with a beautiful group of Palms and Hydrangeas, was done by Fleischmann. E. J. Peterson, with his Stearns, decorated with American Beauty Roses, received honorable mention. In the private owners class Mrs. McKellar carried off first prize.

Mangel had the decorating of two Studebakers. Withhold decorated two of the Chicago Examiner's wagons that carried the bands; these decorations were of plants and flowers.

A. Lange had decorated two Studebakers, and the wagon of the Chicago Examiner which with a band led the parade. There were many cars, of all descriptions, decorated with artificial flowers that were not interesting to the trade. It is the opinion of many of our florists that the parade will become an annual event, and result in much benefit to the trade.

Club Meeting

The regular meeting of the Chicago Florists' Club took place at the usual place on Thursday evening last. Geo. Grimm of Peoria st. and P. J. Saunders of Cottage Grove ave. were proposed for membership. A. A. Vermueller, of Nelson Bros., was elected to membership. By action of the Club Margaret Flint was appointed collector to gather in the membership dues. There was a good attendance and a pleasant evening was enjoyed by all.

Providence, R. I.

Samuel Kinder of S. Kinder & Bro., Bristol, R. I., was a recent visitor to Providence. The firm have been quite busy so far this Spring, the force being short through the illness of Geo. Pailthorp, who only recently returned to work after ten weeks' suffering with inflammatory rheumatism.

The heavy frost last Friday morning did much damage to early vegetables. Some sections report about one-half of the Strawberry crop is ruined. Those having Beans and Melons up will be compelled to replant.

The seed stores are kept very busy, but the early trade in vegetable plants has been light, owing to cold nights and recent frosts.

F. Macrae & Sons have been kept busy with funeral work. Cut flowers at present are a little off crop with them.

W. S. Nichols, Hampden Meadows, is bringing in some very nice Carnations.

C. H. Hunt, Oxford st., who runs a dairy in connection with his florist busi-

The Mastin Automatic White-wash and Spraying Machine Is Reliable, Practical and Durable

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 16 minutes.

ness, is putting in a new plant to pasteurize milk, using the Read system.

Mr. Schneider, representing the Edwards Folding Box Co., Philadelphia, was in town Saturday. He reports business has having been very good with him.

Owing to the recent observance of Mothers' Day, all white flowers are scarce.

John Green will open up a new store at the corner of Bridgeham and Cranston sts., for the sale of cut flowers, plants, etc.

Wm. Crompton of East Greenwich, R. I., was in Providence Monday. Geo. C. Kelley, Waterman st., had the order from the Governor and staff for a six foot floral design, made with State seal, for the funeral of Dr. Kenyon.

T. J. Johnston & Co. had the floral decorations for Dr. Miller's reception. Business is very good with them; white Carnations are selling at \$1 a dozen; Roses from \$1.50 to \$2, according to variety and quality; Sweet Peas, 25c. to 35c.; Stocks, best quality \$1 to \$3 dozen.

The Market

Wholesale prices are about as follows: Roses, \$1 to \$5 per 100; American Beauty, \$5 to \$30; Carnations, \$1 to \$2.50 per 100; Sweet Peas, 50c. to \$1; Marguerites, \$1; cut stock, \$2 to \$3 per 100; Callas, \$5 to \$10 per 100; Adiantum Ferns, \$1 per 100; hardy and fancy Ferns, \$1.75 to \$2 per 1000; green and bronze Galax, \$1; Asparagus, 25c. to 50c. bunch. Carnations in general are reported short, especially white varieties. Potted Roses bring 35c. to 50c. each. New hardy cut Ferns are coming in, although not as long as they will be later; the quality is good. H. C. N.

Newport

The work in the four school gardens in this city has been taken up in earnest; in all there are 186 garden plots this year. In 1909 there were but three of the schools that took up the work, this year the Coggeshall school has been added. Two of the teachers, Miss Nuss and Miss Brazier, who have had charge of the work ever since its inception four years ago, are still in charge and, as usual, a committee of ladies from the Civic League are giving some time in helping to start the young gardeners along on the right track. The Horticultural Society is to take charge of the judging and awarding of the premiums. Schedules have been distributed to the would-be competitors.

Worthy effort has been shown in the past and the movement deserves every encouragement.

Mothers' Day here was given very little attention, but it would not take much effort on the part of the trade to make the day a most popular one, perhaps almost equalling Memorial Day. By the way, why could not a white Carnation be worn, in respect to the memory of a good mother, on Memorial Day instead of on a day set apart for the purpose, the special date selected having no meaning to any one except the originator?

The indications are that flowers will be scarce on Memorial Day; the Lilacs which are usually in good condition then are almost sure to be past, being well advanced now.

At Stewart Ritchie's and John Chase's the planting out of the Carnations in the field is going on apace.

Mr. Samuel Haire, for many years gardener for the late Gordon McKay is now gardener for Reginald Vanderbilt at Sandy Point Farm, South Portsmouth.

ALEX. MACLELLAN.

THE FLORISTS' EXCHANGE

THE BEST WAY

to collect on account to place it with the
National Florists' Board of Trade

56 Pine St., NEW YORK

WHY? Because many debtors will pay the Board, feeling otherwise a had rating in our Credit List. Full information as to methods and rates given on application.

they get. Don't forget that one fourth of the potting soil should consist of well rotted cow manure. Hydrangeas are not only rank growers but rank feeders, and it entirely depends on the soil and what treatment they get during the Summer months as to the success you will have next Winter with them.

Stock Geranium Plants

Select Them Carefully and Don't Put
Off Such Work

The man with foresight will select his stock plants of Geraniums before he is nearly sold out of his best varieties. No matter how well stock may be grown there is always a difference, and the best of a bench is none too good to reserve for stock, in fact it is the only kind we should select for future propagating. Don't make the mistake of setting this stock on some side bench, to be planted out when you find time. Before you are aware of it someone will dig into it and you will find yourself short of the most desirable sorts. There isn't after all, a more valuable bedding plant today than the Geranium, and in order to get all there is in it we ought to grow our own stock, and that means planting out a liberal number as early as they can safely be put out. Plant them into the open field, in rows 2 ft. apart by about 1 in. in the rows. If you have large plants give them plenty of space; you don't want them crowded before half of the Summer is over, for such a condition would produce a long, spindly growth unfit for cuttings. The shorter and stockier the growth the better for propagating in every way, and keeping the stock up is only possible by careful selection, even in Geraniums. We have, always, plants which appear to be shy or late bloomers, and once in a while we find one which will not bloom at all; these are the plants left on our hands at the end of the bedding season and it would be folly to use them for stock plants; the only use they can possibly be put to, outside of the compost heap, is in "filling up" in some extra large vases or window boxes, where you are dead certain never to see them again. Use plants which are the freest bloomers, and plants of good habit.

Soil

The Supply for Window Boxes and
Vases

For the benches where the Chrysanthemums are to be planted in a few days from now it matters little if the soil we use is not so very fine, as long as it is sweet and fibrous. When it comes to filling window boxes and vases, however, there is a great difference. You can work twice as fast and do better work in every way by having a fine sifted soil at hand, not forgetting a liberal amount of manure to mix with it. We like two parts of soil and one of manure for the reason that there is usually but little room for soil in a box and the little one uses ought to be good, for we should do all in our power to have the customers satisfied at the end of the Summer season, when they are willing to pay a good price for the work. Take care of the plants, they are still many in our line who do not fully realize the importance of going a little out of our way at times in order to have things right. Get ready with a good pile of sifted soil and manure for the boxes and vases. If it is possible to have it placed under shelter, so much the better, for only too often do we select a rainy day for filling and you can't do good work with wet soil; it must be just right, but, if anything, soil too dry will be better than when it is soaking wet, for one can easily remedy the former, if necessary, in a few minutes, but the latter, the soggy, soupy soil it might be well to mention the soil for the Chrysanthemums. If it is not on hand don't lose any time in getting your requirements for if you are short on room a few more days will give you, no doubt, plenty and the sooner the early fall sales get going out of the ground or in the better; to have the stock on hand and the bench, but no soil ready, shows bad management.

Outdoor Work

Of Importance for the Retail Grower

While the Carnations are usually among the first plants we put out into the field, the early Asters follow closely. For the Asters we like to use a piece of ground which was manured and plowed last Fall and spaded over lightly again this Spring. In rows 18" apart and allow 12" of space between the plants. The first lot of Dahlias went to the field several weeks

ago, but the cold weather kept the roots dormant. Another planting of dormant stock has been made, to be followed by 2 1/2" plants in about one week from now. The first Gladioli, planted out about ten days ago, are showing the tips above the soil. More should be planted now, and plantings continued until the middle of June. The sweet Peas sown out in early March haven't grown an inch since the frost laid them, practically, over, on April 23. They have been at a standstill ever since, but their roots are no doubt active and a few warm days will make up for lost time. We are replanting our Heliathus sparsifolius. If left alone they will run all over; in that respect they are worse than Rudbeckia Golden Glow. If you haven't a good stock of the Heliathus it would be best to get some; there isn't anything we have in yellow from July until September which is more useful as a cut flower. You are not forgetting the severe pruning work of the Hardy Hydrangeas. In the Spring rush this is liable to be overlooked, but without it small, crippled flower heads will be the result. A good sized truss is what you want, on a long stem. We may want a few for design work, where stem is of no consequence, but the most of them are used for decorative purposes.

The Novelties

We All Should Give At Least a Few of Them a Trial

As with Carnations, Roses or 'Mums, so with the bedding plants. We should all put a few dollars aside each year for the purchasing of new varieties. We all know there are but very, very few which turn out to be worth adding to what we already have but, nevertheless, what could there be more interesting than to watch the new comers. No matter what failure we may experience this year it doesn't seem to take away a particle of the pleasure of looking forward to results in another year. I often think of the long list of Geraniums of which we have watched the opening for the first time, ever since S. A. Nutt was introduced by Uncle John Thorpe, and of the novelties which Bruant and others gave us with the promise of being away ahead of any. I find that S. A. Nutt is still one of the best we have, and that six varieties are about all the average grower handles. I can't help but come to the conclusion that, after all, we have reached a point in certain lines where, while not by any means near the limit, we find it more difficult to improve on what we have got, at least to any marked degree. But I find it just as interesting to look forward to a set of new ones Lemoine, Bruant or Rozain offers as I ever did. So with the Cannas; quite a number of new ones are offered this year again. If at all interested give them a fair trial, and keep a correct record. We have plenty of room for new comers in the Cannas line, more so, to my mind, than in Geraniums. If you find that a variety by the end of the Summer season hasn't in any way shown good points, discard it; but if there are any noticeable, no matter how few, give it another trial. There are men who will not try any novelties until they have proved in every section of the country, of value, but they number few against the progressive ones who are always ready to invest in practically everything that comes from reliable sources—and don't feel very bad if disappointment should be the result.

Early Flowering Shrubs

These Should Be Pruned Right After Flowering

With most of us in this neighborhood the Lilacs have been a complete failure this year. What the heavy late frost didn't kill outright it blighted to such an extent that the flowers were of no use, and the same holds good with the Spiraea or Bridal Wreath. Spiraea has proved, of late years, a valuable cut flower, but every bud is black and only in a few sheltered places shall we have flowers this season. What I want to call attention to is the pruning of such early flowering shrubs as the two above mentioned ones, also of the Snowballs, flowering Quince, Prunus triloba and others. Many of us have large specimens on our grounds which flourish with us with flowers; if any of them need pruning, right after they are through blooming is the time to do this work. If you have tall, lanky plants, don't be afraid to use the shears, for only by a severe pruning can you get them into shapely plants again. A Lilac, in order to do well and bloom freely, wants to be on high land, in a stiff loam, rather poor soil; the plant should be kept free from suckers, and a good pruning right after the plant is through blooming will keep it in good shape, and furnish long stemmed flowers for another year. Overgrown shrubs are such as have been allowed to grow without pruning for a number of years, and on that account they are worthless, like half of the Apple orchards throughout the country—lack of care and attention got them into the state they are in.

Worcester, Mass.

The first of the May exhibitions of the Worcester Horticultural Society took place May 5, in Horticultural Hall. The number of flowers and vegetables displayed was not so large as had been expected, but those that were shown were of excellent quality and worthy of the attention given them. One of the features of the exhibition was a display of Pansies by George MacWilliams of Whitinsville. The Pansies were arranged on platters surrounded by Asparagus Fern. Mrs. F. W. Hixon displayed several vases of Pansies which were also of good quality. The cut flowers shown were mainly from Leonard C. Midgley of the Worcester Conservatories, and Allene W. Hixon. The flowers exhibited were Carnations, Roses, Heliotrope, Spiraeas, Marguerites, Lilies and Rambler Roses. The best display was that of Mr. Midgley, while that of Mr. Hixon was a close second. Mr. Hixon won first prize in the basket display. His basket was artistically arranged with Carnations, Tulips, Heliotrope and Ferns.

The next exhibition will be on May 19, after which there will be an exhibit every Thursday afternoon.

The present is perhaps the busiest time of the season for Chas. R. Fish & Co., nurserymen on Hawden rd. Mr. Fish's business is so especially good that he has been obliged to retain a large force of men to keep his shrubs and hardy plants in condition. Besides his location in Worcester he has a branch in Providence, which requires a great deal of attention. Mr. Fish's stock is of the best and the large increase of business he has enjoyed is certainly a reward for the quality of goods he has put on the market.

During the past week, the store of H. F. A. Lange has been moved from the old stand at 294 Main st. to a newly and modern fitted store at 371-373 Main st. During the opening days the windows were handsomely decorated with Roses and Ferns which were sent by other prominent florists, with best wishes for success. The interior as well as the windows was artistically decorated.

L. C. Midgley of the Worcester Conservatories reports business as unusually brisk. Mr. Midgley raises mostly Carnations and Roses, and a few Geraniums and other bedding plants. Out of the seven large houses five are entirely devoted to Carnations, while the other two contain Roses, Sweet Peas and bedding plants. He supplies Harry Grey, of the flower department of the Boston Store, with flowers. At present Mr. Midgley is making plans for the large business of Memorial Day.

W. E. Sargent is still at his old stand at 97 Holden st., catering to his old customers. Perhaps the chief feature of Mr. Sargent's stock is his Pansies, which occupy a large bed in front of his greenhouses. Mr. Sargent is making a specialty of selling Tomato, Pepper and Cabbage plants. Like the rest of the florists in the city Mr. Sargent is planning for a rush on Decoration Day.

Hybridizing the Gladiolus

Extracted from a paper by H. H. Groff, of Simcoe, Ont., read before the Canadian Growers' Association, at Ottawa, Feb. 10, 1910.

If it has been possible for me, an unknown and untrained man, living in an obscure town and in a country of slandered climate, to bring a semi-tropical plant to Canada, and by means of my primary work secure the publicity and recognition that this work has earned, the opportunity is open to all—and it must be easy.

Let me tell you how I did it. The first years of my experience discovered the unsatisfactory condition of the Gladiolus in America, Great Britain and Europe, where over one hundred years had been spent on its improvement.

After costly proving of existing varieties, securing all possible wild types from botanical collections in Europe and from botanical explorers in Africa (Africa being the best original source in the world), I proceeded to supply the needs of both plant and market by the infusion of lacking characteristics through breeding—no natural fertilization and no pedigree system—but by a definite course of practical work designed for the production of desired results, and that on lines at variance with existing theory and practice. Results, the standard by which man's work is judged, have proved my early conclusions to be correct. I hoped so then, when it took from three to five years to mature the first and each year's work; I know so now.

Interesting Experiences

It will be interesting to record here some striking experiences of scientific interest.

An old type, after years of multiplication and apparent fixity, snorted from its scarlet body color to cerise in two seasons; the first included the upper petal and the upper half of each lateral petal; the second completed the process. All special markings remained as in the original, and the variant became a fixed, new type, multiplying true and transmitting its acquired character in crossing.

This instance is more remarkable from the fact that the vital forces normally tend to the vertical rather than horizontal, in proof of which I have noted the independent opening of flowers on each side of the spike, and also the production of red on one side and white on the other of the same spike, the corm dividing at maturity and thus accommodating the two varieties as distinct individuals.

Atavistic tendencies have given me a series that I have classed as "Evolution." Not only do these varieties carry a vine-like tendency of the spike to twist and twine, but many of the flowers resemble the form of the Iris Kempferi, a plant of the same natural order. A vase of these spikes gives a decoration two feet in diameter of novel and pleasing effect.

The influence of discontinuous variation in the increase of the petalene element has also given me examples of (twins) twinning from single seeds bred from semi-double flowers. This unique experience proved of great interest to Prof. Bateson of Cambridge, England, a prominent modern biologist, on the occasion of our meeting at the International Plant Breeders' Conference, New York, 1902.

Results Achieved

To close the case for my system of breeding, a few practical experiences will be in order.

My work is now recognized as the leading quality on this continent, my United States representative growing one hundred acres, the largest area of high quality in the world, with storage for over forty thousand bushels. He exports to Europe over half a million of corms annually; and my Canadian representatives have found difficulty in meeting the demands made upon them for years.

The need for light colors was the first practical demand made upon my system of breeding. I have met it for this continent, and in doing so succeeded in producing from complex parentage, bred from species of other colors, the high ratios of 95 per cent. true to the desired colors, with 75 per cent. in quality worthy of retention, and this in thousands of varieties.

My blush hybrids were the first offered in the world, in thousands of varieties, and during the past year they received high commendation from the Royal Botanic Gardens, Kew, England, as also did a new series of high-class yellow shades recently introduced by me, which will fix the world's commercial standard

for many years to come; these, too, in thousands of varieties produced in the same ratios of true color and value as the light section already referred to.

The recent introduction of a new series of dark colors has met with the most gratifying reports from the world's growers, and these will ultimately displace all existing types, even those of my own earlier production.

The foregoing report, covering the range of primary colors in great diversity, closes my evidence as to the practical possibility of breeding for a definite objective—and getting it. The material for such work as the bluish section is not found in this color among the species, as are red, white and yellow, but it is the product of scientific breeding only, a fact which brings us back to that most valuable influence in animate or inanimate life—the seed.

As the above statements refer specially in the first half of my twenty years' work, before I close this rather disjointed address you will naturally expect me to speak of the last ten.

That it has not been necessary for me to continue my free system of dissemination of original seedlings is further evidence of the effectiveness of my practice in breeding, but I regret to add that, owing to the practices of the commercialism, I have been compelled to reserve my later origination for selection, in self-defence. Selections from all of these newer sections have recently been prepared for introduction, however, in thousands of varieties of such quality as will protect my name and work for this generation at least.

In addition to these, I have registered and numbered a collection of some seventeen hundred varieties, for which I claim the greatest beauty, quality, and diversity of coloring in the whole range of modern floricultural development.

A Tribute to Canada

The variety named "America" by its purchaser and introducer was sold by me in collections for many years before its last merited publicity. It was used for the decoration of President Roosevelt's yacht "Mayflower" during the Japan-Russia Peace Conference, a tribute to Canada which I much appreciate. I have stated that Africa has given us the most useful species in the world on which to build our work of improvement, although they are weeds when compared with their Canadian offspring. It has been my privilege to send many of my new hybrids to the dark continent, and this return of advanced types to the original habitat of their race gives an interesting example of the romance of modern progress and the revolutionizing influence of good seed.

Detroit

Very heavy rains, followed by frost, kept supply at low ebb with prices firm, wholesale as well as retail. Many wholesalers assert that these rains have put the ground in such poor working condition as will ultimately cause delay in planting out.

Boxwoods and other out of door plants are selling well, and all signs point to a good old-time busy Spring.

George Rackham is meeting with great success in his lectures on horticulture to schoolchildren; they all seem to be very eager to learn, and many and varied are the questions he has to answer.

The Greenhouse Question is an Important One

You can't possibly get away from the fact that it is absolutely essential to best results in growing—the best grower in the world could not make a hotbed answer as a greenhouse and get a first class crop. It is true that the greenhouse is not as important as a good grower, but it is necessary to have both of them first class if you expect to make a profit. The question as to the style of house, the kind of materials to be used, the location, etc., are questions that must be settled by every man that builds a greenhouse. If you are puzzled on anything relating to greenhouse construction we will be glad to help you in any way we can. Why not get one of our catalogs?—Just send your name and tell us what you have in mind.

Send for our catalogs:

- No. 4—Greenhouse Materials.
- No. 5—Bollers.
- No. 6—Pipe and Fittings.

A SECTION OF OUR SECTIONAL IRON FRAME HOUSE AND ITS VITAL CONSTRUCTION POINTS

The illustration shows you four things.

1. That a section of our house is a group of framing members made by placing the iron rafters and posts 8 feet 4 inches apart, and connecting them by the purlins and galvanized eave plate.

No matter how wide the house, these sections remain the same length. Each section is *entirely self-sustaining and complete in itself*. The house is made up of a series of complete sections built up much as a child puts block after block along in a row.

2. From the right hand half of this section you can see exactly what the principal iron framing members are, and how light the frame is, considering the fact that this is a section for a house 40 feet wide.

3. From the left hand side you see the other half of the

section with the small amount of cypress that is used, all in place. Now you begin to appreciate *just* why it is the extremely light house it is.

4. But quite the most vital thing of all which this section shows to you, is that any construction the roof of which is supported by *side posts only*, especially in the wider houses, is like a house of cards; if any weakness develops in any member down the whole pack goes.

Such must inevitably be the case with houses not employing columns at frequent enough intervals for properly supporting the roof.

Our Sectional Iron Frame House must then be the logical house for the logical buyer. Write us.

European Notes

At last the mystery is solved and today we learn the true cause of the inclement weather which has afflicted Europe in its western section during the past twelve months or more and which it appears will continue indefinitely. A learned meteorological professor, Dr. Bassett, states that from hydrographic observations made at various stations he feels confident that the Gulf Stream drift is late again this year, and until it arrives in a warmer and saltier condition than last year the inclemency at present existing will most probably continue.

From all of which it is evident that there has been considerable neglect of duty on your side, and the writer very humbly suggests that the free seed staff would be much more profitably employed in clearing away the obstructions which are proved to exist in the channel of the Gulf Stream. It has been irreverently suggested that the "Immortal Theodore" could render his country valuable service in this respect, but the effete monarchies in Europe are so thoroughly enjoying the presence of a "live man" in their midst that they will not readily allow him to depart.

Putting joking aside, conditions are really very serious. One of the largest growers in Provence writes early in the present month: "The frost on April 1

The reputation of a grower is made by the quality of the flowers he markets. A good reputation is invaluable to a successful grower. Market returns are influenced by reputation. Any man with ordinary common sense knows that bulbs of good value are not cheap. That's why Horseshoe Brand Lily Bulbs are not the cheapest. They are good though, and worth the money and then some. They are produced from the choicest seed-bulbs in the world and will average better per thousand bulbs than any other brand on the market. Write us or call.

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advice, quotes wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

did not completely destroy everything, but the bad time still continues; the strong wind is very cold and although we are in the month of May we have the same temperature as in February. I think therefore that the harvest will give very little product." Farther north the growers all tell the same story, hailstorms, biting winds and bitterly cold nights, with only a very few bright intervals.

Outdoor work is terribly hampered as it is not possible to cultivate the heavy soils.

As a result, quite a mild panic has seized some of the more ambitious of the smaller seedsmen who, in their anxiety to blossom into fully developed wholesalers, overloaded themselves with indifferent goods at famine prices and now have them left on their hands. Last season's seeds are dear at any price unless they can be sown at once, otherwise a good profit could very easily be made by buying from the special offers which are now current.

The flower seed trade, which is practically finished for the present season, has been fairly satisfactory as a whole and, so far as the popular hardy annuals are concerned, much in advance of last year. Trade in all branches is reviving, the ranks of the unemployed lessen every day and there is money to spare for the furnishing of the cottagers' and artisans' gardens. Such easily grown annuals as Virginian Stock are hardly obtainable and the huge surplus of Nasturtium has been brought within reasonable limits. Some very prominent Sweet Pea specialists in England denounce the trade as "rotten," but so far as the cheaper varieties and the mixtures are concerned the sales have been well above the average. All that is now wanted is a good season to bring them to their old time perfection.

By the death of R. Wilson Ker, V. M. H., Liverpool, on May 2, England loses one of the most highly esteemed members of the nursery trade. He was well known to many on your side and was highly popular with all. Of late years his firm had made a special feature of Hippeastrums and at the Brussels International Show, which closed on May 3, they exhibited about 160 plants in flower, and in spite of the damage done to the plants in transit they were awarded five first prizes.

As no further steps have been announced in connection with the recent bribery case, which was decided in favor of the defendants, it is doubtless intended to let the matter drop. The nature and source of the information leaves no other course possible.

EUROPEAN SEEDS.

American Notes

Trade Continues Brisk

The retail counter business with the seedsmen still continues quite brisk and will do so, until well after Memorial Day. Sales of nursery stock are very nearly over, although the comparatively cool weather since the month came in has made very late shipments possible this year. Bedding and vegetable plants are selling in large volume. There has, as a rule, been considerable re-planting of tender sorts, such as Egg and Tomato plants, the early settings of which in many sections were killed by the late frosts, which even now seem not wholly past. It would seem as if warmer and growing conditions could not now be far away. The cool weather has, however, certainly had the effect of lengthening out and keeping a steadier retail counter trade than otherwise would have been the case. There will be a very active trade in flowering and bedding plants with the seedsmen from now until after Memorial Day, and certainly every succeeding season has seen a larger business done in this line. Some seedsmen still prefer not to handle plants at all, but while, of course, there is a great amount of labor attached to so doing, still this line, apart from its own sales, does most surely lengthen out materially the selling season for seeds proper. The past week has seen the end of the night work for this season, much to the relief of all concerned, and surely it has been the most strenuous Spring that the seed trade, as a whole, has ever experienced.

Turnip Seed Sales

For the next two months the sales of Turnip seeds of the various popular varieties will be a feature. The quick-growing sorts can be sown right up to even August, but it should be remembered that the Ruta-Baga varieties need to be planted for best results not much later than the middle of June, as they require

a much longer season for the fullest development than the earlier sorts of Turnips. As with other vegetables, there is a long list of Turnips, but some three or four of the most called for varieties will suffice to supply the general trade demands. Odd and little called for sorts your seedsmen will furnish, at short notice, as the orders require. In quick-growing, early flat Turnips, the Purple Top Strap-Leaved is the most popular of all, and a good supply of the seed should always be carried in stock. The same may be said of the Purple-Top White Globe Turnip, a variety much grown for both market and home use. In quality, it is of the best and in appearance very handsome. In Ruta-Bagas—also called Swedish, Swedes, or Russian Turnips—two good varieties will be enough to please most customers. The Improved American Purple Top Ruta-Baga is the standard yellow fleshed variety, both for table use and stock feeding; this sort is known in different sections by varying names, but your seedsmen will supply you with a selected strain of seed of this best yellow Ruta-Baga. There is also a white-fleshed variety of these large Winter Turnips, known as Large White French, Sweet German or White Rock. This sort also grows very large and is of most superior, mild flavor. It is the famous Swede Turnip that is grown on Cape Cod, Mass., and is known throughout the East as the Cape Cod Turnip. Outside of these four described sorts you will not need to carry a stock of seed for the general run of sales; and of the above in the Ruta-Baga Turnips the yellow variety will be found most in demand.

Memorial Day Plant Sales

Those seedsmen who have recently added plants to their other lines, should not lose sight of the main feature of the Memorial Day demand for plants, which, of course, is that all plants be in full bloom as far as possible. It is a well-known and established fact that a plant in full bloom will bring its price readily, when a better grown specimen without bloom will be practically unsalable; and this applies with particular force to the plant sales for Memorial Day.

New York Seed Trade

Trade in all lines holds on remarkably well with the seedsmen, and those firms who carry flowering and bedding plants are expecting a good Memorial Day trade in the same.

The comparatively cool weather here, as all over the country, has kept the trade steady right along. There have been no great rushes but the total sales continue satisfactory. The above sums up pretty well the conditions here this week.

James McHutchison of McHutchison & Co., 17 Murray st., returned a few days since from his annual European trip.

Richards Bros. have this season devoted more attention than ever before to their plant department and are very much pleased with the results. The coming week they will make special offers in this line for Memorial Day.

Harry A. Barnard, representing Stuart Low & Co., Enfield, Eng., arrived last Friday on the Cunard S. S. Lusitania, for his annual trip among the seed trade.

The retail counter sales with the Barclay and Cortlandt sts. seedsmen are holding on well, particularly in the line of vegetable and bedding plants. Memorial Day trade bids fair to be good with all of them.

Arthur T. Boddington reports a particularly good demand for hardy perennial flower seeds. This house has for several seasons been increasing its trade most materially along this line.

Almost all our seedsmen report that their customers complain that the recent quite heavy frosts in this vicinity have killed or injured many tender plants, especially tomato plants.

Boston Seed Trade

The Ames Implement & Seed Co., Quincy Hall, who have been famous for their high-grade implements and tools, and which took over the Haskell Seed Co. at the opening of the year, report that they have retained all the latter's customers and added many new ones to their list this Spring. They are immensely pleased and encouraged with the business they have done; their intention is to carry the highest grades of seeds obtainable and to give the best attention to their customers by keeping the most experienced salesman obtainable.

Philadelphia Seed Trade

The allurements of the warm April weather enticed many gardeners into planting their Beans, Sugar Corn and even Melons. A large percentage of these seeds have in many cases decayed instead of germinating. Some of the planters acknowledge their mistake, and get wisdom out of their experience. Others blame the weather, and still others, unreasonably, cuss the seedsmen. These people are now buying over again. This and the natural sales of the season in the seed line, and the sale of vegetable and flowering plants, lawn and garden utensils keeps every seed store at the present writing almost uncomfortably busy.

Henry A. Dreer is offering, in 6-in. pots, some extra strong climbers of the following kinds: Aristolochia Siphon, or Dutchman's Pipe Vine, Akebia quinata, both of which ought to be planted much more freely than they are, and Ampelopsis Engelmanni, a new variety with green leaves, which clings more tenaciously to the wall than the Virginia Creeper, and grows faster than Ampelopsis Veitchii; also climbing Hydrangeas for growing against a tree or wall, which need no tying.

Michell's Seed House at 518 Market st. is displaying a well-built line of rustic benches, chairs, window boxes, and bird houses; also of horse and hand-lawn mowers.

The Henry F. Michell Co. is offering the first potted Aster and Cauliflower plants noted this season. This company is making an attractive window display of every conceivable implement for use on the lawn, and in the garden.

The Moore Seed Co. reports that its largest present sales are in Field and Sugar Corn, Millet, and Beans.

The Stokes' Seed Co. is offering some extra good Pepper and potted Egg-Plants.

The Johnson Seed Co., by reference to its books finds that its sale of Fordhook Bush Lima Beans is heavier than ever before, and that it is fully 25% in excess of the sale of all kinds of Pole Limas. In the four years in which this house has sold Cyphers incubators and outdoor brooders sales have never been as many as this year.

The Iron Age Mfg. Co. is offering through the seed stores a very useful "crop label." A flat, galvanized iron standard about 10 in. long and sharpened at the lower end is surmounted by a 3 in. by 4 in. galvanized iron frame, attached by one edge to the standard at an angle of about 45°. In this frame is slipped a piece of cardboard, bearing the words "Name, Variety, Fertilizer,

500,000 PANSIES BEST MARKET STRAIN GROWN

Grown from seed of our own raising, this strain is the result of over 25 years' careful selection and for size, form and substance and wide range of color in clear, brilliant selfs and novel shades and markings, they will be found unsurpassed. The colors are very evenly assorted and the growth is very strong and stocky. Fall transplanted plants ready to bud and bloom.

Price \$10.00 per 1000. Larger Sizes \$15.00 and \$20.00 per 1000.

EXPRESS ONLY

I. E. COBURN, - 291 Ferry Street, - EVERETT, MASS.

Planted, Matured." A space to be filled in is left after each of these words, and a piece of mica is slipped in over the cardboard to keep off the rain. If both amateur and market gardeners would use these sensible and durable labels they would secure a valuable reference record without the use of memorandum book.

FRESNO, CAL.—At a small meeting of Farmers' Union members held in Fowler, May 6, the opening gun was fired in a campaign which the California Farmers' Union, Inc., is to carry on for the purpose of erecting a central seeding house. The new plant is to be used by all Farmers' Union packing houses in this section for seeding their goods and when built it will be the only house where Farmers' Union goods will be seeded.

Wholesale Seedsmen's League

On Thursday, May 5, a meeting of the board of directors of the League was held in accordance with a call issued under the direction of F. W. Bruggerhof, president of the League, the object of the meeting being to discuss the conditions prevailing as to the growing seed crops of the biennial families, plants of which were raised last Midsummer and Autumn, 1909, for the production of a seed harvest this Midsummer, 1910. The directors present were Messrs. Bruggerhof, Breck, Burpee, Buist, Wood, Willard, Rice represented by Mr. Hunt, Landreth, and in addition to the eight directors there were present two guests, these being E. D. Bruggerhof and Burnett Landreth, Jr. H. L. Holmes of Harrisburg, Pa., a resigned member, was re-elected to membership. Lester L. Morse of San Francisco was reported as having complied with the requirements for membership.

While the League meetings in the past have been generally held four or five times a year, it was considered best to fix three dates for stated meetings, and the dates decided upon were the first Wednesday in October, the last Tuesday in November, and the first Wednesday in May. Special meetings to be held at any time at the call of the president.

Transparent Envelopes for Seed Packets

The subject of postal regulations as respects semi-transparent seed packets was discussed and the following statement was directed to be issued:

Concerning his recent interviews in Washington with the Third Assistant Postmaster General, Mr. Burpee, Chairman of the Committee on Postal Affairs, reported strongly in favor of the seed trade generally complying with the rulings of the Post Office Department as to using transparent paper.

The Third Assistant Postmaster General and Mr. Bacon both emphasized the fact that it would be a great mistake to further agitate the question just now when Congress is so opposed to special privileges (and seeds enjoy one-half the postage rate of other fourth-

class matter) and when there is so much discussion as to second-class matter. The Third Assistant Postmaster General was most courteous and seemed disposed to be as liberal as possible in his interpretation of the word "transparent," in permitting the use of any paper that is not so opaque as to conceal character of contents of sealed packages. Quarts and pounds can be put up in opaque paper bags if only tied (not sealed) or in cartons, without sealing. This ruling of the Department is in no sense new, as the P. L. & R. under which it is made has stood for more than twenty years. Previously, however, the rulings have been only in individual cases and the subject has not before been made one of national scope.

Suggestive Values of 1909 Seeds

The subject of values was discussed very exhaustively, the secretary presenting a tabular statement embodying a digest from letters and cables received from Europe within the past two weeks, regarding the seed crops of biennials to be harvested from plants grown last year and to ripen their seed in Midsummer of 1910.

After the reading of letters and cables confirmatory of the secretary's brief and other letters from other sources, the board concluded that the seeds of crop 1909 now unsold were certainly of very greatly enhanced values. After much discussion the following rates were offered as suggestive of what in the opinion of the board, under a conservative view of the situation, should be considered the actual value of 1909 seeds on hand at this present moment. In the opinion of the board the values are very likely to be higher:

It will be noticed the board only passed on values of seed of biennial families. Varieties of the same families unnamed, of course, are equally enhanced in value consequent upon the diminished harvests in sight. BURNET LANDRETH, Sec.

Kentia Palm Seeds

At the recent meeting of the Australian Nursery Association, a warm discussion took place on the recent rise in prices of Kentia seeds. Mr. Cheeseman moved—"That this Conference expresses dissatisfaction with the arrangement made by the New South Wales State officials for the distribution of Palm seeds from Lord Howe Island, whereby authority has been given to leaseholders and contractors to combine together to raise the price of seeds and control the output generally, which combine has raised the prices of seeds 650 per cent. over the prices ruling before the combine was initiated."

At one time the price was 8/- to 10/- a bushel, but now it had gone up to nearly £3, a rise of 650 per cent. On the other hand, it was argued that before the trade was organized and controlled, the islanders were at the mercy of buyers who paid starvation prices, so that though Lord Howe's Island had a monopoly of the supply, the inhabitants were reaping miserable returns for their labors. The motion was finally passed, and a deputation appointed to wait upon

AMERICAN ASSOCIATION OF NURSERYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer. 25th Annual Convention at Denver, June 8, 9 and 10.

One of the most important trees of our forests is the *Castanea Americana*, the Sweet Chestnut. As a useful timber tree it is not excelled by any other one of the great number our forests contain. The wood is coarse grained, but it is strong, elastic, light and very durable and for fence posts its excellence has been known since the earliest days of the settlement of the country. Where the forests are still unbroken, in a measure, and where land is cheap, the post and rail fences are almost altogether of this Chestnut, and a new fence of it is good for 20 years, with a little repairing now and again.

Regarding the nuts of this tree, they are far superior to the one known as the Spanish, or Italian. While not as large a nut they are far sweeter, in fact, those accustomed to eating the native one, *Americana*, do not care to eat the European.

As to the proper name of this Chestnut, the authorities give us a choice. An old work before me gives it simply as *Castanea vesca*, the same name as the European species; another one gives it *Castanea sativa*, a later name for the European; while still a third work has it *C. sativa* var. *Americana*. We propose to hold to the *C. Americana*, as, even if the botanical distinctions between the two are slight, the whole character of the tree in leaf, fruit and habit of growth is so different from the other that a traveler along a roadside could tell whether a Chestnut at some distance away was a native or a foreign species.

Besides its merits in the way described, as an ornamental tree it has a good reputation. Standing alone on a lawn, or in a meadow, it is a pleasing object. Our illustration is of such a tree. It stands alone in what was a meadow, but is now a newly formed lawn.

It is well known among woodsmen that when a Chestnut is cut down it starts afresh with three or more shoots, and this is what the tree before us has done. But, although it is a second growth tree, as these are called, it shows a typical growth as much as it would do were it but of a single trunk.

A great deal of attention has been given of late to the planting of Chestnuts for fruiting purposes. Because of their large sized nuts varieties of the Spanish species have been planted, but it is certain that if large sized plants of the native kind were planted—and there are varieties of this with large sized nuts—it would be more profitable in the end. What every one wants is a large nut, and of the best quality. Quality, the *Castanea Americana* has; we now want large sized nuts.

Bechtel's Double-Flowered Crab

One of the handsomest of the small trees that flower in Spring is the Bechtel's Double-Flowered Crab, a variety of the Western Wild Crab, *Pyrus Iowensis*. There does not seem to be the fragrance to the flowers as is noticeable in those of the common Wild Crab, *Pyrus coronarius*, but it is unsurpassed in the way of beauty when it is in flower. The blossoms are in small clusters, such as Apple flowers are, and whether in bud or fully expanded there is no tree, large or small, that is so ornamental. The flowers are pink in the buds and, unlike some pink-colored ones, they do not turn to white

when unfolded, but remain a good pink almost to the end. The quality of being double, too, is not so in name only; the flowers are very double, and with this and their large size they look not unlike clusters of pink Roses.

Though easily increased by either budding or grafting on common Apple stocks, there seems no great stock of it in nurserymen's hands. It is another instance of the many years it takes for a good thing to be so well known that every owner of a garden wants one.

Crape Myrtles

Answering a friend's inquiry as to whether the Crape Myrtle should be considered a hardy shrub in Philadelphia, we told him no, not in the general sense applied to a hardy shrub. Here and there one is met with occasionally, and in the extreme southern part of the State a few large ones are to be seen, the owners simply tying the branches close together in Winter, so that one branch protects the other. In Delaware, close to the Delaware River, the shrub thrives with no protection in Winter; so it does across the Delaware in New Jersey. But after Pennsylvania is passed on the way south the climate soon is felt to be much less vigorous in Winter, allowing the

tured; digging around a tree, and severing the large roots met with. If done about Midsummer, new roots form at once, so that the tree would be in better condition the Spring following than if it had not been root pruned. Still, it would be better were it undisturbed until a year later.

As soon as out of the ground wet mats should cover the roots, and be kept there until the tree is set in its new position. Prune the tree quite close to the main stem, unless it be the Pin Oak, which has usually a good showing of roots naturally, so requires less shortening of the branches. When setting an Oak tree, fill in around the root with very light loam, or even sand. Get it around every root as well as possible, and then when well covered pour in water, to carry the loam or sand well into every crevice, so that the roots will be as solidly covered as they were before the tree was dug up. This is the practice of good planters, and very few trees die on their hands.

At this season of the year the first thing to look to is the root pruning of such trees as it is desired to move later; and nurserymen should now be planning to prune whole rows of trees that have not been transplanted for some time.

Thuja Vervaneana

Before the George Peabody Arborvitae was known the *Vervaneana* was generally planted as a golden Arborvitae, under the name of the Belgian Golden. The George Peabody is the best golden-tinted American Arborvitae today, the gold color being of the best; and when the new foliage is fully matured in late Spring it is as handsome an evergreen as one could plant. *Vervaneana*, beautiful as it is, is not nearly as rich a golden as the other, but there is a pleasing shade of golden color pervading all parts of its foliage, such as the sun shining on a green-leaved tree would impart.

Perhaps, too, the growth of *Vervaneana* is rather more full than that of George Peabody, for the latter is extremely pyramidal in growth, representing a golden form of the true *Thuja occidentalis pyramidalis*.

There are innumerable varieties of the native Arborvitae, some quite globular in growth, others so slim and tall as to look much like a Juniper; then some are variegated tipped, others golden or golden-tinted throughout, as is the subject of our sketch, *Thuja Vervaneana*.

Gordonia Lasianthus

Those of our readers who live south of Philadelphia would have a beautiful native evergreen shrub in the *Gordonia Lasianthus*, if they would take care to plant it in a sheltered place. It has been tried in Philadelphia, but it could hardly endure the average Winter there. Although living through two or three winters it became less in size instead of larger, being partly winter-killed every season. Still, it was not in as good a place as it might have been; and again, on many estates there are natural sheltered nooks where many a choice shrub could be wintered well.

This *Gordonia* has handsome snow white flowers, two to three inches in diameter, and, like the species *G. pubescens*, it blooms all Summer.

The *G. pubescens* referred to is, however, a hardier and handsomer shrub. The wonder is that it is not more widely planted. One rarely sees it outside of the vicinity of Philadelphia, and it is not common there. It is quite hardy there, showing that it could be planted anywhere south of that city, and farther north of it as well.

The flowers of *G. pubescens* are often 3 to 4 inches across. They have a delicate fragrance, which, with their handsome cream white flowers, bearing clusters of yellow stamens in their centers, attracts everyone to them. As it can be rooted from hard or soft wood cuttings and from layers there is no reason why nurserymen should not have a good stock of it.

Hibiscus

Rosa Sinensis

The well-known greenhouse plant of the North, *Hibiscus Rosa Sinensis*, is one of the favorite lawn shrubs of the far South, and even in situations where it freezes a little it withstands, as it is a Chinese and Japanese shrub. It is not seen in greenhouses in the North as often as it was 30 years or more ago, a time when a good collection of greenhouse plants was more valued than bedding plants were. It is changed now, florists' flowers have gained the lead, hence the absence of the *Hibiscus* referred to, except from establishments where old-time plants are still valued.

In the far South it is a well esteemed hardy shrub, and further towards the North it will succeed, planted where it will ripen its wood well in Autumn. It is not uncommon, where frosts occur to some extent, to bank around the base of the plant, in late Autumn, enough soil, manure or some material to insure the life of a few inches of the base of the shoots. From this reserved part shoots will push in Spring, and will give flowers freely through the Summer.

In the North the plants must be dug in Autumn, cut back well and heeled in, in boxes or pots, and kept in a cool greenhouse until time to plant them out in Spring.

This ornamental *Hibiscus* exists in many colors, and in both double and single-flowered varieties; though all things considered the single-flowered ones are considered the most satisfactory for flowering, and of them the single scarlet is one of the showiest.

Castanea Americana. American Sweet Chestnut

growing of many plants that appear to object to thriving further north. It, the Crape Myrtle, requires a situation free from high winds and sun in Winter, and to be on elevated, well-drained ground, where growth will be well ripened before Winter comes. The thoroughly ripened wood is an essential to the wintering of any shrub not of the hardiest nature.

The Crape Myrtle is easily raised, either from cuttings or from seeds. Cuttings may be of green shoots, to be rooted in a greenhouse, or from hard wood, made in Winter, and set outdoors in Spring.

In the South the Crape Myrtle is everywhere, being to that section of the country what the Lilac is to the North, and when seen in hedge form it is, when in flower, a beautiful sight. There are many colors of it, pink, purple, red and white.

Safe Transplanting of Oaks

It is a pleasure to note the increased planting of Oaks and, further, the successful planting of them as well. Every planter knows that some seasons are much more favorable to safe planting than others, still, with the care everyone should give to planting of trees, especially of Oaks, these trees should not be classed as being particularly hard to move. Close pruning, the keeping of the roots moist, and setting the soil firmly about the roots when in their new position, is all that is required. It is not uncommon to see practical planters succeed with good-sized trees of, say, three inches in diameter, and fall-planted at that, while others complain of losing trees of but 6 ft. to 8 ft. high.

As a rule, there is too much disregard of roots in transplanting. Trees that make but few small ones should have a root pruning once or more before removal. This could be done in Summer, after the foliage is well ma-

THE AMERICAN CARNATION

By Peter Bisset

Price \$3.00. Send for Sample Pages

A. T. De La Mare Ptg. and Pub. Co., Ltd., 2 to 8 Duane Street, NEW YORK

New Bedford, Mass.

The past week was a busy one. There was a good demand for flowers, with the supply about equal. Carnations are none too plentiful just now; they retail at 50c. and 60c. per dozen. Roses of good quality sell at \$1.50 per doz.; Sweet Peas at \$1 per 100 blooms; Snapdragons 75c. and \$1 per doz.; Lilies \$2 per doz. Gladioli are now coming in and retail at \$1 per doz. Bulb stock is getting scarce. Tulips, out-of-doors, are almost done, but some still sell at 50c. and 60c. per doz. Daffodils are about gone. Funeral work is good and calls for lots of stock. Pansies sell well yet, also Forget-me-nots. Geraniums are being called for now, and sell at 12c. and 15c. each, from 3½-in. and 4-in. pots; also other bedding stock.

S. S. Peckham and Peckham Bros. of Little Compton, R. I., have about 30,000 to 40,000 Geraniums; they report a good demand for them.

Peter Murray of Fairhaven, Mass., has some nice Forget-me-not plants, which are finding a ready sale.

J. H. Cleary and Julius Rositzky, the latter manager for Wm. P. Peirce, were witnesses in Boston in a trial case the past week. While in Boston Rositzky bought some fine Hydrangeas in pots from Evans of Watertown; they are handsome plants too.

Lilacs and Tulips, and lots of other outdoor flowers will be all gone by Memorial Day, and from present indications flowers will be scarce.

Wm. H. Davenport is showing some fine metallic flower designs.

H. V. Sowle will have some nice Lilies for Memorial Day, also a nice lot of Geraniums and other bedding plants.

Most of the Ten-week Stocks will be in on time.

There is a good demand for shrubs, trees and general nursery stock.

R. H. Woodhouse will be strong on Vines and Geraniums.

Growers are now planting out their young Carnation stock. It will be one grand rush from now on. We wish all a good Memorial Day business and plenty of flowers.

HORTICO.

Lilacs in Highland Park, Rochester, N. Y.

Again the Lilacs in Highland Park are displaying their beauties to admiring multitudes. They are perhaps in greater abundance of floral profusion than they have ever been before and during this week and next it will well repay people who have the opportunity to visit them frequently.

With the importations that have come from Europe this Spring the park board has in its possession 206 varieties of Lilacs. This includes fourteen species. Of course, what is meant by a species in regard to a Lilac or any other plant is a unit composed of a greater or less number of individuals found growing in a wild state, and which reproduces itself true from seed, or within very limited variations. The different varieties of Lilacs, like most other varieties of cultivated plants, have been produced by hybridization and selection and can only be perpetuated by artificial means.

Nearly all the cultivated varieties are the offspring of the common Lilac, *Syringa vulgaris*, whose native home is on the banks of the Danube in eastern Europe. Most of the Lilac species are indigenous to south and eastern Europe, China, Manchuria, Mongolia, and Japan. No Lilacs are found growing in a wild state on the American continent. Some years since Dr. C. S. Sargent of the Arnold Arboretum, Harvard University, procured seeds of the common Lilac in a wild state on the banks of the Danube, and raised a number of seedlings and presented a few of them to the park board. These are now in the park nurseries and have not yet flowered, but it will be interesting when they flower to ascertain how far they are removed from the highest types that have been produced by the skill of the hybridizer.

It is an error to suppose that Lilacs have no particular charm or that they cannot be seen to best advantage except when they are in full flower. When the clusters are partly expanded, and the beauty of the unopened buds is contrasted with the open flowers, is really the time when the Lilac displays its greatest charms. This is more particularly true perhaps in regard to the dark red flowering Lilacs. Those single dark red Lilacs, such as Uncle Tom, Congo, Pasteur,

Dreer's Select Potted Roses

FOR OUTDOOR PLANTING

The Roses here offered are field grown plants which have been potted into 5 or 6 inch pots (according to the growth of the variety) during the winter months. They have been stored in cold houses and cold frames and are in the best possible condition to turn over to your retail customers for outdoor planting, giving an entirely different result from stock carried over winter in storage. For best results the plants should be shipped in pots; in this shape they will carry safely to reasonable distances by freight.

Montgolfier and Negro, are charmingly handsome when the flower panicles are partly expanded.

Fifteen to twenty years since, Ludwig Spath was considered par excellence as a dark red flowering Lilac, and it is today a fine one, but there has been introduced during recent years a galaxy of showy Lilacs, including those mentioned above, with deep purplish red flowers that are the peers of Ludwig Spath.

It might be said that there are four shades or tints with their infinite variations in which the Lilac reveals its greatest beauties, namely white, creamy pink, Lilac or bluish lavender, and purple red, and inside that general color scheme all the Lilacs in cultivation range themselves whether they are double or single.

The most interesting Lilac in the

creamy pink color scheme is one under the name of Schermerhornii, which the park board purchased 18 years since from a nursery in Long Island. It is true the individual flowers are small, but they are deeply tinged with pink, and it is the nearest approach to a pink Lilac in the collection. Macrostachia, Lilarosa, Princess Maria, Crampel and Amena are other distinctive single varieties that belong to this section, and there are many others.

The single white Lilacs are particularly noticeable this year, and Noisetiana alba, Virginalis, Madame Moser, Frau Dammann, Marie Lagraye and Princess Alexandra have all their distinctive beauties. It is hard to choose or decide which is the best among these, but perhaps Princess Alexandra, in

which the erect compound clusters, with large individual flowers, stand out prominently, might be placed at the top. Among the double white Lilacs during recent years there has been a number of new comers. Madame Lemoine held the place of honor for a long time, but Rabelais, Obelisque, Jeanne d'Arc, Ellen Willmott, and Madame Casimir Perier are close rivals, and perhaps Madame Casimir Perier is superior to Madame Lemoine in general excellence.

Among the Lilacs in the range of color with lilac or bluish lavender flowers there is an immense number of single and double-flowered varieties varying more or less in depth and intensity. In the single Lilacs Jacques Callot is an old variety, and is hard to excel. The individual flowers are about one inch

across. Colmariensis cerulea superba, Ernest Leichtenstein, Eckenolm and Christopher Columbus, are single kinds that show the range of color in this section.

In the double flowering varieties President Carnot, Condoret, Alphonse Lavalle, President Grey, Lamarck, Rene Jarry des Loges, Abel Garriere and Dr. Masters are just a few of the numerous sorts in this range of color.

If cool weather had not prevailed for the past two or three weeks all flowering plants and the Lilacs would have been in flower four weeks ahead of last year and about two weeks ahead of the average season. At the present time it seems that they are from two to three weeks ahead of last year.—Rochester Democrat and Chronicle.

Advertising Benefits

Jos. H. Cunningham of Delavan, O., writes us May 16 that, through the trade papers, he has sold 421,000 Pansy plants between Oct. 10, 1909 and May 12, 1910.

Canal Dover, O.

We are glad to report that the severe frosts did not injure our Peonies, and they are growing finely, giving promise of a very exceptional crop, mainly prior to May 30. Iris Florentina is in bloom. Peony tenuifolia and Mock Oranges will be in a few days. Clethra fruits are well set, giving promise of grand crops.

C. BETSCHER.

FAIRBURY, ILL.—Kring Bros. are changing the heating system of their houses from hot water to steam, the heating to be done from a central plant.

WASHINGTON, N. J.—Considerable damage has been done by vandals to the houses of Alonzo Bryan, this place. A barn was also broken into and valuable harness stolen. The police are searching for several suspects.

WASHINGTON, N. J.—Considerable damage has been done by vandals to the greenhouses of Alonzo Bryan, this place. His barn was also broken into and valuable harness stolen. The police are searching for several suspects.

THE WARFEL FLORAL CO., Muncie, Ind., has been incorporated, with a capital stock of \$10,000. Directors, Hiram Warfel, Lottie C. Warfel and Francis A. Shaw.

THE GREENHOUSE Co. of Clarkburg, W. Va., has been incorporated to operate greenhouses. Capital stock, \$25,000. Incorporators: N. J. Hayman, C. C. Jarvis, C. H. Griffin, I. J. Coston of Clarkburg; John C. Johnson of Bridgeport.

WESTBORO, MASS.—William M. Gardner, 50 years old, a florist, living at 50 High st., has received word from his old home in Dumfries, Scotland, that he was one of four heirs to \$25,000 left by the death of his uncle, who was one of the well-to-do merchants of Dumfries. Only

Catalogs Received

recently Mr. Gardner was named as heir to an \$18,000 estate in New Haven, and then received \$300 from a Scotland bank, which was placed on deposit for him by a relative when he was a child. The Scottish lawyers who are settling the estate in Dumfries, have been searching for the whereabouts of the Westthoro heir since last June.

Catalogs Received

APHINE

is proving a most effective, while at the same time absolutely harmless, Insecticide for use on young stock.

It destroys the insects, and invigorates the plants.

HAVE YOU TRIED IT?

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers. If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases. (The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 600 for \$1.60, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

A. T. DE LA MARE PTG. & PUB. CO., Ltd

P. O. Box 1697, NEW YORK

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

Cincinnati

Business during the past week has been exceptionally good. Stock of all kinds moved well, especially **Carnations** and **American Beauty** **Roses**, and prices are getting back to the normal point on all stock. Killarney, My Maryland, and Richmond are quite equal to the demand, and bring from 2 to 6c. Good **Bride** are a little on the scarce side and in demand. **Carnations** are also getting scarce, but a few days of sunshine will bring them out again. **White Carnations** sold on Monday at 3c.; other varieties at 2c. New **Ferns** are beginning to come in. **Peonies** are now coming in more plentifully, and we hope to have a good supply for **Decoration Day**; in fact, **Decoration Day** will clean up everything in the cut flower line, especially **White Carnations** and **Peonies**. **Gladioli** are beginning to make an appearance.

Last week the club women from all over the U. S. held their biennial convention at Music Hall. The hall was handsomely decorated, B. L. Fenn having the decoration. On Friday evening the ladies enjoyed a trip up the Ohio River on the steamers **Princess** and **Island Queen**, after which a buffet luncheon was served on the steamers. On returning, the boats stopped below Eden Park, where a beautiful display of fireworks was enjoyed. The ladies also enjoyed numerous other entertainments.

The trade will be pleased to hear that **Ed. Fries**, who has been quite ill for a fortnight, is convalescent.

J. T. Herdegen was a caller in the city today. John Lodder of Hamilton was here on Saturday. E. G. GILLET.

New Orleans

Young Dan Newsham returned recently from an Orchid collecting trip to Central America, with an increased avoirdupois and a fund of experience which seldom befalls a youth of sixteen. His father, James A. Newsham, who is an old time Orchid collector and an expert grower of these royal plants, will leave in a few days to attend the Boston Orchid show, and, incidentally, take in Washington, Philadelphia, New York and other large centers. His **Magnolia** **Nurseries** have become quite a beehive of Orchid activity within the last two years.

The **Metairie Ridge Nursery Co.** has about completed another new greenhouse. This concern reports this as being its most prosperous season since its formation.

Mrs. Carrie Rehm is making extensive alterations at her Napoleon ave. establishment.

The prolonged drought has had a bad effect on outdoor **Roses**, thrip having full sway. Other outdoor stock is fairly good, especially **Gladioli**, but everyone is longing for rain. CRESCENT CITY.

BOOKS

Every one who would become successful in his pursuits should "fill himself full" on all subjects appertaining thereto; in other words, he should buy every practical book relating to his business from which he is sure to reap some advantage.

We are in a position to supply these as far as concerns the florist, nursery and seed trades.

Send for our Complete Descriptive Book List covering every phase of Floriculture, Horticulture, and Allied Industries

A. T. DE LA MARE PRINTING AND PUBLISHING CO. LTD.

2 to 8 DUANE ST., NEW YORK CITY
Address P. O. Box 1887

SPECIAL OFFER

We will give one copy of **Plant Culture** and **The Florist's Exchange** two years, all for \$3.00.

Plant Culture

NEW, THOROUGHLY REVISED EDITION. JUST PUBLISHED

By Geo. W. Oliver, Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture

Printed on enamelled paper and illustrated with one hundred plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50

A WORKING handbook of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines and a chapter of General Directions, covering Propagation, Seeds, Grafting, Hybridization, etc.

This reliable cultural work has been gotten up for use, not ornament; therefore the price has been fixed at a figure within the reach of all. It contains more real practical information for those for whom it is intended than is found in much more pretentious works.

Send for sample pages, free.

English Horticultural Notes

A Bouquet of Novelties
On May 3, at the Royal Horticultural Society's show, there were certificated the following, each of which is deserving the notice and consideration of your growers: Carnation C. F. Raphael, with intense rosy scarlet flowers, 6 ins. in diameter with crinkled petals, full, and on long stems. The flowers are spicily scented, but the calyx bursts. The bloom is too big for the calyx really, and is of the Marmion and R. F. Felton type, a new section which H. Burnett of Guernsey has produced. The flower looks just like that of a perfectly developed Malmaison, which is more prized in England than America, but Mr. Burnett say the variety is not a Malmaison at all. Perhaps it is crossed with Malmaison and the American varieties. At any rate, C. F. Raphael (named after a wealthy amateur who has a large collection of Carnations) is a fine decorative flower.
Second on my list are Veitch's (Chelsea) Schizanthuses,

which are compact, bushy and very varied and brilliant in the range of color. Crimson, whites, pinks, amarant, purples, orange and gold, and mottled kinds were shown. They also have one of the finest and most varied strains of *Primula obconica*.

Two varieties of *Hydrangea Hortensia* were certificated, one from a Frenchman—E. Moullière of Vendom—and the other from Veitch. The French variety was H. H. Mme. Emile Moullière, with a huge mass of lovely white flowers; the other was H. H. Ornament, with soft blush flowers.

Among the Daffodils there are now many choice gems, especially the triandrus and Leedsii crosses, which are coming to the front.

J. HARRISON DICK.

Some Fern Notes

Osmunda palustris crispato-congesta, which comes from H. B. May & Sons, Upper Edmonton, London, is a decidedly distinct variety of one of the most useful Ferns we have. It gained an award of merit at a recent meeting of the Royal Horticultural Society. The ordinary

O. palustris is a great favorite, as it is evergreen and stands exposure well. The North American *O. gracilis* is much appreciated for Summer use, but unfortunately, it is deciduous, and many think that when the fronds die off the plants are dead; and I have known many instances where those not acquainted with the habits of Ferns have thrown away valuable varieties when they have lost their fronds. Where young men are put into a department more care should be taken to instruct them regarding which varieties are deciduous.

The deciduous Ferns include *Adiantum digitatum*—better known as *A. speciosum*—*A. palmatum*, another choice and beautiful species, *A. lunulatum*, which is closely allied to *A. dolabriforme*, and *A. Henslovianum*. All of the above are rarely seen, though they are beautiful when in foliage. There is not so much risk with *Davallia bullata*, for the prominent rhizomes indicate life; but with *Davallia immersa* the slender rhizomes are under the surface.

I have known several instances where *Nephrolepis pluma* and *N. Bausel* have been thrown away when they have lost their fronds. The hardy sorts do not suffer such a bad fate, as they are left in the ground. A. H.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the offices is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12. Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Joa. H. Sperry, our representative, care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

The American Rose Society

The American Rose Society has commissioned the Rev. Dr. Spencer S. Sulliger of Vancouver, Wash., an amateur rosarian of repute, and one of the Pacific Coast members of several years' standing, as representative to the Annual Rose Show in England. Dr. Sulliger leaves New York this month for Great Britain. Richard Vincent, Jr., of White Marsh, Md., took a letter to the International Horticultural Meeting at Belgium, which he attended. These gentlemen will report back to the Society, their reports forming a part of its annual proceedings.

John F. Huss of Hartford, Conn., one of our prominent members, goes to France and Switzerland, and this trip also is in the interest of Roses.

The Society has closed up its premium list covering the Spring Show, with one exception.

An inquiry has been received from one of the Government departments as to the value and volume of Roses used commercially in the United States, and inquiries forwarded to the various distributing centers have brought responses which indicate that probably one-fourth of the value of all flowers grown under glass comes from Roses. The observations made in travel indicate that the Rambler classes of all Roses are becoming more and more in evidence, as of popular use, all of which shows that with the growth of the country the growth of nice things is also coming in for large development.

The officers of the Society wish to thank the many donors of special prizes for the prompt response and payment of their respective premiums.

BENJAMIN HAMMOND,

Fishkill, N. Y., May 14.

Sec'y.

A letter received from Mr. Richard Vincent, Jr., on Thursday, May 19, dated at London, stated that he expected to arrive in New York on Monday, May 23.

Mr. Vincent states he visited the Kew Gardens on Saturday, May 14, meeting there several well-known gentlemen of the horticultural world. He has also visited many leading horticultural establishments in and around London and reports that he has been treated royally everywhere.

All the horticulturists whom he has met have expressed their pleasure in that the American Rose Society thought enough of them to be represented by a delegate. Mr. Vincent further states that some of these growers are coming over to Boston to visit the show there next month and investigate how Americans grow Roses and Carnations. Mr. Bruton, editor of the "Horticultural Trade Journal," will head the party over.

The Greatest Orchid Discovery Yet

Messrs. Lager & Hurrell, Orchidists, Summit, N. J., advise us that they have in their possession the greatest discovery of all times, viz. a pure white *Cattleya gigas*. We are in great hope that this plant will be seen at the coming Orchid show at Boston.

The Great Orchid Show at Boston

May 26 to May 30

The opening of the Orchid exhibition at Boston, on Thursday, May 26, will mark an epoch in the annals of horticulture.

For the first time in America these plants will form the principal and great attraction of an exhibition, and the heaviest money prizes known are to fall to the successful competitors.

We understand that five entries have been made for the \$1000 prize and the handsome gold medal of the Mass. Hort. Society. The total number of entries made far exceeds the expectations entertained when the proposition to hold such a show was first made known.

We expect Boston to be the Mecca of all worshippers of the Orchid while the opportunity to see the great display is afforded.

The Hailstorm Record

Wind at Sixty Miles An Hour—Half Inch of Rain in Thirty Minutes

At Atlanta, Ga., several thousand dollars damage was done on May 12 by one of the worst hail and rain storms in its history. The maximum of the wind velocity was sixty miles an hour, a rain fall of half an inch was recorded within thirty minutes, and the ground was almost covered with hailstones. Trees were uprooted and many window panes broken.

From Lancaster, Pa., small hail losses are reported.

Butler, N. J., was visited by a lively sprinkle of hail, as large as Walnuts, on the night of May 8. J. G. E.

Brussels International Show

The first of a series of international horticultural shows to be held on the grounds of the Brussels (Belgium) Universal Exhibition was opened on Saturday, April 30.

Plants and Flowers

The planning and laying out of the exhibits of plants and flowers must have been done by a master hand, as nothing could be more artistically and scientifically arranged to please and attract the mind and soul of the true lover of grand and beautiful effects than the eye looked upon when entering the hall or pavilion wherein the show was held. The only section that could be found fault with was the one containing the Azaleas, in which the arrangement showed too much color to be pleasing, a fault hardly to be avoided. The flags of different nations, especially Belgium, were displayed on the walls or supports which added to the confusion of color.

On entering, after passing through an assortment of Palms, was to be seen, on the right, a small but neatly laid out garden, large enough for many a country home, with running water, and a bridge over a miniature lake, summer house, etc., the garden proper planted with shrubs in bloom in pots, the pots hidden in the ground, consisting of Lilacs, Snowballs, Metrosideros, Hydrangeas, Hibiscus, Azaleas, etc. A few evergreens and Palms were introduced to give effect. Vases of vines and flowers, Cinerarias, Calceolarias, Lilies, Geraniums, miniature beds of Daisies and Pansies made the garden beautiful in every sense of the word; no fairer picture could be painted or desired. There were other garden beds laid off and planted, but none exactly like this, the others being more of one kind, but the color combinations or effects were carried out so as to show everything to the best advantage.

Fruits

The exhibit of fruits was not as large as we expected to find them, but we were informed that there would be more later on, when more space was available. Such as shown were very nice, most of the varieties coming from the colonies of Belgium. There was a large exhibit of Citrus fruit from Africa, also Pears, Apples, Pineapples, etc. The Strawberries and Raspberries were extra good. Plants of Strawberries in pots, in bloom and with good ripened fruit, were prominent. A splendid exhibit of fruit in a glass case was well arranged and made an interesting show. The case contained Strawberries, Raspberries, Cherries, Plums, Nectarines, Peaches and a splendid assortment of foreign Grapes.

The Orchids

One entire side of the building had a raised promenade, on each side of which were tables running the whole length; one side was taken up with the Orchid display, and presented one of the largest exhibits of these popular plants ever made, and thousands of people viewed them daily with admiration. At the back of the tables was a row of medium-sized Palms, for a background to relieve the bareness of the walls. Between the pots or pans of

Orchids, everywhere, were small Ferns, that hid the bareness of the tables and made a nice bed of green to help show up the bright Orchid flowers. The value of this wonderful display in dollars would sum up to a very large amount.

Table Decorations

There were many decorated tables, the majority of them being laid without cutlery and table ware, nothing but flowers, plants and trimmings, spaces being left for the dishes, etc. The table taking the first premium was shown by a well-known Paris firm. This table was arranged with fine Orchids, entwined with *Asparagus plumosus*. The centerpiece were elevated about two feet, on fine cut glass supports, very frail, but neat; persons sitting on either side of the table could see one another through the decorations—a beautiful conception.

Outside Plantings

Near the building containing the floral display was a large piece of land, well laid off so as to be easily viewed and planted, each section by different growers. Blocks of evergreens, shrubbery, Roses, both dwarf and standards, fruit and ornamental trees, fruit trees trimmed scientifically as espaliers, pyramids, etc., were to be seen; also a lot of fantastically trimmed trees of Holly, Box, Yew and other close foliaged varieties. Along one of the avenues leading from the flower show were rows of Bay trees of very large size, both pyramids and standards, with enormous tops; these were exhibited by Sanders of Bruges. On other sections large plantings of shrubbery were being made at the time of our visit, much of this work having to be done as the buildings are completed.

R. VINCENT, JR.

National Sweet Pea Society of America

The following additional prizes have been offered for the annual exhibition of this Society, to be held in July:

F. E. Pierson Co.'s Prize, for the best 12 vases of Sweet Peas, first prize \$10, second prize \$5.

The Aphine Mfg. Co.'s Prize, for the best collection of Sweet Peas, open to florists only, first prize \$15, second prize \$10.

The Anton Zvolanek Prize, for the best 10 vases of Spencer and Unwin types, \$10.

The John Young Prize, for the best vase of Sweet Peas, of a variety never before exhibited, \$5.

We are expecting additional prizes and the regular schedule is now in course of preparation. The preliminary schedule will be mailed upon application to anyone requiring it.

If any concern or individual wishes to offer a prize for the coming exhibition, kindly notify the secretary. The prospects are that we shall have not less than 3000 vases exhibited this Summer. Details and particulars will be furnished later.

HARRY A. BUNYARD, Sec.

The Horticultural Society of New York

The annual meeting of the Horticultural Society of New York was held on Wednesday, May 11, at the Museum Building, New York Botanical Garden. The annual report was read, showing a year of increased activity all along the line. Three exhibitions were given during the year; one in June; a large one last Fall at the American Museum of Natural History; and one in March, in conjunction with the American Rose Society. At the meeting just held, the membership was increased by the election of 21 annual members and a life member. This makes a total net gain during the year of 40 members, three of which are life members. This advance is most encouraging, for if the Society can have a large membership, its usefulness in the world of horticulture will be greatly increased. If each member will consider himself a committee of one to add one more member to the Society, the desired result will soon be accomplished.

At the annual meeting the officers and members of the council for the succeeding year are elected. The election just held resulted as follows: President, Geo. T. Powell; vice-presidents, N. L. Britton, T. A. Havemeyer, Patrick O'Mara, Samuel Thorne, James Wood; secretary, George V. Nash; treasurer, F. R. Newbold. Council, elected members: F. L. Atkins, J. W. Cromwell, Henry F. Du Pont, Henry Hicks, John E. Lager, J. A. Manda, E. S. Miller, Clement Moore, W. Nilsson, F. R. Pierson, I. L. Powell, E. H. Roehrs, H. H. Rusby, H. A. Siebrecht, E. B. Southwick, James Stuart, J. H. Troy, Robert Simpson, W. H. Waite, C. W. Ward, C. B. Weathered, A. L. Willis.

It was decided to hold a Summer exhibition of plants and flowers at the New York Botanical Garden, on Saturday and Sunday, June 4-5. All are invited to make this exhibition attractive, whether members of the Society or not, by sending in exhibits. The following schedule has been prepared, and copies will be sent to any one by addressing the secretary, George V. Nash, New York Botanical Garden, Bronx Park, N. Y. City.

Peonies

Prizes	
Best 3 white varieties, 6 flowers each.....	\$5 and \$3
Best 3 light pink varieties, 6 flowers each.....	5 and 3
Best 3 rose varieties, 6 flowers each.....	5 and 3
Best 3 crimson varieties, 6 flowers each.....	5 and 3
Best collection of singles, 3 flowers of each kind.....	5 and 3

For the largest and best collection, not less than 6 flowers of each variety 25 and 15

Miscellaneous

Best collection of hardy Roses.....	10 and 5
Best collection of flowering shrubs and trees.....	10 and 5
Best collection of hardy Rhododendrons and Azaleas, or either.....	10 and 5
Best collection of hardy herbaceous plants.....	5 and 3
Best collection of Irises.....	10 and 5
Best 6 Orchid plants in bloom.....	10 and 6
Best 3 Orchid plants in bloom.....	6 and 4
Best 1 Orchid plant in bloom.....	3 and 2
Best collection of cut Orchids.....	6 and 4

Special Prize

Offered by Mr. L. S. Livingston

For the best collection of cut flowers of various kinds of the *Oncocyclus* or *Regelia* sections, or hybrids of these, not less than ten varieties, \$25.

GEORGE V. NASH, Secretary.

Greenhouse Ventilating Apparatus for Uptodate Automobile Factory

The Pierce Arrow Motor Car Co. of Buffalo, N. Y., are building new shops in that city and are installing window opening machinery throughout, furnished by the King Construction Co. The interesting part of this, to the average grower, is the comparison of the number of ventilator machines, fittings, etc., that go into this job as against the number required in the ordinary size greenhouse. There are 1490 sash that ventilate in this new automobile plant, and it requires 2980 arms and rods, and 135 machines, to operate them. One inch and 1 1/4 inch shafting is used throughout, and to support this shafting 1940 hangers are required. A special gear box and driving device was designed for this job, but with a view toward greenhouse needs, however, and we may see some of this new ventilating machinery in the mammoth houses which the King Construction Company are noted for building.

Publications Received

NATIONAL ROSE SOCIETY (Great Britain). ROSE ANNUAL for 1910.

We are in receipt of the National Rose Society's "Rose Annual for 1910" which, this year, has again been enlarged, and as several of the articles it contains are likely to be of permanent interest and value, the book has been cloth bound. The contents present a vast amount of information for Rose growers, which in the short space at our command it is not possible to fully enumerate. One of the most valuable features of the present edition, however, we believe to be that of the plans of Rose gardens, of which there are six, ranging from a comparatively small arrangement to one involving considerable expenditure in its preparation. These plans alone are worth several times the cost of the membership subscription, particularly to those who might be called upon to lay out such gardens. Among other notable contributions is an article by Alfred Tate on The Treating and Training of Weeping Standards, Knife and Secateurs (pruning shears) for Pruning Roses by H. R. Darlington, Plan of a Rose Garden by Miss Dorothy Page-Roberts, Half-acre Plan of a Rose Garden by R. C. Mount, The One Acre Rose Garden by C. E. Shea and Hybridization of Roses by Walter Easlea. Additionally, the 1910 Annual contains some very interesting illustrations.

This book can be supplied through The Florists' Exchange for \$1.25, postpaid.

Another publication issued for the membership of the Society is "The Enemies of the Rose," revised and added to by George Massee and F. V. Theobald, giving a life history of the different fungus and insect pests which attack the Rose, together with instructions as to how they may be kept in check and destroyed. Excellent illustrations have been supplied by Miss Beard (eight of which are color plates) which will assist in the identification of nearly all the enemies with which Roses may be attacked. Color plates 1 to 4 enable the observer to identify fungus diseases; color plates 5 to 8 show some 25 of the insect pests. Additionally, there are a number of illustrations in black and white. Treatment is given for diseases caused by fungi, the many kinds of which are fully described; also how to thwart the beetles, bees and sawflies, moths, aphides, scale insects, frog hoppers and leaf hoppers injurious to Roses, thrips, red spider; washes used for Rose trees, fumigation with hydrocyanic acid gas, concluding with the Rosarian's Pest Calendar.

Although the number of enemies mentioned in this little treatise seem at first glance to be many and formidable, attention is directed to the fact there are but three principal enemies the Rose grower is liable to be troubled with; namely, grubs and caterpillars, greenfly or Rose aphid and mildew.

This book can be supplied by The Florists' Exchange at \$1.25, postpaid.

A New Tulip Disease

A new Tulip disease is recently described in Möller's Deutsche Gaertner-Zeitung by a Swiss florist. Its vis-

ible sent is at about the middle of the flower stem, which becomes at this point almost transparent (watery), in sharp contrast to the portions above or below. The Tulips affected at first grow just like healthy ones until the flower is fully developed; then the fungus appears as above, and within a very few hours the flowers has drooped. It was found on examining the affected plants, that the bulbs had hardly rooted, these being rolled up in ball shape under the skin of the bulb. The varieties Rose Gris de Lin, Murillo and La Reine were affected the most (the last named as much as 70%), while Mon Tresor was not at all.

Casting about for a remedy, as he still had about 6000 bulbs to grow, the writer took first Rose Gris de Lin and dusted the bulbs with powdered sulphur as soon as they were taken out of the propagating house and set out into the open ground; this was repeated twice until they were in bloom. The treatment was entirely successful with this first batch as well as with other varieties so treated later. In order to verify his process, he forced a box of Rose Gris de Lin in another house, without sulphur, and out of 213 bulbs he secured but 58 healthy ones.

The writer intimates that the infection came in with the Dutch bulbs, since their 1909 crop was reported a failure, and he suggests that importers of bulbs should insist that the Dutch growers give a guarantee of fungus free and fully matured stock.

A similar complaint from Russia is reported in the "Handelsgaertner." Here many florists in the larger cities have incurred considerable losses. In St. Petersburg and Moscow, which import every year 300,000 to 400,000 Hyacinth bulbs from Holland, the loss is estimated at over 60,000 rubles. The defect in the stock is generally ascribed to the immaturity of the bulbs on being shipped.

Rose Dora Hansen

This German novelty, which was introduced last Fall, is favorably criticized by German rosarians as being an exceedingly free bloomer of lovely color and sweet perfume; authorities like the late F. Harms have prophesied for it a promising future both for cutting and forcing. A seedling of Mme. Caroline Testout X Mme. Jules Grolez, Dora Hansen is much superior to its parents as regards color and habit and profuse blooming. The plant puts forth sturdy, perfectly straight stems, often nearly 32 in. long; the wood is reddish when young, the leaves are large and firm and free from disease. The bud is long and shapely, and opens into an immense flower, even in the worst weather. The color is a pure, delicate salmon pink, which keeps fresh until the flower fades, showing none of the bluish shading that Testout sometimes takes on; this lasting quality makes Dora Hansen, therefore, one of the best Roses of its color for cut flower purposes. The edges of the petals are slightly curled. Young graftings will begin to blossom in June, before Testout, and are covered with flowers until the beginning of October. Dora Hansen is such a ready remontant, that one really cannot speak of a first and a second period of flowering. A rosarian growing a number of plants for a test, had some on which he counted 21 stems in flower at one and the same time, each of which could have been cut to a length of about 20 inches.

Dora Hansen was originated some five years ago by O. Jacobs of Weitendorf, Germany, and only after having been thoroughly tested in various soils and under various conditions, it was put on the market last year through the firm of Karl Boelcke of Rathenow, Germany. At the Jubilee Exposition in Mannheim it was awarded a gold medal and several honorary prizes.—*Rosenzeitung*.

Nursery Notes

ELGIN, ILL.—The D. Hill Nursery Co. is incorporating, with a capital of \$25,000.

HARRISBURG, PA.—The Berryhill Nursery has bought 45 acres of land along the Jonestown road for nursery purposes.

ASHLAND, WIS.—Mayor Bunday, a well-known Twin City nurseryman, has acquired about 1000 acres of land on Sand Island, which he will devote to fruit growing.

YORK, NEE.—The C. S. Harrison Nursery Co. has been incorporated. The company is composed of C. S. Harrison, H. S. King, and Fred G. Yule.

CARLINVILLE, ILL.—Will B. Otwell, for 20 years engaged in the nursery business here, has gone out of business and sold his stock. He will devote all his time in future to his publication, The Farmer Boy.

THE BOOK OF WATER GARDENING. By Peter Bisset. The only recognized authority on aquatics. Profusely illustrated. Price, postpaid, \$2.50. A. T. DELAMARE Ptg. & Pub. Co., 2 Duane St., N. Y.

The Late W. E. Hall of Clyde, O.

See Obituary Notice, Page 862

The Weeping Apple Tree, Elise Rathke

Landscape gardeners in search of an ornamental tree outside of the ordinary, who are undecided as to their choice, are advised by a writer in Moeller's Gärtner-Zeitung to give a place to the Weeping Apple, Elise Rathke, as being an eminently decorative tree, aside from its specific office as a fruit bearer. None of the German growers have yet succeeded in producing anything equal to it, although it has been on the market for a number of years. It was originated by the late A. L. Doering, a nurseryman of Elbing, Germany, who sold his entire stock of 60 to 70 trees to Franz Rathke, who then introduced the Apple under the name of his wife, Elise Rathke.

Low growing in habit, its drooping branches are richly hung with golden yellow fruit, which is slightly reddened where it faces the sun; the fruit is aromatic in taste, sweet with a certain tartness, and is considered to be one of the best dessert Apples, keeping until April or May. The parent tree is now nearly a quarter of a century old, and is still bearing and greatly admired for its beauty of form. Combining in so high a degree beauty with usefulness, this weeping tree offers the further advantage, from the lazy man's point of view, that the fruit is easy to pick.

Cornelius de Brandt

Cornelius de Brandt, father-in-law of Paul Mader of East Stroudsburg, Pa., passed away on May 13 after suffering from liver disease and dropsy. Mr. de Brandt was a native of Opywek, Belgium, and was in his 67th year. He spent his last three years in Mr. Mader's business and was of a pleasing, kindly disposition.

Henry Blanksma

Henry Blanksma, aged 38 years, a partner in the greenhouse firm of Blanksma Bros., Kalamazoo ave., Grand Rapids, Mich., died recently at Reed's Lake Sanitarium, of typhoid pneumonia.

William H. Sauls

William H. Sauls died at his home on First ave., Columbus, Ga., May 5, from paralysis. He was 86 years old and had been a cigar manufacturer in Columbus, for a number of years, and later was a well-known florist. Two sons, E. C. and C. G. Sauls, both prominent in industrial circles, survive him.

Joseph Lang

Joseph Lang, of 2010 Melrose st., Chicago, an old-time florist, died at midnight on Saturday, May 14, from peritonitis. The deceased was born at Elgeswerer, Baden, Germany, in 1854, and came to this country 30 years ago. For some time he was foreman at the Lincoln Park greenhouses, but later embarked in business for himself at the location where he died. The funeral was held on Tuesday morning from his late home, with interment at St. Boniface Cemetery. A wife, one daughter and three sons survive him. Mrs. Lang will continue the business.

Notable Washington Plantings

Among the most recently completed public buildings in Washington is the magnificent marble structure, the National Bureau of American Republics, on 17th st., in the Mall. This building, costing \$1,000,000, \$750,000 of which was the gift of Andrew Carnegie, is one of which any city might well be proud, and, like others of its kind, possesses some wonderfully entertaining surprises for the visitor.

In front, on the outside are two half circular flower beds filled with *Aucuba Japonica variegata* and with *Armeria* used as an edge. This work was done by J. H. Small & Sons.

The interior of the first floor is really a reproduction of an old Spanish courtyard, of no mean proportions, and containing over 250 different varieties of tropical and sub-tropical plants grouped into four beds respectively. These rare and most valuable plants were selected, arranged and planted under the direct and personal supervision of Wm. R. Smith of the U. S. Botanical Gardens, which supplied them, and stands without a compeer. Chief and conspicuous among the plants is a well-grown specimen of *Ficus pandurata*, labeled "The Peace Tree," and which was planted on April 26, at the formal opening, by President Taft, assisted by Wm. R. Smith, Col. Givens, Andrew Carnegie, Bishop Alfred Harding and others. The spade used by these gentlemen was of the highly ornamented type. Upon this occasion a long chain of Killarney Roses across the entrance was torn asunder by the President prior to entering. Towering above the other tropical plants are four rare old Palms, *Thrinax elegans*, 15 ft. tall, *Seaforthia elegans*, 15 ft., *Chamaerops Fortunei*, 12 ft., and *Cocos plumosa*, 12 ft. The beds are in each of the four corners of the court, and each contains one of the above named specimen Palms, completing in minute detail the tropical effect intended.

Much space would be required to give completely the names and a description of the other plants which go to complete this perfect picture. There are *Papyrus*, *Sansevierias*, *Coffee Trees*, *Bougainvilleas*, *Bananas*, *Ficus*, *Euphorbias*, *Mexican Bread Fruits*, and many even more valuable and rare plants indigenous to the South American republics which they represent.

In the center of the court is an electric fountain, as shown in the picture herewith, in which the water is kept in a constant state of agitation, changing in colors like the kaleidoscope. Above, are the individual flags of the 21 republics, decorating the corridors of the main hall overlooking the court. The roof is of glass, iron framework, and so arranged as to be controlled entirely by electricity with regard to ventilation.

The floor of the court is of tile, in imitation of brick, with grotesque figures of the old mummies and South American Indians of centuries ago. In referring to this wonderfully arranged court, Mr. Smith spoke with his accustomed modesty, as though it was a trivial matter to lay out, plan and plant such a place, but it stands as a living monument to his world-wide fame and ability in this line of work. Speaking of the Fig tree, also included in the collection, Mr. Smith remarked that the leaves were of sufficient size to have made Eve a Scotch costume, and perhaps larger than the original leaves used for the purpose.

JAS. L. CABBERY.

Group of Palms in Garden of Dr. R. Schiffman, Pasadena, Cal.

Represents a group of Palms inside of the main entrance at the junction of two driveways. Those to the right and left are *Chamaerops Fortunei*, that in the center is *Chamaerops excelsa*; the hank seen to the left of the driveway is planted with *Dorothy Perkins* Roses, and the large shrubs above these are *Romneya Coulteri*. The hedges bordering the driveway is *Laurestinus*.

Destruction of Eelworms in Garden and Greenhouse Soil

In Farmers' Bulletin No. 388, issued by the U. S. Dept. of Agriculture, dealing with experiment station work, the subject of the destruction of eelworms in garden and greenhouse soil is dealt with as follows:

Eelworms or nematodes in garden and greenhouse soil constitute a serious and troublesome pest for which it is extremely desirable to find some simple and practical remedy. Experiments on various methods of destroying eelworms have been carried on for many years by G. E. Stone, of the Massachusetts Experiment Station, and a recent report of that Station gives some of the practical results of these experiments.

As Dr. Stone points out, the use of lime is often advocated for destroying the eelworms, but his experiments show that lime has little or no value for this purpose. In fact, it was found possible to keep eelworms alive for several days in a saturated solution of lime-water.

"Undoubtedly the application of lime to greenhouse soil improves it by modifying its acidity, but eelworms will thrive in soils which are not acid."

The use of formalin has been recommended, but the experiments at the Mass. Station indicate that this is not effective in killing the worms, and besides cannot be used on soils containing growing plants on account of the injury likely to result to the plants.

Of late years formalin has been recommended as a remedy for eelworms on Violets. This is used by applying it to holes made in the soil where the plants are growing. The formalin being volatile, the gas penetrates the soil and is said to kill the worms. Our experiments with it would not seem to warrant the use of this method of treatment, as formalin is injurious to plants, and there is reason to believe that it would not affect in the least the eggs of eelworms, which are fairly well protected by a resistant covering.

The methods used with more or less success at the Mass. Station for destroying eelworms in greenhouse soils were as follows:

Sterilization.—This is one of the cheapest and best methods of destroying eelworms in greenhouse soil. It is necessary that the soil be heated to at least 180° F., and a higher temperature is better. This is accomplished by driving steam through the soil by a system of perforated pipes.

Freezing.—If the soil is frozen for any length of time the eelworms are destroyed, and some use has been made of this method by practical growers. As a rule, the soil is removed from the house and frozen in bulk out of doors.

Desiccation.—Drying the soil is destructive to eelworms, but it is difficult to dry soils sufficiently in deep benches to make this method effectual. The application of unslaked lime, however, will materially aid in drying the soil, by virtue of the water-absorbing qualities of the lime.

Trapping, or the catch-crop method.—It has been found in Germany that sowing very susceptible crops, like Mustard or Rape, on soil contaminated with eelworms, and, after the females have become encysted in the roots, pulling up the plants and exposing them to the drying rays of the sun, is capable of reducing the worms to some extent in contaminated soils. We have found, however, that two or three catch crops are much better than one.

The Massachusetts experiments indicate that in some instances simply flooding the soil may prove a successful means of destroying the eelworms, and that manure infected with eelworms may be safely used on garden and greenhouse crops if left for a sufficient length of time in water.

Interior Court in the National Bureau of American Republics Building at Washington, D. C. The Arrangement of Plants was Under the Direction of Wm. R. Smith

THE BOOK OF WATER GARDENING. By Peter Bisset. The only recognized authority on aquatics. Profusely illustrated. Price, postpaid, \$2.50. A. T. DeLaMare Ptg. & Pub. Co., 2 Duane St., N. Y.

Among the Growers

Woodside, L. I., in Greater New York, is the home of many florists, all engaged in the production of plants and flowers for the New York market, and the products of some reaching distant markets. The following ranges were recently visited:

E. C. Matthes, Woodside, L. I., N. Y.

Five houses at this establishment are at present devoted to growing *Asparagus plumosus nanus*. As far as possible, solid beds are used and give the better results. A temperature of not less than 65° is maintained. The plants in some of these houses are now five years old, but are very productive; in fact, all the *Asparagus* in the range is very thrifty and shows good culture.

Five houses are used for the growing of Stocks. Beauty of Nice is the variety grown, and a very abundant and choice cut of flowers is obtained. A few other varieties like Elizabeth, and Bismarck, are being tried out. After the season for Stocks is over, the five houses and two others are to be used for 'Mums, which are now growing on in another house. The varieties used are Virginia Poeldmann, Helen Frick, Golden Glow, Bonnaillon, Jeanne Nonin, and White Ivory. These are set directly in the ground, neither bench nor solid bed being employed.

Three houses are used for Carnations. Boston Market being the only variety grown. Gladioli are grown outside in large quantities. Augusta is the only variety used. Callas also are grown in large pots.

William Schilowsky, Jr.

Boston Market Carnations are grown here in two houses. This appears to be the favorite variety in this section.

One house is used for Callas, part being grown on benches and part in pots; the latter proves more prolific. Home grown bulbs are used and are much preferred to California bulbs.

Beauty of Nice Stocks are grown, and home grown seeds are employed at the outset. Several hundred plants of *Hydrangea Otaksa* are well covered with blooms, including some of the blue tint, and all will be in just the right condition for Memorial Day.

Henry Ulrich

Practically the whole range here is devoted to growing Boston Market Carnations. The plants are exceedingly productive, even now giving a cut of 10,000 to 15,000 per week. A few plants of Fair Maid are also grown.

The young stock has all been planted out in the field.

Thomas F. Ehrhardt

In this range there are five houses of *Smilax* grown in solid beds, and three houses are used for Genevieve Lord and Boston Market Carnations. Both the *Smilax* and the Carnations show good care.

Outdoors is a block of 2000 General Jacqueminot Rose bushes, stock well worth going to see. From the present outlook the plants will give a very large cut of flowers this season. Last year, from these same bushes, 15,000 blooms were cut on some days, and about 150,000 blooms from June 1 to July 1.

A small block of Tree Peonies is noticeable. The plants were set out many years ago, and bloom earlier than the herbaceous variety. About 800 herbaceous Peonies are now beginning to bloom. This stock was sent from Germany several years ago. The color is a deep red with a very full center.

Charles Smith's Sons

This range is now undergoing considerable repairs. Six houses are used for Carnations Boston Market and Genevieve Lord and five for 'Mums. The varieties of 'Mums used are Jeanne Nonin, Halliday, Pink Pompon, Major Bonnaillon and pink and white Ivory. One house is used for Sweet Peas. The young Carnations are now all in the field and the young 'Mums are growing on.

Satow & Suzuki

A Summer blooming 'Mum from Japan was noted here, of a deep yellow shade tinged with saffron color.

Five houses here are filled with potted Roses, chiefly Magna Charta, and Ramblers. Five houses are used for 'Mums, which are now being given proper attention; after the 'Mums are out they are to be followed by Poinsettias, which are now being propagated. About 500 plants of *Hydrangea Otaksa* in large pots will be ready for Memorial Day. The whole range shows good culture.

C. Schafer

At this range several thousand Japanese Lilies, which have been already started, are being transplanted into outdoor frames. Three houses are filled with potted Roses, varieties Magna Charta, Ulrich Brunner, and that old-time favorite Hermosa. About 1000 extra strong Crimson Baby Ramblers are growing here, as good as can be seen anywhere. The blooms for some reason are especially large. Callas are grown here in 5-in. pots, plunged. Attention has often been called to the different ways in which Callas are grown, each way having its advocates—directly in the ground, in solid beds, on raised benches, in large pots, in 5-in. pots, in plunged pots. Which now is really the most profitable way of growing Callas?

Hartman & Wagenfohr

This firm has just now a very large trade in vegetable plants at wholesale. Some extra fine potted Fran

Establishment of E. C. Matthes, Woodside (L. I.) N. Y.

Karl Druschki Roses are grown here. The canes of this Rose grow so long that they can be bent around like the Rambler Roses, and a large number of blooms on one bush are produced. Magna Charta and Ulrich Brunner are also grown, and in the Ramblers, Dorothy Perkins, Tausendschön and Crimson Rambler, all showing good culture.

Callas are grown here on benches. In going among the various growers it is noted that a large number are growing a house, or a bench or a considerable number of pots of callas, and the thought arises: "Is the Calla gaining in public favor?"

F. Weinberg

Over the office door of Mr. Weinberg's greenhouse is the one word "Cacti." In addition to Cacti he grows that class of plants known as "succulents," and also

odd and rare plants. Here a collector would have his fill of pleasure. Except to collectors little is known about Cacti, and yet the Cactus is an American plant, and aside from certain African species of the *Euphorbia* genus of Cacti, this great family of nearly 1000 species is absolutely restricted to America. There are, in all, twenty genera of Cacti, five of which are represented in the United States. The greater number grow on the burning plains of Mexico and Brazil, and in the West Indies. They are for the most part devoid of leaves, thus preventing evaporation, and are provided with spines. The ovary, ripening into a fleshy fruit, is often edible, and in some species some part of the plant itself is eaten. The natives gash the plants with their knives, and drink the cool and refreshing juice; and even cattle suck the juice from the Cacti after wounding them with their hoofs. The blooms are usually conspicuous; often large, and of very brilliant color.

Cacti can be propagated by seed divisions, offsets, and cuttings, the seed method being the best. This brings to mind Peter Henderson's dictum. "When a plant comes true from the seed, that method of propagation gives a better plant than any other." The soil for Cacti should be equal parts of fibrous loam, old lime rubbish and clean sand. A complete season of rest should be followed by one of excitement. In winter a temperature of 50° is sufficient. A house sunken about two feet, so as to obtain dampness without much watering, is preferable. A well drained pot is an absolute necessity. Mr. Weinberg has the most complete commercial collection of Cacti in the world, and is an exporter of Cacti, succulents and rare plants. At his establishment may be seen Cacti from 2 ins. to 10 ft. high, and of many different shapes and colors. The genus *Cereus* includes many of the larger Cacti. A *Cereus giganteus* is seen here 6 ft. high and weighing 650 lbs. The shape is that of a huge club. The *Cereus macrogonus* is also seen here and is 11 ft. high and channeled like a Corinthian pillar. The *Phyllocactus* have hair-like spines, of which the *Phyllocactus senilis*, "Old Man Cactus," is one of the most interesting. Many of the *Echinocactus* genus are of a globular shape, and are called "Hedgehog" Cacti. It is now too early for many Cacti to be in bloom, but some fine specimens of *Phyllocactus Gaertneri* are now literally covered with large scarlet blossoms. Those mentioned are only a few of the very large and interesting varieties of Cacti seen here.

There are grown here a great variety of succulents, among which are the different species of Agave, some of which bloom only after reaching a great age, and then die; also many species of the Aloe, Crassula and Euphorbia. Some trained specimens of the *Euphorbia splendens*, with their brilliant blooms, are very attractive. Odd and rare plants too numerous to mention are grown. Altogether about 2000 species of plants are grown here, including the Cacti. A collector of Cacti and of rare plants can here enjoy himself to the limit.

Mr. Weinberg, besides plants, has about 100 varieties of snakes, poisonous and non-poisonous; forty varieties of lizards, from land and water, including the poisonous Gila Monster; twenty varieties of turtles, porcupines, horned toads, etc. These various reptiles he takes over to the zoological gardens of Europe, and brings others back to this country. In short, Mr. Weinberg not only supplies collectors in this country but is an exporter and importer of plants and reptiles.

Establishment of J. T. Conger, Hartwell, Ohio

Showing his new salesroom and the ends of four of his houses, each 24x100 ft. In all he has some 11,000 to 12,000 ft. of glass. Mr. Conger has built up quite a business in this locality and surrounding town during the past ten to twelve years.

Proposed Gladiolus Society

Editor The Florists' Exchange:

I am in favor of a Gladiolus society. Its chief aims should be: Restriction of naming sorts, unless of distinct and advanced merit; elimination of less desirable stocks; diffusion of press matter regarding the merits, culture, uses, etc., of the Gladiolus; giving exhibitions in districts, States, or nationally; nomenclature, etc.

Anything to popularize, advance sales, extend its culture, etc., we should all stand for. A better time to bring the matter to a reality would be at the S. A. F. meeting at Rochester. A preliminary hearing from interested parties, with ideas of an initial exhibition, amounts to add to a fund for prizes, ideas of various matters of moment all might be sent to Mr. Fuld with power to issue a condensed report for concurrence, through the EXCHANGE columns; all this would be in the line of a constructionary move. I stand ready to do my share, personally and financially.

Canal Dover, O.

C. BETSCHER.

Help Wanted

Editor The Florists' Exchange:

In your issue of May 14, "One of the Help" raises the question as to whether employers could get the help were they willing to train it. As an ex-employee, and now an employer, and as one who has trained many boys and young men, and has seen many of these obtain first-class positions after leaving his employ fully equipped as to knowledge of their pursuit to easily retain the same, I think myself fully entitled to answer.

Care should be taken in the selection of proper material; it is little short of a crime to keep a boy at a business for which he is not fitted.

As to the comparison of wages and hours. There are few trades which present the opportunities afforded by that of the florist's to get into business for one's self. It is not the hours spent at daily labor which count near as much in the long run as the progress made. For the truth of this assertion question any of the hundreds of florists who have risen from the ranks!

A young man entering the growing end of the business at age 16 should be a foreman at age 25 and in business on his own account very shortly thereafter.

These opportunities may not always prevail, but they are certainly with us today, and intelligent, hard working observant young men, not afraid of long hours, are qualifying as employers in the near future.

BEEN THROUGH THE MILL.

Magnolias Bearing Seeds

Editor The Florists' Exchange:

Referring to an allusion to fruitfulness of Magnolia stellata, in The Florists' Exchange, I have two large plants which for the past several years have fruited more or less sparingly. Some seasons they have had very few seed cones, probably not more than a dozen seeds, but other seasons I have had as many as two hundred seeds from one plant. Another plant, about ten miles from here, also bears in about the same way. These seeds are cleaned and stratified in sand and kept dormant, but not too dry, until after New Year's, then sown in a greenhouse in early Spring. Young seedlings are grown in pots till Summer, then planted out in open ground. They commence flowering about the third year and appear to come nearly true to type and make satisfactory plants.

Magnolia Kobus fruits much more freely and grows very readily, and I find it an excellent and cheap stock for grafting stellata, conspicua and other Chinese sorts upon. Kobus appears to be too little known and not properly appreciated. It can be grown cheaply as shrub. I have one plant about forty years old and thirty feet high which blooms freely every year and usually, fruits freely. Some Kobus seedlings are rather shy bloomers, not commencing to bloom until five or six years old and then not flowering as profusely as Magnolias are expected to, but it is only a small percentage of the seedling plants that do so and it is probably these few which have helped to prejudice public opinion against a desirable tree. When they are planted more freely they will be better liked.

Morrisville, Pa.

SAM'L C. MOON.

—Mr. Moon's notes are very interesting. As before mentioned, the writer's trees of Magnolia stellata have never borne a seed, but at this time, as three or four little "cucumbers," as the immature cones are called, are still in good condition on a bush he hopes to see some ripen this year.

A large tree of M. Kobus was here for years, and it bore flowers and seeds abundantly every year, but from some unknown cause many of its large limbs have died

back, so that there is not much life in the old tree now. Kobus and Leonel are the two best seed bearing varieties of all the foreign sorts. Leonel, being but a hybrid, cannot be relied on to come true from seed, but its seedlings have come pretty close to the original in those observed.

Mr. Moon's method of treating seeds for sowing is the right one. There would be few failures were his method followed.

J. M.

Parisian Dahlias

These form an interesting race of Dahlias, of rather recent origin, very ornamental and striking in that the petals are edged by a wide band of some sharply contrasting color; the plants are semi-dwarf, growing to a height of not more than 27 in. The type was originated by A. Millet of Bourg-la-Reine, Department of the Seine, France, who relates the history of the Parisian Dahlias and gives their characteristics in the "Revue Horticole."

Some twelve years ago Millet crossed an ordinary Dahlia with some dwarf varieties of his collection which had shown a tendency to produce bordered petals, a variety with semi-double, chamois yellow flowers being the one chiefly used. While the results were not encouraging at first, he obtained in 1901 the first nearly fixed variety, which he named Paris, the petals having a wide center edged with a remarkably broad band of crimson. The seedlings of Paris came about 50 per cent. true to the type.

Continuing his experiments, he finally, by 1904, introduced nine well fixed varieties, each different in shape, and with distinct bands of color bordering the petals. This was the starting point for a new race of Dahlias, which he named Parisian, after his first success, Paris.

Parisian Dahlias

1, Paris; 2, Tour St. Jacques; 3, La Seine; 4, Observatoire; 5, Opera.

In the picture, taken from a lithograph in the *Revue Horticole*, in addition to Paris is shown the following: Observatoire (Observatory)—No. 4 in the picture, which has white petals banded bright yellow, is about contemporary with Paris; three others shown are more recent, Tour St. Jacques (Tower of St. James) is white banded purple; La Seine is yellow banded red; Opera is white banded red.

At first the flowers of this new race were rather regular, round and umbrella-shaped, but the later varieties show different forms; the petals may come either twisted in screw-shape, incurved to form a cup, bulging out, or straight, or even curling up like shaving. The florets of the discs also vary, giving to each variety a distinct character.

The flower of this race is single, that is to say, the disc is always in plain view; but there are sometimes two rows of petals, and occasionally some florets of the disc have a curved prologation which is evidently an attempt at a petal.

The Parisian Dahlias are especially well suited for beds and borders; and also effective in groups, blooming freely until the frost. The flowers are borne on erect stems, and rise well above the leaves; they will keep for a long time when cut.

Raising Pelargoniums from Seed

Raising zonal Pelargoniums from seed is one of the most pleasing duties of the gardener. The seed may be obtained from a seedsman, or may be saved at home. First of all, if the seedlings are to be really good the parents must be first-class, and therefore half-a-dozen or so good-named sorts, either of doubles or singles, may be obtained and potted on into 48-sized pots (about 4½ in. to 5 in.). If healthy and well rooted, these will quickly start growth, and when about 6 in. high should be headed and made to break into several side shoots. When these in their turn become of sufficient length to show bloom trusses they also may have the extreme tips of the shoots nipped out. Here, however, care must be taken to get several trusses about the same age, as otherwise it will prove awkward later on. To ensure this it may be expedient to pick off some of the very early trusses in order to await others which will flower with the more backward shoots. It is not advisable to get the plants too rank and sappy in growth, and feeding must not be resorted to, although a fairly free growth is beneficial. By this treatment the plants should, in a short time, have run up trusses, and in due course flowers will commence to expand. It is advisable to select those it is intended to use as seed-bearers right away, and only use them, not crossing at haphazard and so lose all count of what has been done.

Now for a word or two respecting the different floral organs. When the flower expands fully it will be seen that in the center is a short spike like the point of a pin. This is the stigma, and about the second day after opening, all round this central spike will be seen four or five flat pad-like bodies completely covered with reddish pollen. These are the anthers. If these are watched it will soon be found that they have fallen off, but the stigma is no longer merely a spike, but has unfolded, and now presents the form of a sea Anemone. It is now clear that the flower to become the seed parent must of necessity be much older than the flower from which the pollen is to be obtained, because as already pointed out, the anthers have dropped off long before the stigma has fully developed. I will suppose that the grower has a number of trusses all flowering in different stages. The stems are hard and the plants not too succulent. If this is the case, commence crossing at once. First get the smallest sable or camel-hair brush, obtainable at an artist's shop, and on a sunny morning gently collect the pollen from the anthers of a newly-opened flower and transfer this to the stigma of another. Here comes an important point, namely, there is a proper time for this transference of pollen, and it may be done too early or too late, but no written rule can be given. There is a very easy means of testing, and after a few experiments the manipulator of the brush can tell when he is doing right. If when he transfers the pollen to the stigma the surface of that organ appears to be dry, and the pollen does not adhere to it, desist at once, and wait another day; but if the pollen seems to show a partiality for the stigma and can be seen dusted upon it in preference to the brush, all is well, and I do not advise re-crossing on successive days under the impression that it must be right sometimes.

The grower will now pollinate as many as he thinks fit, but not too many on one truss, which reminds me that when, say, eight or ten blooms on one truss are safely fertilized the remainder of the buds should be removed with a pair of scissors. Of course, the first flower that opens on a truss will be the first ready for crossing, and so on. When fertilization is complete the florets quickly drop, and the stigma shrivels up, but in its place there grows a spike over an inch in length. This does not contain the seed. These, strange to say, are produced at the base of the spike or "crane's bill," and appear to be stuck on the bulb of the spike, and later, when dried, it will be found they have a spiral, plume-like, fluffy down. Any flower not properly fertilized soon decays, and the grower will not be long left in any doubt as to which are right and which failures. The developed spikes can be left until they begin to turn brown, and may then be picked and dried, when they burst open and liberate the seeds.

During the period between the crossing and the picking of the seeds the plants should be kept rather on the dry side, but not dry enough to rob the growing seed of sufficient nourishment, and, above all, should have plenty of sun, or at any rate be placed in a light, airy part of the greenhouse. I might add that very few spikes produce a full crop of seed. Some have one, others two, and up to as many as five, according to the success of the crossing.—H. S., Sussex, in *Journal of Horticulture*.

CULTURAL DIRECTIONS

For the benefit of Seedsmen and all who retail Seeds, Bulbs, Trees, Shrubs, Fruits, etc., we have had written by experts over fifty single page leaflets covering the raising and care of these various subjects. Their free use will save your clerks much valuable time. Samples will be forwarded on application.

Stray Notes from Abroad

BY T. A. WESTON

The Label Problem

The label problem is always with us, and while we tolerate the wood and zinc labels for herbaceous plants, etc., we still continue to look for the ideal label for permanent stock, such as Roses and shrubs.

We have the plain zinc, which require indelible ink; stamped zinc, such as the Acme; stamped lead; and aluminum. The Acme is probably the finest permanent label ever handled by the sundriesman, but its cost prevents it becoming popular, except in a limited way.

The aluminum label is clean and is easy to write upon, and it steadily gains favor among Rose growers.

Perhaps the smartest label ever devised is the B. K. Fally, which at present is solely a Rose label. This is made of porcelain, specially baked so that it will stand any degree of temperature. The makers stock some 600 names, but are prepared to supply additions. The names are, of course, burned in, the reverse side being decorated with the name of the firm supplying the varieties; that is to say, any nurseryman may have his name indelibly fixed on the label, thereby insuring that his customers cannot mislay his address, while the label may also prove an advertisement. These tallies retail at something like two cents each.

Usefulness of the Rose Tausendschoen

The new Rambler Rose Tausendschoen is going to prove even more valuable than was anticipated, for while it has not the vigor and freedom of Dorothy Perkins, its giant flowers and charming tints make it extremely attractive. London florists are making great use of it for decorating and, furthermore, they find it will sell as a cut flower. Cut bloom is now being brought into Covent Garden Market, and when once people find that it lasts longer than any other Rambler it will be in great demand.

The newer Lyon Rambler has a good reputation, but up to the present I have not seen it, and, being a greedy individual, I have cut back my own plant hard for stock purposes, rather than allow it to bloom this season. One thing is certain, Lyon Rambler is a good grower, and it will surprise me if it does not equal Dorothy Perkins in this respect.

Popularity of the Lyon Rose

Speaking of Roses, it is worth recording that the Lyon Rose bids fair to be the most popular florists' variety of the day. This Rose, must not be confounded with the Lyon Rambler, nor the Lion, for it is a Hybrid Tea and not a climber. R. F. Felton, the famous florist of Hanover Square, is now receiving some of the most beautiful Lyon Roses I have had the pleasure of seeing. Not all growers can get the variety in good color under glass, but Mr. Felton's grower has obtained the secret, for the display put up by Mr. Felton at a recent R. H. S. meeting was immensely fine.

Some New Gerbera Hybrids

Coupled with the Lyon Rose was a mass of new hybrid Gerberas of French origin. Mr. Felton appears to control this particular strain, for I have seen none to equal them for size and vigor. The strains exhibited by such firms as Veitch appear to be smaller and more formal in shape. Felton's protégés however are giants, some nearly 4 in., with stems nearly 2 ft. in length. The colors range from yellow through the most beautiful shades of satin pink and strawberry, down to brick red. Many of these Gerberas possess exactly the same tints as does the Lyon Rose, and, as staged by Mr. Felton, the color scheme was sufficient to cause a mild furore among the visitors. The exhibit, which was only 7 ft. by 4 ft., was awarded a silver flora medal, an award rarely given for so small an exhibit.

Show Pelargoniums Coming into Favor

Show Pelargoniums, which at one time were highly thought of, are now gradually coming into favor again, and of late years there has been an influx of new varieties from Germany, which are generally conceded to be superior to the older varieties. Pelargoniums, for cut blooms, are quite largely used in florists' work, the white sorts being favored in preference to Azaleas by not a few. Grown in standard form, Pelargoniums make splendid decorative plants, and a variety largely used for this purpose is Clarinda; the flowers are a bright rose color, not over large, but freely produced, and when staged in mass as was done by a private grower at the mid-April R. H. S. meeting, it is very telling. Stuart Low & Co. are making a feature of this variety in standard form, I understand.

Notes on Cinerarias

One may almost venture to predict that the grandiflora type of Cineraria, with its massive circular flowers, will eventually be displaced, for the wonderful strides made with the stellata and Cactus forms indicate which way breeders are working. Sutton & Sons' strain of Cactus-flowered Cinerarias, when exhibited in mass, presents a sight for sore eyes, for the colors range

from true blue, blush, blue tipped, red, red tipped, pure white and pink, both twisted and straight petaled flowers being among them.

Two distinct varieties of the small-flowered type are Lady Thistleton Dyer, and Feltham Boquet. The former is treated as a perennial and its habit is after the stellata type, the foliage being small and covered with a whitish film. The flowers, which average about 1 in., or white edged blue, and abundantly produced.

The other variety is a distinct hybrid, obtained by crossing C. multiflora with stellata. Although first shown some two years ago, it is not generally known, but when once a variation in color is obtained it will open up a new type that will prove useful for florists' work. This striking Cineraria is an enormous grower, standing fully a yard high and as much broad. The stems are almost like those of a Dahlia, and the trusses of flowers, which are a peculiar rosy mauve shade, with purple eye, are borne in enormous panicles. The individual flowers are small, but what they lack in size they make up in number. To my mind this monster Cineraria offers great possibilities, providing seed can be obtained, a point I am not enlightened upon.

Some International Price Comparisons

Despite the clamor made for tariffs on this side, owing to importations of foreign products, a glance at your New York prices for April 9 indicates that it is possible to over produce, and so bring down value without the aid of foreign importations. For some little time past Carnations, including Lawson, Britannia, Enchantress and White Perfection, have realized in Covent Garden Market prices ranging from 1/6 to 3/- per dozen, and on St. George's Day, April 23, when the demand for Roses overshadowed other things, the prices for Carna-

Simple Hanging Device for Seed Boxes

tion specials was 2/6 per dozen, equal to about \$5 per hundred, against New York's \$2. Richmond Roses have been realizing 1/6 to 2/6 per dozen, and, on April 23, specials were up to 3/ and 4/ per dozen, equal to nearly \$8 per hundred—and not 3 ft. stems at that.

When it comes to Daffodils, however, we can do these cheaply, for the blooms have to be good to bring 3/- per dozen bunches, or about 100 blooms. Generally, the price is much lower, often down to 1/- per dozen bunches of 12 dozen blooms.

Superior Introductions Reduce Profits

It is not often that one runs up against a grower who admits that the introduction of a new variety of plant kills the profit in that particular culture. This, however, was stated to be the case with regard to our leading Strawberry, Royal Sovereign. A grower who specializes in forced Strawberries and Chrysanthemums recently informed me that the appearance of Royal Sovereign, some years back, knocked the bottom out of Strawberry culture. In the old days, when Sir J. Paxton was the leading variety, prices always ruled high, but with Royal Sovereign yielding treble the crop with far less trouble, and propagating like a weed, down came prices, never to rise again. This applies equally to outdoor culture. This fact tends to suggest that the plant

breeder can do the commercial man a bad turn by introducing a plant that is easy to grow and a prolific yielder.

The Auchusas

I note that Auchusa Italica, Dropmore variety, has found favor in the United States. If not already known, the variety Opal should also receive attention, for it is a beautiful bright blue, considerably paler than the first named variety.

A Simple Hanging Device for Seed Boxes

When visiting the great nurseries of Wells & Co., Sydenham, I observed an ingenious wire hanger for suspending seed boxes from the roof. Having found it inadvisable to erect permanent shelves, owing to the stoppage of light, Mr. Wells designed this hanger, and by its use he is able to suspend boxes, thus placing them out of the reach of mice and vermin, beside giving more bench room for other things. The claws act in the same way as do those used on cranes, the weight creating the grip. I append a rough sketch. A patent was applied for, but Mr. Wells never completed the transaction.

Another space saver used by Mr. Wells is a skeleton shelf fixed down the centers of his Fern houses. These are simply two narrow bars, wide enough apart to allow 7" pots to drop as far as the rim. These skeleton shelves are used for Aracarias, and the plants do well, for air plays around and underneath the pots, while the Ferns underneath are not deprived of any great amount of light.

Facts Concerning Lilies

As relating to the paper on Lily growing recently appearing in the EXCHANGE I might mention that the great Lily grower, W. H. Page, referred to by J. Harrison Dick in your columns recently, has small trouble about timing for Easter or any other date. At the recent R. H. S. meeting he showed some splendid flowers which were, he informed me, from bulbs he purchased in October, 1908. He placed in cold storage many thousands at that time, and this same batch kept him going through 1909, and in April, 1910, he was still using them. Respecting longiflorums, some growers prefer not to handle them to any extent, as their salesmen find many people prefer Arums, owing to the powerful and sickly perfume of the longiflorum type when massed in a room.

Fighting Plant Diseases and Pests

Science, in fighting diseases in plants, develops rapidly, more so, perhaps, than in other directions. While for centuries the energies of scientists have been devoted to combating diseases that affect animal life, it is only in comparatively recent times that really determined efforts have been made toward elucidating the mysteries that conceal the workings of pests and diseases affecting plant life. Many there are who declare that modern plants are more addicted to disease than earlier forms, but probably the real fact is that all forms of plant disease have been prevalent from the time of Adam, although cultivators have been content to let things slide. Lack of knowledge and care has doubtless brought about an increase of disease, and growers have been compelled to give the condition attention and seek the aid of the scientist, who has, perhaps, scared us not a little with his terrible names, and whose advice sometimes may not prove satisfactory; but, nevertheless, it is to him that we are indebted for the knowledge of how diseases and pests propagate, and this knowledge, coupled with his assistance, has enabled us to combat things that might easily make it impossible to cultivate certain plants.

I am led to make these remarks through a chat with a well known Fern grower, whose nurseries were in the grip of the Fern mite, a pest introduced through some bought stock. This occurred some years ago, and being unable to secure any reliable information as to clearing out the pest, he enlisted the help of one or two doctors, and between them they experimented. Crude nicotine proved useless, for it killed the plants without injuring the mite. After some weeks of worry, they hit upon formalin; this fluid settled the mite, but many thousands of Ferns were destroyed before the right strength at which to use it was discovered. Formalin, the doctors informed the grower, would harden skin, and it was surmised that by hardening the backs of the mites trouble to them would follow. It did, for the fluid caused the mites to crack open, and ended their days in quick time.

In much the same way the method for coping with the dreaded silver leaf disease in Plums and other fruits was suggested. Nothing could be discovered that would shed light upon the actual cause of this disease, but someone suggested the use of sulphate of iron, and this was applied by boring into the stem of the tree and plugging the holes with sulphate. The notion was ridiculed at first, but it is gradually becoming apparent that injections of such kind can, and do clear silver leaf and chlorosis in trees.

In Germany, an experimental injection of iron sulphate cleared a number of trees of chlorosis, and quite recently a famous Jersey nurseryman reported that he had succeeded in curing a number of trees affected by silver leaf in the same manner.

Greenhouse Construction and Heating

[Readers desirous of further information on any subject mentioned in this series will have their questions freely answered. Address your envelopes Construction Dept., care of this paper.]

Article III—Continued

Large vs. Small Houses

The terms "large" and "small" being only relative do not convey a very clear idea as to the size of a house, and the question would naturally arise: What is a large and what is a small house?

Not many years ago a small house was considered anything less than 18 ft. wide, and few growers cared to deviate from the regular beaten track of an 18 ft. or 20 ft. wide house; but when some of the more enterprising ventured beyond these limits and erected houses from 25 ft. to 30 ft. wide they were looked upon as large houses.

We can safely say that at the present stage of greenhouse construction any house 35 ft. wide or less may be classed among small houses, and large houses include everything above 35 ft. wide. At the present time a house 60 ft. to 70 ft. wide is generally looked upon as the practical limit, but the strides with which greenhouse construction is progressing seem to indicate that this limit is likely to be increased, as, already, houses of 150 ft. wide and over have been erected successfully. From the grower's standpoint there are various problems which have not yet been settled to his satisfaction, in connection with the use of such wide houses; but there is not the slightest doubt that these various difficulties will be overcome, and in the not very distant future a 60 ft. wide house will hold the same relative position in the minds of growers as a 30 ft. house does today.

At the present stage of greenhouse construction the question, "What is a large house?" is frequently answered by stating that it is a single span house which will cover the same ground as two 18 ft. wide or wider houses.

During the past few years the advocates of large and small houses have been making such positive statements for and against their favorite width of house that many growers contemplating building find themselves decidedly mixed, as one grower put it recently.

It is, therefore, our purpose to take up the consideration of this question from an unbiased standpoint and to present facts and figures in connection with the various proportions of large and small houses, so as to give as much definite information as possible with a view to assisting a grower to decide intelligently whether a large or small house is best suited for his requirements.

For many years, as before stated, the 18 ft. and 20 ft. houses were considered the regulation size for a commercial grower, but, gradually, these widths have kept increasing and are still increasing, and from all appearances the wide house has come to stay; therefore, there must be some merit in a large house from a grower's standpoint.

In the development of the wide house it has been found advisable to place walks at the sides of the house, instead of benches as has been the usual custom in narrow houses. One of the reasons for this change is that in houses constructed with a high ridge there is a more rapid circulation of the air than in the small houses, and the natural course of the cool currents of air is

down the underside of the roof, and if the bench was placed at the side it would obstruct the rising of the heated air to offset the descent of the cooler current, the result being that the plants in the side beds would be exposed to the draught of the falling cool air; but with the benches removed so as not to prevent the rising of the heated air at these points, and with sufficient heating surface placed at the outside of the house, these cold draughts are avoided.

Another reason for this change is that it is at times desirable to provide side ventilation, and in such cases the plants in the side bed would suffer from the current of incoming air, which in the case of the high ridge houses is more rapid. There is also another point that is in favor of the sidewalk, and that is the fact that it is desirable to have all the beds as nearly as possible of uniform width, the most desirable widths being from 4 ft. to 6 ft., generally not over 5 ft. wide; but the narrowest of these widths would be too wide for a side bench, therefore it is necessary to have access to the bench on both sides, and for these reasons it has been found desirable to have walks at the outside. Because of this it is necessary to raise the eaves of the house so as to give ample head room, and a height of 6 ft. 9 in. from the top of a walk to the glass line at the eaves has been generally found to be ample for almost every construction, as with a 2 ft. walk between the inside of the concrete wall of the house and the side of bench it would give a height of about 7 ft. 7 in. from the center of the walk to the glass line.

It has frequently been stated, as a matter of experience, that a large house is easier to heat than a small one, and in the case of the average grower who has not had experience with a house of this character it is somewhat difficult to convince him of the fact at first. Various reasons have been advanced to explain this, one being that the cubical contents of a large house are so much greater in proportion to the glass that the air is not renewed as frequently as in a small house; but when it is taken into consideration that in extreme Winter weather, when every lap of the glass is frozen and the frost has almost hermetically sealed the house, under such conditions the question of the change of air enters very little into the matter. Still, it is found that it is easier to maintain a given temperature in a large house than a small one. We are compelled to look for a further reason, and we believe it is due to the following causes: It is a well-known fact in connection with heating, that heat is given off by a warmer body to a cooler by three methods, viz.: radiation, conduction and convection.

Radiant heat is the heat which passes directly from a warm body at right-angles to its surface, until it comes in contact with some other solid body. This portion of the heat passes through the atmosphere without affecting its temperature to any appreciable degree, except in the case of a very large body of air containing a large percentage of vapor, in which case some of the heat of radiation is intercepted; but in the

case of the comparatively small body of air in a greenhouse it has practically no effect on same.

The second method of transmission of heat, conduction, is when heat is applied to one end or side of a piece of metal it gradually passes through same, the amount of heat passing depending upon the thickness and also upon the difference in temperature between the two sides; that is, the amount of heat given off by a steam pipe depends upon the difference of the temperature of the air in the greenhouse and the pressure or temperature of the steam in the pipe. The greater the difference between these two the more heat will be given off by the steam pipe, and this amount may be still further increased by increasing the velocity of the air passing over the pipe.

The third method of heat transmission is that known as convection, which enters very largely into the means of heating a greenhouse. The heat of convection is the heat which is given off when a body in motion comes in contact with a heated body, as, for instance, when the air passes over the heating pipes, or over any other body which has been warmed by the radiant heat. Therefore, this is practically the only means of warming the air in a greenhouse. It is also only by means of convection that the air gives up its heat—apart from the question of leakage—that is, by coming in contact with the glass or other cool outside surfaces as it passes over same; thus, the greater the amount of air in a greenhouse in proportion to the glass surface, the longer it will take for the air to come in contact with or pass over same. Hence, when the air is once heated it is much easier to maintain the temperature in a large house than a small one, because of its greater cubical contents.

Another reason in connection with the matter of the ease of heating a large house is the fact that owing to the height of the ridge there is a more rapid circulation of air over the heating surface, and this causes an increase in the efficiency, that is, the more rapidly cool air passes over a steam pipe the more steam it will condense in a given time.

The cause of this more rapid circulation of air is due to the difference in the weight of a column of heated air and an equal column of cool air, and the greater the height of the two columns the greater is the total difference. This is the reason why some have complained of feeling draughts in large houses, and such draughts are due to the fact that the heating surface has not been properly located, there not being sufficient surface put at the sides of the house to counteract the rapid movement of the cool air down the roof glass to the sides. The natural tendency of the air in a house is to pass down the outside of the house and rise in the center, but by a judicious distribution of the heating surface this difficulty is easily overcome; the fact of this so-called draught having been observed in a large house, however, demonstrates that there is a rapid circulation of air, and this results in increased efficiency of the heating surface. That we may more intelligently consider the arguments for and against large and small houses we have prepared several sections with proportional tables.

Fig. 23 shows two 20 ft. wide even span houses in dotted lines, placed with 8 ft. between same to avoid the shadow line at 25°; and enclosing these two houses is shown one 48 ft. house with 5 ft. high eaves, as indicated by the dotted lines marked A at ridge; and also a 48 ft. house with 6 ft. 9 in. high eaves marked B at ridge. To the right of these sections will be found a table showing the comparative proportions between these houses.

Comparative proportions per lin. ft. of two 20 houses and one 48 house

	Two separate 20 ft. wide houses	One 48 ft. house with 5 ft. eaves	One 48 ft. house with 6 ft. 9 in. eaves
Height of ridge	10'-10"	19'-0"	20'-9"
Vent above bed	6'-10"	14'-0"	16'-6"
Total exposed surface measuring from sill to sill	56'	60'-7"	64'
Cubical contents	317'	576'	660'
Proportion cubical contents to glass surface	5 3/8:1	9 3/8:1	10 3/8:1
Dist. req. between houses to clear shadow	8'-0"	11'-9"	15'-6"
Number lines 1/2 steam pipe required to heat to 60 at 6'	22	22	22
Area of Beds Sq. ft.	28'	34'	34'

New Hydrangea hortensis Sea Shell

Grown by John Lewis Childs, Floral Park, L. I., N. Y.

It will be seen that the ridge of the 20 ft. houses with the 7 in. pitch is 10 ft. 10 in. high, and the ridge of the 48 ft. A house is 19 ft. high and the space between two 48 ft. houses of this height of ridge, to avoid the shadow of 25°, would be 11 ft. 9 in.; thus, two such houses could be erected with only a waste of a space 11 ft. 9 in. wide, whereas if four 20 ft. houses were erected with a space of 8 ft. between each, as required, it would mean a waste of nearly 100 per cent. more space, or 24 ft. But, as previously stated, in a wide house it is desirable to have walks at the side, thus necessitating the raising of the eaves to admit of head room in the side walks, consequently it would be necessary to construct this 48 ft. house with the 6 ft. 9 in. high eaves, as shown by section B. With this house the height of the ridge would be 20 ft. 9 in., and the space required between two such houses would be 15 ft. 6 in., still showing a saving of waste space between the houses of about 33 per cent. in comparison with the 20 ft. houses. It is also seen from the table that the height from the bottom of the vent sash in the 20 ft. wide houses is only 6 ft. 10 in. above the top of the bed, whereas in the 48 ft. B house it is 16 ft. 6 in., and this difference in height makes it possible to give required ventilation in damp weather without injuring the plants, which would be impossible in the low houses.

In the case of the two 20 ft. wide houses, the total cubical contents for the two houses per lineal ft. of house is 317 ft., and the glass surface from sill to sill is 56 ft., thus giving 5 2/3 cubic ft. of air to each sq. ft. of glass. In the 48 ft. B house there is 660 cubic ft. of air to 64 ft. of glass, making a proportion of 10 1/3 cubic ft. of air to one sq. ft. of glass. Thus, there is very nearly double the amount of air in the latter house to each sq. ft. of glass than in the two 20 ft. wide houses. It will be very evident, therefore, in view of what has been already stated regarding the matter of heating, that it will be much easier to heat the wide house than the two narrow houses, and this is still further shown by the fact that this same house can be heated to a temperature of 60° when the outside atmosphere is at zero with the same number of lines of 1 1/4 in. steam pipe, 22, as the two 20 ft. houses, although there is over 20 per cent. more bench room in the wide house than in the two narrow houses. Also, with this additional bench area there is only about 15 per cent. more glass in the 48 ft. B house than in the two 20 ft. houses, which, of course, means a reduction in the first cost. It is very evident therefore that in this instance the 48 ft. house is more desirable than the two 20 ft. houses.

(To be continued)

John Lewis Childs, Floral Park, L. I., N. Y.

Considerable activity has prevailed in the bulb department of the John Lewis Childs establishment at Floral Park, Long Island, this Spring, due mainly to the transferring of the Gladioli growing department to the new property at Flowerfield, between St. James and Stony Brook, L. I., and about 35 miles distant from

One of the most interesting things to be seen on the grounds is a bed, one of two planted, of *Daphne Cneorum*, well grown and beautifully fragrant. Such a bed is rarely seen.

There is a fine stock of the Yellow *Lilium Hansonii*, a somewhat rare variety of Lily, as may be judged from the price of the bulbs which is \$30 per 100 wholesale. There is also a nice bed of *Lilium tenuifolium*.

Some seedling beds of Gladioli are quite interesting, as showing the extent to which hybridization is conducted at this establishment. The beds, at present, are covered with excelsior and further protected by lath shading.

A bed of *Lycoris squamigera* is now at its best for the showing of its foliage. This foliage will very shortly die down and its place be taken by the tall flower heads used by florists around August.

Iris Regilio cyclus, the Mourning Iris of Japan, is now in flower, as well as many other varieties of the type. In one of the show houses is a block of plants of a new *Hydrangea hortensis*, called Sea Shell. It is an exceedingly handsome variety of the type and the color of its flower clusters is well described in its name, Sea Shell. It is a very handsome thing and should figure prominently at exhibitions in the near future.

The only field-grown stock to be grown at Floral Park this year will be Cannas, of which the usual planting will be made, occupying five or six acres.

Bed of Daphne Cneorum at John Lewis Childs', Floral Park, L. I., N. Y.

There is no trade medium published that begins to equal the EXCHANGE in giving returns to all of its advertisers. Test it for yourself.

Reminiscences of Wm. R. Smith

Supt. of the U. S. Botanical Gardens at Washington, D. C., and
Father of the National Charter Granted the S. A. F. and O. H.

BY J. L. CARBERRY

Under the shadow of the statue of the Goddess of Liberty which, for years, has commemorated the freedom of our nation, is the modest but well loved home of William R. Smith, in the U. S. Botanical Gardens, of which he is superintendent. Of the throngs who daily pass this home, the majority are as ignorant of the wealth of rare intellect to be found therein as of the long life Mr. Smith has spent in the accumulation of treasure there stored, to immortalize his beloved Robert Burns. All this material Mr. Smith epitomizes as his "Paper Monument," the equal of which the country has never seen. The walls are closely hung with innumerable portraits of Burns and illustrations of his works, including rare photographs. These two rooms are especially dedicated to the Immortal, and, on entering, within their portals the visitor's impression is one of perfect repose and peace.

The hickleness and vanities of modern life have not penetrated here; there is an all-pervading air of sanctity and of days gone by. Antique bookcases of rare and beautiful design ornament every available space, while volume after volume of well-thumbed pages lie close at hand, and are best described in Mr. Smith's own words:—"The library contains professional, historical and biographical literature, but, especially, a paper monument to Robert Burns, the like of which does not exist in its completeness anywhere. A paper monument will outlive the bronze monuments; it will do more good and speak ten times louder and better for the individual commemorated. There are 600 editions of and bearing on Burns, nearly 5000 volumes, illustrated by 40 volumes, and with 100 indexed articles on Burns. Of every book that Burns owned (he had ninety pounds sterling worth at his death) and of every book which he borrowed or loaned, a copy will be found in this library, with a few exceptions which will be obtained as soon as possible." A complete catalog of Mr. Smith's collection is now being prepared in Scotland.

With all that ardent love for the immortal Burns, which has induced the spending of a long life in the accumulation of material covering his life and works, space has been reserved for portraits of Mr. Smith's personal friends, Andrew Carnegie, Pres. Lincoln and many other prominent men.

Fifteen miles from Edinburgh, Scotland, stands the town of Haddington, and near this, the village of Athelstoneford, in which latter Mr. Smith was born in 1828, and near which he served his apprenticeship as gardener. Owing to emigration the village only accumulated 200 inhabitants in 900 years. His parents died during his early childhood and his high sense of appreciation of an education induced him to walk eight miles, three times a week, from St. Andrews to Mount Melville, to attend night school.

Mr. Smith characterizes this as one of his best experiences, when he was afforded an opportunity to "measure himself in comparison with other boys." Near the village of Athelstoneford, after his days of apprenticeship were over, Mr. Smith served three years as journeyman in the gardens of various Scotch noblemen, and at Kew. In 1853, being then 25 years old, he came to America, a stranger to a strange country, with a reputation to build, and with no better asset than the following letter which stood him in good stead and which he has in his possession to this day.

We quote the original:

Edinburgh, Jan. 23, '53.
To Messrs. Parsons & Co., New York City.

Gentlemen: I beg leave to introduce to you Mr. William Smith, the bearer of this. He is recommended to us by Mr. Smith of the Kew Gardens, London. He proceeds to your country in the capacity of a gardener, and if you can be of any service to him we shall feel much obliged.

With best respects we remain, truly gentlemen, your faithful servant,

(Signed) P. M. LAWSON.

Mr. Smith has been in our grounds a short time, and seems well acquainted with his business.

Mr. Smith's first employment in this country was with Dundas, in Philadelphia, and great was his surprise, while engaged in potting Ferns, the labels of which had become misplaced, so as to require correct labeling, to discover the identical labels which he himself had written and placed on the Ferns in Kew Gardens, London. Mr. Smith explained that in numbers these Ferns consisted of about 50 or 60 plants, the best and perhaps the most distinct stock in this country at that time. Quite recently Mr. Smith paid a visit to Philadelphia again and, at Dreer's, saw a stock of two and one-half million Ferns offered for sale. He explains that his early experience as described was the beginning, the latter experience the end; and many of these latter Ferns were descendants of the first named. He characterizes Ferns as the personification of grace and elegance.

On the 18th day of March, some three weeks after presentation of the letter, and just after the inauguration of President Pierce, Mr. Smith came to the Botanical Gardens at Washington, D. C. The place was then in its infancy, a segment of a fever-laden swamp. Mr. Smith tells how many thousands of loads of earth were consumed in filling the portion now occupied by the Gardens and, under the very house in which he now lives, there is a fill of eleven feet. He tells of how two rooms on the ground floor were allotted him for his use, one for sleeping, the other as a storage room for pots, among which it was no infrequent occurrence to find snakes. Not being an Elsie Venner, this unpleasant local condition led Mr. Smith to purchase a book on snakes peculiar to this section, with a view to ascertaining to what extent his life was endangered. Great is the change since then; the Gardens are most complete in the botanical collections which they contain, and above all, Mr. Smith together with his old friend and associate, John Clark, stand responsible for the correctness of every label.

"Many years ago," said Mr. Smith, "John Clark and I got up an excursion to Box Hill, Scotland, for the purpose of securing specimens of plants indigenous to the place. The Regent Park folks were our competitors;

we all went in an omnibus, the fare being one shilling. We had arranged that any man not on hand promptly at four o'clock (for the return trip) would be left behind. When ready to start, it was discovered that eleven distinct native specimens had been gathered by our party, and only nine varieties by our competitors, but they had the honor of having found the only plant of *Ophio-glossum vulgatum*, a rare, terrestrial Orchid.

"The spirit of rivalry induced me to ask where this variety was found and, when told of the place, we two decided to return in search of one. Being successful, and returning to take the omnibus, we found that the hour of four had just passed, and that the vehicle had already started. Mr. Clark proposed that we should 'run for it' but, having the total aggregate of fares (22 shillings) in my pockets, I decided that 'running for it' would not be necessary; so calling to the driver that I had all the money, the omnibus immediately stopped and we got aboard."

Mr. Smith stands as a fine example of moderation in all things, both eating and drinking sparingly. He is a prominent member of the "Oldest Inhabitants' Society" of this city, in which he takes an active interest; organizer of "St. Andrew's Society"; and of the "Jean Armour Burns Club."

His enthusiasm for the Society of American Florists is great, and upon his walls hangs the charter for which he fought nine years and upon which he will have more to say later.

He was much pleased with his recent Philadelphia trip, the first since his elevation to honorary membership in the American Association of Park Superintendents, and says he there met a "few" very intelligent men.

Mr. Smith is 82 years old, hale, hearty and robust.

CINERARIA CACTUS FLOWERED HYBRID.—The French National Society of Horticulture recently awarded a certificate of merit to a new race of *Cineraria* named *Cineraria Cactus flowered hybrid*, which is distinguished by petals that curl under, like those of the *Cactus Dahlia*. It has been under observation in the trial grounds of Vilmorin-Andrieux & Co. these five years. The issue of various crossings, it is now well fixed and comes perfectly true from the seed. It has the habit of the *Cineraria* large flowered hybrid, but its flowers are somewhat smaller, and hence more numerous; it comes in all the colors of the hybrid, in those of the varieties Old Rose, Matador, etc., and of all their derivatives. Being an excellent grower, it is well adapted for any kind of decorative purposes.—*Revue Horticole*.

The cut flower industry of Paris is greater than that of any other European city with the single exception of London. There are more than 500 retailers, who do a business worth \$6,000,000 in the course of the year. They get their supplies largely from the suburbs of the city, where thousands of acres are devoted to this industry. The growers in the different suburbs specialize in some one flower. In three or four of these suburbs roses only are grown, in one only the bulbous plants, while all the establishments in the suburbs to the south of the city are given over entirely to Violet culture. All these places, however, are within a radius of 12 miles from the center of the city, since the growers must themselves haul their flowers to the markets of Paris in order to derive any profit. The bulk of the flowers go to the Central Halls, whose Flower Exchange is second in importance only to that of Covent Garden, London.—*Bindekunst*.

The Passing of King Edward VII

British gardeners and horticulturists in general have lost in King Edward one of their most generous patrons. A great lover of flowers and everything pertaining to the beautiful in Art and in Nature, he had endeared himself to all who were connected with our profession by the keen interest which he took in gardens and gardening in general, and particularly by the keen interest which he had always shown in the affairs of the Royal Horticultural Society of England. Both the King and Queen were familiar figures at the Temple Show every year, and members of the R. H. S. will recall with pleasure the great honor done them by the King when he opened their splendid new hall in Vincent Square, London, some few years ago.

Anyone who has had the good fortune to visit either Windsor Castle or Sandringham must have marveled at the good taste and broad ideas shown by the late King

W. R. Smith in His Home at Washington, D. C.

An American Wreath for King Edward's Tomb—See Text

By J. H. Small & Sons, Washington and New York

in the laying out of the grounds and gardens at those places; and I have the authority of a well-known landscape gardener in saying that many of the King's ideas and conceptions of landscape architecture positively amounted to genius. This was clearly shown to anyone who visited Sandringham, where I had the pleasure of spending four of the happiest years of my life.

One of the stateliest of all the stately homes of old England, Sandringham, has always been the mecca of garden lovers from all over Great Britain. The estate was bought by the late King close upon fifty years ago, and he had ample opportunity during his lifetime to present his idea of what a country estate should look like. It was the home of a "peacemaker" in every sense of the word, and he showed an old-fashioned fondness for a mansion covered with creepers and vines. Ampelopsis Veitchii, Euonymus radicans variegata, Roses and Honey-suckle rambled over the walls and gables in delightful profusion, charming to the artistic eye.

The grounds at Sandringham, as I remember them, were almost beyond any description which I could write. There were artificial rivers, spanned by rustic bridges, lakes, and islands with their caves and grottoes. There were terraces and retired alcoves; winding ways cut through sweet smelling thickets; and meadows of brilliant green, and delicate woodlands. There were noble and impressive Oaks of grand proportions, which had withstood the gales of many centuries, and which gave a dignity and charm to the surroundings. I can remember that there were long stretches of beautiful green lawn, with here and there a sentinel Yew, which gave the effect of open, sunlit spaces, contrasted with sombre shadows. Then there was the Queen's Pansy garden, with its clipped box edging and white shell walks; one could never pass this garden without admiring the simple and refined taste of the Queen.

The giant Oaks, the solemn sentinel Yews, the lake with its dainty islands and Water Lilies made a picture of unusual charm and character. At every turn of a path one would see something to admire; something which would show the quiet, yet effective taste of the owner; something which would go to show that we can sometimes judge the character of a man by the objects which he chooses to surround him.

Many are the stories I could tell of the late King's kindness and tact in his dealings with his servants. Warm-hearted and generous always, he was most particular as to the comforts of those who were in his service; and I remember him on one occasion saying in his bluff hearty manner that he wanted us all to feel that we were at home, and were members of the family. That he succeeded in making us feel at home I can well testify by my own experience, for nowhere have I been so happy, and nowhere have I seen a more contented lot of em-

ployees than those who were in the King's private service at Sandringham.

During my lifetime I have seen King Edward in many different rôles, but I like best to think of him as the kindly, old-fashioned gentleman whom I worked for at Sandringham; who always had a hearty "Good Morning!" for you in return for your respectful salutation; and who would stop and ask you the names and history of different flowers, in a delightful manner, entirely free from any "standoffishness." His charm of manner, his many accomplishments, and his art of being gracious were inherited qualities which knew no neglect, even in

his dealings with those who were his servants; and while in this latter day, and with a new community, we see little of those old-fashioned manners where the courtliness yet lingers, or has left an imprint, let us pause to pay them tribute.

San Francisco, Cal.

WM. MCM. BROWN.

An American Wreath for King Edward's Tomb

J. H. Small & Sons, the florists of Washington and New York, shipped on Saturday last, May 14, by the White Star Liner Baltic, a wreath made of Oak foliage from a tree planted by King Edward VII at Mount Vernon, Va., in 1860, when, as Prince of Wales, he visited this country. Interspersed with the Oak foliage were Magnolia leaves taken from the grave of George Washington at Mount Vernon. The wreath was tied with a broad purple ribbon, and a knot of red, white and blue ribbon. It was accompanied by an engraved card bearing the following inscription:

"This wreath of English Oak, the leaves from the tree planted at the tomb of Washington by King Edward VII, when Prince of Wales, and of Magnolia leaves from the tree planted by Washington, is presented in evidence of the honor and affection in which the late King Edward VII was held by the Mount Vernon Ladies' Association."

The wreath was sent in care of the American Ambassador, who will see that it is placed on the tomb.

Through the courtesy of Messrs. Small, we are enabled to present an illustration of the wreath.

Wreaths at the Casket of Edward VII

There was an ocean of floral tributes at Buckingham and Windsor Palaces, some costing as high as \$500 each. The Aga Khan, the wealthy head of the Ismaili Mohammedans, one of the most distinguished of Eastern potentates, sent one of the most costly and beautiful tributes that florists could possibly create. It was a huge wreath, six feet in diameter, on a background of laurel, with serried rows of Roses and one thousand white Lilies.

Hughes' May Day Party

More than 100 public school children participated on Saturday evening, May 14, in a May party and entertainment, which was witnessed by several thousand persons, in the florist store of H. R. Hughes, 1859 Van Buren st., Chicago.

The children, who ranged from 10 to 12 years in age, had been drilled for several weeks by Mrs. Peterson Marcy, a teacher in the Marquette School, and more than sixty, clad entirely in white, danced about the May pole in relays of sixteen each.

Several specialties were added to the regular program, after which refreshments were served. Upon leaving each child was presented with a box of candy, upon the top of which was the picture of every one who took part in the program. The children were selected from pupils of the Marquette, King, Irving, Grant, Brown, Tilden, Jefferson, Skinner and St. Jarlath's schools.

A Notable New York Wedding

The marriage of Miss Madeline Borland of 116 E. 37th st., New York City to Clarence C. Pell was celebrated at the Church of the Incarnation, 35th st. and Madison ave., on Tuesday, May 17. The decorations were furnished by M. A. Bowe, 1294 Broadway. The color scheme was pink and white, and was very artistically and pleasingly carried out. The gallery above the entrance was heavily festooned with Wild Smilax, with a centerpiece of white Peonies. Large Palms stood at the right and left of the entrance doors, within. The twelve pillars of the church were covered with boughs of Dogwood, Apple, and Viburnum blooms, with a heading of Smilax. On every alternate pew were tied, with white ribbon, large bouquets of either white or pink Peonies, and Spiraeas. At the head of the church, on either side of the chancel, were masses of Palms. Among them were pink Hydrangeas and white Spiraeas. The fronts of the pulpit and lectern were banked with white and pink Peonies, Antirrhinum, and Apple blooms. From the sounding-board hung loopings of pink Killarney Roses.

The chancel rail was heavily crowned with pink and white Antirrhinum. Against the rearedos was placed a large cross of White Killarney Roses, and on either side of this was a banking of white Peonies and Antirrhinum, and there was a banking of the same against the end of the choir stalls.

The bride carried a prayer book decorated with Lily of the Valley and white ribbon. The Bridesmaids carried bouquets of Sunrise Roses and Adiantum Farleyense. The ushers wore boutonnières of Gardenias.

Among the Philadelphia Retailers

M. J. Callahan, 38th and Market sts., reports good trade Mothers' Day. This store has a large call for window boxes and carries a good assortment on hand for selection.

C. A. Bradin, formerly of 3325 Woodland ave., being compelled to seek new quarters, found a good location at 3928 Lancaster ave., next door to West Philadelphia's largest department store. This move brings Mr. Bradin back into nearly the same location he had some fifteen years ago.

La Gierse Bros., 4653 Lancaster ave., have finished repairs made necessary during the recent strike of trolley-men when explosives placed on the track threw a car up against one side of one of their greenhouses. Funeral work has been very brisk and a large order from Shenandoah made it necessary that two men go there to make up the designs. Landscape work is coming in much faster than it can be done, and a scarcity of men makes it compulsory to refine some orders.

Otto Didden of Mt. Moriah Lane has a splendid lot of Joost Carnations. His Spring stock is going very fast and he is making up numbers of window boxes which sell at prices ranging from \$2.50 up. The boxes are 2'x8" and are very popular. Mr. Didden recently opened a store at 1835 South st. which is doing very nicely for him so far.

Chas. A. & Wm. R. Stuart opened a store at 6402 Woodland ave. about Thanksgiving time and report a busy Winter's work. Chas. A. Stuart was several years with the Highland Rose Co. of Morton, Pa. and later with Wm. R. Stuart in his store at 231 No. 8th st. A Hill

ice box was recently installed here of 300 lbs. ice capacity, and, so far, has averaged a cost of 5c. per day for ice. Some business is done here with the Illinois Self Watering Flower Box and the Air Plants in baskets are going fast.

M. C. Dunn, 618 Chestnut st., is still troubled from Primula poisoning which he contracted last Spring, but he has now found a remedy. Mothers' Day trade was excellent.

Geo. Carpenter, 60½ st. and Girard ave., has had all hands moving lively getting out orders for Spring stock; the past week was the most busy one ever experienced. The stock in this range is in splendid condition and up to his usual standard.

Frank M. Ross reports a fine Mothers' Day business in the W. Philadelphia store at 13 So. 60th st. This store is well furnished with signs appropriate to the season calling attention to articles and flowers on hand.

Wm. C. Smith of 61st and Market sts., has joined the ranks of retail store keepers, and at Easter opened one at 24 So. 60th st. cor. Ludlow, and close to the 60th st. elevated station.

W. Wilkinson, 49 N. Salford st., has a splendid stock of Geraniums which are "just right." A recent order was from a builder who had vases filled and set on every porch of a number of houses about to be placed on sale. This made a fine showing when both sides of the block were so fitted out. Percy Uttermil formerly with M. J. Callahan, is now with Mr. Wilkinson.

Henry Engler, 4651 Lancaster ave., has some 10,000 sq. ft. devoted to bedding stock, Palms, Ferns and Ivy.

Retail florists are invited to send us items of trade interest for publication on this page; clear photographs of good designs will also be appreciated. These latter should always be packed carefully between boards.

May 21, 1910

Florists in good standing throughout the country can all themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Summer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to artists whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Every facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

DAYTON, OHIO
Florist, 16 West Third Street
Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Basket Composed of Roses, Lily of the Valley and Peonies

One house is nearly filled with some well-colored Pandanus Veitchii in 4-in. pots; another has a large quantity of healthy looking English Ivy in 2" pots. Mr. Engler takes considerable pride in keeping up his front yard and has same well laid out with shrubs, vases and flowers, furnishing an object lesson and making a good advertisement for him.

Mrs. Richs of 1020 No. 5th st. has finished the repairs necessary upon the conservatory in rear of store and has greatly improved the appearance of both store and glass, making a larger appearing shop.

T. Neilson Geiger, 13th and Walnut, reports a splendid sale of made-up baskets; these were the best sellers during and since Easter.

L. Muir, 5th and Fairmount ave., has an odd but very attractive window showing Mitchell's seeds. Trade in these has been very brisk and keeps him busy; he also handles funeral work.

Frederick Leary has closed his store at 39th and Lancaster ave.

W. W. Crawford, 5210 Market st., reports a good sale of Carnations for Mothers' Day. Funeral work is coming in very brisk.

Mr. Rich of the Novelty Flower Shop, 4820 Baltimore ave., recently installed a larger McCray ice box to handle his increasing trade. The store is well supplied with evergreens, Palms, Ferns and bedding stock, and the landscape line is better than ever before.

Miss Eva Fletcher, 5015 Baltimore ave., has had a busy season and does a lot of table decorating.

C. H. Scherer has opened a store under the name of "The Floral Art Co." at 4906 Woodland ave., opposite the transfer station at 49th and Woodland, and reports business better than was expected. This store is well fitted out and has a fine window for decorative purposes.

P. M. R.

Samples will Prove Value AND A Postal Card Brings the Samples of Ribbons from The Pine Tree Silk Mills Company

Philadelphia, Pa.

806-808-810 ARCH STREET

Why should you be satisfied with second rate Ribbons, when the best Ribbons made cost no more than second rate qualities?

Pine Tree Ribbons are the best Ribbons, for there is more Silk Value in them for the money than in ordinary qualities. Most Ribbons must have a profit allowance for the manufacturer and the jobber.

We are manufacturers and sell direct, and give the best Ribbon Values on the market for the money.

Let us send you samples of TAFFETAS, SATIN TAFFETAS and NEW CHIFFONS?

Please mention the Exchange when writing.

Boston Retail Notes

Last week Newman's store on Tremont st. had a splendid display of wreaths and other ornaments for Decoration Day; these were very artistically arranged. On Monday of this week they changed the whole thing and gave up the window to a display of cut flowers of Cattleya Mossiae, which were tastefully and artistically arranged.

Hoffman had a display of Cattleyas in his Back Bay store. The retail men are all getting ready to make fine displays the week the Orchid exhibition is held.

The Lilacs at the Arnold Arboretum are flowering well this year and thousands journeyed thither last Sunday to see them. R. C.

Washington, D. C.

J. A. Philips of The Flower Store, 2926 14th st. N. W., reports business better this year than any during the six years he has been here. Mr. Philips has roller curtains arranged on his ice box so that it can be kept dark. He came here six years ago from Toledo, Ohio.

Arthur Burrell of Cherry Croft, Tokoma Park, has 4000 sq. ft. to bedding stocks, Carnations, Phlox and Pansies. He has a stall in the "O" st. Market which he attends three days each week. P. M. R.

AURORA, ILL.—The Aurora Floral Co. has moved its store to 3 South Broadway.

BATAVIA, N. Y.—Gustav Noack has opened a flower store in the Masonic Temple.

FORT DODGE, IA.—The North Floral Co. has opened a store at 10-12 South Ninth st.

PEORIA, ILL.—Frank E. Rue, the seedsman, has opened a cut flower department at 420-422 South Adams st. F. Nichols, formerly florist at the Hotel Fey, is in charge.

OSHKOSH, WIS.—E. P. Barnett, manager of the Oshkosh Floral Co. has purchased the interests of J. B. Deamud and W. H. Kidwell in the concern, and will conduct the business as a local enterprise.

Greenhouse Construction

W. H. Ritter of 70 Main st., Fitchburg, Mass., will erect, this coming season, two connected 21 feet wide by 100 feet long houses. King Construction material used.

Robert Scott & Son of Sharon Hill, Pa., have placed their order with the King Construction Company for two iron frame houses, one to be 25 feet by 100 feet, the other 50 feet by 142 feet.

Growers Building

WEEDSPORT, N. Y.—Irving La Due is building a new greenhouse.

MILLBROOK, N. Y.—Wm. C. Russell is building an additional greenhouse.

PITTSFIELD, MASS.—Arthur N. Cooley is building an additional greenhouse.

ATTICA, N. Y.—Florist Pauly is building an additional greenhouse on Jefferson street.

CLEVELAND, O.—The city is to build a 100 ft. greenhouse in Gordon Park, to supplant the hotbeds.

FULTON, ILL.—John Aggen contemplates the erection of two large greenhouses near the Northwestern depot.

KENDALLVILLE, IND.—H. Johnson contemplates the erection of an additional greenhouse shortly.

PENNSBURG, PA.—O. C. Trumbore of this town will erect two greenhouses, 50 by 20 ft., at East Greenville, Pa., this summer.

OLD TACOMA, WASH.—Charles Hal-kier has purchased several lots at Starr st. and Tacoma ave., for the purpose of erecting greenhouses.

PECKVILLE, PA.—W. J. Broad has about completed his new greenhouse at the gates of Prospect Cemetery, and will stock it with potted plants.

New Jersey Floricultural Society

Dr. J. M. W. Kitchen of East Orange

read a paper on the "Question of Heating for Orchid Culture," before this

Society, in Lindsay Hall, 240 Main st.,

Orange, N. J., on Friday, May 13. He

recommended hot water as the best

medium for heating, and advised having

plenty of radiating surface, so that it

would not be necessary to have the

pipes so hot, which made it more congenial

for the Orchids. A very interesting

discussion followed in regard to

time of shading. Dr. Kitchen said he

shaded the latter part of January, and

used a mixture of white lead and kerosene

for that purpose. J. A. Manda considered

January too early, and said the latter

end of March was time enough; he

recommended crude oil and whitening

as being the best material for shading,

and also the cheapest. John J. Dervan

asked Dr. Kitchen what was the best

thing to do to get rid of the Cattleya

fly. He replied that he had tried all the

different kinds of insecticides, but

found he got the best results from

strong fumigation with tobacco stems

when plants were not in flower. The

monthly exhibit for points was exceptionally

fine and the competition very keen.

Those who have the lead in the

various classes at present are: Roses,

A. B. Jenkins, gdr. Albert F. Larson;

Carnations, Chas. A. Hathaway, gdr.

Max Schneider; Vegetables, A. C. von

Gaasbeck, gdr. John J. Dervan; foliage

and flowering plants S. M. and A. Colgate,

gdr. William Reid. The following were the awards of points of the judges.

Roses: Albert F. Larson, 90; John J. Dervan, 90; Frank Drew, 85; William Reid, 70. Carnations: Max Schneider, 80; John J. Dervan, 75; William Reid, 70. Flowering Plant: John J. Dervan, 85; William Reid, 75. Foliage plant: Wm. Reid, 90. Collection Vegetables: John J. Dervan, 90. Cattleya Mossiae: Lager & Hurrell, 80. Cultural certificates were awarded for the following exhibits not in competition for points: Max Schneider, Cineraria, Carnation Victory, Rhubarb and Lettuce; John Dervan, Caccularias; Albert F. Larson, Roses. Fritz Berghard, gdr. for the Essex County Country Club showed a nice vase of Canterbury Bells. Albert F. Larson received a first-class certificate for a vase of a scarlet seedling Carnation.

John J. Dervan will read an essay on "Growing Roses under Glass," at our next meeting.

WILLIAM REID, secretary.

Pacific Coast Hort. Society

The May meeting of the Pacific Coast Horticultural Society was held in Poletto Hall, May 7, V. Matra in the chair. The committee appointed by the

CARNATION CUTTINGS

My stock has not been allowed to throw over three blooms per plant and is, therefore, very vigorous, producing cuttings all the year. Cuttings from such stock will produce more and better flowers next winter than the ordinary grade from stock that has been flowered to death.

JAMES MACFARLANE, Staatsburg-on-Hudson, N. Y.

Please mention the Exchange when writing.

president to make arrangements for the annual exhibition reported that the list of premiums had been made out, was in the hands of the printers, and would be mailed to those interested during the coming week. The committee appointed to make arrangements for the Society's annual picnic reported that they had decided to hold the picnic at Mount Tamalpais on July 3, and it was hoped that a large delegation of friends and members would turn out on that date and help to make the outing a success. On the exhibition table a fine collection of Sweet Peas from B. Kettelwell of San Mateo attracted considerable attention, and was awarded a vote of thanks. H. Plath showed two well grown specimens of Begonia microphylla and Ficus lutescens, which were also given a vote of thanks. A new Geranium named H. Plath was also shown in good shape. Two new members were elected, and the meeting came to a close at 11 p.m. The next meeting of the Society will be held in Poletto Hall the first Saturday in June at 8 p.m., when it is to be hoped a large number of members will turn out.

WM. M. B.

Nassau County (N. Y.) Hort. Soc.

The regular meeting of this Society was held in Glen Cove, on Wednesday, May 11, with a large attendance.

President Duthie in the chair. Three members were elected and three applications for membership received.

The schedule for the Summer show to be held June 15, will be out in a few days, and we may well look forward to a very successful affair. Messrs. Eccles, Gaut and Johnston acted as judges for the night, with the following decisions on the monthly competition: Best three heads of Lettuce, I. Trepass, Glen Cove.

Best 12 Gardenias, G. Wilson, Roslyn, who also captured a first for best 12 Mushrooms. Cultural certificates were awarded to I. Trepass for Tomatoes; I. Everett for a grand box of Mushrooms; H. McDonald for Cucumbers. Honorable mention to H. Matz, Glen Cove, for Sweet Peas, a very promising seedling; V. Cleres for a very fine plant of Canterbury Bells, also for three heads of Lettuce; Paul Reul for collection of Vegetables; F. Petrocia for Beans; I. Reidenbach for Lettuce, also for Citrus, and for a fine vase of Sweet Peas; H. McDonald for a grand vase of Antirrhinums; H. Fleishauer for a vase of pink and vase of red Darwin Tulips, also for a bunch of grand Rhubarb.

G. Wilson received the thanks of the Society for a very fine Deutzia; H. Matz for vase of Sweet Peas; F. Petrocia for Lettuce; Paul Reul for Sweet Peas and G. Wilson for Asparagus.

Next meeting will be Fern night and prizes will be awarded for best Pteris, best Nephrolepis and best Adiantum.

In my report of last meeting I omitted to mention the cultural certificate awarded to V. Cleres of Glen Cove for a vase of American Beauty Roses; Cleres certainly knows how to grow them for they were exceptionally fine.

O. E. ADDOR.

Intensive Cultivation

The study of intensive cultivation or, as it is often called, French gardening has, of late, received considerable impetus in England. The method is particularly adapted to places where land is expensive and population dense. The aim is to get the vegetables into market ahead of those raised under ordinary circumstances and thus secure the highest prizes. In our frozen North, the practice of French gardening methods does not hold forth much inducement, but in States possessing a more temperate climate it would seem well worth undertaking, always providing the labor can be hired at a price within bounds. It will be observed that it takes a number of persons to handle even 1½ acres.

The interview which follows (between one of the staff of London "Garden Life" and the owner of the garden, the Rev. H. Purefoy Fitzgerald) is vouched for as being absolutely reliable.

The name of the Rev. H. Purefoy Fitzgerald is well known in horticultural circles as that of an amateur gardener, and an interesting writer on subjects which he has made his own. Since his retirement Mr. Fitzgerald has settled down in one of the loveliest parts of Kent. Here he has a delightful garden. I visited him in January, especially for the purpose of ascertaining his views on the system of "French gardening" on which he can speak with the twofold authority of unimpeachable knowledge and practical experience. Mr. Fitzgerald has not only made a study of the system, but he has a "French garden" of his own, and has worked in it himself with unflagging energy. The state of the ground was such that on my arrival Mr. Fitzgerald kindly provided me with a pair of clogs, in which I was able to set the most formidable mud at defiance and, thus equipped, I spent some time in inspecting the operations which are being carried on with an evident determination to secure the best results obtainable.

"When did you start this garden?" I asked, as we watched the workers on the slopes.

"In November, 1908, this garden was an ordinary meadow, and we were occupied for two months in preparing the ground, in getting one hundred and fifty frames ready, four hundred and fifty lights painted and glazed, and other essential preliminaries, so that we were too late to produce in 1909 the early produce which pays the best."

"And you had the disadvantage of beginning in a very bad year for the purpose?"

"I think that we could not possibly have picked out a worse year for commencing experiments in intensive culture."

An Old English System

"That is your equivalent for 'French gardening'?"

"Yes, because the system which is called 'French gardening' is not a new French system, but an old English one, written about and practiced by gardeners as far back as the beginning of the eighteenth century. We are certainly indebted to the French for all the experience which has been gained during the last half-century. They have perfected in a wonderful manner the system which we originated, and at the present time

pioneers in this country are trying to call it 'intensive culture,' because that term most accurately expresses what it is."

"What is the nature of your soil?"
"Good rich loam. As you see, the garden is situated on two gentle inclines, one facing west-northwest, and the other south; it is well protected on the north and east. We get every scrap of sun there is to be had; and this, in intensive culture, is a matter of great importance."

"Did you have much assistance in your preparations?"

"They were all effected by a pupil, my private gardener, myself, and my French gardener, Jules Guttin, who came direct here from Paris, and contracted to stay with me for two years. This, of course, was done after the ground had been well treated by hand."

The Necessity of Capital

"How large is the garden?"
"One acre and a half, which I consider a reasonable size. As everything turns upon the question of cost, you may like to have some details concerning my outlay."

"They will be most useful, and I am sure will be exceedingly appreciated by thousands of readers of Garden Life."

"First let me say that I strongly recommend that no one who has not sufficient capital to keep the work going for two years should embark on intensive culture. As to the sum required for an acre and a half, I consider that about £700 is an adequate minimum. With regard to particular items of expenditure, we made one hundred and fifty frames, and furnished them with four hundred and fifty lights, which would have cost me £2 each, or £300 in all, if I had had to pay for them. As it was, the cost was under £200. Then I bought fifteen hundred cloches, which amounted to £88. The water-pipes, pumps, etc., came to about £120; the fences about £40; the shed about £30; the Rye mats, £20; manure, about £100; and packing materials and tools, about £10. I include in my estimate of capital half the salary of the French gardener." [£1=£4.86.]

Prejudice Against the Produce

"I suppose you did very little in the way of selling in the early months of 1909?"

"Practically all that has been done here has been done since the first week in May. We began to sell Radishes in March. From May onward to the end of November, we sold as hard as we could grow, but we were handicapped by being about six weeks behind all through. That, however, was unavoidable, as I did not buy the land until October. At the outset there was a certain amount of prejudice to be overcome in the market. All the greengrocers prophesied failure, and were shy in buying. They said that they had tried the produce of amateurs several times before, and had not found the result very satisfactory. I hope we have overcome that feeling now."

Sales in Six Months

"May I have some figures of your sales?"

"With pleasure. In six months we sold 6000 Lettuces, 1100 Cauliflowers, 5700 Cucumbers, 1145 bunches of Radishes, 550 bunches of Turnips, 3500 bunches of Carrots, 400 Melons, and 2000 sticks of Celery. The Celery took on at once. These were the main crops. The Tomato

crop was big but, owing to the season, the fruit did not ripen well."

The French Varieties

"What varieties of Lettuce did you grow?"

"The varieties of Cabbage Lettuce were The Passion and The Grotte; the Carrots, Rouges de Carentan and Courte Hative; the Radishes, Rose a Bout Blanc; the Cauliflowers, which were very good, with excellent heads, Lenormand; Turnips, the Parisian; Cucumbers, French Ridge; Melons, Canteloupe; Celery, Blanc Doré."

I gave my Frenchman French leave to order exactly what varieties he liked. We grow, in addition to the things I have mentioned, Endive, Batavia, Celeriac, Sorrel, Corn Salad and Chervil. For the three last, however, we have not, so far, found any sale. We sent them to Covent Garden, but there were very few purchasers."

An Independent Supply of Water

"I observe that you grow Celery on the flat?"

"Yes, we entirely dispense with trenches. In planting, care should be taken to get it in before the frost comes on. It is planted thickly, so that it helps to bleach itself. The final bleaching is done by lining the sides of the bed with straw, and covering the plants with Rye mats for four or five days. It comes out quite white then. We water copiously."

"Watering must be a serious business with you?"

"It is so serious that we are sometimes watering all day long, especially when the produce is the early Carrots. A good independent supply of water is indispensable. The company's water is cold and hard. Watering is one of the great labors of the system."

The Cultivation of Melons

"How do you treat your Melons?"

"We put them into narrow beds. Trenches of about eighteen inches wide and nine deep are dug right through the center of the frames; here the bed is made. The system is altogether different from the ordinary English mode of growing, and we water only occasionally."

"You find the Canteloupe variety popular?"

"Very popular now. But when we first sent them to Tunbridge Wells, the greengrocers would not look at them. Then I called on a grocer, and he said he would like to try them, with the result that in a week we could not supply him fast enough. People who have had them prefer them to the ordinary hot-house Melon. The flavor is better. We grow some six, seven, and eight pounds; others are smaller. We get three or four fruits on each plant."

The Essence of the System

"The essence of the whole system is to always have three or four crops coming on in the same ground, and to use nearly every available inch. We condense into one acre what the ordinary Englishman would grow in six. That applies to every kind of produce. Even in the Melon beds the Cauliflowers, are planted to succeed them."

Prospects for 1910

"What are your prospects and plans for 1910?"

"This year we hope to sell a 1000 Melons, 60,000 Lettuce, 15,000 Cucumbers, and to increase the rest of the produce in proportion. As to new features, we

are starting Mushrooms, and we are going to run a large apiary, so that we shall have our hands fairly full."

Trying English Seeds

"Do you intend to adhere to the use of French seeds only?"

"I have not adhered to it quite exclusively. I grew half a bed with English seed, and half with French, and the difference in rapidity of germination was remarkable. In France the growers have been selecting seed for years with a view to more rapid germination. But this year I shall give a trial to other kinds of English seed. I am growing Cucumbers from Sutton's Improved Telegraph seeds."

"Your staff is larger than it was when you started?"

"I have four pupils, the sons of gentlemen, who came for at least a year, some for two, and reside in the house. They all offered to come, and I have refused three applications in the last three months, but I shall have a vacancy at Easter. There is not room for more than four. The pupils see the whole thing from start to finish. By the way, I have not told you that the produce is sent by motor van to Tunbridge Wells. I soon found that a horse and cart would not take it fast enough."

A Crucial Question

"Now there is the crucial question of profit?"

"The first year no one must expect to pay expenses. The second year I expect to do so, and in the third I ought to make a profit. But it is not possible to begin to reap the benefit of the soil until the third year, and then it becomes more and more rich each succeeding year. As to a given sum, I cannot form any idea until the end of the second year, but I am quite satisfied with the prospect today. My Frenchman is so pleased with the results of his work so far that he has said when he leaves me he will stay in England and embark on a garden of his own."

No Short Cut to Fortune

"But you do not believe in it as a short cut to a fortune?"

"I certainly do not think I shall make a great fortune, and it is a pity that statements about making great fortunes should have been put forward. They inevitably have a bad effect, as well as conveying the most erroneous impressions. But I believe that in parts of England, where they are within reasonable distance of good markets, such gardens will pay within a reasonable period. Why should not gardeners in charge of large gardens, have a corner devoted to intensive culture, just for the Winter? That, at all events, is practicable. On the other hand, no one should start one of these gardens who has not a good knowledge of gardening, or has not been specially trained, and seen the system worked for a year or two."

Baltimore**The Market**

Business the past week was satisfactory, considering the unseasonable weather. Funeral work has made a heavy call, keeping the retailer well on the go, and some large orders were gotten out. Several palls were made, using a large amount of the cut flowers that have been of late in such heavy supply. The cool weather we are now experiencing has handicapped business, especially in the pot plant line. However, the growers have many orders and are making heavy shipments. The cut flower situation is not so severe as last week, still much stock is on the market, moving slowly at close prices. The retail market is draggy and will be so until next week, when Decoration Day will cause a rush. Peonies will have a big demand as usual; our farmers supply the greater part of stock to the retail trade and many of the larger buyers likewise. Roses are still in about the same supply as last week. Carnations are extremely heavy in arrivals, especially pink Lawson, and move slowly at small figures. Callas are shortening up in supply. Lilies are in supply enough to meet the demand. Sweet Peas are not over plentiful and sell well. Asparagus is a little steadier in supply. All kinds of pot plants are offered. Peonies are scarce this week. Snowballs are in abundance, as well as nearly all kinds of seasonable stock.

Trade Notes

Walter B. Conroy, 518 W. Franklin st., has changed the name under

which he has been doing business, to "Conroy, the Florist."

G. H. Siddons, Pearl and George sts., has installed new electric lights in his store and windows. He has a steady call for wax designs and his output has been extremely heavy. On Decoration Day he expects to dispose of thousands of bunches of cut flowers, and on that day usually the pavement in front of his store is literally covered, calling for night and day work, and he gets from the farmers wagon loads of blossoms, and makes up the bunches, employing a large corps of helpers.

Otto Guerth has installed electric lights in his store and is making other improvements. Business with him continues good.

Fred Reitz, Franklinton, Md., sent his team to market last Tuesday as usual. The horse was a new one, and a lady agent for the S. P. C. A. noticed one of its legs in bad shape and went into details. A large crowd collected and a doctor was sent for, but the trouble was pronounced nothing more than spavin.

Frederick Seidlitz, Catonsville, Md., has made his appearance in market again with a full line of pot plants.

The Municipal Art Society wants to change every vacant lot in our city from a desert waste into a green and blooming garden spot. James Dix of Philadelphia gave a lecture on "Vacant Lot Farming" at Bennett Hall last week.

Mayor Mahool stopped the wood choppers from destroying some beautiful trees on Eutaw Place last Saturday, where a monument is to be erected. All work is at a standstill until a way can be found to save the large trees.

I. Strintz, Westport, is having trouble with his water supply for his large range of houses. The windmill runs but forces no water to the tank and it will be necessary to overhaul the system.

Some of our growers find the barrel spray pump for shading their houses with whitewash is more preferable than the old way of putting it on with the brush, in heavy spots. Charles Cook, George Cook, Halliday Bros. and John McCormick are using the pump method.

It is reported Lawrence Kinder, Catonsville, has sold his place and taken a position with Mrs. Mary Johnson.

Conrad Hess has been put to inconvenience by the layers of the new high-pressure water line digging up where his stall stood, causing him to seek another stand farther in the market.

The New State road will not pass by the establishments of John Rider and Lehr Brothers; it will take the old Annapolis road through to the city. L. Strintz will be benefited by it.

E. A. Seidewitz has a handsome style of up-to-date flower box for shipping cut flowers, that was designed by himself. The box is very plain and neat, and the box pleases Mr. Seidewitz because it is made in Baltimore; he has his wares supplied in his own town whenever possible.

F. Bauer, Govans, Md., will tear down some old houses and build two new up-to-date houses in their place. Business is extremely heavy with him, especially in the pot plant line. He also makes a specialty of growing seedling Harrisii Lilies.

Mathias Thau, Govans, Md., is building a new house, 65 x 18 ft., for "Mums." Isaac H. Moss, Govans, is doing a large business in the nursery and pot plant line, and orders are very heavy with him. N. Price is his foreman. Mr. Moss is discouraged with the cold weather conditions and looks forward to warmer weather.

J. J. Perry, the worthy manager of the Florists' Exchange, is occupying his new home in Hamilton, a beautiful suburb of Baltimore.

John Schunke, E. Baltimore st., is showing a fine window display of beautiful Hydrangeas in full bloom.

R. L. Graham, Waverly, is showing a handsome window of decorative plants at his Asquith st. store. Mrs. Graham has entire charge of the store.

The Backward Weather

An experienced gardener writes us: "I don't know how the season is as regards your vegetable garden, but this, so far, has been the worst I have experienced here on Long Island. The cut worms—well, the least said, the better. If you have not got 'em and care for some, I shall greatly oblige. They are a curse. What you prize most are those plants they seem to be able to get at. I have had six rows of Peas well nigh ruined, and my Sweet Peas are a sight. My hair is turning gray."

Rochester, N. Y.

Business the past week has lacked the snap to it experienced the previous weeks and stock accumulated to some extent. Prices, naturally, fell in order to move the accumulation. Roses are particularly plentiful but, with some funeral work going round, have moved off. Carnations, though not commanding fancy prices, are not overplentiful and, with ordinary business, move readily; however, with a few dull days, they accumulated and became somewhat of a glut, but no fears are entertained of there being an overplus between now and Memorial Day, which promises a good demand, inquiries coming in daily for quotations for that date.

Owing to continued cold weather, getting down to freezing point at nights, the bedding plant trade has fallen off considerably. People, evidently, are beginning to realize that it is much too early to start planting out yet. The demand for this stock promises eventually to be large and will, no doubt, be far in advance of previous years.

Highland Park Lilan Display

As guests of the Park Board, the members of the Rochester Florists' Association were invited to meet at Highland Park, on Friday, May 13, for the purpose of inspecting the Lilacs.

Owing to the season of the year, which is an exceptionally busy one for the trade, many found it impossible to get away and the attendance was, therefore, not as large as could have been desired. However, a fairly representative body was in attendance and a most enjoyable and instructive afternoon was spent by all present. The party was met at the Pavilion by Mr. A. B. Lamberton, president of the Park Board, and Mr. John Dunbar, asst. supt. of parks, and joined later by Mr. Wm. C. Barry, chairman of the Board, and other members.

The party were conducted through the grounds by Mr. Dunbar who, through his wide knowledge and experience made the visit a most instructive and delightful one.

Highland Park, situated on a slope of rolling hills in the southern part of Rochester, is perhaps of all the parks the most charming for its natural beauty, and one which through the genius of John Dunbar, has become the Mecca of thousands of our citizens, and bids fair to become a park of national importance, which in many respects it is at the present time. With a southern exposure and being almost entirely protected from the north winds, it is particularly adapted for its purpose of conserving a collection of rare and beautiful plants, shrubs and trees, the abundance of which provides for the people from early Spring to late Fall an almost endless variety of flowers. The park has become so commonly used that the mere fact that 25,000 to 30,000 people visited it to see the Lilacs or the Rhododendrons, in one day, excites very little attention.

The collection of Lilacs numbers 206 varieties, comprising 14 species, and is considered one of the three most complete collections in the world, only being equalled by one in Boston and another owned by the Dominion Government of Canada. It would be impossible to give any account in an article of this kind, of the many fine sorts seen here, as the collection is much too comprehensive, and as one gets to the end of it he realizes what a task it would be to name, say, five varieties. Special mention may be made, however, of Mme. Casimir Perrier, a fine double white and one that Mr. Dunbar says is considered a fine forcing variety. If it could be forced into anything like the perfection in which we saw it it would be a grand thing for florists' use. However, in Mr. Dunbar's opinion, Princess Alexandra is, of all the double whites the best yet, and some fine specimens were seen and were truly glorious in their profusion of bloom. Congo, the nearest approach to a red, was very brilliant and caused much favorable comment, as did many others, such as Croisemoise. Brilliant, Comte de Kerchove, Grand Duc Constantin, Dr. Lindley, Pres. Liger, Uncle Tom, Charles Sargent, Toussaint, l'Overture, and Lilarosa. After finishing with the Lilacs the party was led along the grass walk to the Rhododendrons, which, having wintered well, are now in fine condition and the buds swelling, which assures a grand display in about two weeks. The growth of some of the plants is quite remarkable, some reaching ten feet and over. Many new varieties just added to the collection this

Palms That Bring "Repeat" Orders

That's the test of quality—not the first order, but the second, and the third! We're glad for new business—and we're getting a lot of it—but we value most of all the patronage of those who have been with us steadily for years. Such orders prove beyond question the superiority of our Palms—prove the advantage of buying home-grown stock produced under the care of Palm experts.

All of our Palms are propagated from the seed, right here in our own houses. Ours are clean, strong and vigorous—vastly better than any imported Palms you could buy—yet they cost no more.

Areca Lutescens

Question Box

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

(123) Specimen for Name.—L. C. B., N. Y.

—The specimen sent us appears to be Mesembryanthemum spectabile, a native of South Africa.

(124) Names of the most profitable flowering plants which can be grown outdoors from seeds this season?—F. S., Milton, N. Y.

Nasturtiums, Marigolds, Calliopis, Asters, Candytuft, Cosmos, Petunias, Salvia and Zinnias. Seeds of all the above may still be planted and flowers obtained this season.

(125) To Obtain Seeds from Double German Stock?—J. L., Algiers, La.

—Grow the double flowered German Stocks alongside the single ones and save the seed from the single ones; from these latter is obtained a certain proportion which will produce double flowers. Transplant three plants to a pot and you will obtain on an average one double.

(126) Varieties of Hardy Hydrangeas for Richmond, Va?—P. B., Richmond, Va.

—Use Hydrangea paniculata grandiflora, also H. arborescens grandiflora alba, and H. cinerea sterilis. The pink varieties Hydrangea hortensis would probably be hardy at Richmond. See Joseph Meehan's article in Florists' Exchange of May 14, 1910.

(127) Good Variety of Yellow Pansy Daisy for Cut Flowers?—C. M. W., Ronks, Pa.

—The Etoile de Paris is considered one of the best varieties of yellow Daisies for cut flowers.

GERANIUMS

Strong, S. A. Nutt, from 4-in. pots, in bud and flower, \$7.00 per 100.

VINCA Variegata, heavy, 3 feet long, 6-in. pots, \$15.00 per 100; No. 1, from 4-in. pots, \$8.00 per 100.

American Beauty
Bride
Killarney
Carnations

A REVIEW OF THE MARKET

Violets
Chrysom
Orchids
Lilies

NEW YORK, May 18.—At present, the New York cut flower market is weak, and does not take care of the cut of flowers which arrives, consequently the week's end has not only to take care of its own cut of flowers but of the left overs from mid-week. As long as these conditions continue the market will not possess any buoyancy.

The cut of flowers now arriving is abundant, but there is no deluge. The most fatal feature of all is that there is no advance in the price of any staple commodity. In short, the market is in a condition in which the buyer all too often names the price. Special American Beauty Roses bring 20c., yet many go to a buyer for \$1.50 per dozen. Killarney Roses are beginning to come in more abundantly, and though a few fancy blooms realize 6c. each, 5c. is about the limit, and My Maryland is realizing no higher price than Killarney. Richmond is doing a little better, the best grade changing hands at 8c. each. Fancy Bride and Bridesmaid are selling for 5c. each.

The highest grade of Carnations realize 3c. each. Arrivals are moderately heavy and sales are rather slow; much good stock moves off around the 2c. mark.

For the best grade Gardenias \$2 per dozen can scarcely be obtained. The highest grade Cattleyas are realizing 50c. each in limited sales, but not in larger transactions, where 40c. is the limit.

For the best grade Easter Lilies 6c. each is the top price, and Callas of the same grade are selling for \$1 per dozen. Lily of the Valley is moving more slowly, and for the first time since Easter the price has a downward tendency, and for the choicest grade \$3 per 100 is with difficulty obtained.

Peonies are coming in more plentifully and the best grade are selling for 8c. each. Some choice Sweet Peas are selling for \$1 per dozen bunches, but most sales are at or below the 75c. mark.

Lilacs, Pansies, Daffodils, and Tulips are mostly over with, but plenty of other Spring stock is coming in to take their places.

PHILADELPHIA, May 16.—There is no sharp advance in the prices of any flowers, but the market is a trifle firmer and steadier than last week. For several weeks there has been a tendency to a depressed market during midweek, and a firmer condition at beginning and end of week, and the same is now true. Some commodities have altogether or nearly passed out of the market for the season, among them Lilacs, Daffodils, Tulips, and Pansies. The supply of Roses, Carnations and Sweet Peas is abundant, and of Peonies and Gladioli moderate.

Special American Beauty Roses are selling for 20c. each, and in a few limited sales 25c. each is obtained. The best grade Killarney realize 8c. each, but most sales are on a somewhat lower basis. Fancy Richmond is selling for 12c., My Maryland for 10c. and Mrs. Jardine for 15c., but it should be distinctly understood that this price is obtained only for the very choicest selected blooms and in the smaller transactions. Fancy special Bride and Bridesmaid and Kaiserin realize 10c. each.

Top grade Carnations are selling for 3c. each. A few very choice blooms sell for 4c.

The very choicest grade of Gardenias in a few cases realize \$2.50 per dozen, but most sales are at \$1.50 per dozen and downward. Cattleyas, top grade, realize 50c. each, and Dendrobiums 40c. The present supply of Callas and Easter Lilies is not large; the former sells for 12c. and the latter for 10c. each for top grade. Lily of the Valley is moving rather slowly now, and \$3.00 per 100 is the best price obtained.

The choicest Sweet Peas sell for \$1.00 per 100, but 75c. is the usual selling price now for best grades.

Some Peonies of better grade are now arriving and realize 10c. each. A larger number and a greater variety of Gladioli are now offered and the best grade sells for \$1.50 per dozen. Snapdragon, Stocks and miscellaneous flowers are all moving at moderate prices.

BOSTON, May 17.—The market has been quite good this week and there is every indication at the present time of a good market for the next two weeks. Probably Roses are most abundant at the present time, yet the largest growers report that they are quite pleased with their sales. Nevertheless, there is some surplus, but with the slight scarcity in Carnations the Rose condition was relieved. American Beauty is abundant and the quality is good. The Killarneys are good in quality, and meet a pleasing demand; they are certainly favorites with the people. Kaiserin and Carnot from cold houses are of excellent quality and the demand good. Bride and Bridesmaid are also of very high grade, considering the time of year, but the demand for them is not very good. Richmond moves well at quite remunerative prices. My Maryland is getting more plentiful and the flowers are of good quality. There are quite a few Wellesley and Chateaux, of superior quality, coming in, but prices are rather discouraging.

Carnations are selling very well and there is no surplus. They have not sold for some years as well as they are doing this year at this season. Carnation Day has helped out the sales for this week very materially. All kinds of Carnations have sold well but white kinds have been scarce and good flowers were picked up on sight at good prices. Several orders of 10,000 each were filled in the market this week.

Sweet Peas are not overabundant but there is some of good quality to be had, which find ready sale at good prices. Lilies are not very abundant. Some good Lillium auratum were seen this week for the first time.

Bulbous stock of all kinds, except late Tulips in the way of Gesneriana and Darwins, has practically disappeared from the market. There are some Narcissus poeticus which comes from outdoors. Spanish Iris is still in demand and brings fairly good prices. Gladioli are getting quite plentiful.

Antirrhinums are still in evidence but the quality is not as good as it was some time ago. Asparagus and Adiantum are always scarce and in good demand. Orchids are quite plentiful in the way of Cattleyas, and the retail stores were making special features of them this week. R. C.

CHICAGO, May 17.—The market for the past few days has been exceptionally good, and stock has moved nicely. The principal demand is for Carnations, and for white sorts the orders are oftentimes not filled to the full. It is stated that the shortage in Carnations will be seriously felt for Decoration Day, as many growers are reported off crop, but there is no doubt some are beginning to hold back stock for the occasion. The prices quoted for Carnations for Decoration Day range from \$4 to \$6 per 100.

Roses are in far better crop than Carnations, and the prospects are that there will be a good supply for May 30, especially American Beauty, which has, however, not advanced very much in price except on short grades. Extra fine Killarney are quoted at \$10 per 100, medium from \$6 to \$8, with good short stock at \$4 to \$5. Bridesmaid and Perle range from \$4 to \$8 per 100,

according to grade.

The chief advance in prices is on all lower grades of flowers, as for the holiday they can be utilized to better advantage than the long stemmed ones. There is nothing to hope for in the outdoor line but Snowballs, and Peonies. Sweet Peas are still up to the standard, and bring from 75c. to \$2 per 100. Lilies are not very plentiful, but as the demand has been very light for the past week a shortage is not felt. Some double Narcissus are to be found and a few outdoor Tulips are seen.

Peonies are arriving in good shape and some are already being put in cold storage, but not to any extent. \$1 a dozen is obtained for fancy kinds; others go at from 4 to 6 cents, according to grade. Gladioli are not so plentiful, possibly due to the growers' holding back stock. Cape Jasmine has arrived in excellent quality, which has somewhat affected the demand for Gardenias. Orchids are coming in a little more plentiful each week.

New common Ferns from the South are to be had, and are far ahead of the cold storage Ferns in quality; the price is \$2 to \$2.50 per 1000, while cold storage Ferns have reached the \$3 mark. All other green stock is quoted at regular prices. Advance orders for Decoration Day are arriving in great numbers and all orders show that there is a shortage in the Carnation line throughout this section.

INDIANAPOLIS.—April 16.—The florists are not alone in the complaint that the cold weather is detrimental to business at this time, but the tradesmen in general say that May receipts are less than last year. There is little, if any, decorating going on and funeral work is below normal. Counter trade has been moderately good but not all of the fancy stock finds an outlet in this manner, as is generally the case. The supply of flowers is of excellent quality and the variety large enough for all.

Lilies, and Callas, which have been selling so well for a protracted period, are struggling to get off the market at \$10 per 100. The retail figure remains close to \$3 per doz. Carnation growers are oftentimes at a loss to find an opening for their product at \$1.50 to \$3 per 100; 60c. to 75c. per doz. is the storeman's price. Superb Sweet Peas are obtainable and sell better perhaps than anything

else at 75c. to \$1 per 100, over the counter. Short stemmed flowers are wholesaled at 25c. to 35c. per 100.

The absence of field grown Valley has restored the forced flowers to the old price, \$1 per doz. retail, \$4 per 100 wholesale.

Some fine Cattleyas are being grown in this vicinity, but the public evidently loses taste for them at this time as they are difficult to dispose of.

Bride, Bridesmaid and Richmond Roses are the best selling sorts just now, at \$4 to \$7 per 100 wholesale and \$1.50 to \$2 per doz. retail, for the best. A few of the Summer Roses are seen at the same price. The Killarneys are mostly off crop and of comparatively poor quality, at \$5 to \$8 per 100. American Beauty is selling slowly at \$5 to \$25 per 100.

Michigan Ferns are still arriving in good shape and but few of the complaints made elsewhere can be made. I. B.

ST. LOUIS, May 16.—Trade last week in the cut flower business showed no improvement with the retailers and wholesalers as the demand was light.

The commission men have hauled a lot of stock, but prices in all grades were low. Roses and Carnations were so plentiful that some of the consignments were left unsold. Prices on these were: Roses, long fancy, not over \$6 per 100; firsts, \$4; shorts, \$1 to \$2. American Beauty, extra fancy, long, \$2; next choice, \$2; shorts as low as 36c per dozen. Carnations, fancy, not over \$2; firsts, \$1.50; common splits, \$1 per 100.

Sweet Peas are fine and in abundance at from 25c. to 50c. per 100. Peonies, red, pink and white, are coming in fine at from \$3 to \$4 per 100.

Gardenias are arriving from Texas in big lots; extra fancy long sell at \$1.50, shorts 60c. to \$1 per 100.

Of Lilies the market is in full supply. Good Harleil sell for \$6 per 100; extra fancy go to \$8. Callas same price. There is some extra fine Lily of the Valley in the market at \$3 to \$4 per 100, with quite a good call. There are also plenty of perfect greens of all kinds to be had.

A good call for bedding stock in plants has started and the greenhouse men are all busy planting. The season has started in late and everybody is rushed now that warm weather is here. ST. PATRICK.

CUT FLOWERS AT WHOLESALE

New York

George Cotsonns, 50 West 28th st., will remove to 127 West 28th st., June 1.

Kessler Bros., wholesale plant dealers, 50 West 28th st., will move June 1. They have not yet decided upon their new quarters. Among other good bedding plants in which the above firm is doing a rushing business is noted some extra good Heliotrope plants with very large blooms.

John F. Sharkey, 50 East 28th st., is just now doing a good business in window boxes and is showing some very meritorious work in that line.

William Schilowsky, Woodside, L. I. will sail for Europe in June for an extended visit.

F. Weinberg, Woodside, L. I., will soon sail for Europe. Along with him will go shipments of Cacti and rare plants, snakes, lizards and other reptiles for the collectors and zoological gardens of Europe. From Europe he will go to Africa, and on his return trip bring back rare plants and reptiles.

Joseph Leikens, 56th st. and Fifth ave., has a new automobile delivery wagon.

Herman Weiss, formerly with A. I. Young, is now with Charles Millang.

At Ehrmann's Flower Shop, 2112 Broadway, there is a fine display of Parrot Tulips, rechristened "Chantecler Tulips," and selling fast under their new name; also some imported aquaria, consisting of a single vessel of moulded glass filled with an attractive collection of fish, etc.

Some boughs of Cytisus Laburnum, the first observed this season, are displayed at David Clark's Sons, 2139 Broadway. The blooms of this small tree are very graceful and beautiful, and it is well named the "Golden Chain" tree.

At Wadley & Smythe's are seen some pans of Nertera depressa, commonly called "Bead Plant" or "Coral Moss," a hardy perennial forming a dense carpet close to the ground and covered with bright orange red berries.

P. Welch of Welch Bros., florists, Boston, Mass., was recently in town calling on the wholesale commission florists and looking up flower matters for Memorial Day.

James McManus, 42 West 28th st., will take in the Orchid show at Boston the last of this month. Several other wholesalers will also visit the show, a party leaving on the evening of May 27.

Phil. Kessler, 55 West 26th st., is receiving some very nice Sweet Peas, and some Centaurea in the newer varieties.

Walter F. Sheridan, 133 West 28th st., is receiving a choice cut of Enchantress, Winsor and Victory Carnations from Frank Niquet, Patchogue, L. I.

On June 7, at St. John's Church, Larchmont, N. Y., Beatrice May Stetson, daughter of Mr. and Mrs. Nahum Stetson of N. Y. City will be married to Mr. Victor Godwin. The church and house decorations will be furnished by H. Warendorff, Hotel Ansonia, Broadway. About 3000 pink and white Peonies will be used in these decorations for one item. The bride will carry a bouquet of Lily of the Valley and white Orchids, the maid of honor a bouquet of Oncidium Orchids, and the eight bridesmaids bouquets of pink Sweet Peas and Moss Roses.

Charles H. Vick of Rochester spent a day in New York last week, and talked up S. A. F. trade exhibition matters.

The John Young Co. of Bedford Hills is shipping some excellent quality American Beauty Roses to Traendly & Schenck.

The Cottage Gardens Co., of Queens, L. I., has leased twenty acres of ground opposite their greenhouses and have planted the same with evergreen and deciduous trees. The company will have no dearth of Peonies for Memorial Day.

If the facts concerning the strange disappearance of William Shanley, the Flatbush florist, are ever brought to light, Mrs. Shanley believes that a tale of abduction and blackmail will be revealed. It is over a month since he disappeared, and though word from him has been received from San Francisco, asking for a remittance to pay his fare home, the stipulations in regard to the forwarding of same were so unusual that the case has been placed in the hands of the New York and San Francisco police.

Gustav Winderoth, son of a local florist of Hoboken, N. J., while standing at the curb in front of his father's store recently, was kicked by a horse, the kick breaking his leg.

Pittsburgh, Pa.

Carnations and Roses are plentiful. Carnations bring from \$1.50 to \$3 per 100 wholesale; the variety Mrs. T. W. Lawson is exceptionally fine. Roses, second, bring 2c. and 3c., better stock 4c. to 12c. each. American Beauty Roses are very poor. The stock is generally tight buds, commonly called "Bull-heads." It seems that at times the growers cut Beauties before they are properly developed. The market has been scarce of good Beauties for some time. Yellow Iris is very abundant.

The Pittsburgh Cut Flower Co. is receiving fine White Killarney Roses from its Bakerstown plant.

Some nice Snapdragon and white Sweet Peas are being received by the Pittsburgh Florists' Exchange.

E. O. Ludwig's annual shipment of decorative plants has been received, in the pink of condition, from Belgium.

Fred Burki of Gibsonia, Pa., who has been ill for five or six weeks, is reported somewhat better.

Visitors: Frank Farney, M. Rice & Co., and Mr. Goudy, of Henry A. Dreer's, Philadelphia. D. W. L.

Indianapolis

The hedging season is in full swing and an unusual amount of work is being done.

Mr. Rutz of Peru was a recent visitor. A. Weigand & Son report an extra good season for window boxes.

Charles Vollrath, foreman for the Roepke-Rieman Co., is in a serious condition, due to a complication of diseases.

Bertermann Bros. Co. have a most appropriate window for the dedication of the Shriners' Temple, which is said to be the finest temple in the West. A large sized camel crossing the hot sands forms the nucleus for the same.

Tomlinson Hall Market is doing the business of the town right now, and is striving to make Indianapolis most beautiful with a fine lot of bedding material.

John Rieman, and J. S. Stewart of Anderson, visited Bertermann's and the Smith & Young Co.'s establishments at Cumberland this week.

Crown Hill Cemetery florists have about all they can do already for Decoration Day, and no doubt orders will have to be refused before May 30.

The city park board has a large force at work now and there is provided an excellent lot of stock for the parks. I. B.

Detroit

The outlook for Decoration Day is splendid, in fact something to be dreaded, because many and severe frosts which we have experienced in the last few days have played havoc with all outdoor stock. There is Lilac, but nothing nice and clean; every tassel has a number of flowers burned, necessitating a careful picking over before putting them on the counter. Deutzia has been ruined and other flowers are not in as yet.

Thursday, May 19, John Breitmeyer's Sons are turning their store over to society. All the tables will be well filled with cut flowers and between 1 and 5 p.m. society ladies will sell them, using the proceeds towards building a hospital for consumptives.

While bringing a load of plants to Woodmere Thos. McGowan's wagon was struck by a street car, and at last reports he is very low at the hospital.

John Klang is in Mt. Clemens, using the baths there to relieve him of a severe attack of rheumatism.

Local florists turned out in full force for Monday night's meeting to listen to the explanations of the Doylair system of heating, which seems to be a complete solution of the, so far, very vexing problem of "perfect combustion." M. Bloy and Chas. Plumb had previously investigated this new device in Chicago, and became thoroughly enthused. They have seen by their own investigations that not a particle of smoke emanates from the chimney, in fact, the chimney of this device boilers now in operation with this device consists of a plain 6-in. stove pipe. Soot, smoke and cinders are completely eliminated and ashes are only 50 per cent. of the amount produced by

the old system. Every boiler has a magazine and coal is piled on the grate according to size, sometimes 1200 lbs. at one time. Steam is kept up perfectly for ten hours without paying any attention to the fire. FRANK DANZER.

Philadelphia

The following visitors were in town recently: Philip Einsmann, Astoria, N. Y.; H. P. Campbell, Shamokin, Pa.; Mrs. Fenstermacher, Mahanoy City, Pa.; J. S. Ashbridge, Downing, Pa.

I. Rosnosky, traveling salesman for Henry F. Michell Co., will take in the Orchid show at Boston the last of this month. Mrs. Rosnosky and son sailed on the Graf Waldersee, Wednesday, May 18, for a three months' visit in Germany. Mrs. Rosnosky is a talented musician, having studied instrumental music in Berlin, and vocal music in Italy. During their stay they will see the Passion play at Oberammergau.

Robert Craig, Co. is sending out great numbers of Crotons, Pandanus Veitchii and Ferns. Nephrolepis elegantissima compacta in the smaller sizes is meeting with a specially large sale. This company later will bring out a new Geranium, a seedling obtained from Edw. Lonsdale, Chestnut Hill, Pa. It is a semi-double, a very vivid scarlet, with petals slightly frilled, a very free bloomer, and it may be named Edwin Lonsdale.

Robert Craig, Sr., will visit the Orchid show at Boston the last of this month. The date of the show, May 26 to 30, coming just before Memorial Day, will prevent many from attending on account of the pressure of their own business just at this time.

The S. S. Pennock-Meehan Co. is handling some very nice pink Snapdragon, Gladiolus America, and Peonies.

J. J. Habermehl's Sons, the Bellevue-Stratford florists, have been installing some very attractive rustic window boxes at the Hotel Walton, the St. James Hotel, and the Bellevue-Stratford. Dracena, Pandanus, Crotons, Palms, Ficus, Ferns, Vinca variegata, and English Ivy have been lavishly used, giving very pleasing results. One innovation in this work is noted. All of the boxes on the side of the Bellevue-Stratford are filled with Ligustrum aureum, Golden Privet.

H. I. Battles is displaying some fine specimens of Blue Spruce, and Juniperus Chinensis argentea; also a variety of Japanese Maples, from his nurseries at Newtown Square, Pa. Some large specimens of the white Queen Alexandra Daisy are noted here, well covered with large semi-double blooms. The regular routine work here is now keeping all hands very busy.

Pennock Bros. are displaying some beautiful varieties of Lupinus, and the pink variety of the Queen Alexandra Daisy.

W. E. McKissick & Bros. are receiving some nice Peonies, and Kaiserin Roses.

Very little work on the bowling alleys has so far been done by the members of the Florists' Club.

A large, handsome harp, made to the order of Admiral Melville of the U. S. Navy, for the King Edward memorial services at St. Mark's Episcopal Church, was designed and made by M. C. Dunn of 618 Chestnut st.

Boston

The News About Town

The weather has been cool and cheerless; this is fortunate for some growers whose crops for Memorial Day were rather far advanced. The market is improving and things are looking bright for a good Memorial Day business. There is very little surplus and prices are a little on the up grade.

Carnations are all cleaned up this week; they are selling better than they have been for the past two years at this time. There is quite a demand for white Carnations, but as growers have not been handling these in quantity, there has been a shortage right through the Spring. Another reason for the shortage is that many are growing White Perfection and, although it is a good Carnation, it does not produce as many flowers as Queen and other free flowering varieties.

Carnation Day, which had its origin in Lynn, Wakefield and Everett, gave a helping hand to get rid of all Carnations this week. The flowers are bought

and given to children to sell and the profits are handed over to the hospitals of these towns and cities. Lyon bought 30,000, Everett 15,000, Wakefield 5000, and they were all disposed of at good profit. This is a grand good object and we hope other cities will do likewise. A Rose Day at this time would help to clean up the surplus of this flower in good shape.

The demand for Roses is not quite up to the standard, although the quality was never better at this season. Ameri-

can Beauty are of fine quality and in fair demand, but the favorite Rose throughout last Winter and this Spring is Pink Killarney, and immense quantities have been disposed of. Kaiserin and Carnot are especially fine at this time; they are being cut from cool houses and have extra long stems and large handsome flowers; we never saw better foliage on any Roses at any time. Bride and Bridesmaid are of fine quality but retailers are not as fond of them as of some of the other kinds. A leading

FAVORABLE weather conditions this season mean for the Peony what the greenhouse man would say "grown cool," giving it better substance better quality and better size.

For Memorial Day we will have Peonies in any color and any quantity—in fact, the best stock we ever offered, and mostly the newer varieties too—very few of the old common ones.

Festiva Maxima and Novelties of that type.

First quality bloom\$8.00 to \$10.00 per 100

wholesaler told me that he thought Bride and Bridesmaid should not be altogether discarded as they had their uses; and he is of the opinion that there is still a market for them. Killarney has hurt these two latter severely.

Other good paying crops which have been exceedingly short all Winter and Spring and of poor quality are Asparagus and Adiantum. These crops are exceedingly easy to grow, are always in good demand, and it is too bad putting such poor material on the market. The crops have been cut so close all Winter that the goods put on the market are too soft and not mature enough. Asparagus Sprenger and Adiantum have been especially short. These crops are not fussy; they will grow in an old house and in fact better there than in some of the immense modern houses.

parks, with Mrs. Pettigrew, is spending a few days in Princeton, Mass. Mr. Pettigrew has been very busy this Spring, completed many additional improvements in the way of planting. It is rumored that the park system is to have a zoological garden and a herbaceous garden. We certainly approve of the herbaceous garden, but object to the Parkman money being spent on animals. Mr. Parkman admired plants greatly and left his millions for the good of the parks.

Three new flowers we noted in the market this week were Bouvardia Humboldtii, Gerbera Jamesoni and double white Feverfew.

What the Growers are Doing

Robert McGorum is shipping to Welch Bros. some extra well-grown Roses; his Killarney, Bride and Bridesmaid are of extra quality with long stems and clean, healthy foliage.

The crops of Fred R. Mathison of Clematis Brook, Waltham, are doing well and are especially fine at this time. In the early part of the season they did not do just quite as well as expected, but he now is cutting and shipping stock that will compare well with any coming to market.

Mann Bros. of Randolph are cutting

some fine *Lilium auratum* and find a ready sale for them. This glorious Lily should be grown much more than it is; its flowers are the most showy of all Lilies and its fragrance is most pleasing.

Sweet Peas are selling well. A. A. Pembroke of Beverly and R. D. Kimball of Waban, are cutting and shipping good material with fine long stems.

Frank White of Waltham is on the sick list with rheumatism and has not been out for a week. He has a fine lot of *Dracenas* and a good supply of well-grown *Geraniums* for Memorial Day sales.W. E. Turner of Woburn has had good success with *Pansies* and is shipping large quantities of very fine quality to 1 Park st.

John J. Fee of Jamaica Plain grew a large quantity of bulbs last Winter and this Spring and found a ready market for them. He is now clearing up the last of them.

Frank Dolansky of Lynn has some fine Sweet Peas and has a large house which he is just beginning to cut from. He had a luxuriant crop of Peas all Winter and found them a profitable crop. He had some of the finest long-stemmed Lilies that came to the market at Easter.

E. A. Stickle, salesman for Eber Holmes, at 1 Park St. Market, had a pleasing order on Saturday, May 14. In one order he shipped 7000 high-grade

also. They were never in better condition, with supplies of all kinds, to do a big Memorial Day business.

Henry M. Robinson Co. report a greatly increased business; this firm thoroughly believes in letting retailers and others know about the class of goods they carry; this they do through regular advertising in the trade papers. The principals attend strictly to business, looking after every detail themselves, and use their every effort to give the best service and satisfaction to their numerous customers. By paying attention to these details they have built up a strong, healthy business. They have a good supply of Daggers and fancy Ferns, and all other goods for Memorial Day, and with their increased accommodation at 15 Chapman place, which gives them three large floor spaces, they can handle their business quickly and give prompt service and satisfaction to patrons.

Boston Flower Market Baseball Team

The Boston Flower Market at 1 Park st. has a baseball team of crack players. They solicit and challenge amateur teams, florists preferred. They are going to play the Landscape Gardeners of Brookline, May 21. The team is made up of the following men, who all have a reputation as fine players: Frank Solari, pitcher; Mattie Ruane, catcher; Frank Edgar, 2d base; Walter Aylward, 3d base; D. B. Busky, s.s.; Wm. Patterson, r.f.; Wm. MacAlpine, c.f.; B. Benson, l.f.

Chicago

Business the past week was exceedingly quiet locally, although shipping trade was brisk, and stock moved off nicely through this channel. No one reports a surplus, in fact, the *Peonies* have arrived just in time to prevent a report of shortage of stock. It is remarkable what a small variety of flowers are coming in. This is a condition that has not been experienced in the market's existence, and the usual glut of outdoor flowers has not materialized. These conditions have, however, been to the grower's advantage, as for years prices for indoor stock have not been so high.

While the decorations at the memorial services for King Edward held at the Auditorium on Sunday were not very extensive, they were very effective and appropriate. Beneath a Union Jack and an American flag was festooned *Smilax*. The stage and pulpit were similarly decorated; while down each side of the aisles were placed rows of *Palms*.

At Winterson's Seed Store it is reported that the trade in *Cannas*, *Geraniums* and bedding plants, of which they have a varied selection, is opening up well, and a very big season for this kind of stock is anticipated on account of the late frosts and storms demolishing so much of the shrubbery.

The J. B. Deamud Co. is showing some fine flowers of double white *Narcissus* (*Gardenia* flowered). This house has been making a specialty of this beautiful and fragrant flower for four years past and expects to have a big quantity on hand for Decoration Day.

Frank Bentley, with Kyle & Foerster, says that stock is not any too plentiful in any line, and he feels that the *Peonia* have arrived just in time to obviate an inconvenient shortage.

Wietor Brothers have lost no time in planting their new houses with American Beauty Rose stock, the work being all completed. Their stock of *Chrysanthemum* plants is moving off rapidly.

At Peter Reinberg's Tim Matchen says that there is no difficulty in getting rid of their stock rapidly. At the greenhouse they are still busy repairing houses and replanting stock.

A. L. Randall Co. reports that the sales of *Evergreen* Brand of Fertilizer increase every day, most florists coming in for a large quantity after having used a sample.

J. Stewart, of Barnard's Fifth ave. store, says "busy" is no name for con-

Roses, which put him on Easy Street for the rest of that day.

Willow Hill Greenhouses, West Roxbury, are cutting some fine *Bouvardia Humboldtii*. This is the first we have seen of this flower for the season and it is a good, pleasing thing. Thomas Peglar is handling the stock, and it finds a ready sale.

Edward Bingham of Dedham has bought 1½ acres of adjoining land, which is of good productive quality, and proposes to build later on.

Eber Holmes of Montrose Greenhouses has a superior crop of *Roses* and will have a good cut for his Memorial Day customers. He is cutting high-grade Killarney and his Kaiserin are superb. He has a red sport from Killarney which is very promising and of a fine pleasing color. He is increasing it as fast as possible as there will be good demand for this when it is put on the market.

R. Caplin, retail florist, Mass. ave., was married May 9 to Miss Rose Pearlstein. Their friends in the trade extend their congratulations.

W. J. Cain of Newtonville has had very good success with *Marguerites* and maintained a good crop right through the Winter. He is still shipping good stock which finds a ready market.

George Buxton of Nashua, N. H., is shipping this week the first double *Feverfew* we have seen this year. It is of good quality and is a seasonable flower for Memorial Day work.

Great sales are being made this week, outside the Quincy Market, of bedding plants. Here several well-known growers have stands and dispose of large quantities. We inspected their goods and most of it is of especially good quality. Fred Becker of Cambridge had as good *Geraniums* as we have seen anywhere this year. Arthur Coolidge of Cambridge also sells here and his various bedding plants are good. All claim an extra good demand for their stock and good prices are obtained.

W. Stickell of Lexington is busy on his new greenhouse; it is 100'x40'; he anticipates building another next year of about the same dimensions.

Daniel Illife is very busy and has abundant work on hand for all Summer. At present he is fixing the heating and ventilating of Charles Holbrow's two new

greenhouses at Brighton, being erected by the King Construction Co. The houses are to be 250'x60'.

Edgar Bros. of Waverly are going to build a new house to be erected by the Lord & Burham Co. It is to be 200'x35'.

At William H. Elliott's greenhouses at Brighton they have a very large stock of grafted *Roses* of all kinds which are in fine condition. They are busy shipping to all parts of the country now as the planting season is at hand. These grafted plants take much more care in packing and handling and only experts can do this work properly. Mr. Harbison superintends it all and whatever he does is done well. He has had many years of experience at the same task.

John McKenzie of North Cambridge is doing an excellent business and will be all sold out of plants before Memorial Day. On Monday of this week he supplied a landscape gardener of Boston with 1000 *Geraniums*. He supplies outlying towns in the vicinity of Boston at the rate of 2000 plants a week. He anticipates a very good memorial Day business.

The work on Leonard Cousins, Jr.'s (Concord Junc., Mass.) new greenhouse is well under way. It is of truss frame type, designed by the King Construction Co., and will house some 18,000 *Carnation* plants. *Pansies* and *Geraniums*, *Salvia* and other bedding stock are having the call here now and the help is busy filling orders. Some shipments have been sent as far away as Wisconsin, Utah, Dakota and Virginia.

Wholesalers Busy and Cheerful

Welch Bros. report an increased business during the Winter; their Spring business has been very satisfactory, showing a good increase over one and two years ago. They have added many new customers among growers and retailers, and have retained all their old patrons, which is very gratifying to them. They say there has been a lively demand this Spring for Box and Bay trees in different shapes. They received a very large shipment of these which were disposed of in a few days. While we visited them they were unpacking some extra good bulbous material for this time of year; it came from Newport. The *Roses* they carry are of very high grade, *Carnations*

NATURAL GUANO COMPANY, Aurora, Ill.

ditions, since the warm weather has asserted itself people are beginning to re-plant all small stock that was destroyed by the frosts.

J. A. Budlong has already planted 150,000 Carnation plants in the field. No new varieties from last season will be grown.

Poehlmann Brothers Co. state that while some of the wholesalers are putting Peonies in cold storage as yet they have not received more than their demand necessities.

Many among the trade were startled Monday morning to read the announcement of the death of John Degnan. A visit to Winterson's Seed Store, however, discredited the fact regarding our John Degnan, as he was found to be at his post hustling as usual.

Emil Buetner of Park Ridge is adding to his establishment four new houses, 125 by 27 ft., and is rebuilding one of the others. These houses, when completed, he will devote to the growing of pink and white Killarney Roses.

Strail & Hahn were disappointed regarding the opening of their new store last week, owing to the decorators not being able to finish the interior of the shop. They did not start business until Wednesday of this week.

D. D. Johnson is receiving numerous testimonials from various florists and growers, as to the merit of his fertilizer.

J. Raske, who was the lucky florist in decorating the first prize auto in the natural flower class at the recent auto parade, had the large silver cup that was awarded to D. J. Joyce, the winner, on exhibition in his windows on Saturday, displayed amid an elaborate decoration of American Beauty Roses, with photos of the machine in several different poses. It is needless to say that a crowd was to be found there all day.

Similar experiences of a serious nature are reported by two of our flower pot manufacturers. Five weeks ago, H. T. Klipfel scratched his finger; the wound was so slight he paid no attention to it at the time, but a few days later blood poisoning developed, and Mr. Klipfel was removed to a hospital, where for some time his condition was serious. G. Kellar, of Kellar Brothers, injured the tips of two of his fingers at about the same time, with the injury resulting much the same. Both men, however, are now recovering, after losing several weeks at a very busy time.

Wm. Desmond of Minneapolis, Minn., left on Monday morning for his home, after a most enjoyable visit of a week in Chicago. Mr. Desmond's visit was enjoyed by many of our florists.

Visitors: W. Van Fleek, Jr., Boskoop, Holland; W. F. Duntermann, Bensonville, Ill.; A. Lundenberg, Valparaiso, Ind.

A. Lange has again been a victim of lumbago, which kept him home three days last week.

C. A. Samuelson has had a large order of Peonies put in storage to use for the decoration of two large weddings he has booked for the latter part of June.

Mr. Rayburn, salesman for Vaughan's Seed Store, returned Monday from a seven months' trip, and reports business excellent. This house is beginning to be extra busy in the bedding plant line.

O. F. Bassett and wife left Chicago on Wednesday for Detroit, where they will spend several days. Thence they will go to New York and will sail on May 26, on the Prince Frederick Wilhelm, for Europe.

Visitors: H. A. Fischer, Kalamazoo, Mich.; C. A. Brazee, Los Angeles, Calif.; Ed. Amerpohl, Janesville, Wis.

St. Louis

Fred J. Foster, head of the Foster Floral Co., reports he has leased his old stand in the New La Salle Bldg. at Olive st. and Broadway; the new place will be known as the Paris Floral Co. The old stand in the Century Bldg., at 9th and Olive sts., will be continued. The new stand will be opened at once and will have easy sailing as the payment of rent does not begin until September first.

Martin Renkauf, traveler for H. Bayersdorfer & Co., Philadelphia, spent part of last week with the trade selling supplies for Memorial Day trade.

The Lady Florists' Home Circle decided to hold their next meeting at Chautauqua, near Alton, Ill., June 13, spending a night away from home; the meeting will be held in the Meinhardt cottage. All the members are expected to attend.

Ostertag Bros. report that they have been very busy of late with decorations. They have a big job for next week for the Electric Show in the big Coliseum. They are expected a shipment of 150 Bay trees this week to be used for this decoration. Fred Ostertag is again with the firm as head decorator and maker-up. Louis Swartzkopf is no longer connected with the firm.

Frank A. Weber of the firm of H. J. Weber & Sons Co., reports that he will take quite a delegation from here to Denver next month to attend the annual meeting of the American Association of Nurserymen. Mr. Weber is chairman of the Entertainment Committee and says there will be something doing every minute according to the program laid out by his committee. He also expects to land the next meeting for St. Louis.

From reports, there are now 35 new greenhouses in the course of erection in Kirkwood. Among those who are building are W. J. Pilcher, Vennemann Bros., Oakland Floral Co. and Gus Gross. Nothing but Carnations, Violets and Sweet Peas are being grown there, but it is said that some of the new glass will be devoted to Roses which, no doubt, will be a success.

The Florists' Club held a regular meeting on Thursday afternoon, May 12. The meeting was very poorly attended, as are all the Spring meetings, as most of the members are busy with planting, and as the day was fine and warm they took advantage of it. Still some fifteen store men and a few suburban members

The Week's Work

BY
FRITZ BAHR

Chrysanthemums

Loss no Time in Getting the Early Ones Planted

Take advantage of any bench room that may present itself in the next few weeks for the planting out of the early Chrysanthemums. You can't get them in too early. Such short jointed varieties as Polly Rose and Ivory are greatly benefited by early benching. They need every day from now until they set buds to make a good long stem, and there is no other way of getting it than by timely planting. If you are short on stock don't delay the ordering. There is plenty advertised, but do not overlook the fact that the early varieties usually go first, and before long the best stock of these will be cleaned out. Get them, and have your supply on hand when ready for planting. How about the benches which are to be used for the 'Mums? Now is the time to make repairs, if any are necessary. Don't overlook a proper cleaning of every corner, to be followed by a coat of whitewash. A layer of fresh stable manure will afford the very best of drainage. Four inches of good soil on top of the manure is all that is necessary for the present; you can top dress at any time and thereby benefit the plants far more than by filling the bench heaping full now, in order to save labor. While it is natural for us to try to get as many plants into a bench as possible, some make a serious mistake by planting too closely. Not only do we thereby encourage a spindly growth, which is bad, but yellow leaves and leaf spot are often due to crowded conditions. You can't grow a perfect single stem Chrysanthemum by giving the plant 6 inches of space—they need more, a space 8x8 ins. is better, and 8x10 still better if you are after quality.

Gloxinias

Too Much Shade as Bad for Them as None at All

If you started some of the bulbs, or rather tubers, a couple of months ago, the plants should be coming along nicely now. Their foliage, to me, always seems beautiful, even without flowers, and it is the leaves you want to look out for—without them, no matter how fine the flowers, your plants are worthless. A Gloxinia, if exposed to too much shade may develop great leaves, but blind buds may be the result. On the other hand, too much sun, especially if the foliage should be wet from careless watering, will scorch the leaves, so, in order to be successful, strike a happy medium in regard to shading the plants. Gloxinias are not like Cyclamens which, by hardening them off, can stand a great deal of sunlight and are even benefited by it. Gloxinias are delicately constituted and only by most careful attention can you expect good results. But they are well worthy of everything one can do for them, and, after all, it isn't so much. It doesn't require one of our latest pattern houses—one of sash will fill the bill nicely. Use a good, light soil, leaf mould, sharp sand, a little fine manure, plenty of drainage in the pots, and sufficient room between the plants. Forget the hose and use the watering can. Keep the leaves dry. From now on, a temperature not going below 55° is all right; and, as regards shading, thin cheese cloth under the glass will provide it until we find a better way.

Boston Ferns

A Good Investment for Every Retail Grower

As we see the first bench of Geraniums leave the greenhouse we immediately think about what is to come next—what is to be used for taking their place. "There is no rest," as Hubbard

says, "rest means rust." Among the desirable plants to follow a crop the Boston Fern still leads. Few other plants grow so quickly into money for the retail florist. By the time the frost spoils the first Geranium bed your customer will look up the Fern dish, and the empty jardiniere must be filled with something green for the Winter months, and the Boston is in demand again, as much, if not more, than ever. If you grow a good bench, whether planted out or in pots, good stock next October will bring good prices. You can't lose on it. What your own trade doesn't consume you can wholesale at fair prices. Don't grow more than you have room for, but make every effort to produce good plants. There is any amount of poor stock on the market at all times, but never sufficient really good. 2 1/2-in. pot plants will, if planted out now or in the next month, grow into fine stock by next October. Bench culture is easier than growing them in pots. Use six inches of good loam soil, not too heavily manured. Allow the plants not less than 14 inches of space. A Boston Fern is only beautiful when you have a well shaped plant with drooping fronds, and you can only get such a one by allowing plenty of space between the plants. Shading? Yes, they need a little; not a heavy thick paste all over the glass, but just enough to give a little shade. A Fern is supposed to grow out in the full sunlight when under glass.

Smilax

Get Ready If Stock is Wanted for Next Winter's Use

No one like the outtown florist knows how to appreciate a good bench or bed of Smilax, to have it on hand during the Winter months to cut from. To have it when in need of it means a great deal sometimes. There are some of us who keep on trying our luck with the newest Carnations, Roses or 'Mums, ever anxious to get an improvement over what we have, and yet it is these very things that the retail grower ought to grow. A small batch of Pansies, Forget-Me-Nots, Sweet Alyssum, Smilax, Stevia, etc., is of as much value if not more to him than a bench of Roses or Carnations. Grow as many Carnations and Roses as your place will permit, but don't overlook the other things on account of them. A bench of Smilax can be made to produce four crops in a year. Doesn't that pay? Now is a good time to plant the young stock for next Winter's use. If to be grown without benches use 6 to 7 inches of good Rose soil, or soil of a heavy nature. Don't use too much manure; for the present the little plants are not in need of it. When they are once established and going ahead, well rotted manure worked into the surface of the bed will do them more good, and this holds good with bench culture. Don't overlook providing plenty of head room for the strings, and don't wait too long before supplying the strings themselves.

Adiantum

As Much in Demand as Ever as a Florists' Green

In answer to an inquiry regarding bench culture of Maidenhair Fern, I would suggest using a house where during the Winter months no trouble will be experienced in keeping a temperature of 60°. Five inches of good fibrous soil are needed. Provide good drainage; Adiantums are like Boston Ferns, they love great quantities of fresh water but detest sour soil, and never will you cut the best fronds from plants in such soil. Fresh manure should never be used with any Ferns. A well rotted cow manure is the thing; have it as fine as the soil you make use of. Strong 2 1/2 in. pot plants planted out now, about 12 ins. apart each way, will give good fronds next Winter. Be careful not to over water the young stock, but rather cultivate freely, keeping the surface of the soil clear of weeds and moss. A good heavy shade is required from now on, until October, after which the heaviest should be removed, for light dur-

GIBLIN & CO., Utica, N. Y.

ing the Winter months is necessary to give a good green color and substance to the fronds. A bunch of Adiantum if properly taken care of, will last for several years; and while divisions of the old clumps will do for replanting, young stock grown from seed is preferable in every way. Snails do more harm to the young fronds than any other greenhouse pest, and of the various ways of catching them Potatoes cut in half and hollowed out form the best traps.

Fire Heat

Keep a Small Fire Going Over Night for the Bedding Stock.

Raw, cold northeast winds practically every day for the past two weeks have prevented the planting out of bedding stock of any kind. The temperature goes down near the freezing point every night. This, with the dampness in the houses containing bedding stock demands the keeping up of the fires. A dry atmosphere in a 50° or 45° house doesn't hurt a Coleus or Fuchsia, that is, if the plants are fairly well established, but with a daily watering everything below the benches is soaking wet and the stock will suffer if firing is not kept up. Some may claim, a few days before the plants go out, that fire heat indoors is not necessary, as the stock is benefited by hardening it a little. If this is the object a proper way to do is to keep the fires up, but open the ventilators; in this way one can keep the temperature of a house at almost any desired point and overcome the dampness at the same time. We all know what effect a few nights of a cold, damp atmosphere will have on a Rose house, and a Geranium in full bloom will suffer in like manner. A condition of that kind will give the Coleus a dose of mealy bug, and cause the decaying of the leaves of plants in a crowded condition, as is often the case with bedding stock when we are short of room. Keep your firing up, even if the sun during the daytime makes things real hot under. Don't shut down your ventilators on that account too early. No! Let them remain open a few inches all night, for no matter how early you close your houses up at night this will never help to retain a desired temperature without fire heat. Even without heat I should prefer a little air on Geranium house rather than a stuffy air over night. It is poor economy to save coal now and is as bad as not starting the fires early enough in Fall. Because it is May or September should never be a reason for net firing—but it is with some of us.

Salvias

Timely Hints on Their Culture as Pot Plants.

Because the Salvias are going out from now on is no reason for letting them get infested with insects. Green fly will disfigure the leaves of Salvias quite as much as a Cineraria. It cripples the growth of the plants and thereby makes them unfit for sale. A light fumigating or spraying will keep them clean, so don't overlook this part of the week's work. Hardly another plant will show the effects of being potbound more than the Salvia. If you crowd them in a small pot there is trouble. Even the application of liquid manure does not seem to overcome this nearly as well as a shift into larger pots. Whenever a stiff loam is obtainable, let the Salvias have it. I know they grow in light, yes, almost any kind of soil, but they do best and can remain longer in a small pot when a stiff loam and a liberal amount of rotted manure is used for potting. They are great feeders, besides loving root room. Another thing not to do is to place them in a hot, dry house. They want a rather moist and cool atmosphere to produce a short, stocky growth and dark green foliage. Whenever you are growing spindly, yellow looking plant you can depend on it that a starved condition and dry atmosphere was the cause. Red spider, the greatest enemy the Salvias have, is only possible under such conditions, and there is no reason for it. If you have small seedlings, or rooted cuttings, new, don't bother putting them into 2 1/2's, 3's are not too large. In three to four weeks in that size pot you can have a salable plant. They grow as fast as a Coleus at this time of the year—only don't neglect them; if once stunted you may as well dump them out as try to get them in shape again.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

Providence, R. I.

Robert Greenlaw, representing the firm of N. F. McCarthy & Co., Boston, was in town Saturday, calling on the trade. He reports business good.

E. R. Seymour, Warren, R. I., was in Providence on Friday, delivering flowers and purchasing supplies.

E. E. King, Attleboro, Mass., was in town this week purchasing supplies. He reports business good, and that he is busy moving his bedding stock, of which he has a liberal supply. His stock is in fine condition, both in cut flowers and plants.

D. E. Newell, Attleboro, Mass., reports business about the same as usual with a tendency of cut flowers to be short for Decoration Day.

W. S. Pino is receiving some very nice new Ferns, and has a fine supply green and bronze Galax always on hand. He is very busy with seed and plant trade.

Mr. Crosby of the firm Franklin & Crosby, Danielson, Ct., was in Providence recently purchasing supplies for Decoration Day.

J. Koppleman & Co., Washington st., wholesale florists, report business good.

W. S. Nichols, Hampden Meadows, R. I., says all flowers with him have a tendency toward a short crop, especially Enchantress Carnations.

Wm. Crompton, East Greenwich, Ct., was in town this week.

Eugene McCarron is still busy with his landscape work.

John Macrea is bringing some very nice potted Roses into town. His other stock will be fine for Decoration Day.

N. D. Pierce, Norwood, R. I., manager of the Home Nurseries, has had a very busy Spring in nursery stock.

Johnston Bros., Dorrance st., report the supply of cut flowers as fair and business good.

The Florists' Club meets on Monday night. C. S. Ford, representing Hermann & Co., New York, is in town. Wm. Jergens of Newport was also a recent visitor.

Wm. Hoffman, Pawtucket, reports he has about 100,000 bedding plants ready for market. He also has four orders for planting this week, each order going above three figures.

Geo. Johnson & Son are busy filling vases and boxes. They have 100 of each to fill this week.

J. B. Canney reports funeral work keeps him busy. His stock is looking fine.

T. O'Connor has some very fine Hydrangeas and Geraniums. Mr. O'Connor celebrated his 73d birthday last Tuesday. He always gets to his office at 7 o'clock a.m., thus beating some of the young men.

The Market

There is little change to report in market conditions this week. Business, on the whole, is good and steady and satisfactory returns have been the rule. Carnations continue to be a prominent feature, with little change in prices. It would be much better if Carnation growers in this section would get together and try to regulate the quantity of blooms they should bring into the market at this time of the year. In the writer's opinion, at least half of the Carnations brought into the market at the present time would be far better on the dump pile, and a limited quantity brought in regularly would keep up prices and be better for all concerned. Roses of all descriptions are plentiful. Outside Roses are being brought into the market in quantity and meet with a ready demand. American Beauty is becoming plentiful and of better quality than for some time back. The Gladiolus is a prominent flower in all the stores at present and varieties such as The Bride, Blushing Bride, and Peach Blossom sell out rapidly. Spanish Iris is overabundant and flowers are now being peddled on the street at five cents per bunch. Orchids continue plentiful, and prices remain the same. Some very fine blooms of Cattleya gigas were seen in the stores this week, which shows that Mosses are now on the wane and the time is at hand when Orchids will be hard to get at any price. Valley is none too plentiful, in fact choice flowers of any description will be hard to get in a week or so. There is quite a demand all round for Palms and Ferns of all sizes, although large Kentias are decidedly scarce. It would pay growers to go in more for this class of stuff.

Various Notes

David Basset, head gardener to H. E. Botkin, Marin County, was, until six months ago, private decorator to the new King of England, when he was Prince of Wales. Mr. Basset held this responsible position for over five years, with great credit to himself, and he has numerous presents from King George and the Queen to show that his work was appreciated by them.

The Rose carnival at San José, lasting for four days, is in full swing at present. San José is known as the "Garden City" and is well worthy of the name.

Frank Mills, the University florist at Palo Alto, has a grand lot of Sweet Peas in flower at present, which have been bringing him good returns.

Charles Abrahams reports a heavy demand for bedding plants of all descriptions this year. He claims that city people are only now beginning to take an interest in flowers and he looks for an increasing demand for simple flowers in the future.

A huge Vanda Sanderiana with fourteen large growths is one of the MacRorie-McLaren Co.'s latest arrivals from the Philippines.

The Art Floral Co. has been turning out some fine design work from their store this past week.

An especially fine show of Roses is to be seen at the Slade Estate at Fair Oaks at present.

The Lynch nursery at Menlo has been sold to Frank Roach of that place. Mr. Roach will endeavor to bring the nursery to the same high standard attained by the late M. Lynch during the latter years of his life.

Everything points to Callas being very scarce this year. Stock in the South has the disease badly, and most of it will have to be destroyed. In San Francisco and vicinity Callas were never better, and local growers should get fancy prices for their stock.

E. James of Elmhurst was a recent visitor in town. Mr. James is noted for the excellent Ferns which he brings into the San Francisco market. Lorraine Begonias will be largely grown by him this year. He also reports having a fine lot of young Cyclamen plants on the move at present.

Vanda teres is to be seen in grand shape at Fair Oaks these days. A large lot of Cattleya gigas is also looking fine and showing a large crop of flowers. This variety seems to do better here than anywhere I have ever seen it. A fine Cattleya Mossiae with over sixty blooms was also in flower during my visit.

Twelve carloads of semi-tropical trees and shrubs arrived from the South this week for one of the MacRorie-McLaren contracts in Marin County.

WM. McM. B.

The Sievers Floral Co., doing business on Geary st., failed late in April and will be unable to resume business.

C. P.

Washington, D.C.

As "scapegoat" the comet is blamed for the unseasonably low temperatures which prevail, making fires a necessity.

On May 5 light frosts appeared in exposed places, and again on the morning of May 13. This condition is retarding all outside vegetation and flowers, and likewise cut short the output of the greenhouses where fires had been suspended. Present indications point to the fact that the flowers for Memorial Day will have to come in chiefly from the inside. Peonies became rather abundant during the past week but, owing to the cold, those from nearby points are yet scarce; the crop, however, promises to be up to the average later.

Pond Lilies, which manage to open slowly during the middle of the day, remain in that condition over night by reason of the cold, but the uncertainty of the buds coming open, if they once close, is retarding local sales.

John Robertson, one of Washington's most popular retailers, and president of the local club, has moved from 1510 H st. N. W., to 2010 P st. N. W., where he has a very nice store and is centered among his old patrons in a locality without competition. He is to be congratulated upon securing such a good locality, and it is the wish of his many friends that well deserved success may attend his efforts.

Louisville, Ky.

The principal factor in the florists' business at present is the demand for plants, although this was interfered with to some extent by cold weather a few weeks ago, which resulted in killing a good many plants which had already been set out. For that reason the demand has fallen off somewhat, but will be heavier, it is believed, as soon as the weather becomes definitely settled. Sweet Peas have been very popular this Spring. Baskets and window boxes have been selling well. Peonies have been moving in large quantities. The plant trade has been so heavy, taking the season as a whole, that it is quite within the range of possibilities that there will be a shortage of bedding stock, provided weather conditions from now on remain favorable. Cape Jessamine blossoms will soon be on the market, some shipments from the South having already been started, and these will be a feature as soon as offered.

Mrs. E. W. Reimers reports that there has been a good deal of complaint of late on account of the cut worm, which has damaged a good many plants.

Henry Fuchs is in the middle of the planting season, and is selling a great many baskets and window boxes, the demand for the latter being especially strong on account of the increasing number of apartment houses.

Nanz & Neuner provided the floral wreath for Donau, the winner of the Kentucky Derby, which was run May 10. This firm has been the recipient of an annual Derby order for a long while. The wreath was made of American Beauty Roses, and its presentation is considered one of the features of the event. The Derby was held under good weather conditions, and there was a spirit of holiday in the air. Many dinner parties were held at the leading hotels and restaurants following the races, and florists sold flowers for this purpose in profusion, many Orchids being ordered. The firm's plant trade has been exceptionally heavy.

The family of H. G. Walker, the local florist, narrowly escaped with their lives as the result of a fire of incendiary origin which happened recently. Mr. Walker awoke at 3.50 o'clock in the morning and discovered the fire. He alarmed the members of the family, who succeeded in escaping, and the flames were put out by Kingsley Walker, Mr. Walker's son, before the department arrived, by means of a garden hose. An oil-soaked blanket found on the premises led to the belief being formed that an incendiary started the blaze. The matter was reported to the State Fire Marshal.

Officers of the Woman's Outdoor Art League, which is doing much work in which the florists of the city are interested, have been chosen. Mrs. John B. Castleman, who has been at the head of the work for some time, was elected president again. The League is composed of leading women of the city.

G. D. C.

MEXICO CITY, MEX.—The Battle of Flowers, looked forward to by flower dealers here for many weeks, has been postponed indefinitely, out of respect to the memory of the late King Edward of England. The loss to the dealers will be heavy.

HERE IS WHAT THE MAN WHO HAS ONE SAYS

Here is a letter written by Mr. Alfred Holm, Corsicana, Texas, that will interest you, copy of which was forwarded to us by courtesy.

"The Lord & Burnham Semi-Iron Greenhouse Structure which I purchased in 1908 is one of the best, if not the best, in Texas. Has many new features, being very light in material, which prevents shadows, at the same time very strong and durable. Splendid glass which has stood pretty good size hails without breaking.

Splendid cypress material, good ventilating apparatus, simple and strong, in short, everything A No. 1.

The Burnham Sectional Boilers are undoubtedly the best on the market in both heating and economy. Too much cannot be said towards recommending them. By all means buy a Burnham Sectional Heater."

European Notes

Whitsuntide is eagerly looked forward to by the members of the European seed trade as a welcome respite after the arduous labors of the busy season; and this year we feel the need of the rest very badly, for never before in the memory of the oldest inhabitant have our labors been so exacting and, in the main, unprofitable.

The concluding remark of the foregoing paragraph may appear to be at variance with fact when the high prices which figure in the seedsmen's catalogs are taken into consideration, but when the expense side of the balance sheet is taken into consideration it will be found that appearances are, in this case, deceptive.

Our rejoicings will, for this and other weighty reasons, be of a somewhat subdued nature this year, for at the present moment France is storm swept from the English Channel to the Mediterranean Sea, so that the outdoor pleasures beloved by the Frenchmen are not possible; England is clouded over with a great national sorrow; and Germany and Holland have hardly recovered from the losses occasioned by that fatal October frost.

It is popularly believed that much of our trouble is due to the influence of the tail of Halley's Comet through which we

Do you invest in Lily Bulbs, or do you speculate? In buying Lily Bulbs at random you are merely speculating, and speculation has never been known to pay in the long run. The success of your business may be ruined by speculation. You must have good Lilies or you had better have none. They must be good every season and not just once. If you want to make a conservative investment in Lily Bulbs for Easter, 1911, buy Horseshoe Brand Lilium Giganteum—the best the market can afford.

Vaughan's Lilium Harrisii

CAREFUL
SELECTION
OF BOTH
PLANTS and BULBS.

OUR grower, writing under date of April 12, says crop of "Harrisii" is looking exceptionally well this year, the season having been favorable to the development of good healthy plants, and they expect to harvest an average crop of fine bulbs. Remember, while we do not claim that our "Harrisii" are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and roguing are producing results, our stock now being freer from disease than ever before and of genuine "Harrisii" type. In fact, the best general crop grown on the Island of Bermuda.

are now reported to be passing. If this be true we shall be delighted to part company with our heavenly visitant at the earliest possible moment, for anything more nowelcome than the conditions at present existing it is impossible to imagine. Sharp frosts at night and a cold nipping wind all day, with occasional hail storms of unusual severity to fill up the gaps, are proving most destructive to everything that hath life—except the vermin. Already stem rot has set in among the best looking of our Cabbages, and as much of the Beet has been planted on low lying lands where a renewal of the floods is imminent the outlook is not conducive to gay and festive relaxation.

The lamented death of the King of England, apart from its immediate effect upon the business of that country, and Europe in general, removes an intelligent

patron and warm-hearted supporter from the world of horticulture.

Few rulers have more agreeably disappointed the ghoulish croakers than "Edward the Peacemaker" and "Theodore the Strenuous." It is fitting that the country which owes the best of its glorious liberties to its early associations with Britain, should be represented at the hier of Britain's famous King by his equally famous and friendly rival.

EUROPEAN SEEDS.

American Notes

Good Business Continues

The week just ending has seen very good business for the seedsmen, every line of the trade continuing particularly active for the end of May. Retail counter sales of seeds proper have been, as a rule, materially larger than usual at this season, and especially has this been true of flower seeds. While it may be only fair to attribute many of these extra sales to the late killing frosts and excessive wet weather that some sections of the country have experienced, still there is no question as to the fact of the yearly and most rapidly increasing May and June demand at retail for seeds, and all other needed supplies from the makers of small gardens in the suburbs of our larger cities. There is no customer so good as the city dweller who becomes "the commuter." He is enthusiastic about planting things, studies the seed catalogs, and buys intelligently. This special branch of the seedsmen's retail business is destined to assume tremendous proportions in the future, and no attention is too great to bestow upon it.

The wholesale seedsmen are still receiving many filling-in orders, and report the outlook very encouraging as regards the Summer season's demand for Beet, Mangel-Wurzel, Turnip, Fodder Corn, and other seasonable seeds. As regards nursery stock, the sales are very nearly over, with the seedsmen; but it is well worthy of note that never before in the history of the business has such a large proportion of the total amounts handled passed through the hands of the seedsmen. Vegetable and bedding plants are still in good demand, and, as regards the latter, Memorial Day sales seem likely to be far ahead of those of a year ago. Altogether, the seed trade has added still another very satisfactory week of sales to the season's total, with the prospect

Cultural Directions
Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)
We can supply them at \$2.60 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.
Try a thousand and see what a help they are in selling goods.

A. T. DELAMARE PTG. & PUB. CO., Ltd
P. O. Box 1697, NEW YORK

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

of quite a few weeks yet of continued good business.

Squash Seed Sales

The sales of Squash seed are always very large through June, for the reason that the Squash, being a very tender annual, cannot be successfully planted until all danger from frost is past, and the ground is dry and warm; and aside from the tender nature of the plant, the seed itself is liable to rot in damp, cool weather. As with all the other vegetables, a long list of Squash varieties is found in a wholesale seedsman's list; but, as advised in this column regarding other vegetable seeds, if a few of the most popular and leading sorts are kept constantly in stock, customers will be willing to wait until the little-called-for varieties can be obtained. In Summer Squashes, two varieties will be found ample for most requirements—the White Bush Scalloped and the Early Summer Crookneck; both are favorites, the flesh of the former being white and of the latter yellow. In Fall and Winter Squashes, two sorts also should satisfy most people—the Boston Marrow and the Hubbard; there are many strains of each, but any wholesale seedsman will advise as to the particular selections most salable in certain localities. In buying a supply of Squash seed, it would be well not to over-purchase of the Summer varieties, as the seed of these being small only about half as much is required to sow an acre as of the large-seeded Winter sorts. In fact, retail customers should be informed that while one ounce of the Summer Squash seeds will plant fully forty hills, the same quantity of a Winter variety will only sow about half that number. While Squash seeds will retain their full germinating qualities for several years, it would seem conservative policy not to carry in stock too largely of the many little-called-for kinds. The four varieties above mentioned are always in demand.

New York Seed Trade

The uncertain weather of the past week has interrupted trade greatly. Business has run right along a large part of each day nevertheless. Orders keep coming in and retail counter sales are still good. All our seedsman who carry full stocks of bedding plants report a very active demand for Memorial Day. Speaking of bedding plants, the end of the season will show this year the largest totals in this line ever handled by the seed trade here.

F. S. Willard of Wethersfield, Conn., was in the city this week calling upon

Dahlias! Dahlias!

A superb collection of the choicest Cactus, Decorative and Show Dahlias, including the very best varieties for cutting. We have tested about every variety in commerce and have discarded all except these of special merit—the collection offered consisting of forty varieties—names of which will be given upon application. The plants we offer are strictly true to name.

\$2.50 per 100, \$20.00 per 1000

They are well rooted plants in 2 1/2-in. pots, with firm balls of earth. These plants succeed better and give larger, finer flowers than can be obtained from dry tubers. Packed free for cash with order.

the trade, and he feels that conditions are particularly favorable for the coming season. Good seed stocks, he thinks, will be in demand within reasonable limits, no matter what the outcome of the new seed crop may be.

Burnett Bros. report trade as still active. This week they have been handling many Bay trees, in different sizes, for which they have had unusual demand this season.

Wm. Elliott & Sons are doing more than ever this year with rustic work. Particularly is the demand strong for hanging baskets, lawn settees and bird houses.

At Boddington's there is continued activity; particularly in bulbs. This house is still making shipments of Dahlias, especially of those varieties which florists are growing extensively for forcing. New crop seed of *Areca lutescens* has just been received.

Vaughan's Seed Store expects an unusually large and early demand for Lillium Harrisii this season.

The Stump & Walter Co. has its usual full line of insecticides ready for the coming demand.

The whole trade is looking forward with much pleasure to the Memorial Day holiday which certainly has been well earned by both employer and employee.

Philadelphia Seed Trade

W. Atlee Burpee and his manager, Howard M. Earl, left the city this week on an inspection trip of their California Sweet Pea crops, the hot weather having driven the plants into bloom prematurely. They were to make but one stop, this side of California, and that at Culver, Ind., where they were to examine into the merits of the Culver Cavalry and Naval Summer Schools with an idea of placing David and W. Atlee Burpee, Jr., and Jack Earl there.

Mr. and Mrs. Burpee will sail July 1 from Quebec on the Empress of Britain, which will bring them to England in

CUT DAHLIA FLOWERS PAY

If You Have the Following Varieties and Plant them NOW

After considerable consideration and observation, and "talks" with the trade, we decided to offer the following Dahlias to florists this season. Price, \$1.00 per 12, \$8.00 per 100; Our selection, 75 cents per 12, \$6.00 per 100.

Decorative Dahlias

Auguste Nonin. Clear scarlet, a large and superb flower borne abundantly, always above the foliage. Flowers are always perfect.

Beauty of Keot. Well named, beautiful in form, color and appearance. Deep crimson-red, with distinct pure white tips; most effective and at once catches the eye; free-blooming and fairly large.

Camellia. A dwarf, bushy plant, attaining a height of 2½ feet with small, but prolific foliage and myriads of small-sized perfect flowers of a coppery orange. The shape of the flower is just like a Camellia and lasts well when cut.

Catherine Duer. Crimson-scarlet.

Clifford W. Bruton. Best yellow.

Kirefly. A most striking variety on account of its color, fiery orange-scarlet, with distinct white tips.

Frank L. Bassett. Bright purple, shading to blue.

Lyndhurst. Bright scarlet.

Maid of Kent. Cherry-red, tipped white.

Nymphaea. Color clear, light shrimp-pink.

Orange King. Rich glowing orange; early and profuse.

Source de Feu. New. Deep orange, splashed and streaked with vermilion-scarlet, a dazzling color; flowers gigantic and on long stems, 4 feet.

William Agnew. Rich, dazzling red; immense size.

Giant Decorative Dahlias

Gigantea. Its name suggests the size; truly gigantic and massive in form. The individual petals are short and it requires many to form such a monstrous flower. Color a soft sulphur-yellow.

Souvenir de Gustave Dozas. The most sensational Dahlia of the season; a decorative variety of mammoth proportions, which under ordinary cultivation will produce flowers 6 inches across, and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color.

Cactus Dahlias

Countess of Lonsdale. Amber and salmon.

Earl of Pembroke. Bright plum.

Kriemhilde. One of the finest pink Cactus Dahlias.

Standard Bearer. Brightest scarlet; profuse bloomer.

Show and Fancy Dahlias

Acquisition. Rich, royal deep mauve; splendid exhibition flower.

A. D. Livoni. Beautiful soft pink; early and profuse bloomer.

SHOW AND FANCY DAHLIAS—Continued

Alice Emily. Delicate buff, center clear yellow.

Arabella. Pale primrose, tipped and shaded old rose and lavender.

Comedian. Orange ground, beautifully flaked and speckled with crimson and tipped white; of the finest form. 4 ft.

Criterion. Delicate rose; large and fine.

Gloire de Lyon. Very large, pure white, requires thinning.

Gold Medal. Bright canary-yellow, regularly marked with fine stripes and splashes of deep red.

Grand Duke Alexis. Very large white, tinted pale lavender.

Green's White. One of the best whites for cutting.

Harlequin. Brilliant crimson, striped and tipped white.

John Thorpe. Very large; soft rich pink.

La Republicque. Creamy white, overlaid with rose; very fine.

Menhedy Beauty. Fancy buff, with crimson spots, free long stems, large bloom.

Mrs. Gladstone. Delicate soft pink; large and splendid form; the finest pink Dahlia.

Mrs. Reggie Green. Color a pure white ground, slightly flaked and veined with rosy purple.

Mrs. Chas. Lanier. This grand new Show Dahlia is one of unquestionable merit; color deep brilliant yellow; flowers of immense size; free-blooming.

Norma. Bright orange-buff; good outline.

Rev. J. B. M. Camm. Yellow, flaked red.

SHOW AND FANCY DAHLIAS—Continued

Rosamund. A very fine selling flower, white ground, heavily edged with crimson.

Watchman. Rich golden yellow, heavily striped and blotched with crimson.

White Swan. Snow-white, with long stems.

Single Dahlias

The 20th Century. Intense rosy crimson, with white tips and white disc around yellow center.

Maroon Century. Rich maroon, shaded plum very large and velvety.

Pink Century. In size it is from 6½ to 8 inches in diameter; a strong, vigorous grower with fern-like foliage; color is a delicate shell-pink, slightly suffused, clear, soft pink.

Rose-Pink Century. By far the largest and best, in fact, the only clear rose-pink Century, of immense size, perfect form and great substance. Very strong, heavy plant, with 2 to 3-ft. flower-stems, bearing the giant flowers erectly, making it the most valuable as a plant or for cutting.

Dahlias to Color

We can also furnish, without names, in mixture, all colors separate, or all colors mixed as follows:

Mixed Pinks, Mixed White, Mixed Reds, Mixed Yellows, 75c. per doz., \$5.50 per 100, \$50.00 per 1000.

Mixed, all colors, 60c. per doz., \$4.50 per 100, \$40.00 per 1000.

ARTHUR T. BODDINGTON

SEEDSMAN

342 West 14th Street, NEW YORK

Please mention the Exchange when writing.

time for the Sweet Pea show to be held there. Their stay on the other side will be confined to three weeks, passage home having been engaged on the Empress of Ireland, sailing from Liverpool for Quebec July 20.

At the Doylestown (Pa.) farms the erection of two new greenhouses has been commenced. At Sunnybrook (the seed farm in southern New Jersey) a warehouse is in course of erection. At their city headquarters other building operations are also under way, including the erection of an additional warehouse. Thus, the members of this firm certainly have their hands full with work in the preparation for next season's rush.

It is Mr. Burpee's expectation to be back home at Fordhook Friday, June 24, when he will entertain the members of the American Seed Trade Association and their families at the conclusion of the convention taking place in Atlantic City the early part of the week.

The trade in Spring vegetable seeds is mostly over. The sale of Spring roots and bulbs has, according to the general consensus of opinion, been unprecedented, and is holding out remarkably well. The prices, too, have been satisfactory. Every kind of seasonable vegetable plant is now offered at the various seed stores. Never before were so many useful garden tools displayed. Add to all the above, the commercial fertilizers, the insecticides and the guns, etc., for applying these, and what more can the gardener ask for?

The Johnson Seed Co. is offering a "Self Setting" Mole Trap, a kind, it is to be hoped, which will obviate the danger of the gardener's spearing his own hand while setting the trap.

The Moore Seed Co. report a very

large sale of Sweet Potato plants and Marrow Squash seed. The latter is a favorite with the New Jersey planters, some using as much as forty pounds each season.

The seedsmen are getting ready their circular matter in regard to seeds for Summer and Autumn Sowing.

The season for sowing Mangels, late Cabbage and Turnips will soon be at hand. The Stokes Seed Store calls attention to the fact that the supply of the above seeds is not abundant and that the demand will be heavy. Owing to the fact that all biennial roots here and in foreign countries wintered badly, the settings of these, this Spring, were small, and a shortage of seeds from these biennials will surely occur in 1911. Attention is called to the fact that in 1908 Crimson Clover seed sold at retail for \$3.50 per bushel, but the present price is \$9 per bushel on account of its scarcity. Cow Horn Turnips will be sown by many in place of Crimson Clover as a soil crop. Consequently, the price of this seed will rise. It should be noted also that Celery seed, especially Golden Self Blanching, as well as the seeds of all other biennials, is scarce. Owing to the small planting of all biennials, for reasons above noted, the seedsmen will do well if 33 1-3 per cent. of their contract seeds are delivered to them, so far as biennials are concerned.

At Henry A. Dreer's is being displayed a vase of the blooms of the H. T. Rose Dean Hole. Bushes of the same are also for sale. The color, size, shape and substance of the blooms are all good, and it should meet with a large sale. An old and pretty custom, which should be introduced into this country, is suggested by the scene in one of the windows at this store. A Maypole, several feet tall, is prettily trimmed with Sweet

Peas and ribbon streamers, and three life size girl dolls are holding on to the ribbon streamers, and dancing around the pole.

The number of meritorious hardy plants and vines offered here is increasing, now amounting to about twenty, and these are only a few of what can be obtained at Dreer's Nursery.

The Michell seed houses will make an exhibit at the S. A. F. convention at Rochester this Summer. Fred'k J. Michell expects to attend.

Michell's seed house, 518 Market st., is displaying a full line of poultry foods and supplies; a fresh importation of Japanese Fern balls and one of the most complete lines of garden tools and lawn requisites in the city. At the 1018 Market st. store there is an unsurpassed supply of all vegetable plants.

Kentia Palm Seeds

On page 892 of our issue of May 21 reference was made to the prevailing price at which these seeds are now held. It appears that Lord Howe Island, off the southeast coast of Australia, is practically the only source of supply for these seeds. The islanders are leaseholders from the Government and their principal business is the gathering and marketing of Kentia seeds. It seems that, as already related, under old conditions the islanders were entirely at the mercy of the buyer, but a Mr. Farnell, at that time visiting magistrate, being greatly interested in the welfare of the people of the island, undertook to enlighten them as to improved methods of marketing. Later he became resident magistrate and, on his recommendation, the price per bushel was raised to £1, a discount being allowed to the New South Wales trade only. After two or three

years, however, a combine or company was formed which has still further improved conditions for the islanders, but is held to be unfair and unjust to purchasers, as Kentia Palma seed is now in the neighborhood of \$14.50 per bushel.

This increase in price has brought about many protests on the part of purchasers, and an agitation has been started by the Australian nurserymen, in the endeavor to find a remedy, or at least obtain a clearer explanation as to the nature of the combine or company and of the justice of the price fixed.

The facts above given are sent to us by John S. Gallagher of the National Nurseryman Publishing Co., Rochester, N. Y., and are supplementary to the information printed last week.

Concrete Fence Posts

The U. S. Department of Agriculture, Office of Public Roads, Washington, D. C., has issued an elaborate bulletin on the subject of concrete fence posts. The pamphlet goes into details, giving full and minute instructions enabling those so desiring to build their own fences with their own labor. This information is contained in Farmers' Bulletin No. 403, and may be obtained without charge by addressing as above.

BULBS and THEIR CULTIVATION

By T. W. SANDERS, F. L. S., F. R. H. S. Crown 8vo., Cloth, 212 pages, 42 illus. A Practical Guide to the Cultivation and propagation of hardy, greenhouse and tuberous-rooted plants, including lists of all the genera, species and varieties worth growing. Price, postpaid, \$1.25. Address, **FLORISTS' EXCHANGE**, 2 to 6 Duane st., New York.

Dreer's Select Potted Roses

FOR OUTDOOR PLANTING

The Roses here offered are field grown plants which have been potted into 5 or 6 inch pots (according to the growth of the variety) during the winter months. They have been stored in cold houses and cold frames and are in the best possible condition to turn over to your retail customers for outdoor planting, giving an entirely different result from stock carried over winter in storage. For best results the plants should be shipped in pots; in this shape they will carry safely to reasonable distances by freight.

Fertilization of Horse Radish Seeds

Horse Radish, which is cultivated in great quantities in Central and Eastern Europe, is generally considered to be sterile, and in horticultural works it is frequently cited as an example of sterility caused by the excessive development of the organs of vegetation. It is commonly propagated by cuttings from the root. A Polish horticulturist, Mr. J. Brzezinski, has made some interesting experiments, which are summed up in a memoir addressed to the Academy of Sciences of Cracow.

He began by grafting Horse Radish (*Cochlearia armoracea*) on common Cabbage and on Sea-Kale (*Crambe maritima*), but obtained no results as the grafts rotted before being completely developed. Then he made an incision on the root of the Horse Radish, cutting out a round strip of the skin, so as to lay bare the flesh.

The chief portions of the inner skin, the cribrate tubes, are thereby cut, while the woody fibres stay intact. As the organic matter of the plant is now prevented from going down into the roots to nourish and develop them, the plant is deprived of its former quantity of

water as a result of this enfeeblement of the roots, and at the same time an excess of organic matter accumulates in all the parts of the plant above the point of incision.

The first incisions were made on ten roots on June 3, 1907, in the upper portion, less than an inch below the leaves and the stems of the flowers, and on July 10 following Mr. Brzezinski collected a round number of pods, some of which had already lost their seeds. Nevertheless, he obtained 150 grains of seed that were perfectly developed. In the following year he operated upon a larger number of plants, which yielded

him 1500 grains of seed. These grains are like those of *Cochlearia officinalis* in shape and size, but flatter and more grey in color. Mr. Brzezinski then sowed part of the seeds, and of the plants that sprang up, some did not differ in any way from the type of the parent, while others showed very distinct variations.—Quoted by *Revue Horticole*.

[Seedsmen here, 20 to 25 years ago, sold Horse Radish seed, but that practice was discontinued for the reason that these plants could be raised so freely, and in such large quantity from the root as to make seed raising unnecessary.—Ed.]

AMERICAN ASSOCIATION OF NURSERYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer. 25th Annual Convention at Denver, June 8, 9 and 10.

The Alvin Japanese Nursery Co., Houston, Tex., has been incorporated with a capital stock of \$225,000. Incorporators: C. L. Bradley, Joe M. Sam, S. Arai.

The King Thurston Nursery Co. of Kalispell, Mont., has filed with the Secretary of State notice of its change from the nursery to the realty and kindred business and its increase of capital stock from ten thousand to fifty thousand dollars.

Quercus falcata One of the beautiful Oaks hardy in most all parts of the country is the *Quercus falcata*, commonly called Spanish Oak, though why "Spanish" it is hard to say, the tree being a pure native of this country alone. If it grows elsewhere in Pennsylvania than from Philadelphia southward the writer has never seen it, nor has he seen it outside the northern limits of that city. In Fairmount Park, Philadelphia, there are two wild trees still thriving, and as one progresses to near the limits of the city, at its southern end, there are quite a number of trees. Across the Delaware River, in New Jersey, the tree is fairly abundant, extending both east and south.

Some time ago we had an illustration of a large tree in our columns, one of the wild ones mentioned as growing in Fairmount Park. We give now an illustration of a young tree, planted some years ago, as one of a row of shade trees, and which is greatly admired for its beauty. Its good shape will be noticed, as well as its finely divided leaves; and it may be added that its shape is of its own making, no pruning knife having ever been applied to it.

The shape of its leaves is sufficient to enable any one fairly well acquainted with the Oaks to distinguish it, but for additional identification the rusty brown of the underside of the leaf is sufficient.

It is only of late that it is finding its way into general plantings, and it would, perhaps, not be known now had not nurserymen become alive to the fact that the old stock in trade of Oaks, the red, the white, the black and the scarlet will not suffice planters nowadays when such beauties as this one, the *Quercus falcata*, are to be had for the sowing of the Acorns.

Kieffer Pears The fact that the Kieffer Pear is free from scale appears scale proof is a great boon to the fruit growers of southern New Jersey, where so many poor farmers have set out orchards of it in their sandy soils. This Pear is well adapted to the soil there, growing freely where no other sort will do at all, and bearing good crops of fruit. The Pears sell well there, wherever canners can get them, a great demand for them existing, for it is almost the only variety to be had in quantities, and when canned they are very good eating. The freedom from scale is very much in its favor. I cannot say that it is entirely free everywhere, but I have never seen a tree with scale on it, nor have I heard of one having it on. In this respect it is in line with the Cherry, as the same can be said of it.

It is useless to condemn this tree, as some do, because the quality of its fruit is not of the best for eating. One might as well, or better condemn the Quince, fruit of which no one expects to eat out of hand; but how valuable it is for preserving! The Kieffer is good for both eating fresh and for preserving. Eaten after a week or two of ripening indoors, in October or November, it is a favorite with many.

It is about the only Pear that will stand the ill usage of marketing without immediate rotting, so that, in all, there are many reasons why the Pear should be planted.

Sowing Early Ripening Seeds

There are several species of trees which ripen their seeds very soon after they form in Spring and which, if sown at once, grow in a few weeks, making nice plants the first season.

Among the Maples are the red and the silver, and in Elms the Americana and the fulva. Then there is the red Birch, *Betula rubra*; and among shrubs the *Rhus aromatica* and *Daphne Mezereum* come to mind. These seeds are to be gathered as soon as ripe; or gathered from the ground where they have fallen, and if quite green, though fallen from the trees, they should be spread out on a dry floor for a few days, to help their thorough ripening. Sown after this, the result is generally very satisfactory.

It is the common belief, and almost the common experience, that if these seeds are not sown as soon as ripe, but are kept over until Autumn and then sown, none will grow. This may be so in a general way, but the writer knows of red Maple seed kept until Autumn until sown, and which grew very well, and it is not unlikely that some of the other kinds would do the same.

There is much more to be learned about tree seeds than is generally known. Many will grow very well sown when a year old, kinds, too, believed to be worthless. Take the Ash, as an illustration. If sown the same Autumn as gathered it will grow the following Spring. Keep the seed dry until Spring and sow it then and it will not grow until a year has passed, when it will sprout freely. Kept dry a whole year, and sown in the Autumn following gathering, every one of the seeds will grow. It is quite likely that if kept in a

Quercus falcata. Spanish Oak

cool, dry place until Autumn and then sow, the early ripening Elms, Maples and Birches already referred to would grow, sprouting the Spring following.

There appears to be a demand on the part of seeds to have a certain number of weeks in the ground in advance of Spring, and, if they do not get it they will not sprout, though quite good. If in damp soil indoors through the Winter, the condition seems equivalent to being sown outside in Autumn.

Paulownia imperialis

When it comes to trees with flowers famed for fragrance it would be hard to name a more esteemed one than the Empress Tree, *Paulownia imperialis*, a native of China and Japan. Philadelphians are favored by possessing a climate suitable to this tree, as the tree cannot endure very severe cold, such as the northwestern States are subjected to. Even in Philadelphia seedlings are killed to the ground the first Winter, the upper portion of their growth the second Winter, but after this it is rarely hurt in any way. As it is planted farther north it feels the cold more, until at last it never makes a growth that will endure the Winter. But even in such places it is grown, for the shoots it makes from its base every Summer bear immense leaves which present such a tropi-

cal appearance that it helps along the Summer display.

The shape and size of the flowers are like those of a large Trumpet Vine flower, but they are of a blue color, and are borne in immense panicles. Their perfume is most delightful, and from large trees it is wafted a distance of several hundred feet away. As the seeds are somewhat winged and are exceedingly light they are blown away a great distance, consequently they have become wild here and there in the woods about Philadelphia.

It is claimed that the first trees of it were imported by the late Robert Buist of Philadelphia. The trees were young, and no sale for them appearing, save for a single tree here and there, the stock was grabbed out and burned after the lapse of a few years. Later on, when the few sold flowered, the beauty and fragrance of the blossoms created a great demand for the tree, causing Mr. Buist much regret that he had destroyed the stock.

The seeds grow freely; and besides this method of increasing stock it is easily increased by cutting up the roots.

Double Rhododendrons

Edwin Matthews, Germantown, writes: "Referring to your notes in the EXCHANGE on Rhododendrons, I would say that we used to have a Rhododendron at home (England) with double flowers. It was of a purplish blue color, and had flowers quite as double as the best of the double Azaleas."

As double flowers are more lasting than single ones and Rhododendron flowers soon fade, double ones of it would be popular without doubt, just as the double Azaleas are.

Night Blooming Jasmine

In old collections of greenhouse plants in the North, the night blooming Jasmine, as the *Cestrum Parqui* is called, is still a favorite, because of the delightful fragrance of its flowers, which exalt their odor at night. Years ago, when Northern florists had a large trade with the South, *Cestrum Parqui* was grown to some extent, together with Camellias, *Magnolia fuscata* and other favorites hardy in the South, but not where hard freezings occurred. In the far South this *Cestrum* is a favorite today as a hardy evergreen; in fact, as it is a native of Chili it endures some cold without harm, flourishing even in the south of England, when grown to a wall which affords it some protection.

The flowers are white, in loose panicles, and, as stated, give off their fragrance at night. It is valued by many above all perfume plants. When grown in pots, a plant placed in a room when in flower is a great treat to all who enter.

Cestrum and *Habrothamnus* are considered under one head generally, usually under *Cestrum*.

Wistarias Not Flowering

Wistarias have bloomed so uncommonly well this season that such blooming has caused envy in the hearts of some who have young plants of these vines that have not flowered, and the writer has had several parties enquiring the reason their vines fail to gladden them with flowers. One writer, from far off Denver, Col., says that a nurseryman there has told him it is useless for him ever to look for flowers from his plant, it being a seedling, and neither *Wistarias* nor Trumpet Vines ever flower when raised from seed. The nurseryman, whoever he may be, will have to learn more yet. We have assured the correspondent that he may look for flowers in time, but not so early as he might from plants raised from cuttings. This, at least, is the general experience with these vines, as well as with all plants; the seedling has more vigor, and while in the blush of growth it has no room for flowering. The cutting does not start out so fresh and strong, hence reaches the flowering stage sooner than the seedling.

But to come to the complaints of those who say their vines do not flower, it must be said that the *Wistaria* does not flower for several years—many years some would say. The writer has one that has been planted six years, and it was at least two years old when planted, and no flower has appeared yet. But if those who complain will contain themselves a little longer their vines will flower, and when they commence they will bloom every year. It is well known among those who are familiar with this vine that it takes many years to bring it into flower, and that it is only after years of growth that the flowering period is reached. There is this much consolation for those who now complain—when the flowering starts it never ceases so long as the vine lives, every Spring seeing it bring forth abundance of bloom.

Indorsements of Our Nursery Department

The following extracts from letters addressed to Mr. Joseph Meehan serve to show that this department has much of interest for our readers:

"I read with great interest your notes in The Florists' Exchange every week and wish you every success. No doubt, you sometimes think it a thankless job, but I assure you it is a great help and pleasure to read your Department."—W. S., New York.

"We wish to thank you for the information we receive through your articles in The Florists' Exchange; these we read with great interest every week."—G. H., New York.

Detroit

Increased counter sales and a brisk demand for floral gifts for store and theater openings have kept a rapidly increasing supply down at a level which makes firm prices a possibility. Some of the boys are figuring ahead for some large bouquets and weddings, making prospects look much brighter than a year ago.

Tuberculosis Flower Day, instigated and nursed into existence by genial Phil. Breitmeyer, was a huge success. About nine of the most popular society huds appeared as salesladies at the establishment of John Breitmeyer's Sons and, after four hours of hustling work, they carried away several hundred dollars for the benefit of the Tuberculosis hospital.

The great success this sale attained has given room to the desire to have this an annual affair.

FRANK DANZER.

Milwaukee

Cut flowers in all lines moved exceptionally well the past week, and from advance orders coming in for Decoration Day it looks as though the business for that day will be a record breaker. There are no outdoor flowers in this vicinity this year to relieve the market, and, therefore, the supply will come entirely from flowers grown under glass. Owing to the exceptionally heavy demand there will probably not be anywhere near enough to meet it.

Carnations are mostly called for and the wholesale quotations will run about \$5 per 100. Roses will range from \$4 to \$8 and Peonies \$6 per 100. There will also be quite a cut of Lilies, which will find a ready market at \$2 per dozen. In addition there will probably be some Valley, Sweet Peas, Marguerite Daisies and possibly a few Tulips to help out. The month of May, so far, has been one of the best experienced here.

The demand for bedding plants opened up later than usual, owing to the conditions cold nights, but for the past few days, since warm weather set in, the sudden call has been exceptionally heavy and it has proved quite difficult to get all orders out as promptly as wanted. From advance orders now in for plants, most dealers expect to sell out clean.

Geraniums are bringing a little better price this year, especially in the pink and white varieties. Most of the growers are holding them at about \$1 per 100 higher, which is readily paid wherever the quality is right.

C. C. POLLWORTH Co.

New Use for Privet

In a recent number of the Fruit, Flower, and Vegetable Trades' Journal (Eng.) appeared an article entitled, "A Possible New Industry." "Some weeks ago," says the writer, "when discussing horticultural matters in general with a friend, Clement Bolton of Halifax, he surprised me by informing me that, in the course of his researches, he had discovered that the common Privet (Ligustrum vulgare) contained precisely the same dye as Fustic (Morus tinctoria), and that an infusion of Privet leaves produced results identical with Fustic infusion. Mr. Bolton, who is a metallist and author of a work on wool dyeing, is foreman dyer in a large dyehouse, and he followed up this discovery by exhaustive tests which proved that the Privet color was not affected by exposure to sunshine or boiling with soap, and that it acted in practice in exactly the same way as Fustic. Over 3000 tons of Fustic wood are imported annually." The present price of Fustic chips is \$6 per ton, and Fustic extract is \$36 per ton.

TRADE LIST

CLEMATIS paniculata, strong plants, \$10.00 per 100; 3-in. pots, \$6.00 per 100.

DRACAENA Indivisa, 4-in. pots, \$10.00 per 100.

ASPARAGUS Sprengeri, 2-in. pots, \$2.00 per 100; 2½-in. pots, \$2.00 per 100.

PASSIFLORA coerulea, 3-in. pots, \$5.00 per 100.

ALTERNANTHERAS, four varieties, 2-in. pots, \$2.00 per 100.

SWAINSONA alba, 2½-in. pots, \$3.00 per 100.

AMPELOPSIS Veitchii, 4-in. pots, \$10.00 per 100; 3-in. pots, \$5.00 per 100.

Cleveland, O.

The Schneider Floral Company has been incorporated with a capital of \$25,000; S. E. Kramer, E. S. Byers, C. D. Friehtlin, A. F. Counts and M. Colahrese are incorporators.
L. F. Darnell, manager of The J. M. Gasser Company, is confined to his bed on account of a bad fracture of the lower leg, sustained in a fall. Slipping on the floor at his home on Sunday afternoon, May 22, his foot turned under him, breaking the small bone of the leg and tearing the tendons.

Providence, R. I.

A movement is under way to beautify the city of Providence. It was first started by teachers and scholars of the Doyle ave. school, by planting trees in front of the school property. The movement was then taken up by the Evening Bulletin. A committee of three, consisting of Mayor Fletcher, Prof. J. F. Collins, botanical inspector of Brown University, and Alexander Johnson, city forester, member of the firm of Geo. Johnson & Son, proprietors of the Elmwood Nurseries has been appointed to take charge of matters. The plan seems to be a grand one, as its object is to plant trees on streets that have been neglected. The first donation consisted of 20 trees by Mr. Edward F. Albee, proprietor of Keith's Theater; this was followed by 20 more given by the Evening Bulletin. These trees are to be Norway and Sugar Maples, five years old, and will be supplied by the Elmwood Nurseries. Up to the present about 539 trees have been donated to the city by different individuals and firms. Let the good work go on and Providence will be one of the most beautiful cities in the Eastern States.

C. S. CHASE, Dighton, Mass.

Please mention the Exchange when writing.

T. W. Lawton of Fall River, Mass., was in town Saturday. He reports business good, with plenty of design and decorative work in the past few months. He also reports that the city of Fall River's park commissioners are hurting the florist trade by offering to fill, water, and keep in shape all cemetery vases for \$2.50 each per season. Formerly this work was done by the florists. It is said one of the leading florists of that town has about 250 vases. This will make quite a difference in sales of hedging stock which has been grown for this purpose.

John N. Green reports business good during the short time he has had his new store open. He still runs both places. Sweeney Bros., Cranston st., have planted several thousand named sorts of Gladioli outside for Summer blooming. They report business very good.

Thomas Curley seems to be as busy as usual. He has his hands full looking after the State's property, keeping the lawns and grounds in fine condition.

Mancair the Florist reports business good, with an advance on Roses at wholesale a little sooner than at other seasons. All look forward to good trade for Memorial week.

F. Macrae & Sons are having Lilies now at all times, planting a fresh lot every two weeks. Business is very good on Smith st. with all the florists.

W. B. Hazzard, Mathewson st., is bringing in some very fine pot-grown To-

DRACAENA INDIVISA

FICUS ELASTICA, 4 in. pots, 25c.

Don't forget we are the wholesale growers and shippers of the genuine **MOON VINE**, the *Ipomoea Noctiflora*, for which we have had, for the last 25 years, a world-wide reputation. A rapid grower; grows in one season 50 ft. and over with thousands of pure white, waxy, fragrant flowers as big as a saucer. We ship 25,000 every season to every state in the Union, Canada and Mexico. 2½-in. pots, \$5.00 per 100; 4-in., staked up, \$12.00 per 100.

ARAUCARIA excelsa. First consignment just arrived from Antwerp, in their original packing, 2-3-4 year old, 3-4-5-6-7-8-12-15-18-20-25 in. high, 35c., 50c., 60c., 75c., \$1.00 to \$1.50.

ARAUCARIA compacta, Robusta and **GLAUCA**, \$1.00, \$1.25 to \$1.50.

All plants must travel at purchasers' risk.

mato plants. He is doing a nice business in his new location.

D. W. McCoid is kept very busy; he hardly has time to get downtown to purchase supplies.

O. H. Williams & Sons report Geraniums in Rhode Island short this season, and that they are about sold out of most of leading sorts of bedding plants. The firm is one of the largest growers of stock in Providence, if not the largest. Mr. Williams grows Sweet Peas very extensively.

At a recent meeting of the Florists' Club it was decided to visit Kingston College, some time in June.

J. A. Budlong & Sons are cutting a nice lot of Roses at present.

E. D. Tucker, Saylesville, R. I., was in town this week purchasing supplies. He reports business good. He also has a store on Mineral Spring ave., Pawtucket.

The florists in general are very busy getting things in shape for Memorial Day. Owing to continual cool weather, some of the plants will not be in full bloom and this will have a tendency to make cut flowers short.

Johnston Bros., Dorrance st., had a large decoration last week at the Providence Opera House, for the Acme Band concert, which was a grand success. They have booked many good advance orders for Memorial Day.

J. Kelley, Fall River, Mass., was in town Monday.

The Market

Carnations are scarce and the cheaper grades of Roses doubled in price on Monday, the others will, no doubt, follow before the end of the week.

Roses: My Maryland, Killarney, Bride, Bridesmaid, \$3 to \$15 per 100; American Beauty, \$8 to \$30; Richmond, \$4 to \$15. Carnations (scarce), \$4 to \$6 per 100. Sweet Peas, 75c. to \$1.50 per 100. Lily of the Valley, \$2 to \$4 per 100. Gladioli, small forcing varieties, \$3 to \$5 per 100; large varieties, \$6 to \$8. Callas are about out of market. Peonies, \$5 to \$12.50 per 100. Adiantum Ferns, \$1 to \$1.50 per 100. Fancy and Dagger Ferns, \$1.75 to \$2 per 1000. Bronze and green Galax, \$1 per 1000. Antirrhinums, \$3 to \$6 per 100.

H. C. N.

Government's New Landscape Architect

The projectors of the city beautiful in Washington, D. C., have succeeded in procuring an artist whom they believe will do much to elaborate and execute the ambitious plans of the park commission for the future development of the National Capital along esthetic lines, says the Washington Post.

Secretary Dickinson has appointed George E. Burnap of New York, as landscape architect to succeed George H. Brown, deceased. Mr. Burnap is a young Cornell graduate, and stood at the head of a list of 70 persons who entered into a competitive examination for the place.

Pruning Lilacs

Lilacs should be thinned out quite freely from congested and superfluous wood, both inner and outer; decaying blossoms should be removed immediately after they are through blooming. After a period of twelve to fifteen years Lilacs are apt to get "leggy," but if they are cut down to within two or three feet of the base, and the strong growths they will immediately throw up are "stopped," this will compel them to throw out laterals, when they will soon again make compact, shapely bushes. In fact, there are few shrubs which can be so easily rejuvenated as the common Lilac. The beauty of the common Lilac, however, is mainly in the flowers, and there is really not much character in the shrub itself. Some of the Chinese and Japanese species are fine garden plants, though.

JOHN DUNBAR.

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advice, quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by means compels you to sell him at wholesale.

WORTH READING

San Francisco, Cal., May 13, 1910.
"This will advise you that I have thoroughly tested out your product Aphine, and can highly recommend same for exterminating Aphids. Our outside Roses in Golden Gate Park were badly infested with Aphids; with the first application of Aphine the pest was entirely destroyed." (Signed) John McLaren, Supt. Golden Gate Park.

"Uploads," San Mateo, Cal., May 10, 1910.
"The Aphine you sold me I have used on orchard trees and ornamental plants infested with scale, green and white fly, thrip, mealy bug, etc., and found, in every case, that it completely destroyed the pests in question, with not the slightest harm to the subjects treated. It is without doubt the finest insecticide I have ever used."—(Signed) William Munro, Supt. to C. T. Crocker, Esq.

Miami, Biscayne Bay, Fla., April 26, 1910.
"The sample of Aphine you kindly sent me was used on a lot of Palms which were infested with Mealy Bugs and I am glad to say it entirely destroyed them without injury to plants. I shall include Aphine in my next order for supplies."—(Signed) E. J. Andrews, Gardener, Hotel Royal Palm.

Hill Crest, Purchase, N. Y., May 14, 1910.
"Replying to your letter of March 31st, I wish to say that we have given your Aphine a thorough test, and have come to the conclusion that it is one of the best insecticides ever sent out."—(Signed) A. Underwood, Supt.

Morristown, N. J., April 25, 1910.
"It gives me great satisfaction to tell you that Aphine has entirely cleaned my Gardenias of mealy bug. I used it one part to 35 water. I have tried many things with more or less success, but this was the first complete success. There was no injury to buds or foliage."—(Signed) Edward Reagan.

Concord, N. H., May 8, 1910.
"Received the Aphine and gave it a good test. As I wrote you before, my 'Mums were literally covered with lice, but that is a thing of the past. I regard Aphine practically as an insurance against insects and I shall not be without it in the future."—(Signed) H. D. Whitney, Prop. Fern-Croft Farm.

Pasadena, Cal., April 11, 1910.
"It may interest you to know that of the three fluid insecticides which I have tested, Aphine proved to be the best. First, it did not disfigure foliage or flower. Second, it mixed with water perfectly, and last, but not least of its merits, it is less expensive than any of the others considering the work accomplished."—(Signed) P. D. Barabart, Editor of "Pacific Garden."

We will

Bedding Plants

Cannas from 4-inch pots, in the following varieties: A. Bouvier, Mme. Crozy, Souv. de A. Crozy, Chas. Henderson, Gladiator and Shenandoah, price \$5.00 per 100 or \$70.00 per 1000. King Humbert, \$15.00 per 100.

Alternanthera Brilliantissima
Strong bushy plants, from 2½-inch pots, price \$3.00 per 100 or \$25.00 per 1000. Yellow and Pink, \$20.00 per 1000.

New Hardy Yellow Border Carnation Comtesse Knuth

Comtesse Knuth, of which we present an illustration herewith, was awarded a large silver medal at the exhibition in Aarhus, Denmark, in the Summer of 1909, where a large bed of it was much admired by visitors.

From the originators' description we learn that the flowers of Comtesse Knuth are of an extraordinarily fine apricot yellow color, produced on strong and stiff stems, varying from 24 to 48 in. in length. The flowering season in Denmark is from July to November, making this hardy Carnation exceedingly useful for beds and borders. In the Copenhagen market Comtesse Knuth has been in very great demand and realizes good prices. The value of Comtesse Knuth is summed up in three essential qualities: 1. its extraordinarily beautiful flowers on long, strong stems; 2, its hardiness even in the most severe cold weather; 3, the abundance of flowers it yields, unsurpassed by any other hardy Carnation.

Comtesse Knuth is offered for sale by the firm of Hjalmar Hartmann & Co., Copenhagen, Denmark.

Among the Growers

At West Hoboken, N. J.

West Hoboken is the great Geranium growing section. Nearly every grower on or near to the Hudson Boulevard grows from 15,000 to 100,000 Geraniums. These are all of the semi-double type, none of the new fancy single varieties being used, as it is found the blooms drop during transportation.

John Birnie

The output of the Birnie range for one item is 100,000 Zonal Geraniums, and 6000 of the grandiflorum varieties, commonly called Lady Washington Geraniums. A large range of varieties in Zonals are grown here and some new varieties are being tried out. It has been noted by Mr. Birnie that the first truss of flower on Viand and Jaulin have the stem bent or partly broken about two inches below the truss, making the first truss of bloom in a measure unsightly and worthless. He is, therefore, trying Cerise instead of Jaulin, and Dagata instead of Viand, and finds them more satisfactory. The fact is, Viand is and always has been a coarse Geranium, but a strong grower. Doyle is also added

JACKSON & PERKINS CO., Florists and Nurserymen.
Wholesale Only
NEWARK, New York.

Please mention the Exchange when writing.

trees, ornamental trees and evergreens and ornamental shrubs, there are grown there practically all the Rose bushes suited to this climate, especially of the Rambler and Wichuriana varieties, which they force in their greenhouses at West Hoboken. In case they are obliged to buy any Rose bushes for forcing, they buy American-grown stock and much prefer it to the imported. About 10,000 potted Ramblers of the different kinds and 30,000 Hybrid Perpetuals are forced here for the Easter and Spring trade.

The firm brought out last year Agnes Steinhoff, a Wichuriana variety, which proved a prize winner, and is considered an improvement on Hiawatha. They are now trying out several new Roses of the Rambler type and expect to bring out a new one next year.

Thirty thousand Lilies, 5000 Azaleas, and 5000 Lilacs, the latter from their own nursery, are forced.

The demand in the nursery branch of the business has been very large this Spring, and the firm is engaging in the landscape gardening business also.

'Mums and Poinsettias are now being propagated in very large numbers, and of the former some new varieties are being tried.

John Tschupp & Co.

At the present time this firm is giving most of its space to growing Geraniums, Fuchsias, and a few miscellaneous bedding plants. The Geranium growing is confined to a few standard varieties, Ricard, Nutt, Poitevine, and Rose Geraniums. Some 70,000 Geraniums were grown here this season, most of which have been sent out, and the others are ready to go out now. Of Fuchsias, about 4000 plants are grown here, mostly Little Beauty.

The plants at this range are all well grown. At present they are disposed of at the Canal st. market.

After the bedding plants are disposed of 'Mums are grown, the varieties used being white and yellow Chadwick, Dr. Enguehard, Ivory, Maud Dean, Gold Mine, Polly Rose and Halliday. These are grown for a single bloom only. After the 'Mums follow Lilium Formosum and giganteum.

Ernst G. Asmus & Son

This range, not modern but well kept up, consisting of seventy houses, 140,000 sq. ft. of glass, heated with hot water, is largely given up to the growing of Roses. Most of the raised wooden center benches have been changed to solid beds with concrete sides and ends, and these are giving better satisfaction than the raised benches.

Ten varieties of Roses are grown here, and about as follows as regards quantity: Eighteen houses of pink Killarney, four of white Killarney, twelve of Richmond, two of My Maryland, two Madam Hoste, two of Franz Deegan, four of Sunrise, six of Testout, and seven of Kaiserin, with about 5000 plants of Madam Cusin on side benches.

About 800,000 Lily of the Valley is forced annually, and 3000 pots of white Lilac.

A few houses are devoted to 'Mums; white and yellow Eaton, pink and white Ivory, Halliday and Maud Dean are chiefly used.

The Rose plants show good care, are well covered with buds, and are giving a large cut of flowers, averaging from 7000 to 12,000 per day. No new varieties are at present being tried.

Fred Engel

The seven houses of Fred Engel's range are now devoted to growing bedding plants. Among these are 50,000 Geraniums, chiefly Ricard, Nutt, and Poitevine, and a few Buchner, Mrs. Parker, the tricolor with double pink blooms, and Madam Languth, the tricolor with double scarlet blooms. Some 3000 Little Beauty Fuchsias, and the standard varieties of Coleus and Heliotrope are grown here, and a few Magna Charta Roses.

After the bedding plants come the 'Mums: Chadwick, Jones, Glory of Pacific, Polly Rose, Balfour and Halliday; and still later the Formosum and giganteum Lilies. The plants are sold at the Canal st. market.

Henry Baumann & Son

This firm devotes most of its glass to growing table Ferns. Of these they send out annually to the New York retail stores 100,000 to 125,000 in 2½-in. pots. They raise the Ferns from spores of their own saving. A temperature of 60° to 80° is necessary for the germination of the spores and the development of the tiny plants.

Besides Ferns this firm raises some 15,000 Ricard and Poitevine Geraniums, and some other bedding plants.

They have just put into service a handsome new delivery wagon.

Rudolph Wittman

Hydrangeas, Spiræas and Lilium Formosum are forced in Mr. Wittman's greenhouses for the Easter trade, and then the space is devoted to Rose Geraniums, Ricard, Nutt and Poitevine Geraniums. It may be stated here that fully 90 per cent of the Geraniums raised in this

Cash

JAMES HAMILTON, Mt. Washington,
Md.

Please mention the Exchange when writing.

section are of the above named varieties, and except in the case of one or two growers there seems to be little inclination to try out any of the new varieties.

Some Echeveria and other miscellaneous bedding plants also are grown here.

Emil Leuly

The specialties grown at the Leuly establishment are Carnations and small Ferns. In addition to these, Asparagus and some Geraniums are grown. Five houses are devoted to growing Carnations, two to Asparagus, and after the Geraniums some 'Mums are grown. In Carnations, Beacon, Mrs. Patton, Enchantress, pink, white and variegated Lawson, Winsor, White Perfection, and Boston Market are grown. In 'Mums the varieties are Virginia Poehlmann, Tousse, Alice Byron, Balfour, Bonaffon and Ivory.

It is to the growing of small Ferns in flats and in 2½-in. pots that Mr. Leuly gives his special attention. The work is a very interesting one, and in order to be successful has to be carried on very systematically and carefully.

Mr. Leuly for the most part saves the spores from his own plants. They are planted in flats, and the moisture and temperature of the seed house must be carefully watched. In the case of most varieties, the spores germinate and the seedlings reach a sufficient size in four months so that they can be transplanted, first into flats and then into 2½-in. pots. About two months later the Ferns in the pots are ready for market. The time, however, varies considerably with the variety; for instance, Aspidium tsussimense and Cyrtomium falcatum take twelve months for germination and growing to a sufficient size after they have been transplanted into the flats to be transplanted again into pots, and two months more to grow large enough to market.

Mr. Leuly gives especial attention in his Fern work to sending out Ferns in flats. Several hundred thousands of Ferns are grown here each year. Some Geraniums are also grown here; in fact every grower in West Hoboken seems to find it necessary to grow these.

John Reickert, Weehawken, N. J.

Bedding stock is the chief feature at this range. Among the plants grown may be noticed a large block of dwarf Marigolds, even now in bloom. The most attractive plants to be seen here just now are 1000 well grown potted plants of Spiræa Gladstone, well covered with buds, which will be ready for Memorial Day, if not somewhat earlier.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12.

Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Jos. H. Sperry, our representative, care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

THE ORCHID SHOW AT BOSTON

After two years of preparation it presents a scene of unsurpassable beauty never before witnessed in America

The great Orchid exhibition which has been in preparation for the last two years will open on Thursday, May 26, at 8 p.m., and will continue each day until 10 p.m. of Monday, May 30.

The first evening is intended to be a society event and 2000 notices have been sent out to all the prominent people in New England asking them to attend. Evening dress was requested for the opening night.

Special invitation tickets have been sent to the Governor of the State, the mayor of Boston, editors of all the Boston newspapers as well as of all the papers published in New England towns and cities, also to the editors of all horticultural and florist trade journals.

Those holding the usual complimentary tickets are not to be admitted until Friday and Saturday. In all there are to be six different kinds of admission tickets. The price of admission is to be three dollars for the first day; Friday and Saturday one dollar; Sunday and Monday fifty cents.

Never before in the history of the Society were there such preparations made for an exhibition and it has spent money lavishly to make the affair a great success.

The orchestra hired (the Philharmonic) is one of the very best in the city and most of the gentlemen composing it belong to Symphony Hall, so good music of a very high class is assured.

The press representative is Mr. John W. Luce, assisted by Howard Hale Schaff. Mr. Luce is considered one of the cleverest writers on such subjects; his mission is to keep the exhibition well before the public in all the city and principal papers throughout New England. The Society has been fortunate in getting Mr. Luce to take charge of this work and he is paid a handsome sum for his labor.

For almost a week a steam roller has been running in the large exhibition hall, firming the soil; a gravel walk has been constructed, and the roller has made it as firm and as hard as it could be made. Thousands of feet of green sward are being laid so as to create a garden effect.

The main hall is to be largely made up of the large Orchid groups. Lager & Hurrell of Summit, N. J., and

the Julius Roehrs Co. of Rutherford, N. J., will each occupy an alcove on the right hand side of the hall. W. A. Manda of South Orange N. J. and J. T. Butterworth of South Framingham, Mass., will occupy the alcoves on the left side. In the rear of the hall the Julius Roehrs Co. will have a large group of stove and greenhouse plants. Dr. G. C. Weld of Brookline will occupy the other side.

The center is laid out in garden fashion. Large Azaleas and extra fine specimens of Wistaria from Prof. C. S. Sargent will occupy both ends. The colors of the Azaleas will be chosen with care so not to clash with those of the Orchids. The Azaleas will not be arranged in groups but will be set out on the grass just as though they were growing in a garden. A large circular group of Cocos Weddelliana will occupy the center; these have just come in from Belgium.

The small hall adjoining the large exhibition hall will be filled with cut flowers of Orchids. Right in the center of the upper hall or lecture room, so that people can walk all around it, will be placed the Roebing exhibit. Flanking it on each side are the groups of the private gardeners; these occupy 150 sq. ft. each. There are two entries, one from Walter Hunnewell of Wellesley and one from E. B. Dane of Brookline. The other portions of the hall will be filled with specimen Orchid plants and, on the stage in the rear, will be an exhibit from R. & J. Farquhar Co. of Wilson's new Chinese plants.

There are any number of entries and no doubt at all of the floral end of the show being a great success.

One exhibit which deserves special mention here is that which arrived last Friday from Belgium. It was sent by a horticultural establishment of Ghent, Belgium, and consists of 250 specimen plants of Cocos Weddelliana. These are all about four feet high and every plant is a perfect specimen. The exhibitors of these plants grow 500,000 of this variety of Cocos, and won the honor prize at the exhibition at Berlin in April, 1909, a medal at the Temple Show in London and a gold medal in Paris. This exhibit alone is worth traveling a long way to see and never before has there been such fine plants of this species shown in this country. They were exceptionally well packed and not a leaf on the 250 plants was broken. It took seven large cases to hold them.

We expect many other foreign exhibits. One was promised by the late King Edward VII but, owing to his sudden and unexpected death, it has been canceled.

The judges are T. D. Hatfield of Wellesley, chairman; Oakes Ames of North Easton, James E. Rothwell of Brookline, Arthur Herrington of New York and Alfred J. Loveless of Lenox, Mass.

John K. L. M. Farquhar of Boston is in charge of all the exhibits, and Robert Cameron of the Harvard Botanical Garden, Cambridge, is supt. of the Orchid section.

The committee on prizes and exhibits consists of John K. L. M. Farquhar, Professor Charles S. Sargent of the Arnold Arboretum, Robert Cameron, W. N. Craig, H. A. Patten and John A. Pettigrew, all of whom have worked faithfully to make the exhibition a great success.

This show should create a greater desire for these beautiful plants and, in so doing, it will help the Orchid growers' business immensely. We are highly pleased with the interest the large commercial Orchid firms have shown in this enterprise ever since its inception nearly two years ago. We wish them all the best of success.

ROBERT CAMERON.

The American Seed Trade Association

Twenty-eighth Annual Convention

Hotel Strand

Atlantic City, N. J., June 21-22-23, 1910

Officers 1909-1910

President, J. C. Robinson, Waterloo, Neb.; first vice-president, M. H. Duryea, New York; second vice-president, F. W. Bolgiano, Washington, D. C.; secretary-treasurer, C. E. Kendel, Cleveland, O.; assistant secretary, Leonard H. Vaughan, Chicago.

Order of Business

Reports of the secretary and treasurer; election of members; reports of committees; reading of communications; unfinished business; new business; general discussions; annual election and installation of officers.

Program

Recent Science in Plant and Animal Breeding.—Hon. W. M. Hays, Assistant Secretary of Agriculture, Washington, D. C.

Methods and Apparatus for Seed Testing by Seed Merchants.—George H. Clark, Department of Agriculture, Ottawa, Ont.

The Spencer Type of Sweet Peas.—W. Adlee Burpee, Philadelphia, Pa.

State Legislation, Present and Future.—Prof. Charles D. Woods, Orono, Maine.

The Advancement and Protection of the Interests of the

Seed Trade.—Curtis Nye Smith, Counsel for the American Seed Trade Association, Boston.

Past, Present and Prospective of the Seed Trade of America.—Francis Brill, Hempstead, N. Y.

Entertainments

On Wednesday evening will take place the annual banquet.

On Friday, June 24

All members and their families are cordially invited to spend Friday at Fordhook Farms. Special trains will stop at the entrance, and luncheon will be served at 1 o'clock. Mr. Burpee and Mr. Earl will be back from California in time to welcome their guests.

List of Committees

Executive Committee.—W. S. Woodruff, Orange, Conn.; Geo. S. Green, Chicago; Alex. Forbes, New York; Chas. N. Page, Des Moines, Ia.; S. F. Willard, Wethersfield, Conn.

Membership Committee.—Albert McCullough, Cincinnati, O.; E. L. Page, Greene, N. Y.; J. C. Vaughn, Chicago.

To the Florists of the United States

The Bennet Postal Bill, H. R. 10762, as amended, increases our four pound domestic weight limit to the prevailing eleven-pound limit of our foreign parcels post, with rates in our general unsealed express post, one cent each 2 ounces, the old common merchandise rate of 1874.

On sealed parcels: letters, within city delivery limits, 4 ounces 2 cents; each additional 2 ounces, 1 cent; within the limits of a rural route, parcels up to one twenty-fourth of a cubic foot, one pound in weight, 1 cent; larger parcels up to one-half a cubic foot, one-half the size of the ordinary suit case, and up to 11 lbs. in weight, 5c.; larger parcels, up to one cubic foot, the size of the ordinary suit case, 6x12x24 inches, and up to 25 lbs. in weight, 10c.

All mail matter to be insured, the ordinary rates carrying insurance up to \$10; the ten-cent registration fee carrying insurance up to \$50, and a two-cent fee for each additional \$50 carrying insurance up to the full value of the parcel.

This bill, endorsed by the Society of American Florists at its last convention (the only change is the increase of the weight limit), is now in the hands of Hon. John W. Weeks, chairman of the Postal Committee of the U. S. House of Representatives.

The hearings on this in the last week in April were very strongly in its favor. Its only failing is its conservatism, but it cuts the present 16c. a pound merchandise rate to 8c. a pound; we believe it will increase the income of the Post Office by fully \$100,000,000, and it will save the public a great deal more. It will prove an effective entering wedge for making the Post Office "Our Mutual Express Company" what it ought to be, the most extended, the cheapest, the most secure and the most efficient express service on earth.

Contrast the foreign parcels posts provided by President Taft and Postmaster-General Hitchcock for foreigners sending merchandise to the U. S. with the rates levied upon you by your representatives in Congress.

Foreign rates to the U. S.: From Italy, 7 lbs., 39c.; 11 lbs., 79c. From Germany, 4½ lbs., 33c.; 11 lbs., 81c. From Austria, 4½ lbs., 35c.; 11 lbs., 86c.

Domestic rates levied upon you by your Congressmen: 4½ lbs. in 2 parcels, 72c.; 7 lbs. in 2 parcels, \$1.12; 11 lbs. in 3 parcels, \$1.76.

Will you quietly submit to the continuance of this condition of things? My advice is write to your Congressmen and tell them that if they are to expect your votes next Fall, they will see that the Bennet Postal Bill, H. R., 10762, is enacted into law now.

Write to the House U. S. Postal Committee and request them to report the Bennet Bill, H. R., 10762, to the House immediately. Here are their names:

Hon. John W. Weeks of Massachusetts, chairman; Hon. John J. Gardner, N. J.; Hon. Nehemiah D. Sperry, Conn.; Hon. Wm. H. Stafford, Wis.; Hon. George F. Huff, Pa.; Hon. J. Sloat Fassett, N. Y.; Hon. Sylvester C. Smith, Cal.; Hon. Frank O. Lowden, Ill.; Hon. Cyrus Durey, N. Y.; Hon. Thomas R. Hamer, Idaho; Hon. Francis H. Dods, Mich.; Hon. Victor Murdock, Kansas; Hon. John A. Moon, Tenn.; Hon. David E. Finley, S. C.; Hon. James T. Lloyd, Mo.; Hon. John H. Small, N. C.; Hon. Thomas M. Bell, Ga.; Hon. Wm. E. Cox, Ind.; Hon. Ralph H. Cameron, Arizona. Their common address is Washington, D. C.

Write to these men immediately and write to your Congressmen and Senators as well. There is no time to be lost. A postage stamp spent now will be dollars in your pocket a little later.

Our cry is:

"The Bill, the Bill,
The Bennet Bill,
H. R. 10762."

James L. Cowles, Sec.-Treas. the Postal Progress League, 361 Broadway, N. Y., May 24, 1910.

May 28, 1910

The Peony Exhibition at Boston

Schedule of Prizes for the Peony Exhibition of the Massachusetts Horticultural Society, and the Annual Meeting and Exhibition of the American Peony Society, at Horticultural Hall, Boston, Thursday and Friday, June 9 and 10, 1910

Flowers intended for competition must be shipped so to reach the exhibition not later than ten o'clock a.m. on Thursday.

Express charges on all exhibits must be prepaid, and should be so marked on the boxes, as no charges will be paid by the manager of the exhibition.

All packages must be addressed in care of William P. Nich, Secretary, Horticultural Hall, 300 Massachusetts Ave., Boston, Mass.

Prizes Offered by the American Peony Society

Herbaceous Peonies—Double

COMMERCIAL CLASSES

Largest and best collection of named varieties, one flower of each, three prizes: \$15, \$10, \$5.

Best fifty blooms, one variety, named, white, two prizes: \$10, \$5.

Best fifty blooms, one variety, named, dark pink or rose, two prizes: \$10, \$5.

Best fifty blooms, one variety, named, flesh or salmon-pink, two prizes: \$10, \$5.

Best fifty blooms, one variety, named, crimson, two prizes: \$10, \$5.

Prizes Offered by the Mass. Hort. Society

Herbaceous Peonies

Collection of thirty or more varieties, double, one flower of each, four prizes: \$12, \$8, \$5, \$3.

Collection of twelve named varieties, double, three flowers of each, three prizes: \$12, \$8, \$5.

Specimen bloom, double, two prizes: \$2, \$1.

Collection of twelve or more named varieties, Japanese single, including all single varieties destitute of pollen, three prizes: \$4, \$3, \$2.

Vase of blooms on long stems, arranged for effect in the Society's large China vases, three prizes: \$10, \$6, \$4.

Collection of six named double varieties, white, rose pink, salmon-pink, red or crimson, any other color, one flower of each, three prizes for each color: \$3, \$2, \$1.

Vase of twenty-five blooms, double, white or blush, pink or rose, red or crimson, any other color, three prizes for each color: \$5, \$3, \$2.

Best display of peonies, arranged for decorative effect, to occupy a space not exceeding one hundred square feet, three prizes: 1, Silver Medal and \$10; 2, Bronze Medal and \$5; 3, \$5.

Best new Peony not in commerce or introduced since 1906, Silver Medal.

Officers of the American Peony Society, 1910.—President, Bertrand H. Farr, Reading, Pa.; vice-president, J. J. Maloy, Rochester, N. Y.; treasurer, J. H. Humphreys, Germantown, Pa.; secretary, A. H. Fewkes, Newton Highlands, Mass.

Committee on prizes and exhibitions of the Massachusetts Horticultural Society, 1910.—John K. M. L. Farquhar, chairman; Robert Cameron, W. N. Craig, M. A.atten, J. A. Pettigrew, C. S. Sargent.

The Forthcoming Peony Exhibition at Boston

June 10 is the date which has been announced for the next meeting and exhibition of the American Peony Society, to be held in conjunction with the annual Peony Show of the Massachusetts Horticultural Society at Boston. If the weather conditions do not make it necessary to postpone this date the opportunity will be open to the most successful exhibition the Society has ever had, for probably no other city has so many fine collections of Peonies, both private and commercial, as are to be found in the immediate vicinity of Boston; and in no other locality has there been greater enthusiasm shown. The exhibitions which have been held there are noted not only for the number of exhibitors but for the large number of new and rare varieties shown. In addition to this earliness of the date this year will enable exhibitors from the sections farther South to send their later varieties which, in former years, they have been unable to do.

This coming meeting of the Society promises to be an interesting one in other ways, for the committee on nomenclature have during the last year accomplished a large amount of work, the results of which will be shown in the official list of some two hundred and fifty (250) varieties which have been studied and passed upon during the past season. This Bulletin has just been received from the printer's hands and will be ready in a few days for mailing to the members of the Society. It is to be expected that members will go over this report carefully and compare the descriptions given with their own flowers; members who are able to offer any suggestions or criticisms are invited to send them as quickly as possible so that the committee may have the benefit thereof in time to avail themselves of them during the blooming season at Ithaca. Any suggestions may be addressed to Professor Leon D. Batchelor, Department of Horticulture, Cornell University, Ithaca, N. Y., who has in charge of the work for the Peony Society at Cornell.

The Peony situation in southeastern Pennsylvania has, for several weeks, been a conundrum. We were fortunate in escaping the freezing which inflicted so much loss on

our Western friends, and for a time it looked as though most of the earlier Peonies would be pretty well over by Decoration Day. Peony Wittmannia was in bloom April 28, Triternata, April 29, and nearly all the various species, except the Chinensis section, are all over. The cool weather of the last two weeks has so retarded the Chinensis varieties that it is now—May 23—a guess as to whether they will be in time for Decoration Day. And as happened last year, the later varieties look as if they would be in bloom almost as soon as the earlier ones of the Chinensis class.

BERTRAND H. FARR,
President Am. Peony Society.

Wyomissing, Reading, Pa., May 23, 1910.

Publications Received

CORNELL UNIVERSITY. Agricultural Experiment Station of the College of Agriculture, Department of Horticulture. Bulletin 278. Classification of the Peony. Third Report. By Leon D. Batchelor.

This publication marks the third step in the co-operative study of the Peony, jointly undertaken by the American Peony Society and the Department of Horticulture of the Cornell University Experiment Station, and extending over several years. Two previous publications have been presented, "The Check List," and "The Peony" both prepared by Dr. J. Eliot Coit, and both preliminary to the new publication. The work is an important contribution toward a permanent classification of the Peony. There are 390 variety descriptions, each description covering species, color and form, and synonym when it has been determined, and other important information to authenticate a variety. The publication is sent free to persons residing in New York State, upon request, also to members of the American Peony Society.

The Commercial Definition of a Seedling

Alex. MacLellan's notes relating to what is to be considered a seedling by the U. S. Customs authorities are timely. As he well says, a seedling is always a seedling, no matter what its age and size, or, in his words, "a plant raised from seed and not perpetuated by artificial means, can never be anything but a seedling."

In nurseries the word "seedlings" is well understood to mean something not transplanted, irrespective of height. It is used in connection with stock priced at a lower rate than another, because in the untransplanted stage. In cataloguing stock one would see, say, "Cercis Canadensis 2 ft. (s) \$3 per 100; Cercis Canadensis, 2 ft. (tr.) \$4 per 100." The "s" stands for seedlings and "tr." for transplanted. Some catalogs are arranged this way, others have seedlings of all kinds by themselves, but in all cases "seedlings" mean the stock is still in seed beds, not transplanted. The whole arrangement is to allow for a better price for the transplanted stock. In this way one may often see 6 ft. trees offered at a lower rate than 3 ft. ones, the latter size representing transplanted stock, and the 6 ft. seedlings.

This arrangement answers well for nursery catalogs, but might not prove practicable for Custom House work.

JOSEPH MEEHAN.

A Pure White Cattleya Gigas

On page 902, issue of May 21, The Florists' Exchange made mention of the fact that Messrs. Lager & Horrell of Summit, N. J., had come into possession of a great acquisition in the Orchid line—a pure white Cattleya gigas. Through the courtesy of the above firm, we are enabled to present this week a photograph of this notable Orchid which was discovered flowering out of a lot of plants imported quite late in the Summer of 1909; hence, this particular plant made only one shoot, from which it flowered this year. Messrs. Lager & Horrell tell us that the flowers are absolutely pure white all over, except the customary yellow in the throat which, in this instance, is quite insignificant and of a greenish-yellow. The company state that, so far as they know, this is the only pure white Cattleya gigas ever found.

Nephrolepis Sport

Home growers are not waiting for Americans to turn out Nephrolepis sports. N. Marshallii, which was first shown last July, is now being rapidly worked up by the great firm of specialists, H. E. May & Sons, and on April 21 they exhibited a large block of this new variety, which is so finely cut that the fronds appear to be a dense mass of moss. These fronds open somewhat shallow, but continue to develop until they are about 1½ in. in depth, the effect being quite extraordinary. In length the fronds average about 1 ft. and curve gracefully. Accompanied by the giant N. Mayii, N. Marshallii makes a display that cannot fail to draw attention.

T. A. WESTON, Eng.

Some Corrections

The British Horticulturists expect to visit the National Flower Show to be held in Boston next Spring, not next month, as we had it on page 902, issue of May 21. Mr. Richard Vincent advises as that probably a fairly representative body of these gentlemen will come over at that time.

Ophioglossum vulgatum, mentioned in our last issue in the Reminiscences of W. R. Smith, we are reminded by Mr. Arthur Herrington is not a terrestrial Orchid but a rather uncommon British fern, known as the "Adder's Tongue Fern."

Adin Alexander

Adin Alexander, who was engaged in the florist business for years in Rhode Island, and moved to Los Angeles, Cal., about ten years ago, died suddenly at his home in that city, May 14, of heart trouble. Since living in Los Angeles he had been growing Roses in the open ground very successfully. The product of his garden was always of the best and found a ready sale among the florists.

Article III—Continued

Large vs. Small Houses

Fig. 24 shows the comparative proportions between two separate, 20 ft. wide, three-quarter span houses with 15 ft. 3 in. between same, and one 55 ft. 3 in. wide house covering the same area.

It will be noticed that although the ridge of the large house is 10 ft. higher than the ridge of the three-quarter span houses, the space required between two wide houses to clear the shadow line is only 9 in. more than required between the two three-quarter span houses, or 16 in., showing a saving of waste ground of about 100 per cent. The total glass surface, measuring from sill to sill, in the three-quarter span houses is 56 ft., and the cubical contents per lin. ft. is 400 ft., thus showing a proportion of cubical contents to glass surface of $7\frac{1}{2}$ cu. ft. to 1 sq. ft. of glass; whereas, in the large house the proportion is 11 cu. ft. to 1 sq. ft. of glass.

If the measurement of the surface over the house, in the case of the three-quarter span houses, was made to include everything from the sill on the south side to a point 2 ft. 6 in. above the grade on the north side, the proportion of air to glass would be still further reduced. It will be also noticed that while the bench area is increased nearly 30 per cent. in the wide house, in comparison with the two three-quarter span houses, with the usual method of benching the required heating surface is increased less than 10 per cent. It is very evident, therefore, that in this instance the wide house is much superior to the two narrow houses.

As stated in a previous issue, the general consensus of opinion among growers who have used three-quarter span and even span houses is that they can obtain just as good results from the beds all on the level as when stepped, as was the usual custom in the three-quarter span houses; and with the glass carried down to the same height at the north side as on the south side, so as to give additional light, still better results would be secured. It is, of course, a well known fact that the raised walks necessary cause additional labor in taking care of the plant, a still further argument in favor of the wide even span house in preference to the old type of 20 ft. three-quarter span houses.

Fig. 25 shows two styles of houses 58 ft. wide, one in which the roof is composed of four short span roofs, the distance between the gutters of same being 14 ft. 6 in. While this house is not covered with one single span roof, yet, as the roof covers such a wide area and it is used as all one house it is entitled to the designation of a large house, provided that it has anything like the same cubical contents in proportion to glass surface as is found in a single span large house, taking a house of about 48 ft. wide as a unit of comparison.

The objections urged by those who favor large single span houses against houses of this construction are:

First, that the number of the gutters and ridges necessary causes considerable shadow. To this the reply might be that if iron gutters are used it would make it possible to construct them of small proportions, which would be permissible, with water outlets at frequent intervals to avoid flooding; and if the gutters were placed at a sufficient height to obtain the required cubical contents the shadow from the gutters and ridges would be so slight, owing to the law of diffusion of light, that it is really not a practical objection.

Secondly, the number of columns necessary to support the gutters. To this objection the reply is that it matters not what style of roof is used if it was constructed of all wood, the same as the general construction of the ridge and furrow type, it would be necessary to use the same number of column roof supports as the standard wood roof bar used today requires, a support about

every 8 in., and this is all that is required in short span roofs.

Thirdly, the point is raised that the houses are more difficult to heat. This brings up the question of the cubical contents of the house in proportion to glass surface, on which this matter very largely depends.

Ridge and furrow houses have frequently been built in the past with the gutters placed about 7 ft. high, the result being that the cubical contents in proportion to the glass surface is very low, and this has been the main cause of the difficulty of heating such houses in comparison to those of greater cubical contents. But if the gutters are placed at a sufficient elevation to increase the cubical contents, this objection will be overcome.

The house shown in Fig. 25 shows the gutters at an elevation of 12 ft., and this gives a cubical content of 819 ft. per lin. ft. of house. The glass measuring from sill to sill is 86 ft. 3 in., and this gives a proportion of $9\frac{1}{2}$ cu. ft. to 1 sq. ft. of glass. This proportion of cubical contents is the same as that in the 48 ft. house, A, shown in Fig. 23, with the eaves 5 ft. high, but is less than the same size house with the eaves at 6 ft. 9 in., although the proportion is sufficiently large to warrant the house being designated as a large house. The height at which the gutter and ridge is shown is such that the shadow from same would not be a serious difficulty, as the higher such members are placed the less pronounced the shadow becomes, owing, as before stated, to the law of diffusion of light; but the width of gutters should not exceed 6 in., and if the water is removed from same at frequent intervals this width will be ample for the work.

It will be seen by the section that the height of the ridge in this case would be 16 ft. 3 in. and the distance of the ventilators above the beds would be 12 ft. $3\frac{1}{2}$ in. This latter dimension is only about 2 ft. 6 in. lower than in the case of the 48 ft. house with 5 ft. eaves, Fig. 23, which still shows a very fair comparison.

Those who favor this style of house claim that there is a marked difference in the ventilation of a house constructed on these lines in comparison with a single span house, owing to the distribution of the roof ventilation; and where side ventilation is considered desirable there could be a space left between each house of the width shown on section, thereby giving desirable results, as far as these points are concerned, when compared with the single span house. The manufacturers of the short span house claim that the material for same can be furnished at less cost, and also that they can be erected for about 5 per cent. less than a wider house with a single roof. To admit of more careful comparison we have shown, in dotted lines, in Fig. 25, a single roof covering the same ground as the short span roof house.

A single span house of this character should, of course, be constructed with an iron frame; while the roof of the short span house might be composed practically, of all wood, with the exception of the iron gutters. This, no doubt, in a measure accounts for the fact of the cost of the material being somewhat decreased in favor of the short span houses.

The advocates of the short span roofs advance the argument that the combined shading of the ridge, purlins, eaves and roof supports of the large houses is only a small percentage less than the shading occasioned by narrow gutters and ridges used in short even span roofs; and they also claim that where the advantage of the equal distribution of ventilation is taken into

consideration, it more than counterbalances the effect of the small amount of additional shadow.

In regard to the shadow of the ridge in the large house, it might be stated that when the sun is at its lowest point in Winter time there is absolutely no shadow inside the house from the ridge in the large house; and, as we have before stated, the greater the height of the various members which cause the shadow the less pronounced this shadow becomes, consequently the small members used in the iron frame house for purlins would, at the height they are necessarily placed in such a house, be almost shadowless, owing to the diffusion of light.

In regard to the matter of the roof supports; a single span house of iron frame construction could be erected with just two roof supports, as shown at B, on both sides, with a tie rod between, the space between the eaves, ridge and column, B, being strengthened according to the general practice in whatever construction might be decided upon, but there is absolutely no necessity for a greater number of column roof supports. It is, therefore, apparent that the arguments, for and against, put forward by those who favor the two different kinds of constructions are pretty well offset one by the other, although there are other points of difference which have not yet been considered.

It will be seen from the section that the height of the ventilators above the beds in the short span house is 12 ft. $3\frac{1}{2}$ in., and in the single span house 19 ft. 3 in., showing a difference of over 50 per cent. in favor of the latter; and if there is any advantage in a large volume of air between the ventilators and the plants, the consensus of opinion being that there is, the advantage in this case is certainly with the single span house.

In the short span roof construction it is usual to place one line of ventilating sash only at each ridge, whereas in a single span house it is the custom to place the ventilating sash on both sides of the ridge. This, of course, would only give 50 per cent. of the number of lines of roof ventilation in the single span house as compared with the short span roof in this instance; but by increasing the size of the sash in the single span house the actual amount of ventilator opening could be made practically the same as in the short span roof. Of course, there would not be the same distribution, but with a volume of air in the single span house and the fact that the general tendency of the ventilation is upwards the experience has been that this has not been a disadvantage.

As before noted, the amount of glass measuring over from sill to sill in the case of the four short span roof houses is 86 ft. 3 in., but in the single span house, covering the same ground, the amount of glass from sill to sill is only 75 ft. 9 in., which is a saving of 12 per cent. in favor of the single span house. It will also be seen from the table of comparison that the cubical contents of the short span roof houses is 819 cu. ft. per lin. ft., and in the case of the single span roof house it is 882 cu. ft., showing a proportion of $9\frac{1}{2}$ cu. ft. to 1 sq. ft. of glass for the houses with the short span roof and 11 $2\frac{3}{4}$ cu. ft. to 1 sq. ft. of glass for the single span roof house. As pointed out, the greater the cubical contents in proportion to glass area the easier the house would be heated and the better results obtained, therefore, in this instance also the single span house has the advantage. Of course, it could be claimed that the short span roof houses could be made to have a larger cubical contents in proportion to the glass area by placing gutters higher than 12 ft., but this would still further increase the glass area, which would necessarily add to the expense of the structure.

It is also to be noticed that for the heating of the short span houses to a temperature of 60 degrees, when the outside atmosphere is at zero, will be required 30 lines of $1\frac{1}{4}$ in. pipe, while the single span house will only require 27 lines. This is due to the less amount of glass and greater cubical contents in the latter.

Comparative proportion per lin. ft. of two 20 ft. 3 span houses and one 55-3 house

	Two separate 20' 3/4 open houses	One 55-3 house with 6-9 eaves
Height of ridge	12-9	22-9
Feet above bed	8-9	18-6
Total exposed surface measuring from sill to sill	56'	72-9
Cubical contents	400'	814'
Proportion cubical contents to glass surface	7 1/2	11 3/4
Distance required between houses to clear shadows	15-3	16-0
Number lines of steam pipe required to heat to 60 at 0	23	25
Area of beds sq. ft.	29'	40'

FIG. 24

The Question of Heating in Connection with Orchid Culture

A paper by J. M. W. Kitchen, M. D., read before the N. J. Floricultural Society, May 13, 1910.

Having been asked by your very persuasive treasurer and member of the essay committee to read an essay on Orchids, I will try to do so, although a very busy person about this time. I elect to say something in connection with the management of heating in its relation to Orchid culture, as my mind has been given up to the consideration of this question as the result of having invented a device to cut down fuel expenses in connection with that culture.

Our garden Orchids have largely originated in habitats where great extremes of temperature are almost unknown as compared with the atmospheric conditions of our, so-called, "temperate" zones, which are in fact the quiescence of latipernance, and in which our temperatures may vary over 100° F. during the year, and in which a quick variation of from 30° to 40° in one day is quite a common occurrence.

Inasmuch as we are accustomed to such wide variations in atmospheric conditions, it is somewhat difficult for the beginner in Orchid culture to realize that we must strive to overcome such immoderation of temperatures in handling Orchids. We find it difficult to realize that a difference of only 15° to 20° F. between resting and growing temperatures is usually necessary to procure the best health in orchidaceous plants. Of course, wider variations than that are allowable under certain conditions, but not as a rule, if the best results are to be secured. I am also inclined to think that we get better results if we do not allow great extremes between night and day temperatures. One reason why I think this is that since we have been using the, so-called, Torridoor combustion regulators on our furnaces, we have had better success than before their use. Previous to the use of that device we had a quick and great drop in temperature during the night, and we had to keep up a high temperature in the evening to prevent too low a drop before morning, an evening temperature that was in my opinion 10° to 15° too warm for houses when there is no sunlight. I think, as a rule, we ought to run our temperatures somewhat in harmony with the sunlight acting on the plants, though not entirely so, as in some cases we have very cold as well as dark day conditions. But I think the principle as a rule holds good, and if we put on too much heat for the light we have, we get an unbalanced growth.

I have thought a good deal about the various degrees of heat and light we ought to apply to secure various results, but have not come to very definite conclusions. Many years ago I evolved a soluble blue wash for greenhouses, which, when applied, effected a marked influence on the leaf growth and retarded flowering. The blue pigment, of course, permitted the chemical rays to reach the plant and, more or less, prevented the heat and other rays from reaching them.

In Orchid culture we have to provide means for protecting the plants against too much light and heat, as well as against too much cold, and it is one of the serious expenses of the culture to carry out this requirement. When the sun begins to be bright and hot in January, the plants become faded and yellow; and then we have to begin to shade, as a rule.

As an exception to the rule, there are some varieties which, to do well, have to be given exposure to the full sunlight, and in such cases, when it is possible, it is better to give this exposure in the open air. I presume it is the greater amount of moisture in the air of the enclosed house which makes the influence of strong sun heat have such a burning effect under glass.

Taking everything into consideration, I think a good quality of white lead is the best shading material to use, the same being used by thinning with naphtha or gasoline. With our abundant supply of sunshine, we do not have to be provided with movable shading to the extent

that is needed in less sunny Europe. If we start in the middle of January with a thin coating of white lead on the warmest slopes of the houses and follow up the increasing sunlight by increasing applications, we do very well; though sometimes we have to make haste to remove some of the shading when we find the plants are acquiring a spindling growth. We practice the plan of slat shading on most of our houses during the months of the brightest sunshine, placing the slats over the lead shading. The lead gradually wears off between the slats, and then in late Summer, or early Fall, we take off the slats and gradually remove the lead shading. Altogether, it is an expensive undertaking, but there can be no Orchid culture in this climate without it.

I do not think there can be any successful Orchid culture, in this climate, of the cool Orchids, without other protection against heat than mere shading. If I were going into Odontoglossums, I would make some provision for cooling the air in the houses by evaporating water, or cooling air by mechanical compression and then expanding the air in the house, and thus cooling it. This practice I should consider as the very height of cultural achievement; but it is questionable if it would pay in the present state of appreciation of Orchids. At a later date there will be a commercial demand for crispums and other cold Orchid blooms.

In providing for keeping up the heat in Orchid houses we, of course, must have hot water and lots of it. We do not want the high dry temperature of hot air or steam; and we do want a uniform radiation of heat in the houses. Water is the greatest known absorber of heat, and so we need a large amount of moderately heated water continually radiating heat. We cannot afford to run the risks of quick drops in temperature that may result from the use of steam.

It is a nice question to discuss, as to whether steam or hot water is the cheaper system in greenhouse heating. You can get a cheaper installation by using steam; but I think it is a loss in the end, both through the use of more fuel and in attendance in stoking. Of course, we can get up heat quicker with steam, and shut off the burning of fuel and losing heat when the sun comes out; but we fire a lot of heat up the chimney when we pass our heating gases over the hot water in a steam boiler that we do not lose when we have the water in the boiler cooler than the temperature of the gases in the steam boiler.

It is on this account that it pays to have an abundance of radiating surface in our greenhouse piping, using larger bodies of water at lower degrees of temperature, instead of lesser amounts of higher temperatures. If we put a valve on our main flow pipe near our boiler, of the right design, and heat the water to a high degree in the boilers, and then have a slow circulation and radiate most of the heat in the greenhouse, we can get along with less radiation, and save fuel; but in this case, we must have an application of what is called the vertical counter current principle of heat transmission in our boilers. This is a principle that the manufacturers as yet know very little about.

Also, they know very little as to the principles which should control combustion processes in the furnace. Fully one-third of fuel is lost in practice because the combustible gases are not burned in the furnace. This gas needs air to burn it, yet if it is mixed with too much air it will not burn at all, and if air is introduced above the fuel mass, as is ordinarily the case, not only is much of the gas not burned, but some of the heat absorbing surfaces are put out of commission. Some makers get better results by putting no air above the fuel mass; and most makers depend upon a rapid rate of combustion to get heating effects, with very little references to the coal merchant's charges.

The more often fuel is fed to the furnace in moderate amounts, with a thin fuel bed, the better the economy of fuel secured. The fuel bill is an awful thing to con-

sider in connection with the growing of Orchids; but no one should ever attempt to grow these plants unless thoroughly equipped in the heating line, and prepared to meet the expense without a groan. If possible, I would advise growers to have a separate furnace for each house, and in some cases more than one furnace. This is one of the cases where a preliminary outlay pays in the end, both in economy of fuel and in ease of management.

I have offered these few crude remarks more with the idea of starting a discussion than of offering anything new. If there is any particular information I can offer I shall be glad to have it called for.

Lectures to School Children on Gardening

A Detroit note in The Florists' Exchange recently mentioned the good work being done by Geo. A. Rackham through his talks to the school children of that city on gardening matters. This led us to drop a line to that gentleman for further information as to the manner in which he handled the subject.

In his reply Mr. Rackham says that in going before the children he tells them that the profession of a gardener or florist is one of the noblest on earth, and proves it by showing how anyone can plant a seed and produce from it, by proper care and treatment, a perfect plant. (This opening remark appeals to the children and holds their earnest attention. Mr. Rackham then tells them how and when to prepare their soil, how and when to plant their seeds, how and when to transplant and thin out their plants and care for them to maturity, and strives to impress upon them particularly the value of thorough cultivation and the necessity for the total eradication of weeds. Mr. Rackham says it is surprising to hear the answers he obtains from the children—as to the depth they should plant their seeds, etc.)

He gives a fifteen or twenty minutes talk on the practical side of gardening and the growing of flowers from seeds. This work is done on behalf of the Home and School Garden Committee of the Twentieth Century Club which is composed of a great number of the society ladies of Detroit. These furnish the seeds at 1c. a package to the children of the schools. The seed is bought at wholesale and the members of the club fill the packages.

Mr. Rackham admits that he was not much interested in the work at first and was almost afraid to undertake the task but, after talking to one or two schools and noting the interest taken, he has grown to love the work and wishes he could devote his entire time to it, for the children seem to hunger and thirst for information, especially those in the schools of the poorer sections of the city, who have to use old soap boxes and tin cans for their gardens.

Mr. Rackham further says that he hopes in time the Board of Education will take up the work.

[We do not advocate the lengthening of the school day hours for the purpose of the propagation of the knowledge of the art of gardening but, judging from experience at various points, we are fully impressed with the fact that Boards of Education throughout the country generally could well dispense with some of the useless fads which now occupy more or less of the children's time, in favor of teaching them the elements of gardening. This would be quite a diversion in the routine of the school work and not a task, and have a far greater influence on the pupils than could possibly be had from several of the studies now pursued which, as a rule, do not lead to anything tangible.—Ed.]

THE BOOK OF WATER GARDENING. By

Registration of Fern

Public notice is hereby given that the American Rose & Plant Co. of Springfield, O., offers for registration the Fern described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the Secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

RAISER'S DESCRIPTION: A sport from *Nephrolepis Bostonensis* that is a great improvement over that variety, being of the same habit, but of somewhat more vigorous growth. Fronds six to eight inches in width. The edges of each pinna are decidedly ruffled in wave-like undulation that is very distinctive. As the fronds mature the undulations become more pronounced, giving the individual fronds and the plant as a whole a marked wavy effect. Does not run back, the type being fixed.

NAME: "*Nephrolepis Roosevelt*."

Registration of Violet Marie Elise

As no objections have been filed, public notice is hereby given that the registration of the Violet, Marie Elise, by Thomas DeVoy's Son, of Poughkeepsie, N. Y., becomes complete.

May 19, 1910.

H. B. DORNER, Secretary.

English Horticultural Notes

The Death of King Edward

Though the florists are sure to suffer a considerable loss in trade as a result of the death of the monarch, the loss is not likely to be severe at present, especially when one remembers that no fewer than 2000 wreaths and other floral emblems were assigned by corporate bodies and private personages from all over the world to the funeral of Queen Victoria. These floral emblems, or at least many of them, were of immense size and grandeur, and cost about half as much, each, as some of the house decorations for dinner parties. The actual loss, therefore, in the long run, may not be as great after all. * * * The Temple Show will not be postponed, though some lesser shows have been canceled, notably the fortnightly exhibition of the Royal Horticultural Society, the annual show of the National Tulip Society and the Spring show of the Carnation Society. * * * King Edward's death, of course, has put a damper upon the London "season," and many fixtures of a social character have been indefinitely put off.

The annual dinner in aid of the funds of the Royal Gardeners' Orphan Fund was also to have taken place in one of the big London hotels on the day of the funeral, and after the invitations cards had been sent out the fixture had to be canceled. This will mean a considerable loss, no doubt, to the funds of a very excellent charity. * * * However, the melancholy event of our late beloved Sovereign's decease may have the indirect effect of benefiting horticulture by sending the aristocracy sooner back from London to their country residences and to the quiet enjoyment of their gardens.

Just a personal line or two with regard to King Edward. In his short reign of nine years he had endeared himself to all hearts—one can scarcely imagine a single exception, and certainly all the signs go to show that he was indeed beloved. How a monarch wins his way into the hearts of his people is difficult to say. It is a very gradual and inscrutable process—but there it is. Never has the monarchy stood more firmly based on the love and reverence of the people of these islands than it does today, and one may be allowed to say, even to republican and democratic America, that presidencies and shifting heads of republics seem to suffer in comparison with the grandeur, the embodied historical continuity, and the stability of a constitutional monarchy like ours in Great Britain. "Long Live the King!"

Mr. Richard Vincent

By a curious and fortunate accident I met Mr. Richard Vincent, Jr., of White Marsh, Md., as he and his good lady were inspecting the beauties of the greenhouse at Kew Gardens recently. It is several years since I first met Mr. and Mrs. Vincent, through an introduction by the late Mr. Alex. Wallace. They came to my London office and I was able to give them some slight assistance in getting to some of our English nurseries, and I afterward ciceroned them through "Royal Kew," and had Strawberries and cream in these spacious gardens. Well do I remember Mr. V.'s delight when his eyes first beheld a bed of the now famous Paul Crampel Geranium, then just introduced; or rather, then just brought into prominence, for Cannell's had had it a long time. Mr. Vincent opened his note book when I saw him a few days ago and showed me a dried pressed, full-sized flower of another English-bred scarlet Geranium, one which ("His Majesty") I had already described in the up-to-date columns of the EXCHANGE. More need scarcely be said. If Mr. Vincent has got a stock, as he has, then all is well. He had been out to Mr. Page's nursery (see account of this place in the EXCHANGE, page 782) and had also, as I gathered, been down to Cannell's of Swanley, which is nowadays the great English home of zonal Geraniums. Mr. and Mrs. Vincent both appeared in good health and spirits.

From an unofficial source I learn that the Messrs.

Rochford of Broxbourne, are disposing of their collections of Orchids, and do not mean to cultivate them for market from this date.

Our Dahlia Society

The National Dahlia Society is raising its wings a little—not actually to soar aloft but to help its steps along. By means of direct circularization, its membership, so the secretary tells me, is improving, and one of the newspapers, the "Journal of Horticulture," gave the movement a lift by publishing recently a brief history of the Society with portraits and notices of some of the leading introducers (issue of April 21). The Society's "Annual Supplement and Conference Report" has just been published.

Orchids

Notes from a lecture by E. O. Orpet, before the Gardeners and Florists' Club of Boston, May 17, 1910.

Orchids are vastly different from other plants, and botanists say that there is no true link to connect them with other groups of nearly related plants. They stand distinct from other plants in that they grow in almost all parts of the world, that is, with the exception of places too dry for them. Their geographical distribution is very wide. They seem to inhabit the whole of the cultivated or inhabited earth. There are many places where it is too arid to grow them, but wherever it is possible for any plants to grow there is an Orchid grown. The fact is they grow everywhere, China, Japan, South Africa, Siberia, Australia and the United States. Again, they are widespread, and quite distinct from all other types of flora. Of course, the plants we have here, in the United States, with one exception perhaps, have no commercial value. The exception is *Cypripedium spectabile*, which, to me, is the most beautiful in the whole genus.

Orchids That Interest Gardeners and Florists

The variety of Orchids that is making most money today for the gardeners and florists is the Cattleya, which comes from Colombia, Brazil, Mexico and Central America; but, practically, all the good Cattleyas grown come from Colombia. I think that perhaps the most important thing in regard to them to emphasize is that they need no rest. The Cattleya is either preparing to grow, growing, finishing up, flowering, or recuperating after flowering. There is no resting time. In England they have a climate which is very different from ours. There they have one-tenth the amount of sunshine that we have, and there they emphasize the necessity of keeping plants dry. Now, to keep plants dry here would mean ruin. I find in growing Cattleyas one should never keep them dry; in fact, I never dream of keeping them dry. We have been tied up by English books which direct us to keep Orchids dry a certain portion of the year. The treatment they give them in England would cause complete ruin here.

Temperature

The next thing of importance in Cattleya growing is, perhaps, the matter of temperature. The temperature does not vary in Colombia 10° any day in the year, no

extremes at all. Here in this climate there are days when the temperature goes up to 90° and in the Winter below zero. Cattleyas can't be forced. We have plants which have been in our possession for nineteen years. We bought them as flowering plants. We find there is not three days variation in their date of flowering from one year to another. They will flower on a Wednesday of this year and the corresponding day in the year following. It is impossible to force them. There is no reason for raising the temperature. If you do, the plants lack vigor and die. They die exceedingly slow. No other plants die as slowly as the Orchids, but in the end they will die. In the Andes, Cattleyas grow within a zone of 5000 ft., either high or low elevation. They are peculiar in their tastes, and the same is true in regard to temperature.

Robert Grey, late of North Easton, told me one time that he believed more in a hygrometer than a thermometer. I think he was right in this. Of course, the hygrometer is no good if the thermometer goes below the freezing point, but in the Summer, when we have the ventilators open, as we do in the Cattleya houses, then the hygrometer counts. By the way, in regard to atmospheric moisture: the new houses they are building now—a days will never grow Orchids. I assure you, you will have trouble growing Orchids in modern houses. The old-fashioned range of glass will grow better Orchids. Poor Orchids are often grown because the atmosphere is too arid.

Potting Material

The old gardeners in Massachusetts used to import peat from England, and thought they could not grow an Orchid without this special brand of peat.

It was the worst material ever used for Orchids and is of no value at all in this country. Osmunda fibre is one of the best things to use, and the tide has turned—English firms are buying Osmunda fibre from this country in large quantities. In potting Cattleyas, pots never should be used larger than 7 in.; but for the larger sizes of plants baskets or perforated pans may be used, which allow the plants more air about their roots.

Feeding

Next to potting, I suppose, comes feeding. Years ago, I took particular care to mark the time I had been experimenting with fertilizers. It seemed to me that Orchids were air plants, but they could not live on air or water alone. There was something lacking, as they did not thrive as they should. I experimented with different fertilizers, such as sulphate of ammonia, nitrate of soda, etc. After this they seemed to grow and flower. About that time, or shortly afterwards, May, 1899, Mr. Cookson, a chemist by trade and by choice an expert collector of Orchids, said he had instructed his gardener to take certain chemicals, mix them up, and apply them to certain plants which the gardener was to determine upon. Cookson did not care to know, but later went into the houses and picked out the individual plants on which these fertilizers had been used. The difference was so marked and so evident that it was a surprise to him. The Sphagnum Moss grew so it had to be cut off two or three times each month with shears. I found trouble in procuring chemicals such as phosphate of ammonia. Later, we had no trouble in getting it. When Cookson came out with his formula and said it was the thing to use, I began to use it. Because the plants grow on air, or on the trees, it is not reasonable to suppose that they can subsist on straight water or air. The fact of the matter is, you must feed them. Some get moisture from the pores and some from rain water. We find they must have air, and they must be fed.

We can show this easily; on the plants that are suspended, where the roots hang down two or three feet, you can see little knots or joints on the roots. They are breaks. If you come to figure it out the way I have, you will realize that each joint is the difference between one watering and another. The roots are not specially porous; they are only susceptible at their tips, and for that reason we always water in the evening. Do not water in the morning, because the air will take all of the moisture out before night. Wait until evening, in hot weather, to water. During the night the plants have a chance to absorb the moisture, and to suck up all the water, and if there is something in the water they get benefited through it. In the morning they dry off and the plants go on growing. Some will say that manure water is good for Orchids. No doubt it is. Manure water means water in which some natural manure is dissolved. Strength is an unknown quantity in it. You do not know the strength, that is where harm comes. Chemicals are in a known quantity and you know exactly what you are using. I use 3 lbs. nitrate of potassium and 3 lbs. phosphate of ammonia as a good formula for feeding. There is no reason why an Orchid should not be fed all the year round. I feed them every time I water them.

Some one asked me why I did not begin raising seedlings. He told me the field was a new one, and said, "You have climate, plants and good ability; all you need is to begin." I began, under difficulties. I did not know how to cross *Cypripediums* and asked how, then had to go back home to figure it out myself. I found it very easy afterwards. First experiments are not successful,

May 28, 1910

because it is not always a small task to raise plants from seedlings. When they began to come up we did get results in some cases, and they were very interesting.

Nomenclature of Cattleyas

It is very uncertain indeed to talk about a species. The classification of the species of Cattleyas is very uncertain. We have raised some by hybridizing two distinct genera, and this was very interesting, because it proved to us that botanists of the olden times were wrong. They used to claim that hybrids were sterile and that they could not be used over and over again. Hybrids may be used again. In the Stud Book there are 30 names to one cross originally raised. One fault with the Stud Book is that it does not give credit to the gardener who raised the plants but to the owners or employers.

Now, as I have previously stated in print, regarding the raising of hybrid Orchids, someone said there was not a hybrid raised that was as good as a species. I am inclined to agree with him. I still believe that the species introduced from the woods are better than any hybrids ever raised; but there is one thing about species coming from the woods, the dates of their flowering are as fixed as the days in the year, but hybrids have a way of growing as they please. There is not a day in the year when we haven't flowers of hybrids. They flower especially well in the Spring and again in the Fall, that is, twice a year, and this, I think, is the chief advantage of hybrids—we can have flowers any day or week of the year. It is easy enough to get Cattleya species to flower in the Winter, but when it comes to August or September it is another proposition. We find that the Orchid hybrids will flower all the time, as they grow. They start to flower in the middle of the Winter and flower when they get around to it. They never seem to die when large, only when very small. I have had them come out so thick that you could not see between each individual seedling, and before we got around to transplant them nine-tenths of them had died off. The time is coming when we shall find that hybrid Orchids will be grown everywhere for all flowering purposes. The woods will be pretty well cleaned out of natural species in Colombia, and we can raise all we want to sell. We shall find in our day—if not, pretty soon afterwards—that we shall be able to raise Cattleyas, in quantities, to flower twice a year.

If you start to hybridize, do not use anything but good material. Procure the very best you can get in the way of good varieties. Do not attempt hybridizing with poor parents. Pollen will travel 1000 miles and still be good.

There is one thing I want to emphasize, and that is: do not keep the Cattleyas warm. Keep them cool, in Winter especially. We have no control over temperature in the Summer, but in the winter time we have. The Carnation house temperature is about ideal for Cattleyas. The temperature for them should be about 50° at night, and the place to grow Cattleyas is in a temperate house.

Discussion

Thomas Butterworth of South Framingham claimed that feeding Orchids with chemicals, or anything else, was wrong. He claimed that he never fed an Orchid in his whole career, and that his plants would compare with any he had seen in any part of the world. In answering him, Mr. Orpet said the three things most essential in Orchid culture to have good success, were brains, hustle, and manure.

W. N. Craig thought Mr. Orpet was altogether wrong about the modern houses, and that he believed Orchids could be grown well in them. He said he was sorry Mr. Orpet had not taken up many more genera of Orchids.

Robert Cameron called Mr. Orpet's attention to the fact that he had not mentioned anything about the influence light had on the growth of the plants. Mr. Orpet took up the subject and talked very interestingly upon it. He said that botanists agreed that all plant growth was made at night. This statement, however, some of the members doubted.

R. C.

Ex-President Roosevelt at the Haarlem Jubilee Flower Show

First row from left to right: Mr. Roosevelt, M. Krelage (president of the Bulb Growers' Society), Mr. Beaupré (American Minister at the Hague), Mrs. Roosevelt, Mrs. Beaupré.

The Haarlem Jubilee Flower Show

I arrived in Haarlem May 7 and put in most of my time at the flower show, one of the grandest of its kind ever held; the display of Tulips alone was worth crossing the ocean to see. This was the fiftieth anniversary of

the Bulb Growers' Association of Holland and was visited by many people. The growers expect to pay all expenses, which are quite large, as the numerous buildings for the display of flowers and plants, the fencing in of the large grounds (part of the city park) and removing the same after the show is over will cost thousands of dollars. The entrance fee (one-half guilder), about 21c. in our money, seems small.

Many American growers were in Haarlem this Spring visiting the show. It was my pleasure to meet A. N. Pierson of Cromwell during my visit, also A. Colyn of Colyn & Sons, bulb growers of Sassenheim, Holland, who visits the States annually where he is well known.

The Hyacinths were about over, so were most of the Narcissi, but the Tulips were just right, excepting the Darwins and other late flowering sorts, which were just commencing to show color and looked very promising for a grand effect. It surprised me to see so many sorts grown here, all good, while at home we have always about the same varieties. I picked out the very best grown in the grounds, as follows:

Vermilion Brilliant, very fine; Enchantress; Rose Gris de Lin; Golden King, good double yellow; Brilliant Star; The Rising Sun, very good single yellow; Ibis; Leopold I, good yellow; Pink Beauty; Imperator rubrum; Murillo; Princess Wilhelmina; Duchess Parma; Rose of Holland; Jordans, very good; Lord Beaconsfield; Princess of Austria; Lady Bozeel, good white; Woverman, very dark purple; Princess Helena, fine white; El Toreador; Jenny, rose pink; Couleur Cardinal; Joost van der Vondel; Purity; Dac de Berlio; Elegans; Pres. Lincoln; Piepmann; Van der Meer; Menelik, very dark; Couronne d'Or; Rose Luizant; Golden Queen; Proserpine; Princess Juliana, fine; Alice Roosevelt.

The Darwin Tulips looked remarkably fine and should be grown more extensively in our country. The variegated foliage type Tulips, very little seen in our country, are very effective planted in groups, and should be used in our public parks and private places, as they are very attractive.

The planting in the grounds was well done, colors harmonizing and bulbs very close, about four inches apart, so that the blooms almost touched. There was a good display of Rhododendrons in the grounds and in the buildings; a few noticeable ones were Prince Camille de Rohan, Mme. Wagner, Fastosum, fl. pl., Chevalier Felix de Sauvage.

The display of Narcissi must have been very fine, but they were pretty well done excepting Emperor and Picticus. Anemone fulgens was very nice and very effective in masses. A good collection of Hollies in many varieties, some well berried, Magnolias in bloom, and a variety of other trees and shrubs were noticed. A representative collection of clipped Box and Yews of various shapes was a feature.

In the buildings, protected from the elements, were a great variety of plants and cut flowers, and potted plants of single and double tuberous Begonias with immense rich colored blooms; a new Polyantha Rose, Jessie; fine collection of Geraniums in bloom; very good Hydrangeas with immense heads of flowers; Deutzias gracilis and Lemnolci; Lilacs remarkably fine; pink Spiræas, well-grown plants, the best I ever saw; Hippeastrum, fine large flowers; Begonia Lorraine, not so well done as in America; and numerous others. A mass of Phlox divaricata was very showy.

The cut flower exhibit, in a building by itself, was good, consisting of Iris, Narcissi Tulips, Lilacs, Roses,

a good collection of Hybrid Teas and Perpetual Roses; Carnations, such sorts as we grow, were well done, viz.: Harlowarden, Beacon, Winona, Enchantress, Winsor, White Perfection, Pink Lawsoo and Fair Maid.

A show of Orchids was a great feature and a good many species were seen, such as Cattleya, Cymbidium, Lycaste, Selenipedium, Renanthera, Dendrobium, Oncidium, Vandas and other sorts. Odontoglossum Lady Lucas Boreal, yellow flower, the only true yellow ever exhibited as claimed by the grower, remaining pure yellow, and Renanthera Imshotteana were noticeable. The Orchid exhibitors were E. W. A. Van Nederhassel and G. Muller from Holland. A parasol trimmed very effectively with cut Orchids was very much admired.

The renowned bulb fields of Holland center around Haarlem, and are one vast stretch of intensely impressive color, one might say a brilliant carpet of flowers bordering Haarlem, a scene never to be forgotten. All the villages in the bulb growing district bear witness to the prosperous state of the country and, what is very conspicuous, is the great neatness prevailing everywhere. The buildings and storehouses of the bulb growers are well built and spacious and their homes are very pretty and comfortable. Many thousand acres of land are used for the cultivation of bulbs and the annual exports from Holland is estimated at about five million dollars.

E. C. REINEMAN.

The Visit of Ex-President Roosevelt

Ex-President Roosevelt visited the Jubilee Flower Show on May 1, accompanied by Mrs. Roosevelt, Miss Ethel Roosevelt, Kermit Roosevelt, the American Minister at the Hague and wife, and the Netherlands Minister of Foreign Affairs. The party arrived in autocars from the Hague and were welcomed by a most enthusiastic crowd of many thousands of people. The ex-President happened to be the 100,000th visitor, and he was presented with a silver model of the Half Moon on the occasion. When handing the little ship to Mr. Roosevelt, the president of the General Bulb Growers' Society, Mr. Krelage, addressed him as follows:

"Mr. Roosevelt, do not expect a speech from me; you have come to see the flowers and the best way to show our appreciation of your presence is not to abuse your time for other things. Therefore, allow me just to thank you most sincerely for your visit to our Jubilee Flower Show, but may I be permitted to add a peculiar fact? Just before your arrival 99,999 visitors had passed the gates of the show, and I presume that they wanted to honor you in their own way by enabling you to become just the one-hundred thousandth visitor, a cipher which probably will not very much impress an American citizen, but of which we are rather proud in our little bulmland."

"We are particularly proud and happy that you, Mr. Roosevelt, are the hundred-thousandth visitor as, according to our custom, this fact affords us a welcome opportunity of offering you a souvenir of our show."

"On behalf of the General Bulb Growers' Society of Haarlem, which organizes this Jubilee Flower Show in commemoration of its half-centenary, I beg you to accept the reproduction of one of those ships which may be considered as the symbol of the historic and family relations between old and new Amsterdam, between Holland and America."

"Call it the Half Moon or the Mayflower, just as you like, for nobody exactly knows how they looked, and therefore you may consider this reproduction the most accurate imitation of either."

"Neither the Half Moon nor the Mayflower had any Tulips on board, but in our days 3,500,000 kilograms of Tulips and other Dutch bulbs are yearly shipped to America alone, being not even a fourth part of the whole annual production, and this quantity will still increase if the duty on bulbs in America, which was reduced last year, will be cancelled altogether. And this will be to the profit of the American consumer, to the profit of all American citizens, for it will then be possible to have cheap flowers in every garden just as fine and as plenty as here in our show."

"Flowers are the symbols of love, faith and peace, and as the flowers of Holland are spread all over the world, they will be mighty co-operators, eloquent interpreters and active propagandists of your noble ideas to the benefit of mankind and humanity."

Ex-President Roosevelt replied in a very eloquent speech, saying how delighted he was to be in the land of his ancestors and in the most beautiful garden in the world. It had struck him that the Hollanders, and especially the bulb growers, knew how to combine beauty and commerce and he said that, in this respect, they gave an example to other nations. The ex-President showed himself extraordinarily glad with the silver model of the Half Moon to which he promised to give a prominent place in his house.

The little ship is a real work of art, having been manufactured by the Zaanland Silversmith Works of Amsterdam and Haarlem.

The show was inspected by the Roosevelt party with great interest and a fine pink bulb, named Alice Roosevelt, was an object of admiration. The buildings had all been cleared of visitors so that Mr. Roosevelt could enjoy the extreme beauty of the special temporary show in perfect quietness.

The Retailer

A Unique Design

At a dinner at the Hotel Shelburne, Atlantic City, N. J., recently, given to Charles M. Schwab, the table centerpiece was a reproduction, in flowers, of the famous 24,000-lb. steam hammer of the Bethlehem Steel Works.

A House Wedding Decoration

June, the month of weddings, is now almost here, and the florist is often approached with the following remarks from a prospective bride: "Oh! Mr. Florist! I would like ever so much to have a fine church wedding, but, really, we can't well afford the decorations, so we have decided to hold the ceremony in the house. What idea have you to submit that would be both unique and pretty, and at the same time inexpensive?" In answer to the query I would suggest the following idea for an inexpensive home wedding decoration, having in mind the average parlor 12 ft. high by 14 ft. wide:

First have all the pictures, furniture and bric-a-brac removed and the carpet covered with crash; green crash would be very effective and would harmonize with the decorative scheme.

The Bridal Bower

Then take a wire arch, about 11 ft. high, one-third the width of the room at the base, and place it exactly in the center and in the rear of the room, leaving just enough space behind for the officiating clergyman to stand, with a bank of Palms behind him. Lay a rug lengthwise from the bower out, and place a prie-dieu under the arch, more to the back of it, in order to have the couple stand exactly under it on completion of the ceremony.

Now, bank the background with tall Kentia Palms, on stands, and graduate them to the floor, forming a sort of half circle from the side wall back to the rear, covering the pots and filling the space between with Palmetto leaves and Oak branches stuck in the pots, using both the fresh and prepared Palmetto leaves, so that in case the heat should cause the fresh leaves to wilt the prepared ones will still keep the effect.

Place six aisle posts, three on each side, at equal distances apart, beginning at about a foot from the prie-dieu and extending out from same in a straight line, as shown in the drawing. Drape some cheap broad white ribbon from post to post making a three loop bow on top of each post.

The Bell

Have the wire worker make a bell, 2½ ft. high, 2 ft.

wide at the mouth, in two sections; one half, Fig. A, shown in the drawing to be made with the inside solid; the other half, Fig. B in the drawing, to be made hollow so that Rose leaves or Rice can be inserted, as desired. Moss the frame and fill flatly with white Carnations or some other white flower, carrying out the outlines of the bell as clearly as possible. Cover the wire bridal arch rather heavily with Oak foliage and hang the bell, with the solid side to the rear, exactly in the center of the arch. Attach a fine, but strong white cord from the bottom of the hollow side of the bell and pass it through a small pulley, or ring, fastened to the top of the chandelier, back to another ring, or pulley fastened to the picture moulding in the end of the room farthest away from the bower, with the end hanging low enough for a person to pull at the proper time.

Take three nice Kentia Palms, about 5 ft. high, and place them in 2½ ft. basket stands. Decorate them with Palmetto leaves and Oak foliage in such a manner as to permit of their being lifted out of the way to make room for dancing. Place one just inside the door, as shown in sketch, and the other two in opposite corners in the far end of the room from the bower.

Moss the tops of two 5 ft. standard pot holders, place them on oval baskets, and moss around the base; cover the holders with sprays of Asparagus plumosus and strings of Smilax and place them on either side of the arch a little in the foreground of the bower.

The Mantel

Place a single Kentia Palm, about 3 ft. high, on one side of the mantel, and a good-sized vase on the other, which will be filled later. Bank the entire mantel with medium-sized Parleyense Ferns and place a couple of good-sized Scottii Ferns in the fire place. Hang a few garlands of Smilax round the mantel edge, also drape a few strings of Smilax over the mirror and chandelier.

Now drape some long strings of Asparagus plumosus over the door, in the form of a curtain and tie them with a piece of broad pale pink or white ribbon to the side. Wire some good symmetrical Oak branches to picture hooks, and hang them irregularly along the picture moulding around the entire room. Wire some sprays of Oak foliage to the stair banister in the hall, and you now have the green part of the decoration finished.

Wait until as near to the time of the ceremony as possible with the cut flowers, without being in the way of arriving guests, then fill the arch with good-sized white Peonies, and make six bunches of the same colored flowers, four or five flowers to the bunch, and fasten a bunch on each aisle post. Now fill the two standard pot holders on each side of the bower with a darker shade of pink Peonies, sticking them in the moss in the top part; also stick some good-sized stalks of pink Gladioli in the mosa at the base. Tie three or four specimen Peonies to the uprights of the prie-dieu; fill the vase on the mantel with good-sized pink Peonies; fill the hollow space inside the bell with Rose petals or Rice; catch be-

A House Wedding Decoration for June

May 28, 1910

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyes
ALBANY, N. Y.
11 North Pearl Street
Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Hatcher
Leading Florist
AMSTERDAM, N. Y.
SCHENECTADY, N. Y.
Estab. 1877

Atlanta Floral Co.
ATLANTA, GEORGIA
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin
BOSTON, MASS.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons
Corporation
BOSTON, MASS.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Zinn the Florist
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of New England. Also special delivery to any outgoing steamship without extra charge.

Prof. E. Wilson
BROOKLYN, N. Y.
Fulton St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality

Every facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

O. S. Matthews
DAYTON, OHIO
Florist, 16 West Third Street
Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

The Park Floral Co.
DENVER, COLORADO
1706 Broadway
J. A. VALENTINE, Pres. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

forehand about seven or eight butterflies and put them also in the bell. At the proper time a person standing at the far end of the room by pulling the cord opens the bell, releases the butterflies and showers the bride and groom with either rice or rose petals.

Place some stalks of white or pale pink Gladioli in the small Palma on the mantle and also in the Palms in the basket stands at the door and two corners, and you have the decoration finished. Finally, leave instructions to have the room kept dark and as cool as possible until time for the ceremony.
JAS. MEIKLEJOHN.

Some Boston Window Displays

The retail stores are quite busy booking advance orders for Memorial Day and their windows are and are quite attractive at this time.

Galvin's store on Tremont st. has a very pretty display, tastefully arranged. The display includes a grand showing of Cattleyas Mossiae and Mendelii. At the Back Bay store they display outside the windows and conservatory a large quantity of splendidly grown Bay trees for which there is quite a demand this season. Inside they show handsome Araucarias, colored Dracaenas, and other things.

Wax Brothers on Tremont st. carry a very high grade of goods and make a grand display in their windows. A large bunch of Roman Anemone was seen; and the beautiful blue Daisy Athaea celestis, a charming, star-shaped flower, of most exquisite blue color. A basket of Orchids, mostly Cattleyas, very cleverly arranged, occupied the center of the window. A vase of Bouvardia Humboldtii and the Dahlia Jack Rose were also prominent. Trollius Asiaticus, with its globular, yellow, buttercup-shaped flowers, was noticeable, and a very large vase of American Beauty Roses filled the corner of the window. Tulip Bouton d'Or made a pleasing companion to the Trollius, and for a ground work to the whole setting was used blue Forget-me-nots.

Newman has a fine display of wreaths in one window, and in the other is nicely displayed many varieties of cut flowers, including Cattleyas. Outside the door are displayed such plants as Geraniums, Pansies, Forget-me-nots, Daisies and such like for Memorial Day patrons.

At MacMullin's, on Boylston st., the most attractive thing in the window was a large plant of Stephanotis floribunda, which had a good showing of its waxy, fragrant flowers.

William Doyle's window carries a very light, graceful arrangement. There is not as much material as in some of the other displays, but it does not require many plants to make an artistic arrangement when they are placed properly. Cattleyas and sensible flowers are used with telling effect. There is, in addition to the plants and flowers, a display of English gathering baskets for which large sales are reported.

Carbone has two windows in his store on Boylston st. One of them displays an Italian garden effect, which is very cleverly arranged. The background is tastefully made up of Box trees, in pyramidal and other forms, interspersed with purple Japanese Maples. In front of these is a large marble seat, and near it, in crevices of rocks, are placed cleverly small plants of Bird's-nest Fern (Asplenium Nidus). A little in front of the seat is a small pool, hewn out of a marble rock, and around it are several small birds relieving their thirst from its cool contents. Little baskets of Forget-me-nots and Bluets, with a plant of yellow Calceolaria and Globe flowers show up and brighten the scene delightfully. In the other window there is displayed artistically a line of general cut flower stock. Inside the store is a dinner table tastefully arranged with yellow Marguerites.

Sydney Hoffman shows a large assortment of wreaths, devoting a whole window to them.

Zina on Park st. has always a good display. The principal thing to be seen this week are large vases of Gladioli, Cornflower, Spencer Sweet Peas, Baskets of Orchids, Forget-me-nots and other seasonal flowers.
R. C.

John Breitmeyer's Sons

Notes

NEW CASTLE, IND.—Four new boilers are being installed in the Weiland greenhouses.

WELLSVILLE, N. Y.—Mrs. Jennie McEwen has purchased the greenhouses here formerly owned by W. F. Yewdall.

PORT HURON, MICH.—C. W. Asman expects to have his new greenhouse completed in time for Memorial Day's business.

DEPERE, WIS.—A. Van Gemert, florist, is planning to move his greenhouses to a location on Grant st., owing to lack of room for expansion.

WASHINGTON, D. C.—The greenhouses of the American Rose Co., on the Bladensburg rd. near Mt. Olivet Cemetery, were severely damaged by storm May 20. Three houses were blown down.

ALTON, ILL.—Mrs. E. A. Riehl, wife of E. A. Riehl, the veteran florist of Evergreen Heights, Alton, Ill., died May 20. She was about 70 years of age, and is survived by her husband, two sons and a daughter.

SANDUSKY, O.—The Central Greenhouse on Columbus ave. will be reopened June 1 by Leo E. Wagner, who is the new proprietor. Mr. Wagner for the past three years, has been deputy city auditor for this city. Jacob Mans will have charge of the growing end of the business.

Coming Exhibitions

Newport (R. I.) Horticultural Soc.

A regular meeting of the above named Society was held on Wednesday evening, May 24. President James Robertson in the chair. The premium list for the Fall show as presented by the executive committee was gone carefully over, finally adopted as a whole, and ordered printed. For the first time in years no medal is offered for a seedling Dahlia, it being considered a poor policy to award a medal to a Dahlia in its first year from seed, an award which should only be made for a new plant after a thorough test. In the collection of annuals to be shown in bottles the number is limited to 40; and in the vegetable collections shown the number in the large one is limited to 18 species, not over two varieties of each. In this arrangement it is hoped to avoid the crowding together which has been seen in the past. The number of special premiums offered is again quite large. The show is, as usual, to be held at Masonic Hall, and the dates are September 17-19, Saturday, Sunday and Monday.

On the table were two finely grown and flowered plants of Calceolarias; to the variety C. Stewarti was, on recommendation of the committee, Messrs. R. Gardener, J. Forbes and Colin Robertson, awarded a first-class certificate of merit; and to an elegant plant of the variety Golden Gem a cultural certificate was awarded. The latter would be a fine thing for the Easter trade. The plants were grown by James Bond, gdr., for Mrs. H. Mortimer Brooks.

Andrew Dordward has been appointed on the executive committee to fill the vacancy caused by the removal of Charles Newton, who is now gardener for R. T. Wilson at Blufftown, S. C.

Not a few of the members are planning to visit the Orchid show at the end of the week.

ALEXANDER MacLELLAN.

Greenhouses Building

ROCHESTER, N. H.—C. W. Bradley is erecting a new greenhouse.

WOBURN, MASS.—Wm. H. Ward is building a large new greenhouse.

BINGHAMTON, N. Y.—W. R. Gray & Son are building a large greenhouse on Burbank ave.

SPOKANE, WASH.—The Rose Floral Co. is to build a greenhouse covering an acre of ground.

ST. PAUL, MINN.—Holm & Olson are to build eight new greenhouses at Duke and Pleasant sts.

CATONSVILLE, MD.—Charles H. Cook is erecting four large houses on the old Frederick rd.

FOREST CITY, IA.—The Hill City Greenhouses are planning to erect an addition to the plant, 66 by 20 ft.

OCEAN SPRINGS, ALA.—F. B. Faes- sel, of New Orleans, has purchased the Sinclair place here, and will erect greenhouses.

The Johnson Floral Co., Kendallville, Ind., will erect an iron frame house, 28 ft. by 56 ft. King Construction Company's material used.

Question Box

(128) Shrubs for Name.—A. P., Conn.

—These specimens were received in poor condition; a few had no flowers on, others had flowers shaken off. They are recognized as follows: 2. Spiraea prunifolia. 6. Exochorda grandiflora. 8. Rhodotypos kerrioides. 9. Spiraea Thunbergii. The others are believed to be as follows: 1. Pyrus Aucuparia. 3. Syringa Persica alba. 4. Syringa Rothomagensis. 5. Symphoricarpos, variety. 7. Spiraea chamaedryfolia. 10. Deutzia crenata. J. M.

(129) Carnation Plants Affected with Stem Rot.—L. M., N. J.

—It is not stated whether the plants affected are in the greenhouse or field. Stem rot is caused by a fungus, the spores of which exist in the soil. Avoid potting off young plants too deep, or planting them in field too deep or benching them too deep in greenhouse. Avoid over-watering or keeping plants in a close, warm, dank atmosphere. Propagate from strong healthy stock. Applications of lime tend to reduce the fungus. Avoid growing your Carnations in the same field year after year. If possible, sterilize sand, potting and bench soil. There is no cure for a plant once attacked by stem rot. In some unfavorable seasons it prevails to a very serious extent, no matter how the stock is handled. Prevention is the cure.

(130) Can Freesia Bulbets taken from mother bulb after foliage is dry be sown now in cold frames?—A. J. H., Ky.

—Plant the bulbets at once; let them grow as late into Autumn as possible; dig them, and dry them off. Later plant the large ones for blooms. The smaller ones can be kept over and planted out next year.

(131) Bug on Clematis Vine and How to Kill It.—R. C. G., Pa.

—The specimens submitted are scale bugs. Remedy: When the vine is dormant, spray with lime and sulphur solution or Scalecide, or Target Brand of Scale Destroyer. Now that the vine is growing, try spraying or washing with a solution made by dissolving Ivory soap in boiling water in the proportion of 1 oz. of soap to 1 gal. of water. Apply when warm.

Retail Notes

CORRY, PA.—Mrs. Milton Caldwell has opened a florist store in the Traction Building.

WHITE SULPHUR SPRINGS, W. VA.—Alexander Baxter is to open a florist store here June 1.

WASHINGTON, D. C.—Leapley & Meyer are a new firm starting a retail florist business at 905 G st., N. W.

FARMINGTON, CONN.—George D. Mason has sold his florist business and greenhouses to Mrs. Keep, proprietor of the Porter school.

KANSAS CITY, KANS.—J. F. Ephraimson has purchased the florist business of James Brough at the old Holmes stand, 812 Minnesota ave., and has taken possession.

NEWARK, N. J.—A delivery auto of the Begerow Floral Co., 946 Broad st., was badly wrecked on May 19, while the chauffeur was giving a "joy" ride to some companions.

RICHMOND, VA.—The building in which the florist store of Ratcliffe & Tanner is located is to be torn down and a finer store building erected. The firm will occupy quarters next door during building.

CAMBRIDGE, MASS.—Bert Connell, who has had charge of the Harvard Square florist business of Mr. Delay, has bought out the business and will be found at the same stand, and also at the Mt. Auburn st. car station.

LEWISTON, ME.—Ernest Saunders, florist, has opened a downtown store on Lisbon st. The store is finished in white, and a McCray refrigerator has been installed. Miss Grace W. Barker is in charge of the store.

ST. JOHN, N. B.—W. & K. Pedersen, florists, have moved their store from 31 to 49 Charlotte st. On May 14 the opening of the new quarters was celebrated by the presentation of boxes of flowers and bouquets to customers. The new store is handsomely fitted up; the woodwork is quartered oak, and the fittings chiefly of plate glass.

Hoped to Meet Again

A traveling salesman of this city died recently in Syracuse, and his relatives telegraphed the undertaker about the funeral arrangements. They directed that a wide wreath should be made with, "Rest in Peace," on each side, and if there was still place left for sentence, "We Shall Meet in Heaven."

It chanced that the undertaker was busy and his assistant received the telegram and literally followed out, to the best of his ability, the instructions received. The wreath was extra wide, and when it appeared at the funeral, relatives, friends and mourning guests read, "Rest in peace on both sides and if there is room we shall meet in Heaven."

The latest Pneumatic Apparatus for cleaning Insects and Fungus off trees. Intended to replace all chemicals.—From Moeller's Nonsensia Number

CLUBS and SOCIETIES

Morris Co. (N. J.) G. and F. Society

The May meeting was given over entirely to the Rose growers, for the purpose of arranging the Rose section of the final schedule to as nearly as possible suit everybody. The Flower Show Committee reported progress. A movement is on foot to secure trade exhibits from the seedsmen and nurserymen; a number so far have volunteered. The Whippany River club house and connected buildings contain as much floor space as Madison Square Garden, New York city, so there is ample room for exhibits of gardening tools, seeds and bulbs. Bay trees, box and a general assortment of evergreens in tubs.

There are several hundred gentlemen in this club; they belong to the best class of buyers and, as every member is a sponsor for this show, it ought to be a great advantage to the trade to show goods.

The Flower Show Committee is composed of Dr. Leslie D. Ward, Dr. D. H. McAlpin and T. H. Kahn. It is an enthusiastic committee, and its very composition guarantees that there will be something doing. This committee meets ours next week to still further consider the situation.

Great encouragement is felt because

of the friendly spirit of other horticultural societies. We want a great show, and would like to see the prizes widely distributed.

Twenty of Morris County's prominent residents have accepted appointments as honorary vice-presidents and we expect to get two hundred in as associate members. The prize money is guaranteed, so we can now go ahead.

E. R.

Newport (R. I.) Horticultural Society

The June exhibition will be held on June 23 and 24. Premiums are offered for groups of Palms, Ferns and flowering plants, table of decorative foliage plants, Orchid plants in bloom, Palms, cut Roses and Gardenias, hardy herbaceous flowers (cut), shrubs, Strawberries, vegetables, collection of wild flowers, best vegetable and flower plot in each competing school garden in the city and best home garden. Special premiums are offered by Mrs. Goeltz, S. G. Harris and J. C. Vaughan. Schedules may be obtained on application to the secretary, Daniel J. Coughlin.

G. and F. Club of Boston

The Gardeners and Florists' Club of Boston held its monthly meeting at Horticultural Hall, Boston, on Tuesday evening, May 19. Peter Miller, acting president, was in the chair.

A letter was read by the secretary from Dr. East of the Harvard Bussey Institute, Jamaica Plain, inviting the

THE third edition of our Design Book is now ready to be mailed out to purchasers. It has been thoroughly revised and greatly improved and is easily worth Ten Dollars a copy to anyone with a Retail Trade. Sixteen pages have been added, older designs eliminated and many new and beautiful suggestions incorporated.

THE FLORISTS' EXCHANGE DESIGN BOOK

One copy of the Design Book to present subscribers for 75c., delivery prepaid. No copies obtainable except as above. Money refunded if book is not satisfactory to purchaser.

Only one copy can be supplied at the 75c. rate. Subscribers desiring more than the one copy can secure them at the rate of \$1.00 each, postage prepaid.

Handsomely and durably bound, in stiff board covers, with 32 blank leaves for pasting in clippings of other designs, at One Dollar additional to above prices.

All prices include delivery prepaid.

Address: **THE FLORISTS' EXCHANGE,** P. O. Box 1697 NEW YORK CITY

members to attend two lectures which are to be delivered there on "Hybridization of Plants" on May 22 and 29. A communication was read from William Sim, Sweet Pea grower, of Cliftondale, Mass., inviting the members of the Club to visit his place early in June. The matter was referred to the executive committee which reported later that the Club would visit the Sim establishment on Saturday, June 4.

A motion was made and carried that the president appoint a committee to consider what the Club should do for the S. A. F. National Flower Show which is to be held in Boston next March.

As there was no further business Chairman Miller introduced E. O. Orpet, of South Lancaster, as the lecturer of the evening, and Mr. Orpet was wel-

comed very warmly by a large and enthusiastic audience, present to hear his talk on Orchids. Mr. Orpet is a very fluent speaker and gave a very lengthy and interesting talk, which lasted almost an hour and a half, and was much enjoyed. A lengthy discussion followed, some very good points being brought out. Prominent in the discussion were W. N. Craig, Thomas Butterworth, Kenneth Finlayson and R. Cameron.

There was on the exhibition table two very fine vases of Trollius, from Blue Hill Nurseries; two splendid vases of Snapdragon from Wm. Sim; a very fine specimen of herbaceous Calceolaria from William Downs; and a vase of Chrysanthemum Golden Glow from Wm. Edgar Co.

The June meeting will be "Ladies' Night."

REVIEW OF THE MARKET

NEW YORK, May 25.—There is now in the New York market a supply of every kind of bloom in excess of the demand. Sales, so far this week, have been very slow, and prices flat. It is hoped that the end of the week, with the approach of Memorial Day, will see a livelier market and better prices.

There is not an extraordinarily large cut of American Beauty Roses now, but the demand is so limited that for specials nothing better than 20c. each can be realized, and in most sales \$1.25 to \$2 per dozen is the price obtained. The supply of Killarney and My Maryland is very heavy. As the warm weather comes on My Maryland does not seem to grow in favor. The best price obtained for top grade stock of Killarney and My Maryland is 6c. each, while most sales are around the 3c. mark. Richmond is sustaining its reputation as anything but a warm weather Rose; it opens up either during transit or soon after arrival and the present demand for it is very limited. Some long stemmed, extra choice blooms in limited sales realize 8c., but in most cases stock goes to the buyer for half that price. Bride and Bridesmaid, especially the former, are showing some mildew, consequently upon the humid condition of the atmosphere. The highest price realized for the best grades in the market is 5c. each.

Carnations are not coming in as plentifully as Roses, but there are enough to more than satisfy the demand. While in general they are deteriorating in quality, yet some very good blooms are still arriving. Winsor is maintaining both its color and quality, and is a favorite at this time. The highest price obtained for the very best grades is 3c. each, but most sales are on a 2c. basis and downward.

The supply of Gardenias is so far in excess of the present demand that there is no price obtainable worthy of so choice a flower. In limited sales \$1.50 per dozen is obtained for the very best grade, but most sales are at \$1 per dozen and downward. The supply of Orchids, mainly Cattleyas, was probably never so great as at the present time. The demand is slack, and prices very low.

Given in detail by varieties they are as follows: Cattleya Mendellii 20c. each; C. Mossii, 30c. each; C. gigas, 60c. to 75c. each; all for the choicest flowers. It must, however, be understood that many sales are on a much lower price basis than the above. Lilies are arriving more slowly, but there are sufficient for all requirements, and 6c. each is the price for the best grade, and many good flowers are changing hands around the 4c. mark.

There is in the market still a small supply of outdoor stock in the Valley, selling at 50c. per 100 for the best grade. The indoor Valley is not over abundant and the best grade realizes \$3 per 100.

There is a plentiful supply of Sweet Peas, and while many of the flowers are of a very inferior quality, some of extraordinarily good quality are now arriving. For the high grade stock \$1 per dozen bunches and upwards is realized, while the poorer grades find slow sale at any price.

Both Southern and local Peonies in considerable numbers are in the market. The short stemmed, red locals show a good bloom, and realize about 4c. each. Most of the pink varieties are of poor quality. A few choice blooms sell for 6c. each, but most sales of this color and the poorer reds and whites are around the 3c. mark. Very few choice whites are in evidence; Festiva maxima is selling at 8c. each for the top grade.

Some choice Centaureas in white, lavender and yellow are coming in, and sell at 50c. to \$1 per dozen. Gladioli in a larger range of colors are appearing. The smaller varieties, such as Blushing Bride, realize \$2 per 100 for the best grade, and the larger varieties \$8 to \$12.

The only flowering shrubs now coming in in quantities are Japanese Snowball and Weigela.

PHILADELPHIA, May 23.—A rising temperature and a humid atmosphere have a tendency to increase the cut of flowers and to cause them to arrive in

poorer condition. There is no shortage in any staple product. Blooming shrubs are little in evidence as compared with last week, in fact, there is no great display of outdoor stock in the market now, except a good supply of Peonies, and blue Centaureas.

There is a good supply of American Beauty Roses. Specials in some small sales bring \$3 per doz., for extra choice selections, but most sales are below the 20c. mark. Killarney and My Maryland are coming in very abundantly. A few choice flowers change hands at 8c. ea., but 5c. ea. for the best grade is the ruling price.

The warm weather injures the quality of Richmond, causing it to open too rapidly. A few very fancy blooms realize 12c. each, but 8c. is about the highest price obtained for best grade and from that down. Mrs. Jardine is arriving in about the usual quantity, the price realized being from 10c. down. A few choice selections change hands at a trifle higher figures. With the rise of temperature Bride and Bridesmaid tend to mildew; for fancy special the best price realized is 8c.; most of sales are, however, around the 3c. mark.

Kaiserin is improving both in length of stem and quality of bloom. Top grade flowers realize in small transactions as high as 10c. each, but the ruling price is near the 6c. mark. It may be noted that in all kinds of Roses the shorter and lower priced grades move off more rapidly at present than the higher grades.

The supply of Carnations is sufficient to meet all demands. The quality is deteriorating. The supply of good quality colored blooms is not so full as that of whites. The price for top grade stands at 3c. each. The supply of Gardenias is greatly in excess of the demand, and the price is, in most cases, set by the buyer. A few choice blooms realize in small sales \$2 per doz., but more sales are around the \$1 mark for best grade. In Orchids Cattleyas also are very abundant. The darker colored flowers meet with the best sales. The top price for the best grade is 50c. each, but most sales are around 30c.

The cut of Lilies is being held back as much as possible in an effort to make better prices, and some very choice blooms realize 10c. each, but 6c. is the ruling price. Callas are not abundant, and 12c. each is easily obtained for the best grade. Out-of-door Lily of the Valley realizes 50c. to \$1 per 100, for forced stock \$3 per 100 for best grade.

Out-of-door Valley will soon be over and forced stock will not go below its present price.

Indoor Sweet Peas are deteriorating in quality, and the outdoor crop, which is just beginning to come in, has not yet reached its best, so that the present supply is not of a very high grade. The best there is realizes 75c. per 100.

Peonies are coming in freely and of good quality, and Memorial Day will find some nice stock in the market. Some choice blooms now are selling for 10c. each with 8c. as the prevailing price for top grade and from that down.

The present market is not a brisk one, but all things considered, the conditions are as good as can reasonably be expected at this season of the year. The outlook is for a fairly large volume of business for Memorial Day.

CHICAGO, May 24.—The market is more than usually quiet, with any amount of stock waiting for bidders, quite contrary to last week, when there was just enough stock to meet the demand. No one seems to believe that stock is going to be scarce for Decoration Day, and if arrivals continue to accumulate there will be a host of cheap flowers.

Roses, in some instances, are showing the effects of thrip, but there are lots of excellent stock obtainable. It is easy to see that growers are holding back on Roses as much as possible, as many flowers are received half blown.

It seems impossible, when one observes the quantities of Carnations displayed everywhere, that there is a possible chance of shortage for the holiday, no matter what the demand may be.

Sweet Peas in the past few days have been coming in such quantities that the price has fallen considerably. Peonies are not up to the standard, the buds are

very soft and do not last as long as they should. Gladioli are in greater quantity than last week; some excellent flowers of Frances King, Augusta and America are noticed, prices ranging from \$1.50 to \$2 per dozen. The miniature Gladioli are also claiming considerable attention. Lilies are in greater abundance and could hardly be in better condition. Callas are not over plentiful. Valley is coming in fairly well.

Cape Jasmine is fine at \$2 per 100. There is a considerable addition to the varieties of flowers offered last week. Fine Candytuft, Cornflowers, Stocks, and double white Narcissus, all are available.

Green stock is plentiful, except Smilax which is scarce.

BOSTON, May 24.—The market this week has been rather sluggish and not at all what it ought to be. To give a good substantial reason why it is so is a hard thing to do at this time. Probably the most feasible explanation would be that flowers are so plentiful outdoors; and, again, most people who buy flowers in quantity are out of town. The material arriving is of very fine quality, and the buyer certainly gets his money's worth.

Roses are a drug this week, immense shipments being daily received. There is an over abundance of all varieties. Carnations are more plentiful than they were, but there is a good demand for white varieties. Sweet Peas are selling well this week. Feverfew and Stocks are quite plentiful and in good demand. Large orders are being booked daily for Memorial Day.

There is a good supply of Gladioli and they are selling very well. There are some good Lilies and prices are satisfactory. Late Tulips will be in good shape for the holiday if the weather keeps cool. Spiraea is selling well. There is a slight scarcity of Snap dragon; the pink varieties are selling well. Orchids are quite plentiful, and the demand is not as good as it was a few weeks ago.

Hydrangeas and Spiraeas in pots are selling well. Marguerites in pots, however, are not in very good demand. Bedding plants, such as Geraniums, Coleus and Ageratum, are in very good demand, and large quantities have been disposed of.

INDIANAPOLIS, May 23.—Contrary to all expectations at the outset, May is falling behind last year's record. No

reason can be assigned other than the weather, which has been consistently miserable and cold. Then there is little funeral work at this time and the poorer grades of flowers find no outlet, as counter trade, while fairly good, does not consume the fancy flowers.

The market is sluggish and the non-consumed portion of stock takes with it the profits. About the brightest prospect at this time is the next two weeks, which includes Memorial Day and a number of good sized decorations.

The Peony season has commenced in earnest, with hundreds, yes thousands of blooms available, at \$3 to \$5 per 100 wholesale and 75c. to \$1.25 per doz., retail; only a slight advance is anticipated the latter part of next week.

Harrisii Lilies and Callas of fine quality may be had at \$10 per 100 and form beautiful corners in the flower shops.

The Carnation market is ruled nearly as much by the buyers as by the grower lately. It is simply impossible to use all the flowers at \$1.50 to \$3 per 100.

Commission houses in surrounding cities furnish an outlet for the surplus Roses where a fairly good price is obtained for them. Killarney and Richmond are wholesaling at \$6 to \$8 per 100. Select Bridesmaid and Bride bring \$5 to \$7 per 100; seconds sell at \$2 to \$4 per 100. Am. Beauty, quality good, are shipped in at \$3 to \$2.50 per 100.

Spanish Iris is most desirable for the counters at \$3 to \$5 per 100 wholesale; 50c. to \$1 per doz., retail.

Campanulas in plants and beautiful sprays of light lavender, pink and bluish white, remind one that the June wedding season is once more close at hand. The product of one plant retails at from 75c. to \$1.50. Feverfew is also here, en masse, at 15c. to 25c. for large sprays.

Sweet Peas are certainly outdoing themselves in quality this year at 50c. to \$1 per 100. The demand for corsage flowers, other than these, is small at this time. Excellent Cattleyas are obtainable at 35c. each but the retail call for them is at a standstill.

Boxwood and Laurel are more extensively handled this year by the shopmen, but, as yet, there has been but little derived from their sale.

The Indiana crop of Ferns will not be available this year by the 30th of May, but they will not be greatly missed as the shipped ones are unusually good.

CUT FLOWERS AT WHOLESALE

New York

Kessler Bros, 50 West 28th st., have begun handling a nice line of Fern seedlings in flats. They report very heavy sales of plants for present orders and for Memorial Day.

George Saltford, 43 West 28th st., is receiving daily shipments of Gardenia florida; also some fine Cardinal Sweet Pans.

Wadley & Smythe, 491 Fifth ave., will open their Newport store June 1. In their window this week is noted a vase of Cypripedium Curtisii, with trimmings of Leucothoe sprays. The effect is sombre but very striking.

J. H. Small & Sons, 1153 Broadway, are showing some magnificent specimens of Boston Ferns, in 16 in. tubs.

A. Warendorff, 1193 Broadway, is displaying steamer baskets of Sweet Pans and other flowers "arranged in water so as to last an entire voyage." These baskets are very attractively made up.

Hitchings & Co., 1170 Broadway, are showing at the Real Estate and Ideal Home Show at Madison Square Garden a portable greenhouse. The greenhouse is 12 ft. by 8 ft. 3 in. The wood is air-dried Cypress. The six heavy ironposts render any foundation of masonry unnecessary. The house is well built, and all the parts are so prepared that the structure can be immediately erected. It is heated by a Junior hot water heater, which can be placed in the cellar of the dwelling house to which the greenhouse is attached, or in a small pit prepared for that purpose. The total cost is only \$250. In the States far enough South, so that there are only a few degrees of frost, the heating apparatus can be dispensed with, and the cost will be \$75 less. A descriptive catalog can be had upon application. At this same show the Foster-Mansfield Mfg. Co., 143 West 28th st., is displaying a well built line of window boxes, plant tubs, columns, rustic work, Bamboo furniture, etc. The company is now making a specialty of art wood novelties for the florist trade, and manufactures the latest improved ice box.

Herman C. Steinhoff, West Hoboken, N. J., will sail for Europe in June, to attend to the selection of stock for importation.

Richard Vincent, Jr. and Mrs. Vincent arrived in New York on Sunday, May 22, from their trip through Belgium, Holland and England, proceeding immediately to their home at White Marsh, Md.

Max Schling, who for the past eight years has been doing business at 1002 Sixth ave., and who has had a steadily increasing business, finds that the volume of his trade has become so great that he has outgrown his present quarters; therefore, he has leased new quarters at 22 West 59th st., adjoining the Plaza Hotel, where he will have more room and a better location. Mr. Schling's many friends wish him all success in his larger and better store.

Alexander J. Guttman, the wholesale florist, 34 West 28th st., has become president of the Best Oil Co. This company is putting on the market a substitute for linseed oil which, it is said, is both better and cheaper than the real article.

J. A. Newsham of the Magnolia Nursery, New Orleans, La., was a visitor in town this week, en route for the Orchid exhibition at Boston. Mr. Newsham is making a specialty of the Central American varieties of Orchids.

A fire, of unknown origin, at 2.15 Monday morning destroyed the two-story frame barn, with hay, straw, etc., therein, at the corner of 20th st. and Whitestone rd., Whitestone, L. I., belonging to V. Zuber & Sons, florists. The loss was about \$2000 and the insurance \$500. The distance from the hydrant prevented any effectual work by the firemen.

John Miesem and wife, Elmhurst, L. I., will sail for Europe June 1, for a two months' visit.

Jasper McMullen, Whitestone, L. I., is convalescing from pneumonia.

Philip F. Kessler, 55 West 26th st., is now receiving some very choice white, lavender and yellow Centaureas, also some extra fine Sweet Peas.

Richmond, Ind.

The E. G. Hill Co. has taken a five-years' lease on the Graves greenhouse, west of the city. Carnations only will be grown in the newly acquired plant.

A new house, 200 ft. x 62 ft., is filled entirely with American Beauty for Summer bloom and, although only a short time planted, these have started out as if they meant business. For the new houses a Lord & Barnham sectional boiler is to be installed. Mr. Jurgens has now acquired all of the available space in the block and owns over 50,000 sq. ft. of land.

ALEX. MACLELLAN.

CYCLAMEN

Splendens Giganteum Hybrids

The strain which I offer is unsurpassable, in 5 colors including fringed varieties, from 2½-in. pots, \$5.00 per 100, \$15.00 per 1000; from 3-in. pots, \$7.00 per 100, \$65.00 per 1000. Now ready.

Cincinnati

During the past week business reached a better condition. Stock was equal to the demand and sold well, in fact, I believe better than the Memorial Day business will be. It looks now as though all outdoor flowers in this section would be in full bloom for Memorial Day, which will decrease the sales of greenhouse-grown stock in this market. Farther north the holiday business will be better, as Peonies, Roses and outdoor stock in many instances, will not make May 30. Peonies are right in their prime at this writing, May 23, and will undoubtedly be a little on the scarce side for the holiday. Our retail florists are not expecting any special rush of business for the occasion.

C. J. Ohmer of West Palm Beach, Fla., is now shipping a fine new crop of Asparagus plumosus to E. G. Gillett, sprays of just the right length to suit the florists.

Sidney Wertheimer of New York was in the city last week; J. T. Herdgen of Aurora, Ind., was also a caller.

E. G. GILLETT.

St. Louis

Chas. W. Fullgraf is reported to be in Kaos City, Mo., where he has a number of heavy landscape contracts under his supervision; Charlie has had an extremely satisfactory start in his landscape business.

Florists who are adjacent to the big cemeteries in the North End are having a busy season in planting. The Koenig Floral Co. and F. H. Meinhardt do the bulk of the work as their places are just across the way from the two largest cemeteries. The season has been a backward one and everything is being rushed along.

Fred Ostertag, who is again with the firm of Ostertag Bros., was on the sick list last week, but will be on hand this week to help out on some big decorations the firm has contracts for.

Fred Foster reports that he will have his new place, The Paris Floral Co., open for business this week. His son, Fred, Jr., will take charge of the Foster Floral Co.'s store at Ninth & Olive sts.

Otto Sander, who is under the Maryland Hotel, had the contract to furnish all the window boxes of the hotel. His pretty show windows attract a great deal of attention along this busy thoroughfare.

Pierre Schneider got in last week from Springfield, where he resigned his position with A. C. Canfield, and is now head of the growing department of the Oakland Floral Co. at Kirkwood.

Mrs. George Ostertag has taken a position with her sister, Miss T. Baderacco, at 1316 Olive st. Miss Theresa has been very busy and needed extra help.

Aspidistras have been very much in demand of late, with most of the local florists short of supply. The demand is for porch decorations and the public has just awakened to the fact that it is one of the easy plants to handle.

W. E. Robinson, who has charge of the Chain of Rocks Park for the city water department, has a big force of men at work planting out. He will soon again have his big seven-foot globe of plants in position.

C. Young & Sons Co. have had a most busy season in plants, seeds and cut flowers. Their big force is working late to catch up with shipping orders.

The Schisler-Cornell Seed Co., St. Louis Plant Co. and Tinsley Seed Co. say they are having a most prosperous season in the sale of seeds. All had to engage extra help, which they still carry.

The Ladies' Home Circle have issued postal to their members to meet on June 8 at the Union Station, at the gate of the C. P. & St. Louis R.R., at 6:45 p.m. for a trip to Chautauqua, at which place they will spend the night and hold their meeting the next day, returning home in the evening. For any further information telephone Miss Meinhardt, the secretary.

ST. PATRICK.

Los Angeles, Cal.

Our board of park commissioners have, after carefully considering all applications for the position of superintendent of our park system, which is the largest of any municipality in the United States, selected Frank Shearer to fill the place. He is a Scotchman who came here from Denver, some time ago, for the benefit of his health. He came into the business when a boy of 15, as a gardener's apprentice on the estate of the Duke of Richmond and Gordon, following this with experience in the Royal Botanical Gardens, Edinburgh. While there he took a university course in horticulture and forestry. He came to this country several years ago and Andrew Carnegie found use for him in the landscape work at "Dungeness," the Florida Winter residence of the Scotch ironmaster. Later he did similar work on the Gould and Untermyer estates near New York. Before coming to Los Angeles he was connected with the Denver Park Department as landscape engineer, forester and superintendent of construction, a part of his work being on the boulevards of that city. Denver officials highly recommend him.

Readers of these notes will remember the "ideal" park superintendent as described by one of our commissioners, which I quoted in the EXCHANGE of April 30, and now every gardener about town is wondering if the new man will even approximately measure up to that standard of excellence. A stranger to the fraternity here, we shall welcome him, and wish him every success in the stupendous task which faces him. In a land where the activities in gardening are never suspended because of cold or heat, and seldom by rainfall, the ingenuity of any man, no matter how richly endowed with knowledge, either inherent or acquired, and his ability as a gardener, will constantly be taxed to the limit.

Anton C. Zvonlanek of Bound Brook, N. J., en route to his Sweet Pea seed farm at Santa Barbara, stopped in town May 17. He astonished us by saying that all Sweet Pea seed which he plants annually in this State is grown under glass at his New Jersey greenhouse establishment.

Dieterich & Tuerer are planning to add two more houses, each 50x200 ft., to their Montebello establishment, for growing Roses and Carnations.

Howard & Smith have added a motor wagon of five ton capacity to their transportation equipment. And all this activity on the part of our nurserymen to meet the requirements of the trade, which is going forward in leaps and bounds, with the rapid development of southern California. P. D. BARNHART.

The Week's Work

BY
FRITZ BAHR

Bedding Out

Conditions the Geraniums, Cannas and Salvia Like.

If you plant a Geranium in light soil which contains much manure, you will have any amount of foliage and stem but very few flowers; directly the opposite from what to expect from a Canna. Give a Geranium a stiff loam or heavy clay soil, little manure and water, but plenty of cultivation; this, with plenty of sunshine will produce a short stocky growth and no end of flowers. You cannot get good results with Geraniums in a shady place—in fact, any of our bedding plants we grow for flowers need sun, but a Geranium, above all others, needs every hour of sun there is to be had. The Cannas, whether you grow them for flower or foliage effect, or both, as most of us do, need deeply cultivated, rich soil. They are great feeders and love moisture; and while a Geranium, if the soil is kept cultivated, can stand weeks of dry weather and look good, the Cannas want watering if good leaves and flowers are expected. You cannot mix too much manure with the soil when preparing the Canna beds, nor dig the soil over too deeply. The Salvias also like a rather heavy soil and should not be given too much manure unless you wish to plant tall growing varieties and to get them to grow seven feet in height before the end of the season. If you grow that grand bedder Zurich, allow 15 inches between the plants each way, and you will have perfect specimens, covered with flowers all Summer long, plants hardly over 15 to 18 inches in height; they love plenty of water but if planted out where there is poor drainage, they will soon play out; while they will do fairly well in a half shady place they do better where they get the full sun.

Tuberous Rooted Begonias

Their Requirements as Bedders

The Begonias, with few exceptions, all have very fine roots, quite different from most of the other bedding plants we make use of, therefore use a fine, mellow soil in the beds or borders they are to be planted in; not that they will not grow in heavy soil, but they do better in the other. What is really of more importance is the location of the beds or borders; to give the plants a place where the sun strikes them all day would be wrong, their beautiful leaves would soon be scorched. Select a half shady position, where the plants are protected against the hot rays of the

noondays sun. For bedding out, the small plants, those started late, are better than plants which have been blooming for a couple of months inside. Give the plants 12 inches of space, they don't look well crowded. When it comes to a suitable border plant for a Begonia bed, Mme. Salleri Geranium fills the bill about as well as anything I know of; the color of the foliage harmonizes with any of the shades appearing in the Begonias, and the variety does not seem to mind the shade required for the Begonias in the least. While not a great admirer of formal bedding, of whatever kind it may be, as long as it is practised and there is a demand to be supplied in that line I claim that a border of some kind around a bed, whether it is a Geranium, Salvia, Canna or Begonia bed, adds a great deal without showing it isn't finished, there is something lacking, and every formal bed should have one. While a number of other plants are suitable for use around the Begonias, the Salleri Geraniums will do nicely.

The Perennials

Seasonable Notes on the Flowering Stock

Soon we shall have many of the old favorites in bloom more, the Peonies, Oriental Poppies, Delphiniums, Aquilegias, Iris—all these, and many others come into flower about the same time, in fact during June we have the greatest display in the perennial border. At no other time of the year are there more gorgeous colors or finer foliage to be seen. To have every plant show at its best means proper attention to the cultivation of the soil. Don't allow weeds to cover the surface! A light mulch of well rotted manure after cultivating is of great help; it not only gives nourishment to the plants but adds to the attractiveness of the border. The Delphiniums will produce stems 4 to 5 ft. in length, don't allow them to break down, for this will spoil their looks; support them in some way, it pays, even if the plants are not in the show border but in the nursery row. You cannot dispose of a flower with a crooked stem as well as one with a straight one and it does not take much of a wind to fell the strongest of them. The Peonies are also benefited by support of some kind, especially if you have only a few choice specimens on the grounds, as many of us have. Where the plants are grown by the thousands, and the stems cut for shipping when the buds are still closed, it doesn't matter much whether they are tied up or not. A plant, however, allowed to come into full bloom needs support of some kind to show the flowers to their best advantage. Most of us conducting retail businesses have call for the plants in Spring and Fall, and find it hard to keep the colors separate, but as this is of great importance the time of flowering should be taken advantage of to put the proper labels on the plants as they bloom. Your customers are not likely to ask you for Mary Stuart or Rosea plenissima superba Peonies; nine chances out of ten a good white or red is asked for and it is your place to be able to supply the proper color.

Hardy Plants

Now Sow if Good Sized Plants are Wanted by Fall

Don't worry about the great number of varieties of perennials which are offered; for the average florist it would never pay to try and handle every sort which is pictured and described by the specialist, and of which there are hundreds, all beautiful in their way and many of them suitable for the border of the average customer. Twelve to 15 is the number of the old standbys and better known varieties, such as every retail florist should have in stock. Here, as with things in other lines, I suggest confining one's self to about a dozen or so of the mostly widely known varieties, and endeavoring to have a good stock of them on hand. If a customer should ask for a certain sort not on hand, you will have but little trouble in getting it in short order. The retail grower

can't possibly carry anything which brings him better returns and costs him less to handle than the hardy stock, and the demand for it is constantly increasing. No better time than the present to sow out quite a number of perennials which will, if taken care of during the Summer months, make suitable plants by next October or next Spring. A cold frame will come in nicely. Gaillardias, Foxgloves (Digitalis) Coreopsis, Canterbury Bells, Oriental Poppies and Border Pinks are among the perennials to be sown now, or during this month; and do not overlook Primula veris superba, the English Cowslip. We have some plants in bloom now, grown from seed sown one year ago and they are a sight; they were outdoors all Winter, protected only by a few leaves. This not only makes a beautiful border plant but is ideal for bringing into bloom indoors for Easter; a low dish filled with them, in full bloom, always finds a buyer.

Primula Obconica

Don't Overlook Sowing Seed of This Important Plant

If I were asked to name three of the most useful flowering pot plants for Winter use, for the retail grower, I certainly would mention Primula obconica as one of them, and the time to think about growing a good supply for another year is not next December and January, when you see them in bloom at your neighbors, but now, when it is better in that respect, even if the flowers are somewhat smaller. The number of flowers is of great importance with the obconicas, where the plants bloom more or less for five months. There is a fringed sort, of the grandiflora type, very good indeed; also a compact growing one which is offered as compacta. Yet, for all around purposes, none of them is quite as good as grandiflora. And about colors: the white is to be preferred; there are some beautiful shades of light pink and lavender, but out of a package of seed of either one of these one gets always such a great percentage of bad colors that it really doesn't pay to bother with them when only a few plants of each are wanted, and by buying seed of the white sort you will get most likely quite a few light rose and lavender sorts.

A Few Other Florist's Primulas

All of Value to the Retail Grower.

Outside of the obconicas the large flowering Chinese Primroses come perhaps next in importance of the many Primulas we have. Seed of them may also be sown now. Get the best "Mixed" your money can buy, and you will get flowers of great size, beautiful shades and grand foliage. P. stellata is one of the greatest bloomers, and a most decorative plant when covered with large trusses of small star shaped flowers. Grow a few P. auribunda is to be recommended where a yellow sort is desired; you don't need a great number, but a few, when well grown, are always admired in the show house. In 1896, when I first heard of the Baby Primrose—P. Forbesii—it created quite

a sensation, and hardly a plant arrangement was complete without a few plants of them, with their sprays of Gypsophila-like flowers of rosy lilac color, and I am under the impression that far more should be grown by the man who has a retail trade to supply. Nothing is of more easy culture and there are so many uses this great bloomer can be put to that more of it should be seen. There isn't anything I know of that the average florist grows during the Winter months, outside of Stevia, which is as light and airy as the sprays of the Baby Primrose. It blooms, if sown out now, from October until Easter, and like the obconica, wants a little more heat than the Chinensis and loves plenty of root room.

Washington, D.C.

Leapley & Myer, a firm of two young men, the former of whom was for seven years foreman in the store of F. H. Kramer, have started in business for themselves at 907 G. st., N. W. Mr. Myer was with Mr. Kramer also, for three years. These young men have a fine location, and on Saturday, their first day in business, reported sales in excess of their expectations. At present they are handling chiefly a miscellaneous lot of bedding plants, which are moving well. They also carry a liberal stock of cut flowers.

The stores about town are well filled with Peonies in all grades, and quite a number are being retained in cold storage until Memorial Day, when the crop about here will be pretty well over.

The various city parks have been planted with bedding plants, and while in some the gorgeous array of Crotons has already been set out, other Crotons are being hardened off gradually prior to their removal to the open ground.

G. E. Anderson of Ballston, Va., has succeeded Peter Bisset in charge of Twin Oaks, the magnificent estate of the late Mrs. Gardiner G. Hubbard, on Woodley Lane. Mr. Anderson is disposing of his place and business. JAS. L. CAREERY.

Curved Eave

You see what a fine piece of construction this Curved Eave of ours is. The roof bars are small, and the curved part is cut from the solid wood, with metal backing extending to the sill. The rafters are so narrow and neatly framed in, that you scarcely notice them. The glass is 24 inches wide; the sill and gutter are combined in one. It has proven such a success that most of our private orders are being built this way. Send for our special Curved Eave Circular.

The Market

There is very little to report regarding market conditions this week. Business on the whole is good, and while no fancy prices are recorded, growers are having no cause for complaint, as flowers, though plentiful, are being cleaned up in pretty good shape. Carnations are still plentiful and growers are satisfied to get any price at all for them. Roses are in season, and some very fine lots have been disposed of this week. Taken all in all, there is quite a demand for Roses and prices are remarkably good in this line. The variety Cecile Brunner is one of our most popular Roses at present, and the stores have been handling immense quantities of them for some time past. Gladioli are becoming more plentiful and prices are not quite so good as they might be. The Bride is one of the most popular varieties, in fact, florists can never seem to get enough of it. Spanish Iris, like Carnations, are overabundant, and it is hard to figure prices on them, most growers being content to get anything at all. Lily of the Valley is not quite so plentiful; and there is a perceptible slackening in the supply of Orchids. Outdoor flowers such as Sweet Peas, Pionies, Cornflowers, Gaillardias, Coreopsis grandiflora, Stocks and Tritomas are very plentiful and outrageously cheap.

In the plant line there is little change. Some very nice Hydrangeas are to be seen in the stores and quite a few Pelargoniums are making their appearance. There is quite a call for Palms in 5-in. and 6-in. pots, and they are none too plentiful.

Among the Retailers

Podesta & Baldocchi report having had steady business for the past two weeks, several fashionable weddings for which they had the decorations having helped them considerably.

Sievers' store on Powell St., probably one of the best situated stores in the city, and one of the busiest, reports that there is no cause for complaint as regards business, a good steady volume having been the rule for some time past.

The Art Floral Co. is having quite a brisk demand for design work of all descriptions, for which class of work it has a well-deserved reputation.

Pellicano & Rossi have been making some remarkably fine window displays recently. They look forward to an increased demand for flowers from now on.

Eppstein, the St. Francis florist, has been baulding some very fine flowers recently. Mr. Eppstein makes a point of handling nothing but the best grades of flowers, a principle which is to be commended.

Clark Bros. of Oakland have been doing great business of late; weddings appear to be plentiful over their way, judging by reports.

Various Notes

Frederick Seulberger of Oakland has been appointed horticultural inspector for that city.

Lælia purpurata and Cattleya Mendellii are the great attractions in the Sievers' store this week.

The J. A. Barr Pottery Co. of Los Angeles have been doing a large business in pots this year. This concern turns out a very fine grade of pots, at a reasonable cost, and they are being rewarded this season by a largely increased trade.

David Basset of Ross, Marin County, was in town this week.

H. Plath of Ocean View is bringing some fine Valley into the market these days. Two large houses of Smilax at his place look as if they were making money for him.

One carload of Roses and Camphor trees in tubs arrived this week for one of the MacKorie-McLaren contracts in the vicinity of Redwood City.

L. Blochman of Santa Maria was a recent visitor in town.

A regular typhoon swept the Bay cities on Saturday evening, May 13, and growers in Oakland and vicinity got a scare which they will not forget in a hurry. Domoto Bros. of Elmhurst lost heavily, and the damage done by wind will probably amount to several thousand dollars. The large range of glass now in the course of construction was completely destroyed, while the outside stock of rare and expensive shrubs suffered greatly. Other growers all along the Bay suffered more or less.

The Rhododendrons at the main entrance to Golden Gate Park are in full

bloom at present and are attracting lots of people. The Tree Ferns in the dell are worth going a long way to see; Cyathus medullaris, is exceptionally fine, as also is Dicksonia antarctica.

The largest shipment of Cyathus ever brought into America was received by the MacRorie-McLaren Co. this week, who are busy distributing them at present.

Favored with beautiful weather the Pacific Coast Horticultural Society's outing to the Gill Nursery at West Berkeley on May 14 was a decided success. There was a large turnout of members and their friends, and the magnificent display of Roses in bloom well repaid them for their visit.

The Golden Gate Park conservatories are looking brilliant these days. A house of Calceolarias is the principal attraction.

Everything points to Calla bulbs being high priced this year. Latest reports from growers who make a specialty of them are anything but satisfactory, so far as quantity of the bulbs is concerned.

Weather conditions in San Francisco and vicinity continue to be ideal, and business shows an improvement all round.

WM. MCIL BROWN.

Kalamazoo, Mich.

Favorable weather having at last arrived, the bedding plant trade now receives its harvest, and those handling this line of goods are being rushed to the utmost. Geraniums apparently are as popular as ever, closely followed by Salvias, while Coleus seems to have lost ground. Porch boxes and baskets constitute, as usual, one of the most paying lines of the business, but I regret to find, even at this early date, evidences of prices being cut to near cost. Four-inch Geraniums are, I am told, already being sold for ten cents, a price altogether too cheap, especially when planted out and delivered free.

The outlook for Memorial Day's cut flowers has not improved during the past two weeks, and the big shortage of Carnations will have to be met with other stock; but this year substitutes are hard to find, as outdoor stock usually at hand is either past or not ready. Again Carnations with us are called for on this occasion in preference to any other flowers. The local press appears to have interviewed some of the retailers on the subject, and a sensible article on the expected scarcity of flowers for Memorial Day was published this week. Whether, however, it will be effective in preventing kicks against the high prices that are bound to prevail remains to be seen.

Mrs. Fisher, wife of H. A. Fisher, who recently underwent an operation at the Burgess Hospital, is reported to be doing well. The Fisher Co. gained a good write-up in the papers for work done at the Elks' May Day Festival, it being described as one of the best pieces of work out this season.

The Central Nursery Co. is at present moving into their new store on Burdick st.

WHY NOT YOU?

Why Not Buy Good Greenhouse Material?

YOU can't expect to keep up with your wide-awake neighbor if you are going to build cheap houses and use low priced lumber. Good flowers cannot be grown in a barn. It doesn't pay to spend too much on the greenhouse either, for there are extremes both ways—build modern, up-to-date, durable houses, but get them at a reasonable cost. Figure out the length of time the houses will last in comparison to the cost—make an estimate on the profits you will get during the life of the plant. You will soon come to the conclusion that our Semi-Iron Greenhouse is the house that makes money for you—our prices are not high and you get more bench room for your money. Get the most you can for your money, but be sure you get good material.

Please mention the Exchange when writing.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

This section is our Pipe Frame Construction, using what we know to be the right number of posts and the right way to support a roof to make it thoroughly safe. Next to our Iron Frame House, it is the house we give our strongest endorsement.

PUT IT UP TO THE FIRM WHO KNOWS

You decide to build—decide how long and wide the house is to be—decide you want an up-to-date construction—decide in your mind that a house to meet your requirements ought to be bought for about so much. Then what is your next move—do you begin shopping about from firm to firm? Some of you do, we are afraid, but the long headed, practical grower puts it up to the firm who he knows, knows. He gets their price, considers what he is to get for that price, pays the price and gets exactly what he pays for. Gets what he pays for, do you mind those words?

He planks down his money with a comfortable sort of satisfactory feeling that his house is the best possible to buy for the money. He knows he has a house backed by a firm who "makes good"—he knows they make good because they have made good for over half a century. There is only one firm who has been in the business half a century. You know that one firm knows its business. So let us repeat: put your greenhouse building up to the firm who knows.

PURITY

House of Purity Freesia, as grown for the Stumpp & Walter Co.

The Best and Most Salable Freesia in the American and European Markets

OUR stock of this now popular and famous Freesia is the largest in this country. We have bulbs that have been grown under glass (the illustration shows one of our houses), also bulbs grown by the originator, R. Fischer. Both of these stocks are the true Purity stock, from which we receive our bulbs. The very highest quality is guaranteed. The demand for this variety in all the wholesale markets is persistent and universal. Its popularity is undiminished; practically it has no competitor.

AUGUSTA, GA.—The N. L. Willet Seed
Co. is occupying its new quarters at 849
Broad st. The new store is commodious
and attractive in every respect, and its
three floors brilliantly lighted. The office
is on the second floor, the whole width of
the building, looking out upon Broad st.
through three 15-foot windows. This of-
fice is one of the largest to be found in the
entire city. The wholesale business of the
firm will still be continued at the Doolittle
warehouse, the new store being used
only as a retail depository and office.

European Notes

Summer has burst upon us all at once
and the change it has made in the ap-
pearance of our growing crops is simply
marvellous. Provided we do not get a
setback later on everything looks quite
safe and ready to make up for lost time.
There is a large number of Beet
plants and Mangels yet to be transplanted,
but it is doubtful if anything will be
done with them. A superabundance of
water still causes trouble in western
France, in fact there have been some
further inundations during the present
week. Where this occurs it is not pos-
sible to do anything but wait and hope.
Hemp will doubtless be sown in consid-
erable quantities this year.

Where Beets have been planted on
higher, drier land, they look as well as
at this time last year; let us hope they
will have better times later on.
Spring-sown Radishes are now ready
for transplanting and, where the land is
ready, the weather is all in favor of this
important work. This should encourage
the few growers who have been brave
enough to make the venture; every seeds-
man hopes that they will be amply re-
warded.

The hot rains have brought Turnips
on apace and conditions are at present all
in their favor.

Rutabagas are stalky and rather too
weak to produce very heavy crops, but
a judicious topping and a light dressing
of nitrate may secure at any rate half
a crop.

Vaughan's
Lilium Harrisii

CAREFUL
SELECTION
OF BOTH
PLANTS and BULBS.

OUR grower, writing under date of April 12, says crop of "Harrisii" is looking exceptionally well this year, the season having been favorable to the development of good healthy plants, and they expect to harvest an average crop of fine bulbs. Remember, while we do not claim that our "Harrisii" are absolutely free from disease, or that every bulb will produce a perfect plant, we do claim that our grower's efforts in the way of spraying and roguing are producing results, our stock now being freer from disease than ever before and of genuine "Harrisii" type, in fact, the best general crop grown on the Island of Bermuda.

Peas, where not eaten off by slugs, are doing very much better than was anticipated; Cooper's Velocity, sown in the open on Jan. 1, will be ready to pick before the end of the present month (May). Mauretania will be three days later, while a very choice stock of Alaska is fully 15 days behind.

Broad Beans look first rate but, as they are fully three weeks behind, nothing short of a miracle can save them from the "dolphin."

Walter D. Steele of the Steele, Briggs Co., Toronto, is one of our earliest visitors.

EUROPEAN SEEDS.

American Notes

Trade Continues Very Good

The seedsmen have had still another week of very good business. The wholesale dealers have been receiving a great many filling-in orders, and were it not for the fact that so many reasonable items are in very limited supply the week's business would have been even larger than it was, and it has been very satisfactory. The retail cash-over-the-counter trade is holding on well, not only in regard to vegetable seeds but with flower seeds as well. Speaking of flower seeds, the general verdict would seem to be that the largest volume of retail sales of packet flower seeds ever known has resulted this season. Of vegetable seeds there are no large quantities left in any direction to carry over to another season. Peas, Beans, and Sweet Corn are well cleaned up, especially the green-podded varieties of Bush Beans. Onion sets are still selling very well at retail; every year the demand for white, red and yellow sets continues later and later; it seems to be only a question of how long the sets can be kept in salable condition.

The traveling salesmen are, so far, very enthusiastic over the prospects for the advance seed orders for 1911 and it is surely a fact that so nearly exhausted will be, practically, all seed stocks, when the present season does finally end, that dealers will be obliged to purchase seeds of all kinds for next season's sales in more liberal quantities than for a great many years. As regards general seed supplies for sales next Spring, it is none too early to place contracts with the larger seedsmen for them. Personally, the writer feels that the present rates for the growing crops of seeds are as low, and may turn out to be quite ma-

terially lower than the prices which will be quoted later on. It is a good opinion that so very largely have many of even our most conservative seed growers sold this season from their supplies of planting seed stocks, that a material shortage of planting stock will in many cases render a full average seed crop impossible. This encroachment by seed growers upon their selected planting seed stocks has been going on now for several years, continuously, and will continue just as long as the tempting high prices for seeds last.

Another thing which should not for a moment be lost sight of, is the fact that the end of this season will see fewer seeds carried over to another year than for a decade; and such being the case, although the growing crop of seeds should turn out to be even more than an average one, or even a bumper crop, the general effect upon prices, downward, would be far less than is generally supposed. On the other hand, a general widespread seed crop failure this Summer would cause famine prices in a great many lines. In other words, so very low are seed stocks, as a whole, with the larger seedsmen, that one or even two good seed harvests would no more than bring seed supplies to a fairly normal level; while, on the reverse side of this reasoning, is the fact that crop failure of seeds this Summer means the highest average prices for seeds perhaps ever known for next Spring. In a nutshell, so low are average seed supplies with the larger seedsmen, that a bumper seed crop this Summer would affect prices very little downward, as compared with the prohibitive rates upward that a crop failure of seeds again this year would cause. It would, indeed, seem to be good and conservative policy to place orders early for the seeds needed for next year's sales.

Memorial Day Plant Sales

More than ever before did the seedsmen cater this year for the Memorial Day plant trade, with the result that sales in this line were very much larger than in any previous season, and on the whole at good prices. As suggested in this column, many seedsmen found assorted baskets of bedding plants to be excellent sellers, as were also baskets of blooming Pansies. Other plants need no special mention; suffice it to say that everything in full bloom found ready purchasers.

New York Seed Trade

Trade in a retail way is holding on very well indeed. Our seedsmen who handle plants did an excellent Memorial Day business. Insecticides have begun to sell actively, and June, as usual, will be a month of sales including a little of every line. The weather still continues uncertain, comparatively cool and rainy. What we need are some warm sunny days to start things along.

Henry Nungesser, president of Henry Nungesser & Co., returned from Europe last week on the Kronprinzessin Cecilie of the Hamburg-American Line. Mr. Nungesser reports a most satisfactory trip, which was one of pleasure and business combined, and returns in his usual good health.

Wm. C. Langbridge of the Jerome B. Rice Seed Co. Inc., Cambridge, N. Y., was among our visitors last week, passing through this city on his way South. Mr. Langbridge is very enthusiastic over the prospects for a very large business for his firm the coming year; in fact, he says the season just closing has been one of the best they ever had. Mr. Langbridge feels that there will be not the least trouble in disposing of all the good seed stocks that will be produced from the growing crop, at satisfactory prices.

Wm. Elliott & Sons report retail sales of bedding and vegetable plants as particularly active the past week. This trade with them is every year extending later and later into June.

J. M. Thorburn & Co. have issued their annual wholesale price list of Turnip, Spinach and other seasonable seeds. The Aphine Manufacturing Co. of Madison, N. J., is much pleased with the steady and increasing sales of its insecticide "Aphine" with the seed trade.

The Stump & Walter Co. is devoting particular attention to the "Purity" Freesia this season.

Arthur T. Boddington was one of the visitors at the Boston Orchid show and returns home full of enthusiasm for the splendid and, as he puts it, "gorgeous display" there made.

Wm. E. Marshall, of W. E. Marshall & Co., who has been visiting customers at Lenox, Mass., also attended the Orchid show at Boston last week, and is very enthusiastic regarding the wonderful success of the show in its every feature.

Advance orders for potted Strawberry plants are already being placed with the seedsmen. It is only natural that the sales of these plants should be greatly helped, this year, by the splendid crop of the berries, which is everywhere creating such favorable comment. Not in years have Strawberries been of such uniform good quality.

Philadelphia Seed Trade

The Spring seed trade is over, the sale of vegetable plants is on the wane, bedding plants have reached and perhaps passed the climax, and Summer conditions have begun to prevail in the seed trade.

The seedsmen are now preparing their Midsummer catalogs, and such as did not order their foreign bulbs directly from the growers' agents when they were in this country are now making out their mailing lists. The trade in poisons is growing better, but has not yet reached its full height. In these days the seedsmen as well as the druggist is a dealer in poisons and the sale of insecticides and the apparatus for applying the same forms no small part of the seedsmen's trade. The discovery of new injurious insects is periodically announced, and the chemist immediately offers to the public a compound with which to kill them.

The twenty-eighth annual convention of the American Seed Trade Association will be held at Atlantic City, N. J., June 21 to 23. It is expected that the Philadelphia seed trade will be well represented there, and that there will be a mingling of business, sociability and good cheer.

The Johnson Seed Co. reports that the sale of Turnip seed is beginning. Early Purple Top, White Globe, Yellow Aberdeen and Yellow Amber Globe are the favorites about Philadelphia, but many Yellow Ruta Baga are also planted. The

BRANT BROS., Utica, N. Y.

Please mention the Exchange when writing.

Stokes Seed Store is showing a hive of American bees. As the hive is a wire structure, all the bees can be easily seen, and attract much attention. This company makes a specialty of bee supplies and issues a catalog of poultry and bee requisites, which can be had for the asking.

The rat is one of the smartest animals in existence, and yet like one of old "Every man's hand is against him, and his hand is against every man," or at least its teeth are. The Moore Seed Co. are out with a new rat exterminator called "Rax" from the Eap-Thomas Laboratories, Bloomfield, N. J., who will "Contract to clear hotels, storage warehouses, etc., of rats and mice—no result, no payment." "Rax" is a bacteriological preparation, containing pure cultures of no active virus which has a deadly effect on mice, rats and field mice, but is harmless to all other animals and stock, such as dogs, cats, poultry, as well as human beings.

The very handsome store windows of the Mitchell Seed House, 518 Market st., are filled with a well arranged display of substantial offerings. Rustic window boxes and chairs, all lawn requisites, and a full line of insecticides are noted among this display.

Henry F. Michell Co., 1018 Market st., report an unprecedented and continued heavy trade in all kinds of bedding plants. The company's wholesale and also retail Midsummer catalog will be ready for distribution in about ten days. The Maypole, with the pretty girls dancing about it, should have been located in the show window of this company in the last issue of the EXCHANGE, instead of the window of Henry A. Dreer's. The error is regretted.

In the front of the store windows of Henry A. Dreer, 714 Chestnut st., a group of men and women stand, with note books and pencils in hand; as some move on others take their places. Why? Because 33 of the 75 varieties of Roses which took the highest award, a silver medal, at the Orchid show in Boston, are displayed in vases in the window. Among these beautiful blooms two especially fine are noted—The Lyon, and Duchess of Portland, a lemon white. This is not all. Outside and on either side of the store entrance are shown great vases, fifteen in number, containing fifteen separate varieties of Peonies, only a few of the large number which Dreer offers. Especially noteworthy among these were Duke of Wellington, La Tulipe, Floral Treasure, Reine des Roses, Comte de Driesbach, and Louis Van Houtte. This exhibition of Roses and Peony blooms will be continued for several days.

Holland Bulb Notes

Our bulbs have had a bad Winter. Rain, rain and rain again, caused an abundance of water which had a very unfavorable influence on the bulbs in low fields. They showed this in the Spring; many and many beds of Tulips were drowned out and did not show above the surface; others showed they had suffered heavily by too much water and did not promise much. Strong frosty nights and sharp sunshine in the day caused "fire" in the foliage; and 101° ruined many fields of early Tulips.

Hyacinths did not suffer so much by water as by frost and hail; they also were affected by "fire" in the foliage and some kinds, as Gertrude, Garibaldi, etc., bore yellow leaves in consequence of the

warm days; in general, however, Hyacinths promise rather a good crop, better than Tulips.

Referring to Narcissus: Golde Spur and double Von Sion, especially double crowns, will be scarce and bad, because "fire" in the foliage destroys the plants. I think the prices of these kinds will rise considerably this season.

Crocus are dear and will also keep their price this season. Whosoever can keep them in good health will make money this year. J. BEUMER.

San Francisco

The Market

There was quite a noticeable betterment in market conditions last week. The retailers were more largely represented, and prices showed a well defined improvement all around. Carnations are now beginning to pick up a little and should command good prices until after Memorial Day. At the time of writing high-grade stock is selling well at prices which will be sustained for at least another week. Roses, though brought into the market in large quantities, sell well, and growers who specialize in this line have every reason to feel satisfied. Field-grown Roses continue to be plentiful, and there will undoubtedly be a heavy demand for them on Memorial Day. American Beauty is selling out well at from \$2 to \$2.50 per dozen, while Bridesmaid is fetching 50c. per dozen. The Gladiolus continues to be a prominent flower in all the stores; the Bride is perhaps the best seller, from the growers' point of view, as there is quite a demand for it by those retailers who go in for design work. Sweet Peas are still very much in evidence and clean out well, at from 50c. to 80c. per dozen bunches. Formosa Lilies are to be seen in quantity, and some very fine blooms are being brought in by San Mateo growers, which bring on an average \$1 per dozen; this figure, however, should be exceeded before Memorial Day. Both the yellow and white Marguerites are being disposed of in quantity, and the quality of the blooms is good. Peonies are a thing of the past, only a few stragglers to be seen in the stores at present. Some very fine bunches of Coreopsis grandiflora are to be had; the color of these flowers is bright and pleasing to the eye, and they sell rapidly. Lily of the Valley is none too plentiful at present; growers seem to be holding back for Memorial Day, when big prices will be the rule for this class of stock. Gardenias are also scarce and nice blooms bring as much as 50c. apiece. In the Orchid line Cattleya Mossiae still holds well, while quite a few C. Mendellii and C. Gaskellianae are to be seen. Some very fine Cattleya gigas (var. Sanderiani) was marketed this week, and were quickly bought up. Phalaenopsis amabilis is still to be seen in limited quantities, as also is Odontoglossum crispum, the latter an Orchid which deserves more attention from growers on this Coast; in fact, the writer is of the opinion that O. crispum can be grown in California better than in any other part of America; this refers particularly to San Francisco and its immediate neighborhood, where the temperature is moderate all the year round.

In green goods, Asparagus Sprengerii and A. plumosus is more plentiful than for some time past, while Adiantum is increasing both in quantity and quality. Smilax is the scarcest item in the market at present, and out-of-town growers who specialize in this class of green should reap a rich harvest from now on. Both growers and retailers are getting busy for Decoration Day and everything points to good business for this week end.

Various Notes

The latest news from Santa Rosa is to the effect that Luther Burbank has opened an "Information Bureau" in that town. The fee charged is \$5 per visit. This should prove one of Burbank's most profitable "creations."

Domoto Bros. of Elmhurst, whose new range of glass was totally destroyed last week, have started the work of rebuilding.

Congratulations are extended to Wm. Hill, gardener to Eugene de Sabla, who has taken unto himself a wife.

The new nursery of the MacRorie-McLaren Co., at San Mateo, is rapidly being put into shape. Work on the glass department is being rushed along and the houses will be ready for use early in June.

Carbone Bros. of Berkeley, will erect two new houses this Summer.

The great attraction of the Pacific Coast Horticultural Society for the month of June will be a visit to places of horticultural interest in the vicinity of Burlingame. It is proposed to visit the well-known Tevis Estate, also the

CUT DAHLIA FLOWERS PAY

If You Have the Following Varieties and Plant them NOW

After considerable consideration and observation, and "talks" with the trade, we decided to offer the following Dahlias to florists this season. Price, \$1.00 per 12, \$8.00 per 100; Our selection, 75 cents per 12, \$6.00 per 100.

Decorative Dahlias

Augusta Nonu. Clear scarlet, a large and superb flower borne abundantly, always above the foliage. Flowers are always perfect.

Beauty of Kent. Well named, beautiful in form, color and appearance. Deep crimson-red, with distinct pure white tips; most effective and at once catches the eye; free-blooming and fairly large.

Camellia. A dwarf, bushy plant, attaining a height of 2½ feet with small, but prolific foliage and myriads of small-sized perfect flowers of a coppery orange. The shape of the flower is just like a Camellia and lasts well when cut.

Catherine Duer. Crimson-scarlet.

Clifford W. Bruton. Best yellow.

Firefly. A most striking variety on account of its color, fiery orange-scarlet, with distinct white tips.

Frank L. Bassett. Bright purple, shading to blue.

Lyndhurst. Bright scarlet.

Maid of Kent. Cherry-red, tipped white.

Nymphs. Color clear, light shrimp-pink.

Orange King. Rich glowing orange; early and profuse.

Source de Feu. New. Deep orange, splashed and streaked with vermillion-scarlet, a dazzling color; flowers gigantic and on long stems, 4 feet.

William Agnew. Rich, dazzling red; immense size.

Giant Decorative Dahlias

Gigantea. Its name suggests the size; truly gigantic and massive in form. The individual petals are short and it requires many to form such a monstrous flower. Color a soft sulphur-yellow.

Souvenir de Gustave Doazan. The most sensational Dahlia of the season; a decorative variety of mammoth proportions, which under ordinary cultivation will produce flowers 6 inches across, and can be grown to measure full 9 inches. It is of free growth, remarkably profuse-flowering, and pure scarlet in color.

Cactus Dahlias

Countess of Leonsdale. Amber and salmon.

Earl of Pembroke. Bright plum.

Kriemhilde. One of the finest pink Cactus Dahlias.

Standard Bearer. Brightest scarlet; profuse bloomer.

Show and Fancy Dahlias

Acquisition. Rich, royal deep mauve; splendid exhibition flower.

A. D. Lival. Beautiful soft pink; early and profuse bloomer.

SHOW AND FANCY DAHLIAS—Continued

Alice Emily. Delicate buff, center clear yellow.

Arabella. Pale primrose, tipped and shaded old rose and lavender.

Comedian. Orange ground, beautifully flaked and speckled with crimson and tipped white; of the finest form. 4 ft.

Criterion. Delicate rose; large and fine.

Gloire de Lyon. Very large, pure white.

Glowing Coal. Brilliant red.

Gold Mantle. Golden yellow, neat and good; requires thinning.

Gold Medal. Bright canary-yellow, regularly marked with fine stripes and splashes of deep red.

Grand Duke Alexis. Very large white, tinted pale lavender.

Green's White. One of the best whites for cutting.

Harlequin. Brilliant crimson, striped and tipped white.

John Thorpe. Very large; soft rich pink.

La Republique. Creamy white, overlaid with rose; very fine.

Menhedy Beauty. Fancy buff, with crimson spots, free long stems, large bloom.

Mrs. Gladstone. Delicate soft pink; large and splendid form; the finest pink Dahlia.

Mrs. Reggie Green. Color a pure white ground, slightly flaked and veined with rosy purple.

Mrs. Chas. Lanier. This grand new Show Dahlia is one of unquestionable merit; color deep brilliant yellow; flowers of immense size; free-blooming.

Norma. Bright orange-buff; good outline.

Rev. J. B. M. Comm. Yellow, flaked red.

SHOW AND FANCY DAHLIAS—Continued

Rosamund. A very fine selling flower, white ground, heavily edged with crimson.

Watchman. Rich golden yellow, heavily striped and blotched with crimson.

White Swan. Snow-white, with long stems.

Single Dahlias

The 20th Century. Intense rosy crimson, with white tips and white disc around yellow center.

Maroon Century. Rich maroon, shaded plum very large and velvety.

Pink Century. In size it is from 6½ to 8 inches in diameter; a strong, vigorous grower with fern-like foliage; color is a delicate shell-pink, slightly suffused, clear, soft pink.

Rose-Pink Century. By far the largest and best, in fact, the only clear rose-pink Century, of immense size, perfect form and great substance. Very strong, heavy plant, with 2 to 3-ft. flower-stems, bearing the giant flowers erectly, making it the most valuable as a plant or for cutting.

Dahlias to Color

We can also furnish, without names, in mixture, all colors separate, or all colors mixed as follows:

Mixed Pinks, Mixed White, Mixed Reds, Mixed Yellows. 75c. per doz., \$5.50 per 100, \$50.00 per 1000.

Mixed, all colors, 60c. per doz., \$4.50 per 100, \$40.00 per 1000.

342 West 14th Street, NEW YORK

E. W. McLellan Nursery. Both places are within easy reach of the city and it is to be hoped that a large delegation of members and interested friends will turn out and assist in making the outing a success. The second Sunday in June has been set aside for the outing—please bear the date in mind.

The Stockdale Nursery at Burlingame is selling a nice line of Palms, and evergreens in tubs, at present. They report that trade has been brisk with them for some time past.

A consignment of *Cattleya Trianae* was received in excellent shape by the J. H. Sievers Co. this week.

Frank Hutchinson, superintendent of the Sterns Estate is rapidly recovering from his recent illness; he is now taking a well-earned vacation at Santa Cruz.

Mrs. K. O. Sessions, the well-known Santiago florist, was a welcome visitor in town this week.

H. Geisreiter, of the Bell Conservatory, Sacramento, has been making an extended visit to growers in this vicinity. Mr. Geisreiter is well pleased with business in general and says that business is going along with a rush in Sacramento.

The Sandborn Nursery Co. of Oakland report having had a heavy demand for bedding stock of all descriptions this year. A. Sandborn left this week for an extended trip through the eastern States.

Ferrari Bros. have been sending in some fine blooms of American Beauty Roses of late; they expect to have a fine lot on hand for Memorial Day.

WM. McM. BROWN.

Albany, N. Y.

Memorial Day was well observed here, the weather being excellent, and the demand for flowers and potted plants was away ahead of expectations. Wreaths of all kinds sold well, Laurel wreaths taking the lead and everything available

brought good prices. Outside stock was rather scarce, especially Peonies, they being somewhat backward, especially the white and pink varieties, but the red were on hand in plenty. *Dentzia*, *Spiraea* and other shrubs were in abundance, and worked up well in bouquets for cemetery purposes.

F. A. Danker has his new addition to his present location completed, and he now has, certainly, one of the finest establishments in the State, and an increased business is looked for.

Mrs. Fred Keller has taken over the

business of her husband, Fred A. Keller, and she expects to operate an up-to-date establishment, growing Carnations and Ferns extensively for the trade. Everyone in the trade wishes her success in her new venture. W. W. Hannell of Watervliet, N. Y., is cutting fine Carnations, and Bride and Bridesmaid Roses, which find a ready sale, as the stock is generally grand in every respect.

The regular monthly meeting of the Albany Florists' Club will be held on Thursday, June 2. Matters of importance will be taken up, one of which is

the closing of the retail stores during the months of July and August at noon on Saturday, and also the evening closing of stores at 6 p.m.

Jack Butts, of W. C. King's, is improving after his attack of appendicitis.

J. A. Traxson, the new South End florist, is reported as doing a nice business since his opening a few weeks ago. Plenty of funeral work has been his lot to contend with, also the planting of beds, urns for country residences, and outside plantings with Geraniums, etc.

W. C. K.

New Bedford, Mass.

Memorial Day trade was good. Not many flowers were left; about everything salable was cleaned up. Prices were fairly good both for plants and cut flowers. Most of the demand was for bouquets, some of the florists having to work all night on these to fill orders, which ranged in price from 50c. up. Carnations were in good demand, retailing at from 75c. to \$1 and more per doz. Roses brought \$1 and \$1.50 per doz. Stocks sold at 75c. and \$1 per doz., and Sweet Peas at \$1 per 100 blooms. Feverfew, Candytuft, Daisies and lots of other flowers were used in making bouquets.

There was a good demand for Geraniums in bloom, and they sold at 10, 12 and 15c. each, according to size. Pansies, Daisies and Forget-me-nots sold well in pans. There was quite a lot of hardy stock to cut from.

Saturday our old friend, or rather our old enemy, was selling Roses at 25c. per doz. Just think of it! Only two days before Memorial Day.

E. H. Chamberlain and Wm. P. Peirce had large stocks of Hydrangeas in pots, which found a ready sale.

Funeral work has been good of late. Prices on cut flowers are as usual now.

HORRICO.

Our view represents a part of the greenhouses of Wm. Shick, 326 Ida ave., Wichita, Kans., which were recently struck by a hailstorm. Fortunately, the owner was insured in the F. H. A.

AMERICAN ASSOCIATION OF NURSERYMEN

P. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer. 25th Annual Convention at Denver, June 8, 9 and 10.

WALLA-WALLA, WASH.—The Pacific Coast Association of Nurserymen will hold its annual meeting here on July 13.

KIMBERLY, IDAHO.—The business and nursery of the Tyler Bros. Nursery Co. has been sold to a company composed of John Hardin, John Henning, Wm. Durkee and C. E. Wright, who are re-organizing the business as a stock company, to be known as the Kimberly Nursery and Orchard Co.

Acer dasycarpum No Maple is better known to planters than the *Acer dasycarpum*, the Silver, or White Maple, as it is called, for to the early settlers of the country it proved a tree to give shade quickly, better than any other tree that could be had readily. And as towns became crowded and homes were sought farther away it was still to the Silver Maple that the pioneers looked for "first aid" in the giving of shade, and often for firewood, too.

In many of the older towns and cities the street trees are of this Maple, most of them long past their best, but they bear evidence of the use they have been in the past. And today this tree is of use; not so much as a street or avenue tree, for it is too tall for this purpose, too tall and too large, but as a single specimen in positions it fits. The one of our photograph is such. It is at one side of an entrance gate to a large estate, a position it fits well. The soil, too, is deep and moist where it is, and this the tree demands; it cannot endure a dry soil, its foliage being not nearly of the refreshing green it is when the tree is in good and damp soil. It is still sometimes planted along streets, which is a great mistake, but not such a mistake as many are making in setting the Oriental Plane in such places, for the Plane is a much larger growing tree than the Silver Maple.

As a single tree on a large lawn, or in a meadow, the Silver Maple is well suited; and many public parks have planted it to afford shade to visitors, and to great advantage.

Shaping Evergreens Just at this time, when the growth on evergreens is in development, is the time to prune evergreens to make them shapely or bushy. As soon as the shoots are an inch or two in length, if the tops are pinched off the side buds start out, and instead of a single shoot there will be, perhaps, a half-dozen which the side buds have made. In this way, too, there is no check to the tree, such as follows a loss of foliage. The little bit pinched off from the ends of the shoots need only be large enough to feel—it is simply the checking of the point that is wanted, so as to start the side shoots.

Fall shearing is altogether wrong, as the elongation of the shoots is over, and a loss of foliage follows, to the injury of the tree in every way, without the slightest compensation. When a tree has finished its growth for the season all the pruning in the world would fail to make it bushy, even when the tree is of the deciduous class; and with evergreens it is worse practice than with the others, because it exposes them to Winter cold, and because, too, there are few evergreens which will break freely from shoots cut back below the live foliage.

A tree owes its life as much to its foliage as to its roots, and to denude it of a lot of its leaves in Summer, when its growth is over, is as much of an injury to it as cutting off half its roots at that season of the year would be. Prune as soon as the new growth is of sufficient length to permit of it; in any case, before elongation ceases, and the work will have been done at the best time, for results.

The Tulip Tree

Conversing with a lady, recently, who was fairly well acquainted with trees, she asked what the flowers of the Tulip tree were like, having never seen them. This reminded me that there are few opportunities for any one to see its flowers, its habit being to grow very tall; and from various causes there are rarely branches low enough to the ground to permit of the blossoms being seen at close range. Now, the flowers are beautiful, orange yellow in color, of the size and appearance of a Tulip flower, so that its common name, Tulip Tree, or Tulip Poplar, is well applied to it. At the present time no one thinks of it as a flowering tree, it is always as one of forestry value; but, unquestionably, it is one all should recognize as worthy of being considered a flowering tree, and one all should have. To have the best return from it, it should be treated in a way to keep it low branched. The top should be cut out from it when young, to encourage this, and care taken that its lower branches are preserved. In fact, care being taken that it has these lower branches there is no objection to height, but when the flowers are to be the chief object in planting such a tree, there will be a better display of them when the tendency to attain height is curbed.

The Tulip Tree, *Liriodendron*, is the only genus, beside *Magnolias*, in the same natural order in the northern States; one or two others represent it in the South. It is a tree requiring very close pruning when planted, and much prefers Spring to Autumn for successful planting.

**Acer Dasycarpum. Silver Maple****Sowing Seeds of Magnolias**

An inquiry comes to us as to the proper method of treating seeds of *Magnolia glauca* to make them germinate, the inquirer mentioning that although he had sown seeds he had gathered from trees, and there was no question of their freshness, he had never had one to grow. The writer has never had experience with the *glauca*, but he has with the *grandiflora*, and as what will do for one species will answer for all he will describe the treatment. The seeds were obtained from the South in November. They were placed in a box of damp sand for two weeks or so, to soften their pulp, and afterward they were taken out and washed clean of it. They were then placed in another box of clean sand, the sand the least bit moist, and placed in a cool place in a potting shed until February. Shallow boxes were then filled with fine soil, the seeds sown on top of it, covered about a half inch deep, and the boxes placed in a warm greenhouse, covered with paper, to give shade. In about a month the seeds commenced to grow, and in the end it appeared that every seed had grown.

This plan is as good for all kinds of *Magnolias* as for *grandiflora*. If our friend would treat his *glauca* seed in

the same way it is certain they would grow, as would all other species.

The *grandifloras* referred to were grown in small pots the first year, then shifted to larger sized pots, and kept in the pots until sold; not being of the hardiest nature about Philadelphia they grow better when kept in pots.

With other kinds, such as *glauca*, *tripetala*, *acuminata*, *macrophylla* and the several varieties of the Asiatic type, the seeds could be prepared in the way explained and then sown outdoors early in Spring, and the best results might be expected to follow.

Varieties Coming True from Seed

A correspondent writes us that he has secured some seeds of Wier's cut-leaved Maple, and he asks whether, if he sows them, he will get true Wier from them; and further, how long will the seeds retain their vitality if unsown.

As the writer has never experimented with the seeds of this Maple he cannot say what the results would be. While some varieties will come true from seeds, there is a falling away from the parent in the case of others. Variations might be expected, ranging probably from the Wier, as it is, to the common *dasycarpum*, from which it sprang, and perhaps one still better might appear. The seed should be sown, as it would be very interesting to watch the seedlings, noting variations which are most sure to appear.

Relating to the vitality of the seeds of this Maple, if kept in an air-tight box they will grow if sown some months after ripening; but when simply spread out on a room floor after being gathered, not many would grow should sowing be delayed over a month. The practice is to sow them within a week or two after they are ripe.

Hardiness of Golden Privet

The hardiness of Privets is always an interesting question, since the usefulness and beauty of the Californian when used for hedges, as exemplified in the lovely hedges of it in the vicinity of Philadelphia and elsewhere, has been demonstrated. The difficulty is that the vastness of our country, with the climatic changes experienced in its different parts, makes it impossible to have any one plant sufficiently hardy to be set out everywhere, let it be Privet or what it may.

C. S. Harrison, in his recent contribution to the EXCHANGE, on Privets, mentions the golden-leaved one as being hardier than the green, which can be believed readily, as it has often been noted that both golden and variegated, or silver-leaved plants, are often harder than the green ones from which they sprang. This golden one is not nearly as free a grower with us as the green-leaved parent. It is often seen used as a low border plant, and it is beautiful in such a position, but as a hedge, such as the common green one is used for, it is not met with.

It seems strange to find Mr. Harrison condemning the *lhotia*, yet it proves what has been noted, that variations in climate in our vast country permit of no one plant's general use everywhere in it. That *lhotia* does not equal the Californian with him in Nebraska shows that planters in every place must experiment for themselves to ascertain what kind suits best. As with us, the Californian keeps green a long time in the Fall, in fact all Winter in well sheltered places here.

Next to the Golden Privet in hardiness is the Swedish Privet, Mr. Harrison says. What is this, Mr. Harrison—its botanical name? The variety is unknown here, unless under some other name.

Layering Stock

In old established nurseries it is common to find a portion of ground set apart for layering purposes. In it, from the accumulation of years, may be found clumps of plants of great size, which have been growing layered, annually, for many years. These clumps are known in Europe as "stools," a name which has been adopted for them here as well. From these stools thousands of branches spring forth every year and are layered, giving a strong, well-rooted plant for every layered branch. In this way a certain number of young plants may be relied on every year. In our nurseries there are many methods of propagating; that of cuttings for one, made in Summer and rooted in a greenhouse, is in much favor, as it gives a greater number of plants to a bush than layering will. On the other hand, the rooted layer is a larger and stronger plant than the cutting, added to which is the fact that many plants, easily layered—*Magnolias*, for instance—do not root at all well from cuttings. In Europe, Quinces and Paradise Apples, so much called for for dwarfing purposes, are raised from old stool plants in the way described, the layering being more in the way of the mounding up of soil around the stool plants.

To form a "stool" ground, young plants of all kinds desired to be increased annually should be set out in rows, allowing for their occupying rather more surface space every year, as they occupy a somewhat extended area as years go by. In the meantime the space between the plants may be utilized by setting salable plants there, until such time as the stool plants require it.

Observation will soon show how long a time the layers should occupy the ground. The *Magnolias* already referred to are certainly the better for being undisturbed for two seasons, yet when layered early, and in rich ground, they will be fairly well rooted in six months from the time of being layered.

Peach Trees

During the Spring of 1910 Peach Trees were very scarce; we will have a good supply of them for Fall and Spring delivery, and are prepared to enter orders now at reasonable prices.

CALIFORNIA PRIVET

We have a good prospect for next year and would like to have orders now from responsible parties with a moderate deposit.

RHUBARB

We will have some nice clumps for forcing this Fall.

Cincinnati

Sunday, Monday, Tuesday and Wednesday, May 22 to 25, were about the meanest days that this city had experienced for many years, raining continually, so that stock arrived very soft, and would mildew even in the ice-box; it also had the effect of decreasing the demand, therefore the loss was something fierce for those four days, but on Thursday, Friday and Saturday it cleared up, and business began to boom, and up to this writing (May 30) everything in sight in the way of cheap flowers has been sold.

Am. Beauty Roses were in less demand than anything else but they sold fairly well. The Peony crop failed to make its appearance for Memorial Day; many who thought they were going to have a fine crop found that "Jack Frost had nipped them in the bud," and they were nearly a total loss. Weiland & Olinger are just beginning to get their crop in, and they are certainly fine, but too late for Memorial Day.

Weddings, school commencements, etc., will create a good demand for all good stock during the month of June, and we expect it to be a record-breaker for business this year.

J. A. Evans of Richmond, Ind. (everybody knows John) was a caller on the 26th; he sails for Europe next Wednesday for a three months' trip on the Continent. I know that every florist in the United States who reads these notes will join with me in good-luck and best wishes for John.

A severe hailstorm passed over southern Indiana and central Ohio yesterday (Sunday afternoon) between 4 and 5 o'clock; in some sections the report states that hailstones were piled 4" deep; this occurred at Symmes Corner, O. As to the damage done at this writing I have not heard.

E. G. GILLET.

Louisville, Ky.

The past week in the local market was rather good for business according to Louisville florists. Rain and cold weather have hindered business to some degree and florists express themselves as glad that indications now point toward good weather. Planting trade was the most seriously affected, since few people were daring enough to put out any plants with the prospect of having them ruined by the cold and rain, but, on the other hand, the cut flower trade suffered very little, if any. The season for commencements of Louisville schools has not yet opened to the fullest extent, although there have been several small commencements of law schools and dental colleges, and added to this came several exhibitions by dancing academies and a dramatic entertainment or two by local dramatic clubs, that have caused a distinct increase in the local demand for flowers.

Planting has now been resumed and the business being done in plants of all kinds indicates that the season will be an excellent one. Several large local dealers are contemplating the enlargement of their establishments as soon as they can spare the necessary time from their affairs. Taken as a whole, the flower trade in Louisville for the next few weeks promises to make up one of the most successful seasons that Louisville florists have ever had, and extensive preparations have been made by them to take care of the business in first-class style.

The Louisville Automobile Club has been considering the proposed big floral parade of Louisville automobilists during the early part of June. The parade is now practically assured and it will be a magnificent affair, since there are more than 1500 licensed autos in the city and they would all be participants in some manner or other. Several florists are members of the Club and they are enthusiastic over the parade project, although some of the wise ones claim that they have been in such affairs before with little success. But the movement is being boosted by the men behind the guns and it seems that Louisville will soon have an affair of this kind, which will not only reflect credit upon the Automobile Club but also upon the florists of Louisville.

Fred Haupt is one of the Louisville florists who is an enthusiastic motorist. He intends to drive up to Indianapolis in his big Premier to see the motor races on May 28-31. Mr. Haupt will be one of the Louisville automobile owners who will combine to give the city's orphans a ride on Orphans' Day, which comes during the early part of June.

It is rather a peculiar feature of a

post-card shop when it carries Roses as a supplement to the business. This is, however, true of the "Conoco" post-card shop, which is one of the largest shops in Louisville for the sale of post-cards exclusively. Gus Hammerle, the manager, says the idea occurred to him that he might introduce a line of flowers with profit. The store is situated in the heart of the retail shopping district, and the street is thronged with promenaders on Saturdays. Experience has shown to Mr. Hammerle that flowers enhance the general appearance of the store and lend fragrance to its atmosphere. At present only Roses are handled. These are featured at 5c. apiece or 50c. per dozen and the department has been so successful that Mr. Hammerle is expecting to introduce a complete line of other flowers.

Commencement business has opened up pretty well for Aug. R. Baumer, who

has shipped most of his orders in this connection. However, the local schools will shortly begin to hold their commencements and Mr. Baumer is preparing for a big rush of business.

The Anchorage Rose Company of Anchorage, Ky., and Charles Rayner, president of the company, have assigned to the Louisville Trust Co., for the benefit of their creditors. The severe winter and poor business are ascribed as the causes of the failure.

F. Walker & Co. are now holding a big sale of plants. This is widely advertised and the public is invited to visit the conservatory at the store and receive a floral catalog free. Some bargains are offered in Ferns, Roses, Geraniums and Tuberoses bulbs.

The local association of florists had a meeting recently and a committee was appointed to arrange for a picnic to be held in the near future. These annual picnics have always been a very pleasant feature in local circles and the coming one is sure to prove very successful, being in charge of Fred L. Schultz, Robert Miller, and Louis Kirch.

Oswego, N. Y.

In my twenty years' acquaintance with Oswego, never have I seen such a grand lot of bedding plants offered by the florists for Memorial Day as they had this year. The public has been gradually educated to know and demand good stock and the man who does not produce it gets left.

Outdoor flowers here, as in other places, were very scarce. The heavy rains ruined mostly all the Tulips, and other things, and the florists were depending on selling their plants, and did not order many cut flowers.

Mrs. Becksledt had a very nice lot of stock, all in good shape, also a good crop of Carnations. A large bed of Darwin Tulips, Gretchen, in a sheltered position was just right. A large business is done by her in window boxes and vases; she is very pleased with her increasing trade.

W. D. Stewart had his place in fine shape; in fact, I can't recall the time when his stock looked so well. He still grows some French Pelargoniums and flowers well. His white Petunia, which I have mentioned before, is grand. I noticed that instead of throwing away his Carnations he had taken up to make room he had cut them back and planted them outside. Why won't more follow the plan—then they would have plenty of flowers for their Summer trade.

W. H. Workman had a magnificent stock of S. A. Nutt Geraniums just right, thousands upon thousands of plants in full flower. Last year I praised his Hydrangeas; this year he has gone one better, and had 300 as fine plants as one would find in a long day's journey, which sold readily at from \$1 to \$2 each. In a large city they would bring \$3 to \$5 easily. He had a very large stock of bedding plants in fine shape. The banking on Tulips to be in for a certain day is a pretty risky as well as expensive piece of business as Mr. Workman finds, for he not only lost several thousand by the rain storm, but a thousand he bought for crimson turned out to be nondescript light pink, neither white nor pink, and a kind that no one would buy at any price.

There has been more planting of Roses, shrubs and hardy plants than ever before. The public are taking greater interest in their home surroundings.

H. Y.

Washington, D.C.

The very cool weather which followed the warmer wave retarded all outside flowers which are usually relied upon for Memorial Day decorations, and the majority of stock offerings came from the various greenhouses. The demand is slightly on the increase each year, and while this seems not to have been a record-breaker stock moved well on all sides. There was the usual large gathering at Arlington National Cemetery, where all sorts of floral emblems, from the most expensive to a few hardy Roses with arborvitae green, were placed upon the graves.

At four in the afternoon of the 30th, the usual custom of liberating a small rowboat, loaded with flowers, upon the waters of the Potomac was put into effect, the boat being started from the foot of 4½ st. and permitted to take its own course. The idea is that the little craft, dedicated to those who died in the deep, may finally scatter its floral contents over the watery graves.

The last cut of home-grown Peonies had to be retained in cold storage for a

“Heacock Quality” Palms Mean More Trade For You

Your customers are commencing to stay out-of-doors more now; they are thinking of porch plants—and most particularly of PALMS.

You can sell Heacock's Palms to your trade—profitably because of their handsome, thrifty appearance and great vigor; they are an ornament anywhere.

We grow Palms by the thousand, from seed; we know how to produce the best results, and our stock is vastly better than imported Palms at any price—yet ours cost no more, as you'll see from the following list. Our stock this year is extra-fine and we'd like a trial order from you. We have splendid freight connections and can ship promptly.

ROBERT CRAIG COMPANY, 4900 Market Street, PHILADELPHIA, PA.

Please mention the Exchange when writing.

day or two in order to be in condition to offer for sale, and a great many others were shipped in from the North and sold very well. On the whole flowers were unusually scarce. Crimson Rambler Roses, as usual, are too late to be of service except in especially protected spots, where Rose Philadelphia made good. Some of the white Ramblers were also in good condition and helped a scanty market on cheap flowers, but these, like other hardy Roses, were not in profusion owing chiefly to the late heavy rains. Prices on most all stock advanced a little.

June weddings are now the principal item of interest to the local florist, and it is understood that some good orders are already booked.

The cool weather and late adjourn-

ment of Congress is holding a large number of the society people in the city past their usual time and this also stimulates the trade considerably.

J. L. C.

Newport, R. I.

There was a good demand for all kinds of flowers for Memorial Day, and owing to the earliness of the season outdoor Valley and the Lilacs were all past, which is something unusual in this section. This shortage increased the demand for pot plants for cemetery decoration.

Thomas Galvin furnished a large quantity of Geraniums in 4-in. pots to the Grand Army of the Republic for use in the cemeteries, as well grown a lot of stock as one could wish to see.

Joe Leikens is on hand and has opened up his Bellevue ave. store for the season. Ralph Armstrong, manager for Wadley & Smythe, is also here making arrangements for their opening.

The prospects for a good season are better, at this time than for years. The demand for a raise in wages by garden employees is likely to have an early settlement. Not a few have already been notified that the increase of wages asked for will be given.

A. MACI.

SEDALIA, MO.—Chas. H. Gelven, junior member of the firm of Gelven & Son, florists, has gone to Cape Girardeau where he will at once begin to build greenhouses.

Wax Flowers on Soldiers' Graves

General J. Madison Drake is in trouble with Grand Army men because of his action in substituting wax flowers for natural blooms in decorating the graves of soldiers in Evergreen Cemetery at Elizabeth, N. J. When the veterans reached the cemetery on Decoration Day and found that General Drake, who is supervisor of soldiers' and sailors' graves for the Board of Freeholders, had "planted" wax affairs they were indignant.

The imitation flowers were uprooted and thrown away. Captain Alfred Atkins, past commander of the Department of New Jersey, G. A. R., issued a statement yesterday in which he denounces the action of General Drake and the Board of Freeholders. He said:

"It has been in the minds and hearts of mankind of all ages that the flowers of the Springtime were the sweetest and loveliest of all of God's creation, and when the thought of a day to be set apart for a Memorial Day came into the minds of some of the leaders of the Grand Army a day in Spring was chosen, so that these emblems of love could be had in abundance—that the graves of those who have answered the last roll call could be decorated as a token of remembrance and esteem. It certainly seems to us that the Board of Freeholders of Union County could use the people's money to better purpose than this. The sufferings endured by the boys of the Union army were no shame and they want no shame placed on their graves."

Coming Exhibitions

Boston, Mass., June 9 and 10.—Peony exhibition of the American Peony Society and the Massachusetts Horticultural Society at Horticultural Hall, 740 Massachusetts ave. Secretary of the Peony Society, A. H. Fewkes, Newton Highlands, Mass.

Here To Stay

You know the Comet is a Tale of the past.

Not so with Aphine, which has
come to stay to the last.

APHINE

Has proved its efficiency for destroying the insect pests, that infest the *Garden, Field and Orchard*; it is also equally effective in the greenhouse, where it has already gained wide recognition as the leading Insecticide on the market for general use.

It may not be the cheapest, but it is the best.

Aphine destroys green, black and white fly, red spider, thrip, scale, slugs, ants, and many other species of plant insects.

It will not injure the tenderest foliage; in fact, it invigorates plant life.

These statements may appear as bold assertions, but we can furnish you with many expert endorsements to substantiate all we claim for Aphine, if you are interested.

Aphine Manufacturing Company
Madison, N. J.

Please mention the Exchange when writing.

pictured is from an original bush, six years old, and containing over one hundred blossoms on one side. Christine Wright is bright, clear wild-rose pink, three and one-half to four inches in diameter, double, and borne singly and in clusters; it is very beautiful in bud and last days after cutting. The plant is a cross between unnamed seedling and Mme. Caroline Testout and is adaptable as a post or pillar Rose. It is recommended as a good companion to Climbing Am. Beauty.

Culture of Begonia Lorraine

—Does Begonia Lorraine need any special culture to grow it? I have all kinds of success with Ferns but cannot do anything with Lorraine. What is the cause of a white fungus growing on it? I do not give it any more moisture than to just dampen the soil.—
J. L., La.

—In potting use a screened mixture of two parts good loam, one part leaf mould, and one part well rotted horse manure. Keep the plants moving right along. Give them a shift before they become potbound. Scratch over the surface of the soil and keep the mould from forming. Give the young plants a night temperature of 67° to 70°.

Always maintain an even condition of suitable soil moisture throughout the pot. The soil should neither be dry nor soggy.

Shade the glass very lightly over the small plants by applying with a brush a six-inch stripe of whitewash down the center of the rows of glass. The larger the plant the less the shade which is required.

MINNEAPOLIS, MINN.—Because he was discharged and refused his pay before the regular pay day, Frank Hayes, formerly employed by the Will Bros. Co., florists, is alleged to have entered the greenhouse sometime on the night of May 18 and destroyed 25,000 Carnation buds. He was arrested and on examination held for the grand jury. The damage was estimated at \$1,000.

SUBSCRIBERS PLEASE NOTE.—The Floriet's Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used in wrapping or packing material. Furthermore, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

Catalogs Received

J. F. ROSENFELD, West Point, Neb.—Wholesale Price List of Peonies for Fall 1910 and Spring 1911, to the trade only. This list comprises a representation of varieties of Peonies of great value commercially. In the introductory note special attention is called to Karl Rosenfeld, one of his latest and most beautiful productions, in color a velvety crimson scarlet.

HOOPES, BRO. & THOMAS CO., Maple Avenue Nurseries, West Chester, Pa.—Select List of Choice Fruits and Ornamentals. A 72-page publication, enlisting the best to be had in the nursery line after 57 years' experience. The catalog contains an extended list of Standard and Seedling Fruits; the Ornamental Department embraces Evergreens, Deciduous Shrubs, Evergreen Shrubs, Vines, Roses, Hedge Plants, Herbaceous Peonies, Hardy Phloxes, Hardy Perennials, Ornamental Grasses, and concludes with a list of Bulbs and Tubers. Features of the catalog are two autochrome color plates illustrative of Climbing American Beauty Rose and Christine Wright Rose, both originated by the firm. The former is a cross between American Beauty and an unnamed seedling of rosy crimson color, identical with its pollen parent, American Beauty, and possessing the same exquisite fragrance, a quality rarely found in climbing Roses; the plant as

BY EBER HOLMES
Replanting the Benches

No time should be lost after the rush of Memorial Day business is over before replanting is commenced. On places where plants in variety are grown for a retail trade, the first two weeks in June are, perhaps, the busiest in the whole year. At such times as these the young stock is liable to be neglected, but it is very unwise and costly to allow such neglect to occur. It is much cheaper to put on enough extra help to keep everything moving along in good shape, to get things attended to properly, and to have all work done at the proper time, than to let things spoil for want of proper care. It is a mistake to try to do too much. Hard work is all right; constant endeavor and eternal vigilance are necessary to ensure success, but many a man had better take a vacation than try to do too much. Some people waste half their time on work never finished, or done in such a way as to be unprofitable.

Let us suppose that we now have several benches, or several houses, where the crop is cut off; and that we have a retail business and are rushed with work of every description, so that it seems impossible to get at the Rose planting for several weeks yet. There must be one man on such a place who could be called the Rose grower. Perhaps you could spare another regular man to help him, and then by hiring two or three laborers for a couple of weeks the work could be gotten well out of the way. The plants would improve and increase in value rapidly, and everybody on the place would feel good to see progress made, while the comparatively small extra outlay would result in increase sales in the Summer and Fall.

Advantages of Early Benching

I saw stock of My Maryland that was planted about the middle of May, last year, from which an average of more than 20 flowers per plant was cut before the first of October the same year. Assuming that these sold for an average price of 2 cents each, there would be a return of forty cents per plant for the three Summer months, a time when we used to believe there was little doing in the cut flower business. And if you can make your plants pay well on the first end of the season you are likely to be successful all through; but, if any accident occurs to spoil your crop, or if the market is poor later, you certainly have the advantage of the man who does not begin to cut until late in the season.

These remarks apply more to the man with a small place than to the larger grower. In a general way they are correct. Perhaps the retailer can buy his Roses cheaply in the wholesale market in the Fall, but that is no reason why his own stock should be neglected. On large places, where flowers are cut every month in the year, houses may be planted in succession at almost any time. This seems to me to be the best solution of the problem of regulating the market. It is really regulating the cut to meet the requirements of the market. We like to have a regular cut at all times, with an extra lot for every holiday. We replant about a third of our place every year. We do not cut much from the young plants before Christmas, but the old ones are paying well and the young ones come in at a time when they are most needed, which is in the Winter months. From this onward and well into the Summer the young plants are very profitable and can be carried along while some of the older ones are being thrown out to make room for young stock.

Passing of Varieties Bride and Bridesmaid

Through force of circumstances we were obliged to plant some Bride and Bridesmaid last year. I thought at that time that these varieties would be with us a few years longer, particularly the Bride. However, we find that the Bride is rapidly losing ground, while Bridesmaid is almost unsalable. We shall, therefore, replace these with other varieties as quickly as the Memorial Day crop is off.

Planting in Old Soil

As we put some very good new loam into the beds last year where these plants are growing, we shall simply dig up the bushes, spread on the soil several inches of green cow manure, fork it well into the soil and plant our young stock. We shall save quite a little in labor and loam, and gain nearly a week in the time of planting by this method; and I know that we shall get good

results in this way, for we have done so before. If Roses will grow for five to fifteen years in the same soil without being replanted and give good results, why is it necessary to renew this particular soil? Of course, I believe in new loam, generally speaking, and do not for a moment advocate any departure from the regular procedure, but there are cases where it seems a waste of time and money to renew soil. It used to be considered the proper thing to throw away the bushes and replant every year with young stock when own root plants were grown altogether; and I remember one particular case where a house of Roses did remarkably well the first year. They were thrown out and others substituted in loam which proved to be full of eel worms, and the results were disastrous. I have often thought, since, that it is better to hold on to a good thing as long as it is doing well than to change too quickly. It must be understood that if there is anything wrong with the loam in a house, and which is a menace to the well being of the plants, such loam should be removed completely, and new soil substituted before any replanting is done.

It is very unwise to plant anything but good stock. Old plants before being replanted should be dried off a little, but not enough to shrivel the wood.

Care of the New Plants

Plant carefully and pound down the loam well around each plant. Give a good watering to settle the soil and then give no more water at the roots for two or three weeks, but syringe the tops as needed. There is little difference in the treatment of young stock. The main object at first is to get the bench full of roots; to do this the soil must be kept rather dry and sweet. Only water around each plant for the first few weeks. If too much water accumulates in the depression left in the soil around each plant, as it sometimes does from the frequent syringing, scrape the soil into the hole and partly fill it up when rubbing it over to keep down the weeds. This scratching over should be done about once a week for the first few weeks after planting.

A New Dwarf Polyantha Rose

A most striking new dwarf Polyantha Rose is Jessie, and it is rapidly winning favor from the ladies. The plants are truly miniature, the height being 1 ft., foliage small and flowers not above ½ an inch. These are brilliant pink and are produced in small clusters. As shown by Chas. Turner of Slough it was right away from anything shown at the R. H. S. meeting. The Orleans Rose as staged by Stuart Low & Co., was more profuse flowering, and for bedding purposes this variety will probably prove the best.

T. A. W., Eng.

Carnation Wodenethe

The new Carnation Wodenethe, originated by Frank E. Witney, gardener to Winthrop Sargent, Fishkill-on-Hudson, N. Y., is a glistening, pure white seedling, the result of a cross between Prosperity and Enchantress. The plants show unusually strong, erect growth, and run quickly into flower, throwing up stout, stiff stems. The flowers run 3 1/2 to 4 in. in diameter, are beautifully formed, full in shape, and possess a most marked old clove fragrance. The calyces are strong, and show little tendency to split. The variety scored 90 points for a preliminary certificate at the A. C. S. Convention at Pittsburgh last January. It is to be disseminated by Charles H. Totty of Madison, N. J. The flowers photographed, May 27, had stems 42 ins. long.

Aphine as an Insecticide

The Aphine Manufacturing Co. of Madison, N. J., has received a highly satisfactory report of tests of Aphine made at the Mass. Agricultural College at Amherst. James Whiting, foreman of the Department of Floriculture, in his report says: "I am satisfied that it will kill the insects that you claim it will and I believe it to be a valuable addition to the insecticides for greenhouse work. Used as a dip at the rate of 1 oz. Aphine to 13 1/2 oz. water, it killed brown, white scale and the Belgium long scale in every test, and mealy bug in every test but one, and in that test a few of the older insects showed faint traces of life about five hours after dipping. Used as a spray, it killed brown, white and the Belgium long scale. About one hour after spraying, I syringed the plants thoroughly and the scale were easily removed and dead. Used as a dip at the rate of 1 oz. Aphine to 2 1/4 oz. water, it kills red spider and mites. As a spray, it is very successful on spider, but it is difficult to reach hrip, although where it strikes it will kill. I had a very limited amount of hrip, so my tests were not as thorough as I could wish. I suppose it is needless for me to tell you it kills black, green and white fly at the rate of 1 oz. Aphine to 37 1/2 oz. water; used as a dip and as a spray it is equally successful if care is used in spraying. In short, I can

Carnation Wodenethe

To be disseminated by Chas. H. Totty

honestly recommend Aphine to kill green fly, black fly, white fly, brown scale, white scale, Belgium scale, red spider, thrip and mealy bug, if the directions are followed carefully and the spraying or dipping is done thoroughly; and as far as I can tell it does not injure the tenderest foliage."

Lexington, Ky.

Business conditions during the last four weeks have been good and all the plantmen are very busy with bedding stock. On Memorial Day there was not enough stock to supply the demand. Good Geraniums, Cannas and Heliotropes, in 4-in. pots, all selling for \$1, \$1.50 and \$2 per doz. Roses are good and plentiful, and sell for \$1 to \$1.50 per doz. retail. Carnations retail for 50c., 75c., and \$1 per doz. Gladioli are coming in more plentifully now, and retail for \$1 to \$1.50 per doz. Sweet-Peas bring \$1 per 100.

We have had an abundance of rain here this Spring, but the weather is becoming more favorable now.

The present indications are that there will not be enough bedding plants to supply the increasing demand here this Spring.

The boys of the establishment of the J. A. Keller estate on West 6th st. have been very busy with Spring stock this year, and they have about cleaned up everything in that line. Their young Carnation stock is looking well and they will plant about 20,000 plants this year. About 5000 'Mums will be planted in a few weeks. They grow about 20,000 Roses here and the most of them will be grown on the second year.

Hornaker the Florist, on North Jackson st., has finished planting his two Rose houses. The force is now busy planting Carnations.

S. S. Kelley, Clifton Heights, is doing a big business in plants this Spring. Theo. Keller, who was formerly with J. A. Keller, on East 6th st., is now with the E. G. Hill Co., Richmond, Ind.

August Le Clere, the landscape gardener and florist at the Eastern Ky. Asylum, on Fourth st., has about finished planting the flower beds at that place. Mr. Le Clere is noted for his beautiful work and he always has the most artistic flower beds to be seen in this section.

LEXINGTONIAN.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12. Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Jos. H. Sperry, our representative in care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 6 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

The King is Dead—Long Live the King

As it is with monarchs, so it is with advertisers—out of sight, presently out of mind.

We live in today, not yesterday.

Advertisers who have built up a business exciting the envy of all competitors, thinking their name and their goods an undying mark on the markets of the world, have stopped their advertising as an unnecessary expense, with the result that their sales have immediately commenced to droop. Others in the same line, finding their principal opponent out of the running—so far as publicity was concerned—were encouraged to redouble their advertising efforts, with the result that their success grew apace, quickened by the fact of their biggest competitor having dropped out of sight.

This truth is self-evident.

MORAL: Don't stop advertising unless you are ready to go out of business.

The American Rose Society

A New Sport of Killarney

The A. N. Pierson Co., Inc., of Cromwell, Conn., has filed with the American Rose Society notice of registration of a new sport of Killarney originating with the company in 1908. It is identical with the Killarney, excepting in color, which is much brighter, showing a strong tendency to red, some blooms having been as dark in color as the Richmond, and the average of the crop for the entire year of 1909 was only a shade lighter.

The question has been addressed to the secretary, whether the American Rose Society will have a June show, but up to this writing there have been no steps taken toward such an exhibition.

The Minnesota State Rose Society has applied for a bronze medal, to be offered at its Summer exhibition, for the best exhibit by an amateur. The definition which the Society gives of an amateur is: "One who grows the plants himself or herself, but does not regularly employ a gardener to grow them, and one who does not grow or sell plants as a business." Last year the American Rose Society offered its bronze medal, and it was awarded to Mrs. F. H. Gibbs, St. Paul, Minn.

Fishkill-on-Hudson, N. Y. BENJ. HAMMOND, Sec.

THE ADVS. IN THE FLORISTS' EXCHANGE are ALWAYS read.

The circular generally goes into the waste basket WITHOUT BEING READ.

Hurrah for Great Little New Jersey!

With all due respect to its hundreds of leading growers of nearly every commercial plant, it would seem as though, through its wonderful success at the recent Boston Show, the State of New Jersey is entitled to be called the "Orchid State."

In addition to the many medals and subsidiary prizes won by exhibitors from that State, all three awards of the premier prize were captured by Jerseymen. The record is as follows:

First, Gold Medal and \$1000:
JULIUS ROEHS Co., RUTHERFORD, N. J.

Second, Silver Medal and \$500:
C. G. ROEBLING, TRENTON, N. J.

Third, Bronze Medal and \$250:
LAGE & HURRELL, SUMMIT, N. J.

The American Gladiolus Society

Another star has been added to the bright galaxy of American National Horticultural Societies.

The American Gladiolus Society was launched at Boston, our horticultural hub, on Friday, May 27, 1910, with 75 charter members at its christening. The credit

for the inception and carrying out of this movement is due to the indefatigable efforts of Maurice Fuld of Boston, who also organized the New England Gladiolus Society.

As specializing is a tendency of the age and a necessity toward accomplishing results we warmly welcome every new similar organization into the field, knowing that it has interests to advance and conserve which can best be taken care of through the banding

together of men devoted to a particular form of plant life. A consummation sincerely to be hoped for, however, is that in the very near future, one strong Society, preferably the S. A. F., will become the trunk, the others the branches, so that through this union may be furnished strength and dignity to all the parts, thus giving to horticultural interests a solidity of purpose and the ability to accomplish results, which will prove of the highest value to all concerned.

We point out, as a possible way of effecting this union, the parallel of our Federal and State governments, each one sovereign in itself, yet all under one central authority.

We believe this can be accomplished.

The Am. Gladiolus Society is to be congratulated on the strong and representative body of officers it has selected for its first year's work.

The Boston Orchid Show

The big Boston show is past and is now a matter of history with success writ large across the page. Most of us were fearful that there would be difficulty in obtaining exhibits at this time of year, it being usually too late for the wealth of bloom obtainable a little earlier in the season but, as the results proved, there are plenty of means to obtain exhibits and exhibitors to such an extent that one wondered there were so many flowers available in two States of the Union, for it is a singular happening that, with the exception of a plant from Long Island and a few from Connecticut, all the Orchids were the product of Massachusetts and New Jersey and the latter did herself great credit in taking all three prizes in the premier class, as also the medals, besides other awards in other classes, as may be seen by reference to Mr. Cameron's report.

It was certainly the greatest aggregation of plants ever seen in the country, not alone in quantity, but the quality, too, never was equaled. There were all the species seen that are in season now, with a host of their albino varieties, also a superb set of the hybrid Odontoglots that we read so much of, but were never privileged to see before, and these were shown with huge branched spikes showing wonderful cultural skill. To the writer these were, by far, the most remarkable feature of the exhibition, placed on the trunk of a huge Dicksonia, seemingly growing in a perfectly natural pose.

Cattleyas, when shown in quantities, are apt to pall, but there were masses of one kind so disposed and blended with other Orchids and suitable green decorative material that the observer never tired of gazing; the grouping of colors in each and every exhibit showed a discretion rarely displayed even in Boston with its other efforts of the past to refer to.

The defects of the interior of the building for the purpose intended were never quite so plainly demon-

strated, and all those exhibitors who had the bare brick walls to contend with had a huge task before any of their plants were placed in position. This, however, was overcome in various ways by individuals as they saw fit, and while it was impossible to put all on an equal footing, as regards location, the entries being too numerous, there was no cause for complaint along these lines. The Society and its officers, with unflinching courtesy and assistance, met all difficulties, and the whole was finished in good time so that the judges could complete their task, before the opening hour, and for this the observer has reason to be thankful.

In the beginning many thought that the introduction of Azaleas in masses at this show would be out of keeping with the event, but these fine historic specimens proved a needed foil for the Orchids, for the two large groups in the center were white set in green grass sods and nothing could have been better conceived, the third group of other colors being placed so they did not clash, at the end of the building, with specimen Rhododendrons of colors to harmonize.

The collections of private ownership showed up as gracefully as was to be expected and the awards were well placed—indeed, it is creditable to the committee of judges, all, with one exception, being chosen for this occasion, that their difficult task was undertaken and completed with general satisfaction. Not one was interested commercially and none were exhibitors.

It is not proposed to mention particularly any special feature in detail, but to neglect noting the fine specimen of the pure white Cattleya gigas would be wrong; this plant was easily worth the trip to Boston to any one, and when we realize that these rarities usually make the trip across the Atlantic and are lost to collections here, and that this plant would certainly have been taken over to the great Temple Show any other time, we have reason to be thankful for a sight of this, said to be the rarest Orchid known. It is hoped that the name given it by the possessors may remain attached and that, in the event of a trip to Europe, its identity may not be lost as has happened times before with sterling novelties originating in cultivation here.

It was a pleasure to see Miltonias so well done; they are among the best for decorative purposes and, as seen in Boston from one grower in particular, cannot but compel admiration.

The splendid Cocos Weddelliana from a Belgian grower were a remarkable example of good culture, for we rarely see one plant as good as was each one of these.

The set of new Chinese introductions in hardy shrubs, trees and vines, was deservedly honored, and observers were gratified with a first view of well developed specimens and an opportunity to see their merits.

Three new Hydrangeas were seen in quantity, and, judging from the way they were shown, will be sterling novelties of the future for Memorial Day use.

Many old favorites, Canterbury Bells, Fuchsias, Calceolarias and hardy Roses, outdoor grown, from Philadelphia, all helped to fill the halls and add interest and variety.

In summing up, the Massachusetts Horticultural Society has set a pace for the future that will be hard to keep, even for itself. It was a demonstration of the interest there is taken in Orchids where horticulture is most appreciated, and events such as these serve to make us all familiar with rarities that we have known by name only, and it brings together those interested and this commingling of familiar spirits is of itself an inspiration.

In reviewing an event of this importance it would be wrong not to give praise to the exhibitors who planned months ahead, came long distances, brought the most valuable of plants, risked damage and loss, and put in an immense amount of hard work, all for the good of the cult. Let us hope they all carried home souvenirs of the event that will make it seem in after years to have been worth while.

E. O. ORPET.

The Bechtel's Flowering Crab

Editor The Florists' Exchange:

I was very much pleased to see Mr. Meehan's note in the last issue of your journal in reference to Bechtel's flowering Crab for, in my judgment, this is one of the most valuable and attractive of the small trees flowering in early May. It has also the added virtue of being a native, well adapted to a wide range of territory, and possessing unusual hardiness. A few specimens on our

campus have been objects of universal admiration the past two weeks.

The flowering season begins at the close of the blossoming period of the Apple. It comes in at the end of the procession, as it were. It is not less attractive in bud than in full bloom. It is slow in opening its large buds wrapped in their pink covering, but when these have unfolded and developed the semi-double blossom, 2" to 3" in diameter, it has all the beauty of a prairie Rose if nature or art had transformed the stamens of the latter into petals. The perfume is not as pronounced as in some of the Japanese flowering Crabs, but is delicate and pleasant.

The tree is a compact, round-topped, slow grower. This is characteristic of the Prairie Crab, *Prunus ioensis*, of which it is a variation. The bark of the stem and older branches are strikingly similar to the rough flaky bark of the native Crab of the Mississippi Valley. For lawns and parks this is one of our most desirable ornamental trees of small stature. It can be grown in bush form as well as in standard form to excellent advantage. It forms a better union with the imported or native Apple stock than the dwarf Japanese varieties, but it is not improbable that, like these Japanese varieties, this should be worked on Paradise stock rather than upon the so-called French crab or the native American seedling.

Ithaca, N. Y.

Some Random Notes

Editor The Florists' Exchange:

Noting what Mr. Meehan recently had to say about the beauty of the Horse-Chestnut reminds me of a visit I made a short time ago to the Soldiers' Home at Hampton, Va. Walking through the beautiful grounds I saw at a distance a small tree covered with rosy pink flowers. I thought that it was a precocious-blooming Crape Myrtle, but could hardly realize that one of these could be in bloom in May. So I went to look at it and found it a pink flowering Horse-Chestnut. This variety must be scarce, for the only other one I have ever seen is a fine large one standing in a yard on Walnut st. near 42d st., West Philadelphia, Pa. I suppose that Mr. Meehan knows the variety, and perhaps this particular tree. It is certainly more attractive in bloom than the old form.

Only a block west of this, on 42d st., is the great Clark place, occupying an entire city block, where there is, every Summer, the finest show of Rhododendrons I have ever seen. Mr. Meehan should get a photo of these when in bloom.

Enonymus Japonicus, both plain and golden variegated, grows splendidly here, and makes a show of its red berries in the Fall. It is, however, very subject to scale insects and needs regular spraying to keep it clean. But it makes a far prettier hedge than the Privet now so common.

I have planted a hedge of the Amoor River Privet; which is far more evergreen than the California, has smaller and lighter green leaves, which it held all last Winter, and I suppose it must be hardy North. Some years ago I sent Mr. Meehan some plants of a Privet

which we determined to be *lucidum*. It was as evergreen in North Carolina as a Holly, and I would like to know if the plants have lived well in Philadelphia. This variety and the *Japonicum*, which is perfectly evergreen in the U. S. Botanic Gardens at Washington, it seems to me, would be better for hedging than the California, wherever they are hardy. I hope that Mr. Meehan will enlighten us on this point.

I grew Figs, with success, in a cold locality in northern Maryland, when I was head gardener on the Humpton estate in Dulaney's Valley, north of Baltimore, where we had zero weather almost every Winter, and far colder than in Philadelphia. My practice there was to grow the bushes branched from the ground. In the Fall the limbs were bent to the ground in four bundles, like a four-pointed star, and pegged fast to the ground. The soil was then mounded over them so that, when covered, the mound was just like a four-pointed star. I had a number of plants that measured over twenty feet across when bent down. I had White Marseilles, Brunswick, Castle Kennedy, Osborne's Prolific, and all did well; no disturbance of the roots was ever made, and I seldom failed to ripen the early crop, from the unscathed Figs that were on the shoots when buried.

Since then I have grown a great many varieties of Figs in North Carolina, and found that the old varieties I grew in Maryland were about as good as any, except some that are too tender to thrive north of the Orange belt. The hardest Fig I have tried is the Celestial, a little brown Fig that can be eaten, skin and all, when ripe, from the tree. I think that I sent this to Mr. Meehan and hope he succeeded with it.

Cerasus Caroliniana, or *Prunus* as the moderns call it, is certainly a very pretty evergreen, and makes a good-sized tree in North Carolina, and now and then gets scorched by frost even there. It will make the prettiest of evergreen hedges, but does best near the sea. There is another Southern seaside plant which would make a beautiful hedge. It grows naturally right down on the sand dunes in North Carolina, and seems to like the ocean blasts. This is *Ilex Cassina*, which the modern revisionists tell us must be called *Ilex vomitoria*. It is called Yaupon on the Southern Coast, and is said to make the best substitute for Chinese tea that can be had, the leaves having the same alkaloid that true tea has. Perhaps Mr. Meehan knows something about the hardness of this. It makes large clusters of red berries, much prettier than the common Holly.

I found in North Carolina two trees of the common Holly which make golden yellow berries instead of red. I sent samples to Prof. Sargent at the Arnold Arboretum, who said that as closely as he had studied the sylvia of this country he had never before seen a golden-berried Holly. I never found but the two trees, and these in separate parts of the State.

The black-berried *Ilex glabra* is also evergreen, and is common here in lower Maryland. This would make a pretty dwarf hedge. But people want far-fetched things and neglect native plants. They laughed at me for planting Sweet Gum trees at the college in Raleigh, N. C., but now those trees are the admiration of every one, in the Fall.

W. F. MASSEY.

A Red Rose of Mrs. John Laing Type

A correspondent was recently inquiring for a red Rose with the qualities of Mrs. John Laing. This is, perhaps, a big order, for Roses differ so much on various soils that it is only by experimenting that one can discover what will suit. For my own part, I could never make anything of Mrs. John Laing at one place. As Mrs. J. Laing apparently does well with your correspondent, it is possible that the new variety *Symmetry*, which is a seedling from Mrs. J. Laing, will prove good with him. *Symmetry*, although differing in habit and foliage, carries flowers very similar in form to its parent, the color being deep carnice crimson.

Another fine, strong growing H. P. is Commander Jules Gravelleux. This is an erect grower, carries long pointed buds, which open full and are of splendid form. It is a superb crimson, and well worth trying. Bob Davison is a fine, dazzling scarlet H. P., bearing large fragrant blooms. M. H. Walsh is a good fragrant crimson, especially for outdoor flowering in the Autumn. Lady Helen Stewart is a very free-blooming, bright crimson H. P. The gold-medaled Hugh Dickson is another commendable variety, the color being extremely bright, while form and fragrance are all that can be desired. A very large full vermillion flower is that of *Gloire de Chedane Guinoisseau*, while growth is very vigorous. If these varieties are given a trial I feel sure that one or more of them will meet the desired requirements. The fine new Hybrid Teas should not be overlooked, however, for the advance in red shades during recent years is particularly noticeable.

An Exhibition Vase for Sweet Peas

A short time since the Tom Jones patent vase was referred to in the EXCHANGE, W. Atlee Burpee & Co. having used it at an exhibition. This new vase has now been improved upon by the genial Sweet Pea champion, for by making the top oval, instead of circular, the vase becomes especially valuable to traders, as it allows of the insertion of a wide spread bunch without having to back it with superfluous flowers. This new shape was used at a recent R. H. S. meeting by Miss Curry, the famous Daffodil specialist of Sligo, Ireland, and the advantage was apparent in a moment.

The Great Orchid Exhibition in Boston

Held from May 26 to May 30, 1910

The great Orchid exhibition which had been in preparation for the past two years by the Massachusetts Horticultural Society was opened to the public at 8 p.m., Thursday, May 26, and everything was in complete readiness at the appointed hour. The judges had completed their work and cards were on every exhibit so that the public were enabled to at once see who had won the coveted prizes.

We are not using inflated language when we state that never before on this continent was a more beautiful

One of its oldest and wealthiest members said to the writer that he never thought he would live to see such an exhibition of Orchids in this country, although he has a large and most valuable collection of his own.

Another way to look at the result achieved is in the great influence it will have on floriculture throughout the country. There is no doubt in my mind but that those who deal commercially in this class of plants will greatly benefit through this successful exhibition and we sincerely hope those men who brought such fine col-

ally; its other expenses were very high. Nevertheless, this successful exhibition has given it new impetus, and we hope it will continue to encourage large exhibitions and to do things on a larger scale even than it has in the past.

New Jersey was very largely represented and, in fact, the large commercial firms from that State practically made the exhibition; our Society is very grateful to them.

We were much disappointed that private gardeners did not make a better showing for the Orchid prizes so liberally offered.

We are gratified that the public attended and appreciated this great Show; we had men and women from all over this continent, and many Europeans and even West Indians visited it.

We described, in last week's issue, the general layout of the exhibition and there were few alterations.

The main exhibition hall never looked better than at this time. At the opening show, when the building was new, there was a good exhibition in this hall but the arrangement was poor and the colors of the plants were badly grouped together. It was not so at this, as great care was taken that colors would harmonize.

Entering the large main hall, from the steps the first large group of Orchids to catch the eye on the right was that of Lager & Hurrell of Summit, N. J. This group was intended to give a tropical effect and to show how the plants grow in their native habitats; it imitated a waterfall, by using *Tillandsia usneoides* to imitate running water. The group, as a whole, was quite artistic, although in parts it was not carried out quite as well as it might have been. The high background was objectionable because the firm used too many Northern Pine branches and Junipers, whereas they should have employed tropical foliage. The ends of the alcove were pleasingly done and the tree hung with *Phalaenopsis* was quite artistic; the graceful *Oncidiums* suspended from the other trees added much to the effectiveness of the group. The firm finished their group to the floor, which was well done and looked very much as I have seen them in the West Indies and in South America.

Commencing at the floor it showed a bank covered with mosses, Ferns, and grasses. The arrangement, taken altogether, was quite good, and we think should have scored very high for arrangement and decorative or artistic effect. They lost some points on novelty of Orchids, but they had quite a large variety. They were awarded third prize (Bronze Medal and \$250.). Mr. Hurrell said they had 30 genera and about 200 varieties. Some of the choice pieces in their group were very fine forms of *C. gigas*, *Cattleya Mendelii*, var. *virginialis*, *Celoglyne Dayana*, good forms of *Oncidium crispum*, *Vanda Denisoniana*, *Miltonia Bleuana*, *Phalaenopsis amabilis*, and the rare *C. gigas alba*; *Cypripedium bellatulum*, *Miltonia flavescens*, *Maxillaria Sanderiana* and fine specimens of *Dendrobium thyrsifolium*.

In the next alcove we come to the Julius Roehrs Co.'s group of Orchids which was the most effective thing in the hall with its enormous quantities of Orchids. This firm had their arrangement all figured out before they came to the hall and went to work at once just the same as if they had set up the group a score of times before. The great quantities of fine plants and rare and new varieties was most pleasing and, to my mind, from the beginning there was no doubt where the prize of honor would be placed. The centerpiece was a splendid

The Boston Orchid Show

The Julius Roehrs Co.'s Group Which Won First Prize of \$1000 and Gold Medal.

ful and valuable collection of Orchids and tropical foliage plants brought together at any one exhibition. We questioned many men who make it their business to see all large exhibitions in Europe and all said they had never seen a better anywhere. No pen picture can do justice to a description of the show, however well it may be written.

The Mass. Hort. Society, in all its years of endeavor, has never equalled this; that is, it never has held an exhibition which has gone so far beyond its expectations.

lections of valuable plants will greatly increase their business. We fully understand that they have gone to great expense in placing their collections before the public and firmly believe the results of this publicity will give new life and vigor to an already active commercial movement in these lovely plants. If these ends are accomplished the Mass. Hort. Society will have performed great work.

We also appreciate what the Society has done in giving money prizes and its gold and silver medals so liber-

Cocos Weddelliana at Boston Show

From Le Lion, Ghent, Belgium.

specimen of *Dicksonia antarctica*, its stem clothed with splendidly flowered *Odontoglossums* which looked as natural as if they grew in their native wilds. On both sides of this centerpiece were quantities of *Cattleyas*, *Dendrobiums*, *Miltonias*, *Cypripediums*, *Oncidium*s, and scores of other most beautiful plants.

The arrangement in the front began with a table and did not come down to the floor like the Lager & Hurrell group; it was then massed up to the corners of the alcove. The entire conception was quite pleasing but we would have liked it better had it been finished down to the floor. Some of the choice plants in this wonderful collection were *Cattleya Skinneri* alba, *C. Mendelii*, *C. Gravesiana*, *C. Dusseldorffii* Undine, a white hybrid between *C. intermedia* alba and *C. Mossiae* Wagneri; *Cypripedium caudatum* with six flowers and tails 24 ins. long; *Miltonia Bleuana*, *Angraecum sesquipedale*, *C. Curtisii*, *D. Wardianum*, *D. Dearei*, *D. regium*, *D. nobile* album, and a number of very valuable *Brasso-Cattleya* and *Laelio-Cattleya* hybrids; *Trichopilia Hennessi*, *Phalenopsis* and many other rarities. In all they had about 26 genera and 150 varieties. Awarded First Prize, \$1000 and the Society's Gold Medal.

Following the winding path we come to the next alcove with the Julius Roehrs Co.'s group of stove and greenhouse plants; this was nicely arranged and contained a number of small, well grown stove plants. On the whole this group was rather disappointing. We had expected to see larger plants and better specimens for the fine award obtained. This group won the first prize. It did not contain any new or rare plants.

At the end of the hall was the splendid group of *Cocos Weddelliana* from Le Lion of Ghent, Belgium; each plant was a specimen and there were 250 of them.

Rhododendrons from Gen. Weld flanked each side of this group. Fine specimen *Azaleas* were placed among the *Cocos* to give them a touch of brilliancy; these came from Dr. G. C. Weld.

On the left side of the hall we came to the group of W. A. Manda of So. Orange, N. J., which showed more originality in its arrangement than any other group in the building. His Orchids were gracefully suspended from tree Ferns and so placed that they were reflected in mirrors which had been ingeniously placed to imitate pools of water. This was certainly a very unique group and many people liked it better than any group in the building.

Following the path to the left we came to the Harvard Botanic Group of stove and greenhouse plants, not entered in competition. It contained large specimen *Kentias*, *Anthuriums crystallinum*, *Phyllotanium Lindenii*, *Marantas* and beautifully colored *Dracaenas*, Pitcher plants and many other rare and valuable sorts. A gold medal was awarded Robert Cameron for artistic arrangement of the group and superior cultivation of tropical stove plants. In the small hall on the left was the group of Edward MacMulkin, which won second prize in its class for stove and greenhouse plants. The arrangement was very clever and he had some nice *Anthuriums*, *Cattleyas*, *Dracaenas*, two fine plants of *Stephanotis* and a fine one of *Cattleya Mossiae* alba.

Near to this was the group of W. A. Riggs, which was awarded a special prize.

W. W. Rawson & Co. had a display in this room of

Darwin and Rembrandt Tulips which attracted much attention.

In the lecture hall the most important group was that of G. C. Roebeling of Trenton, N. J. It occupied the center of the hall and the arrangement was not pleasing. It contained many good plants and some good varieties but when judging it should have been scored very low for arrangement and general effect. It measured 29 ft. in length and 13 ft. in breadth. It was given second prize in class No. 1. (Silver Medal and \$500).

Flanked on each side of this group were the private gardeners' collections. On the right was E. B. Dane's first prize group; Walter Hunnewell's group took second prize. Mr. Hunnewell had the best grown plants, but Mr. Dane won out on variety and novelty. The arrangement of these groups was poor and showed no originality in either of them; they were both too flat.

At the west end of the hall Joseph A. Manda of New Jersey easily won the prize for cut Orchids and foliage arranged artistically. W. A. Manda came in second in this class.

Mrs. John L. Gardner had a small group of Orchids and so had John T. Butterworth of Framingham, both of whom received special prizes.

At the farther end of the hall was a group of new Chinese plants from R. & J. Farquhar & Co., which contained many interesting subjects; they received a gold medal.

Thomas Roland had a fine exhibit of new Japanese *Hydrangeas* in nine varieties. This exhibit was of special interest to the trade as it contained some commercial possibilities. Awarded the prize for greenhouse plant not previously exhibited in the U. S. Mr. Roland received a gold medal for this fine collection.

T. D. Hatfield exhibited a nice group of *Fuchsias*. The Mt. Desert Nurseries of Bar Harbor exhibited their new Fern (*Nephrolepis Milleri*). It was very highly spoken of and received a first-class certificate.

Harry Turner of Castle Gould, N. Y., set forth some large *Malmaison* Carnations, but their colors were not pleasing.

William Sim had Sweet Peas, as had Norris Comley. M. A. Patten & Co. staged two vases of fine Carnations. Weld Garden had some superb plants of Canterbury Bells.

The best newly introduced Orchid plant, not previously exhibited in the United States, was won by Lager & Hurrell with *Cattleya gigas* alba. The best new seedling Orchid prize was won by Julius Roehrs Co. with *Cattleya Dusseldorffii* var. *Undine*.

W. A. Manda won the prize for the collection of cut Orchids of new varieties not before exhibited in the United States.

The best new coniferous plant, not previously disseminated, likely to be hardy in the U. S., was won by W. A. Manda with a *Juniper* from the snowclad mountains of Africa.

The prize for six Orchid plants, distinct genera, was won by Julius Roehrs Co. with *Dendrobium nobile* virginale, *Phalenopsis Remstadiana*, *Cypripedium Curtisii*, *Odontoglossum Pescatorei*, *Miltonia vexillaria* and *Cattleya Mossiae*.

W. A. Manda won first prize for three Orchid plants, distinct genera, with *Cattleya Mossiae*, *Odontoglossum citrosimum* and *Dendrobium Findleyana*. John T. Butterworth was second in this class with good plants of *Cattleya Mossiae*, *Laelia purpurata* and *Miltonia vexillaria*.

The prize for three *Cattleyas*, distinct species, was won by W. A. Manda with *C. Gaskelliana*, *C. gigas* and *C. Mossiae*.

J. T. Butterworth won first and second prize for specimen *Cattleya*, any species, with *C. Mossiae* *Reineckiana* and *C. Mossiae* Mrs. J. T. Butterworth.

Weld Garden, Brookline, received first award for specimen *Cymbidium* with *C. Lowianum*; W. A. Manda secured second with the same species.

The prize for specimen *Cypripedium* went to Dr. W. C. Weld, Brookline, for a plant of *C. Lawrenceanum*.

Weld Garden won for the best specimen *Dendrobium* with *D. chrysotoxum*; second went to Julius Roehrs Co. Walter Hunnewell won first prize for six *Miltonias*.

The Boston Orchid Show

Part of Lager & Hurrell's Group Which Won Third Prize in the Premier Competition

The Boston Orchid Show

Cattleya gigas alba, for which a Gold Medal was awarded to Lager & Hurrell as the best recently introduced plant not previously exhibited in the U. S.

with fine plants of *M. vexillaria*; second prize went to J. T. Butterworth for plants of the same species.

J. T. Butterworth won for the best *Miltonia* with a fine plant of *M. vexillaria*.

For six *Odontoglossums*, not less than three species, Julius Roehrs Co. took the award with two plants each of *O. Pescatorei*, *O. crispum* and *O. Andersonianum*.

The prize for specimen *Odontoglossum* was won by Walter Hunnewell; second by J. T. Butterworth.

Mrs. B. B. Tuttle won first prize for specimen *Oncidium* with a large plant of *Oncidium sphacelatum*; second to Julius Roehrs Co.

Howard Gould won the prize for specimen *Vanda* with *V. cœrulea*.

Col. Chas. Pfaff received the prize for Orchid, any genus not otherwise provided for, with *Brassia verrucosa*.

A very fine plant of *Cattleya Mossiae* won for Julius Roehrs Co. the award for the best specimen Orchid plant in the exhibition. R. C.

The Awards

Display of Orchid plants in bloom, arranged for effect, embracing at least 20 genera: 1, Julius Roehrs Co.; 2, C. G. Roehling; 3, Lager & Hurrell.

Display of Orchid plants in bloom, arranged for effect, embracing at least 10 genera: 1, E. B. Dane; 2, Walter Hunnewell.

Best recently introduced Orchid plant not previously exhibited in the United States: Lager & Hurrell, white *Cattleya gigas*.

Best new seedling Orchid plant not previously exhibited in the United States: Julius Roehrs Co., *Cattleya Dusseldorffii*.

Largest and best display of cut Orchid blooms arranged with Ferns or other foliage: 1, Joseph Manda; 2, W. A. Manda.

Best collection of cut Orchids of new varieties not before exhibited in the United States: W. A. Manda.

Group of flowering and foliage stove or greenhouse plants arranged for effect: 1, Julius Roehrs Co.; 2, Edward MacMullen.

Best species of stove or greenhouse plant in bloom, not previously exhibited in the United States: Thomas Roland.

Best species of coniferous plant, not yet disseminated, likely to be hardy in Massachusetts: W. A. Manda, *Juniperus* species.

Six Orchid plants, distinct genera: 1, Julius Roehrs Co.; 2, Mrs. E. B. Tuttle (M. J. Pope, gdr.) Three Orchid plants, distinct genera: 1, W. A. Manda; 2, J. T. Butterworth. Three *Cattleyas*, distinct species: 1, W. A. Manda. Specimen *Cattleya*, any species: 1, J. T. Butterworth. *C. Mossiae* *Reineckiana*; 2, the same for C. Mossiae Mrs. Butterworth. Specimen *Cymbidium*: 1, Weld Garden; 2, W. A. Manda. Three *Cypripediums*, distinct species: 1, Julius Roehrs Co. Specimen *Cypripedium*: 1, Dr. C. G. Weld. Specimen *Dendrobium*: 1, Weld Garden; 2, Julius Roehrs Co.

Six *Miltonias*: 1, Walter Hunnewell; 2, J. T. Butterworth. Specimen *Miltonia*: 1, J. T. Butterworth; 2, Walter Hunnewell. Six *Odontoglossums*, not less than three species: 1, Julius Roehrs Co. Specimen *Odontoglossum*: 1, Walter Hunnewell; 2, J. T. Butterworth. Specimen *Oncidium*: 1, Mrs. E. B. Tuttle; 2, Julius Roehrs Co. Specimen *Vanda*: 1, Howard Gould. Specimen Orchid, any genus not otherwise provided for in the schedule: 1, Col. Charles Pfaff; 2, Mrs. B. B. Tuttle. Best specimen Orchid plant in the exhibition: Julius Roehrs Co., *Cattleya Mossiae*.

Gold Medals: Julius Roehrs Co., group of *Brassia*; *Cattleya*; Robert Cameron, group of stove and greenhouse plants; Prof. C. S. Sargent, collection of *Azaleas*; R. & J. Farquhar & Co., group of shrubs and climbers from Japan; Thomas Roland, new Japanese *Hydrangeas*.

Silver Medals: J. T. Butterworth, group of Orchids;

S. M. Weld, specimen *Rhododendron*; Walter Hunnewell, specimen *Rhododendron*; Establishment horticole Le Lion, Ghent, Belgium, collection of *Cocos Weddelliana*; T. D. Hatfield, superior cultivation of *Fuchsias*; Duncan Finlayson, group of *Canterbury Bells* and other plants; Thomas Roland, collection of *Hydrangeas*; Charles Sanders, collection of new single Tree Peonies; William Sim, collection of Sweet Peas; Henry A. Dreer, collection of Hybrid Tea Roses.

Bronze Medals: Mrs. J. L. Gardner, group of Orchids; N. F. Comley, collection of Sweet Peas.

First Class Certificate of Merit: R. & J. Farquhar & Co., *Begonia Pink Beauty*; Waban Rose Conservatories, White Killarney Rose; Mount Desert Nurseries, *Nephrolepis Milleri*; G. L. Freeman, potting materials.

Honorable Mention: G. L. Freeman, collection of Orchids; W. W. Rawson & Co., collection of Tulips; R. & J. Farquhar & Co., *Pelargonium Ostergruss*, *Geranium* Mrs. Charles Pfaff, and seedling *Iris*; Julius Roehrs Co., *Croton Fred Sander*; Howard Gould, *Malmaison Carnations*; Thos. Meehan & Sons, collection of Japanese Maples, Peonies and Golden Privet; John Lewis Childs, exhibit of *Gladioli*.

Sterilization of Soil

The sterilization treatment described by James Hamilton, in a recent issue of the EXCHANGE is similar to that adopted by some growers on this side. On the other hand one or two growers sterilize by direct heat—fire beneath the soil—and this method is attended with some success.

That sterilization is becoming essential is not to be denied, especially in places where soil has to be used over and over again.

A peculiar feature of sterilizing is the vigor with which plants grow in treated soil, this rankness not always being desirable. Curiously enough, the new chemical soil sterilizers, also bring about an increase in plant vigor, and it is generally believed that this vigor is due to the fact that the minute pests are exterminated, and not because the soil is changed in any particular character.

An advantage that heat or steam has is explained by Mr. Hamilton, when he states that no weeds appear. Chemical sterilizers do not kill weed seed, for were this possible no plants could possibly thrive.

The cost of a steam sterilizing plant to ensure success and freedom from danger, and also its working, is perhaps beyond the small man, and the chemical sterilizer, therefore, may prove advantageous. To ensure thorough action, the chemical sterilizer must have time, and all soil should be treated several months ahead. Not all chemicals are considered to be fungicides, however; only a few, and one liquid in particular, are claimed to destroy disease germs in the soil. The fluid treatment costs, so the maker states, about 16 cents per ton of soil. This fluid I am using for destroying soil pests out of doors, but I am also having it tried under glass.

Article III—Concluded

Large vs. Small Houses

Fig. 26 shows the section of two 18 ft. ridge and furrow houses, and one single span house 36 ft. wide, with table of comparative proportions per lin. ft. between the two styles of construction.

The two 18 ft. ridge and furrow houses are shown with the eaves and gutters 5 ft. high, which is the style employed for the construction of such houses, very largely, in the past. It will be noticed that the cubical contents of these two houses is only 274 ft. per lin. ft. of house. The glass surface from sill to sill being 46 ft. 9 in. gives a proportion of about $5\frac{3}{4}$ cu. ft. to one sq. ft. of glass. This, as will be seen by comparison with the previous tables, is a very low proportion, and it would not be possible to maintain 60° when the outside atmosphere is at zero with less than 18 lines of $1\frac{1}{4}$ -in. pipe. It will also be noticed that the distance of the ventilators above the beds is only 6 ft. 3 in.

If this style of house was of wood construction it would need center columns with side struts to support the roof; and this, together with the low height of the gutter and eaves, would not make a very light or desirable growing house, that is, when compared with the advanced condition of greenhouse construction work at the present time.

If the eaves and gutters of this house were raised to 12 ft. high, the same as the ridge and furrow house in Fig. 25, the proportions would be as follows:

Height of ridge	17 ft. 3 in.
Height of vents above beds	13 ft.
Total exposed surface measuring from sill to sill	60 ft. 9 in.
Cubical contents	526 ft.
Proportion cubical contents to glass surface 8 2-3	
Distance required between houses to clear shadow	23 ft.
Number of lines of $1\frac{1}{4}$ -in. pipe required to heat to 60°	21
Area of beds, sq. ft.	27

It will, therefore, be seen that even the additional height of the gutters does not bring this style of house up to what would be considered a large house, when compared with the 48 ft. house in Fig. 23, as the proportion of cubical contents to glass surface would be considerably less; and it will also be noticed that for the size of the house and the bench area the glass surface would be large, thus necessarily increasing the heating surface. Consequently, we see that the proportions of this 36 ft. wide house, with two ridge and furrow

roofs, do not compare at all, favorably, even with the 58 ft. house with four short span roofs, with the gutters and eaves placed at the same height. The reason for this is that the house not being as wide, the side glass is increased in proportion to the cubical contents.

If this same ground was covered with a single span roof, as shown in section, the height of the ventilators above the beds would be 13 ft., and while the cubical contents is less than if the eaves of the house were 12 ft. high, being only 432 cu. ft., the proportion of cubical contents to glass surface is almost the same, being $8\frac{3}{4}$ cu. ft. to the one sq. ft. of glass. This is due to the fact that the total surface from sill to sill is only 50 ft. 3 in., but, in comparison with the two 18 ft. ridge and furrow roofs, with the gutters and eaves at 5 ft. high, the cubical contents in proportion to glass is considerably more, therefore, if a 36 ft. wide house is desired, it is very clear from these figures that a single roof house is the best proportioned.

If it is desired to build another house alongside of this house, at sufficient distance away to clear the 25° shadow line, there would be less waste with 5 ft. eaves, ridge and furrow house; but the advantage gained in light and ease of heating, etc., in the single span house would more than counterbalance the additional loss of space.

It was stated, previously, that at the present stage of greenhouse construction any house 35 ft., or less, in width should be classed among small houses, and the reply of to-day to the question "What is a large house?" is that it is a single span house which will cover two 18 ft. wide, or wider houses; and it is believed that the tables of comparison given above prove the correctness of this statement, as the 36 ft. wide single span house proportions are such that, in comparison with the 48 ft. house, that house is barely entitled to the designation of a large house; and if the width of the house was made any less, it is very clear that it would cease to be within the limits of what is to-day considered a large house. Therefore, it is very evident that, on the basis of these figures, for the most economical results it would not be wise to erect a house less than this width. Of course, this is purely from a structural standpoint, but each grower will have to decide for himself in reference to the requirements of the particular crop he desires to grow.

There might be instances where the crop is such that, from a growing standpoint, a smaller house would be desirable, but this point the grower himself would have to determine.

To sum up the question of the proportions of the larger houses the following table is compiled:

TABLE OF PROPORTIONS OF WIDE HOUSES 36 FT. TO 58 FT.

	No. 1 Height of Ridge	No. 2 Vents Above Beds	No. 3 Surface Sill to Sill	No. 4 Cubical Contents	No. 5 Proportion Contents to Glass	No. 6 Distance Between Houses	No. 7 Lines $1\frac{1}{4}$ " Pipe	No. 8 Square Feet Beds	No. 9 Contents to Sq. Ft. Beds	No. 10 Lines Pipe to Be 1
36' Single Span, Fig. 26	17'-3"	13'-0"	50'-3"	432'	$8\frac{3}{4}$ to 1	14'-0"	18	27	16 to 1	666 to 1
48' " " " Fig. 23	20'-9"	16'-6"	64'-0"	660'	$10\frac{1}{2}$ to 1	15'-6"	22	34	$19\frac{1}{2}$ to 1	644 to 1
55'-3" " " Fig. 24	22'-9"	18'-6"	72'-9"	814'	11 to 1	16'-0"	25	40	$20\frac{1}{2}$ to 1	635 to 1
58' " " " Fig. 25	23'-8"	19'-3"	75'-9"	882'	$11\frac{1}{2}$ to 1	16'-6"	27	42½	$20\frac{3}{4}$ to 1	635 to 1
58' Short Span Fig. 25	16'-3"	12'-3½"	86'-3"	819'	9½ to 1	22'-3"	30	42½	$19\frac{3}{4}$ to 1	.76 to 1

Columns 1 to 8 are taken from the various comparative tables given with the sections, and columns 9 and 10 are added.

Column 9 shows the cubical contents of each style of house to one sq. ft. of bed for each of the wide houses.

It will be seen from these tables that the proportions are all in favor of the 58 ft. single span house; also that this house contains the greatest amount of cubical contents in proportion to each sq. ft. of bed and the least amount of heating pipe per sq. ft. of bed to maintain the required temperature—two main factors.

Having now considered all of the preliminary problems in connection with the construction of a greenhouse, and assuming that the grower has reached a decision as to the general lay-out of his proposed plant, and also the style and size of the houses, we will next take up the matter of Material and Construction.

GREENHOUSE CONSTRUCTION and HEATING

INQUIRY DEPARTMENT

How much space should be left between even span houses when each house will be 26 ft. or 27 ft. wide, and 12 ft. or 14 ft. to the ridge? The houses will run north and south, with a potting shed connecting all on the north. Space is limited.—C. L. S. Dak.

—We presume you have reference to the space between each house, so as to clear the shadow line at noon on Dec. 21. In this case it will not be necessary to allow any space between the houses for the purpose, therefore the space which you allow can be regulated to suit whatever you think is necessary to give proper ventilation and for convenience. Of course, when the sun is at the southeast or southwest, that is, in the middle forenoon or the middle of the afternoon at this date, there would be considerable shadow cast by the east and west house, but to avoid this would mean a considerable waste of space. We should say that a space of from 6 ft. to 8 ft. between the houses would be thoroughly ample for all requirements.

Ivy Geraniums

Ivy Geraniums may be reckoned as being the finest basket plants for Summer use, and it is worth recording that we are gradually adding to the list of varieties. Numberless sorts introduced in the past have failed to "catch on," chiefly because of their shyness, and so we have become accustomed to look upon Mme. Crousse and Souv. Chas. Turner as the best sorts for market purposes.

Mme. Crousse has, however, a serious rival in Conness Grey; indeed the latter is rapidly being taken up by market growers, a sure sign that it is making good.

In the deeper shades we have hitherto looked in vain for a variety as free as Mme. Crousse, but now we have it in Scarlet Crousse, which is a replica of the old pink sort, except in color, which is a brilliant cerise scarlet.

Phillip Ladds, the big grower at Swanley, has worked up an enormous stock of it, and is offering it at six shillings per dozen. Over here it retails easily at twice that price.

The Gladiolus as We Knew and Grew It Fifty Years Ago

A paper prepared by H. Youell of Syracuse, N. Y., and read at the organization meeting of the American Gladiolus Society, Boston, Friday, May 27, 1910

When Mr. Maurice Fuld very kindly asked me to contribute a paper for the initial meeting of the Gladiolus Society, I gladly consented, as I feel greatly interested in the success of the Society. This arises from the fact that fifty years ago my father was the largest grower of Gladioli in England and I am proud of the fact that Brechleyensis was disseminated by him.

It may be interesting to many if I recall, as they occurred, some of the facts relating to the early history of the Gandavensis varieties fifty years ago. It is generally known that the Gladiolus family is indigenous to Africa, and I know positively that Gandavensis originated there, being found by a French sailor and taken by him to Paris. It is to Frenchmen we are indebted for the great progress made fifty years ago, for they laid the foundation, so to speak, that we have built upon and made possible the grand flowers we have today.

It may not be generally known that Napoleon III was passionately fond of rare plants and flowers and it is owing to his interest and enthusiasm that France today holds her position in the floral world. So eager was the Emperor to add to his collection of rare plants that he offered large bounties to his soldiers, sailors and fishermen, or to travelers, who would bring him any good novelties from foreign countries. So it came about that Gandavensis was taken to Paris and placed in the hands of M. Souchet, the head gardener of the Emperor, and through his industry and ability came the beautiful varieties.

I take it there are not many who can recall the old Gandavensis with its broad, yellow, poorly shaped flowers with a crimson edge, but what a beautiful and wonderful flower it was considered when first sent out, for, the Colville varieties were the only ones previously grown and were called "Jacob's Ladder" in my childhood days.

Bowensis was the next one to make its appearance. This was a dirty brick red, but was a good shaped flower with large spikes. Fanny Rouget followed; this was a very pleasing pink, but only a medium-sized flower. It was about 1855 or 1856 that these made their appearance and in 1857 the English people heard of the wonderful flowers to be seen in the Royal French gardens. In August of that year, Queen Victoria with the Prince Consort and a very large retinue paid a visit to Napoleon. At that time the gardens were a blaze of glory with their many colored flowers and the Queen and all her court were completely carried away with the sight and returned to England with wonderful stories of what they had seen. The Queen was so delighted and enchanted that the Emperor ordered M. Souchet to send her a large supply of bulbs and, so generously was the order obeyed, that the head gardener at Osborne could not find room for all, and rather than throw them away he gave the surplus stock to my father, who was a personal friend. This was the nucleus of what eventually became the largest collection in England fifty years ago.

Soon after the Queen's visit to France came what was considered the wonder of the age in the floral world,

for M. Souchet, through Victor Verdier and Messrs. Vilmoren, sent out quite a number of very beautiful varieties, some of which I believe are still grown in England. The names of a few I recall are John Bull, Victor Verdier, Napoleon III, Queen Victoria, Calypso, Duc de Malakoff, Dr. Andry, Ceres, Endymion and La Reine.

I may be excused for feeling proud of the fact that my father disseminated, the following year, that grand old Brechleyensis, still the acknowledged leader of its class. Its origin is a mystery. How it came into my father's possession is as follows: Some years previously he had in his employ W. Casey, foreman of the hard wooded department and, traveling occasionally (he was later connected with Hugh Low & Co.), on one of his journeys through Kent he visited a small place called Brechley. In a cottager's garden he noticed several flowers of this variety and, after a great deal of persuasion and what must have been a large sum to the owner (£25) he secured the stock. All the information he could gather as to its origin was that a son, who was a sailor, had brought the bulbs home from some foreign country—Africa, it was believed at the time. How popular Brechleyensis became is best attested by the fact that from 1860 to 1864 our sales averaged 300,000 bulbs yearly.

Our nurseries were situated at Great Yarmouth (made famous by Charles Dickens in David Copperfield) and less than two thousand years ago the North Sea flowed where the town now stands, so of course the soil was very sandy and to that fact I attribute our success in cultivating the bulbs. The only things used to enrich the soil were brewers' rotten hops, and disease was a thing unknown to us.

I have always been and am still a very strong advocate of printers' ink and flower shows, both for educational and commercial purposes, and believe my past experience justifies me, as I shall show. Prior to 1860 we had sent large quantities of Gladiolus blooms to the Crystal Palace for decorative purposes, free, and were assured that they were much finer than any exhibited for prizes. After much persuasion, my father consented to compete and had several large beds prepared and planted with the choicest kinds, to be raised for exhibition. The amount of the prizes was very small: for the best collection, \$12; best 24 spikes, \$5; best 12 spikes, \$2.50; not much of an inducement for three men to travel one hundred and forty miles, pay excess luggage and hotel bills, for three days, and compete against such men as Standish, Turner, Paul Cuthush and others. We went and conquered, not only the prizes, but all the London papers from the Times down; they gave us columns of the best possible advertising, and that was not all, for the two foremen and myself hooked orders the first day for more than £300, besides distributing 5000 catalogs in the two days. Did it pay?

The method in vogue at that time for staging the flowers was to have green-painted boards, 3 ft. 6 in. long by 2 ft. 6 in. wide; each board had 24 holes fitted with tin tubes to hold the water. Our boards sloped on an angle of 45 degrees which showed off the back row. We showed three spikes of each variety together with a little foliage mixed in. Some exhibitors used garden Asparagus, others Fern fronds, but I must say the effect of using the Gladiolus foliage was by far the neatest and most appropriate. The London Times, speaking of our exhibit, said: "The flowers showed the highest cultivation and their staging was a finished and artistic piece

of work and a revelation." Certain it is that our flowers were better colored and had far more substance than those grown round London or even in France, which I attribute to the salt air and our sandy soil.

Before concluding this paper I trust I shall be pardoned if I make a few statements relative to that beautiful old flower, the Fuchsia. There are very few today who can recall the old style, the flowers of which were very small, the tube not larger round than a lead pencil. It was in 1838 that my father sent out the first one of the present type and he named it Youellii. On introducing myself, some years ago, to the late W. Harris, for a long time in charge of H. H. Hunnewell's estate at Wellesley, Mass., he recalled the fact that the first Fuchsia sent out, as we know it today, was known as Youellii. In 1856 we sent out the first striped one, Lord Chell, and in 1858 the first double one, Sir Coliu Campbell.

I might go on indefinitely with recollections of the business in my early days, but do not wish to exhaust your patience and, in closing, beg to thank you for the privilege of addressing you on this subject.

The Newer Commercial Roses

White Killarney is now getting into something like form, and Geo. Mount & Sons staged a fine box of bloom on May 3. Compared with Frau Karl Druschki, however, White Killarney is not as pure, the latter appearing quite creamy. Some of our growers do not think White Killarney will be a "top notcher" over here, because of its tendency to mildew. For the same reason Pink Killarney is not grown for market purposes, most growers relying on Bridesmaid and Mrs. John Laing. Caroline Testout is also popular.

Respecting the curious variation of views between English and American growers, it might be interesting to mention that Mrs. Aaron Ward, which is winning such favor in America, is very little grown by Rose growers here, and I have seen no blooms of it in the market. Mr. Mount Jr., says that Mrs. A. Ward, cannot hold a candle to Lady Hillingdon, for the former loses color rapidly, and he is confident that if Mrs. Ward is winning in America Lady Hillingdon is bound to prove popular there also.

T. A. W., Eng.

Church Wedding in June

A suggestion for a wedding decoration of a church in June, at comparatively moderate cost, should be seasonable. June being, usually, a very warm month, it might be advisable to aim for as much Palm effect as possible. As green Oak foliage has a tendency to wilt very quickly with the heat, I would advise using as little of it as possible; and whatever you do use place it as high from the floor in the decorative scheme, as possible. Southern Smilax would be much better to use, but it is hard to procure at this season. In the cut flower decorations Easter Lilies should be used wherever possible, as they will stand the heat much better than most flowers.

The accompanying sketch applies to a medium sized church; and as most churches are similar in style of architecture, inside, the design would fit the average church.

First, take up the cushions in front of the altar rail gates and spread dust cloths over the carpet, to prevent the grinding in of dirt, leaves, etc., while working. Then place two tall stumps, each about 11 ft. high, on each side of the altar. In case stumps of this height are not obtainable, place shorter ones on pedestals, or stands, wiring them to these supports in order to prevent them from falling over with the weight of the Palm leaves. Insert seven or eight good sized Cabbage Palm leaves in each stump, keeping them well to the top, and as high as the length of the stems will permit. Bank around these with Kentia Palms, graduating to the floor and well out to the altar rail, being very careful, where the Palms are not on stands, to have saucers or rubber mats under them, to prevent moisture going through to the carpet. Also fill in the spaces, and cover the pots with small Palmetto leaves, using half fresh leaves and half prepared, so that in case the fresh leaves dry up the prepared will still hold the effect. A branch of green Oak foliage may be added here and there, but very lightly, just enough to soften the stiff Palm leaf effect.

Now place a large Cybotium Fern in the pulpit, on a

The Decoration of a Church for a June Wedding

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres
ALBANY, N. Y.
11 North Pearl Street
Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Hatcher
Leading Florist
AMSTERDAM, N. Y.
SCHENECTADY, N. Y.
Estab. 1877

Atlanta Floral Co.
ATLANTA, GEORGIA
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin
BOSTON, MASS.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons
BOSTON, MASS.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Zinn the Florist
BOSTON, MASS.
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of New England. Also special delivery to any outgoing steamship without extra charge.

Robt. E. Wilson
BROOKLYN, N. Y.
Fulton St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

J. A. VALENTINE, Prest. Orders by wire or mail carefully filled; usual discounts allowed. COLORADO, UTAH, WESTERN NEBRASKA and WYOMING points reached by express.

stand just high enough to permit of its being tilted, with the fronds hanging gracefully over the top of the pulpit. Place a large specimen Kentia Palm, on a stand, on the opposite side of the arch, inside the rail and in about the same position as the pulpit, filling in around the bottom with Palmetto leaves. Place two good sized Bay trees against the wall, outside the altar rail, and bank around them with small Palms and Palmetto leaves. Bank along the wall, on both sides of the altar rail, with tall Kentia Palms, placing one good sized, well furnished Palm in each corner, on stands, banked around with smaller plants and Palm leaves.

Now hang a single garland of Laurel coping from post to post, also on the wall each side of the arch, as shown in the drawing, being careful not to let it hang too low. Fasten some well shaped Oak branches, with wire, to each post, having the topmost branches within about 2 ft. of the top and extending down about one-third the length of the post.

Place some extension plant stands, which have been previously gilded, one on every third or fourth pew seat, on each side of the center aisle, turning back the cushions, so as to have the stands as close to the aisle as you can get them, and fastening them by means of a wire and small staple driven under the seat. Place on each of these stands a good specimen Kentia Palm in a gold basket, or instead of a gold basket, one of a very dark shade of green may be used, painting the stand the same color as the basket. Fasten long Oak branches to the pulpit, beginning at the top outer edge, and carry them down to the bottom inner edge, as shown in the drawing, and you have the green part of the decoration completed.

Now wait as near to the time for the ceremony to take place as you conveniently can, without having to rush the cut flower work, and begin first with the posts or pillar. On account of these being high it will not be so noticeable should the flowers wilt a little. Wire some very pale pink or white Peonies with a heavy rose wire, to prevent them drooping. Insert the Peonies in the Oak foliage on the posts, making them stand out from the foliage as much as possible and letting one or two hang head down at the bottom of the bunch. Now stick some long sprays of Asparagus plumosus or Sprenger in the baskets on the pews, filling them pretty full, with the sprays hanging gracefully over the sides of the baskets, but not projecting far enough to be in the way of people entering the pews or passing down the aisle. Elevate the stands to the height desired, about 2 ft.

above the top of the pew would be about right, in order not to obstruct the view from behind. Twine some Smilax around the stand, stem and wire Easter Lily stalks on heavy green rose sticks, and insert these in the soil in the Palm tubs in the aisle, placing them irregularly, some short and some long.

Take some cheap, broad white ribbon, make a bow on one end and wire it to a basket, bringing the other end down to the pew, and making another bow with a short streamer, fastening this, by means of a wire and a very small tack, to the side of the pew, in such a manner that it will not damage the woodwork. Make a large, loose bunch of either Easter Lilies or white Peonies and tie the same with broad white ribbon, with quite long streamers. If Peonies are used, they should be wired with a heavy rose wire. Fasten this bunch to the inner edge of the pulpit, with the heads up and stems down, as shown in the drawing.

Moss two flat, round baskets and place them on the altar, one on each side, and insert long sprays of Asparagus plumosus or Sprenger in them, allowing them to fall gracefully over the front of the altar. Wire some white Peonies on rose sticks and insert them in the baskets, some long and some short, permitting them to fall over the front of the altar.

Another effective detail would be to wire some long stemmed Lily stalks to the Bay trees, letting some fall, shower fashion, from the front.

You now have the decoration finished. Instruct the sexton to keep the church as cool as possible without too much draught. JAS. MEIKLEJOHN.

John Brattmeyer's Sons
DETROIT, MICH.
Broadway and Gratiot Ave.

Printed on enameled paper and illustrated with colored plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50.

Every florist, nurseryman and grower will find Plant Culture the most useful assistant in his office. Order a copy of the book now, or send for free sample pages.

A. T. DE LA MARE PTG. & PUB. CO., Ltd.

NOS. 2 TO 8 DUANE ST., N. Y.

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

June 4, 1910

SUBSCRIBERS PLEASE NOTE.

—The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

The book of WATER GARDENING

By Peter Bisset. Price, postpaid, \$2.50

A. T. DE LA MARE PTG. & PUB. CO., LTD

2 to 5 Duane Street, New York.

**Baltimore G. and F. Club**

The regular meeting of the Gardeners and Florists' Club was held in their hall, May 23, with President G. Morrison in the chair. The meeting was well attended, it being entertainment night brought out a large crowd. Quite a little business was transacted. The window box and beautifying the backyard problems were discussed, after which the entertainment started. The committee diverted the members for over two hours with good music and catchy songs; cigars were freely passed around and refreshments served by the caterer. It was regretted that many more of the members did not get to this meeting as it was one of the most interesting the Club ever held.

James Hamilton moved a vote of thanks to the committee and those who took part in the entertainment, and the Club accordingly extended its hearty thanks. The success of this event will naturally induce others on the same lines, as it was a success from start to finish.

The committee was composed of J. Boone, Charles Seybold and J. L. Town-er. After the inner man had been satisfied the Club again went into business discussions that kept the members out later than usual. The question box was omitted.

J. L. T.

Tarrytown Horticultural Society

The regular monthly meeting was held in the Society's rooms on Friday evening, May 27, 1910, a goodly number of members being present.

The monthly prize, donated by Wm. Scott for 12 vases of hardy outdoor flowers was won by Robert Angus, gardener for Joseph Eastman. The exhibit consisted of six lots in all and made a nice display.

The finishing touches were put on the schedules for the June and Fall Flower Shows. It was decided to hold the June show on June 14, 1910. These schedules are now ready, and may be had upon application to the secretary, E. W. Neubrand.

The matter of the annual outing was taken up and discussed, and the old committee (John Brunker, James Smith, and William Scott) was again appointed with power to make all necessary arrangements.

Samuel C. Horn, supt. for James Speyer of Scarborough, was elected to membership. WM. SCOTT, Cor. Sec.

May 31, 1910.

Southbridge, Mass.

This is one of the poorest towns of its size I ever saw, for florists. Two small greenhouses, both carried on as a side line, attend to most of the business.

H. F. Littlefield of Worcester has an agent here, but he reports very little funeral work. This is strange in a town of about 14,000 inhabitants.

Sometimes you will see a funeral on its way to the cemetery, with not a flower in sight. One Grand Army man was asked a short time ago why there were so few flowers at the funeral of another old soldier. His reply was "He has been sick so long, people had forgotten all about him." That is a bad case of "Out of sight, out of mind."

Green, the florist from Spencer, came to Southbridge several times the week preceding Memorial Day, with big two horse loads of sundry plants and Ferns. He reported a fairly good business.

CAROLUS.

Surplus Plants

Geraniums, mostly Ricard and Nutt. 4-in. stock, 5¢; Coleus, best bedders, 2¢; Fuchsias, in good variety, 4-in., 5¢; Heliotrope, 4-in., 5¢; Tuberous Rooted Begonias, red, 4-in., in bud, 10¢; Cobaea Scandens, 3-in., 5¢; Scarlet Sage, Zurich, 2 1/2 in., 2¢; Antirrhinum, good colors, 2¢; Asparagus Sprengel, 2 1/2 in., 2¢; Verbena, mixed, 2¢; Dusty Miller, 1 1/2 in.; Lilium Speciosum Rubrum, showing from 8 to 12 buds, 60¢ each. A Window Cleaning Hint

While cleaning a stain from the window, says a writer in the Pharmaceutical Bulletin, Eucalyptus oil was accidentally put on the cloth instead of benzine. The stain vanished. It disappeared like magic, leaving a polished window. The glass can be cleaned in half the usual time, and saves much elbow grease. The odor is not strong and soon disappears entirely.

"FLORISTS' FAVORITE" CUT FLOWER BOXES

Very Neat Manila Boxes—White Inside All Boxes Full Telescope

The following sizes are carried in stock and immediate shipment will be made.

	Per 100		Per 100

American Gladiolus Society

Proceedings of the First Meeting

At Horticultural Hall, Boston, Mass., on Friday afternoon, May 27, the American Gladiolus Society was formed. A permanent organization was effected, with 75 charter members, and a constitution and by-laws were adopted. There was great enthusiasm manifest from beginning to end, and the new society starts in with very brilliant prospects. The meeting was called to order by Maurice Fuld of Boston, who, through his voluntary efforts, deserves great credit for bringing the Gladiolus growers together.

In a few well chosen remarks, interspersed with timely suggestions, Mr. Fuld stated the purpose of the meeting, and then introduced Professor G. E. Stone of Amherst College, who presided. Professor Stone gave an interesting talk on floriculture in its relation to the farm and home, and received hearty applause.

A paper by H. Youell of Syracuse, N. Y., entitled "Gladiolus as we Knew and Grew Them Fifty Years Ago," giving the history of some of the first varieties of the *Gandavensis* hybrids of Gladioli, was listened to with evident appreciation and interest.

The new society has accepted an invitation to meet with the Society of American Florists at their annual exhibition at Rochester, N. Y., next August. The Department of Horticulture of Cornell University, Ithaca, N. Y., has tendered the use of their trial grounds for the growing and testing of varieties of Gladioli, and the offer was accepted with a lively vote of thanks.

A sincere vote of thanks was also extended to the Massachusetts Hort. Society for the use of their hall, to Professor Stone for the able manner in which he presided, to Mr. H. Youell for his most interesting essay, and to the Society of American Florists for their invitation to meet with them at Rochester.

The meeting was enlivened by spirited but friendly discussions in which the following gentlemen all took part: Arthur Cowee, Berlin, N. Y.; Arthur Boddington, New York; Montague Chamberlain, Boston; Maurice Fuld, Boston; J. K. Alexander, East Bridgewater, Mass.; Robert Cameron of the Harvard Botanical Gardens, Cambridge, Mass.; Eugene Fisher, Jamaica Plain, Mass.; I. S. Hendrickson, Floral Park, N. Y.; Professor L. B. Judson, of Cornell University; Carl Cropp, Chicago; L. Merton Gage, Orange, Mass.

The following officers were elected to serve for one year:

President, I. S. Hendrickson, Floral Park, N. Y.
Vice-President, E. H. Cushman, Sylvania, Ohio.
Treasurer, Maurice Fuld, Boston, Mass.
Corresponding Secretary, L. Merton Gage, Orange, Mass.
Financial Secretary, H. Youell, Syracuse, N. Y.
Executive Committee: Arthur T. Boddington, New

York City; Arthur Kirby, New York City; J. K. Alexander, East Bridgewater, Mass.

Committee on Nomenclature: Arthur Cowee, Berlin, N. Y.; Professor L. B. Judson, Cornell University, Ithaca, N. Y.; Leonard Joerg, Floral Park, N. Y.

Orange, Mass., May 30, 1910.

L. MERTON GAGE,

Corresponding Secretary, American Gladiolus Society.

The Haarlem Jubilee Flower Show

Our Haarlem exhibition, in its present shape, will soon be at an end. All Hyacinths, Narcissus and early Tulips are faded, but the Darwin Tulips still display their magnificent colors, and these are planted by thousands upon thousands. Here and there, under and between the thick and tall trees, *Scilla campanulata* (white, blue and rose) show their fresh colors, but for the main part our bulb flowers are finished.

At one of the buildings we meet with all the animals of the Chateaufort opera; they are now clean, fresh green with their new leaves. All clipped plants (*Buxus*) are shaved anew and show their good shape. In the building we find a collection of 5000 flowers culled from Darwin Tulips, numerous Roses, Carnations, etc., alternated by strong *Araucaria* and *Aspidistra* elatior plants. Several miniature greenhouses, stocked with little pots of Orchids and Cactus, *Mammillaria* plants, and fitted for the drawing room, find a place there—and find buyers, too.

Between this and the other head building, close to the fountain basin, in the French garden, all bulbs have disappeared but are substituted by beds of *Cheiranthus Cheiri* (Wallflower), tufted Pansies and *Bellis perennis* (fl. pl.) in two colors. To the right and left of the entrance we find very large half-circular beds of *Rhododendron* *Chevalier Felix de Sauvage* bordered with *Azalea* *Hinodegiri*, a really striking sight. Within we go to the right and come to a nice group of Palms (*Cocos Weddelliana*, *Latania borbonica*, *Kentia Forsteriana*, *Phoenix reclinata*, etc.) being an exhibit of Messrs. Bier & Anshermist, growers of Palms and Azaleas, at Loosdrecht, near Ghent, Belgium. To the left we find a group of much more gigantic plants; *Rhododendrons* in full flower, Lilies, Palms, etc., sent by Messrs. D. & J. Kessen Bros., of Aalsmeer. In the center, formed like a French garden, we see other products of Aalsmeer, *Pelargonium Zonale*, principally, the most popular varieties being Dr. Paul Crampel and Ian McClaren. In the beds we find plants of *Chrysanthemum frutescens* on standards and along the walls border beds with *Tuberous Begonias* having extraordinarily large flowers, having as a background *Cytisus laburnum*, *Acer negundo*, different varieties of *Malus* and red *Crataegus* (fl. pl.). This section ends in large beds of *Azalea mollis*, *Deutzias*,

Hydrangea hortensis with giant flowers, and a magnificent group of Palms, bordered by *Lilium longiflorum*, *Saxifraga* and *Anthurium Scherzerianum*.

In the second part of this building we meet with border beds of standard Baby Roses, *Calla Childsii* and *Primula obconica* in different colors. To the right is a half-circular bed, composed of different kinds of blooming shrubs, crowned by gigantic Palms; next a bed of *Begonia Gloire de Lorraine* and, just in the corner, a bed of the finest *Araucarias* I ever saw. Along the walls, border beds of blooming *Rhododendrons* and many, many kinds of *Cinerarias* in all colors. In the center of the hall, on a two ft. high mound of grass, we see a collection of Orchids in flower, exhibited by E. W. A. Nederbassel, Aerdenhout near Haarlem. This collection is not a large one, and the plants are not strong, but nearly all species were present: *Cypripedium*, *Cattleyas*, *Odontoglossums*, *Dendrobiums*, *Oncidium*, *Cymbidiums* and *Lycastes*, were arranged with fine Ferns in nice groups of which several were sold. On this mound is also placed a rich collection of *Anthuriums*, among them also a white variety, shaped like *Anthurium Scherzerianum*. A very large circular bed, composed of different dwarf-growing shrubs, is laid behind the Orchids. The background is filled with *Ficus elastica*, fine *Acers* with green and red brown leaves, *Bougainvillea*, *Hydrangea hortensis* showing gigantic flowers on single stems. To the left a group of *Deutzia gracilis*, *Bougainvillea Sanderiana*, etc., call for attention. One strong plant of *Strelitzia Reginae* causes the people to gaze at the queer shaped flowers. Next we see a bed of *Tuberous Begonias* with double flowers (about 5" long and 4" broad in different colors) sent by W. Warmenhoven & Sons, Hillegom; I never saw such immense flowers.

Sassenheim, May 22, 1910.

[Owing to the very unfortunate illness of Mr. Beumer, who was taken down on the very opening day of the first exhibition, through exposure to the weather while he was endeavoring to obtain photographs for the readers of the EXCHANGE, this is the first communication on the subject, he has been able to send us of the Haarlem Jubilee Show.—Ed.]

Improvements in Anemones

While on the subject of bulbs I might draw attention to the value of Anemones. These are steadily being improved, and our specialists, Gilbert & Son of Lincolnshire, are now making displays that never fail to attract great attention. The old *A. fulgens* has been enormously improved, the new variety bearing the name of *A. fulgens oculata gigantea*. Under glass it can be had in flower in December, and outdoors it blooms in April, later planted bulbs carrying on the display until end of June. In size it is more than double that of a fulgens, and the color is gleaming scarlet, such as you would term "Christmas Scarlet." The stems are of great length, making it a splendid subject for the florist.

T. A. W., Eng.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names, correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing. It would often enable identification of specimens difficult to determine otherwise.

(132) Plant for Identification.—J. B., Albany, N. Y.

The plant submitted is *Dicentra eximia*. It belongs to the same genus as the cultivated species, the Bleeding Heart, *Dicentra spectabilis*.

(133) Trouble with Bedding Plants.—I am sending you three specimen plants, *Heliopsis*, *Coleus* and *Ageratum*. These plants are taken from a greenhouse and appear to have some disease. Kindly tell me the nature of the trouble, the cause and the cure.—H. J. G., Conn.

No live insects appear on the plants submitted, but the undersides of the *Ageratum* leaves are covered with the eggs of some insect, and a few of them are noted on the *Heliopsis*, and none whatever on the *Coleus*. It is suggested that you dip your plants in Nikotex, used according to its accompanying directions; or in a soap emulsion, made by dissolving one pound of Ivory soap in twenty five gallons of water, using when warm. If dipping is not feasible, spray with either of the above. All the plants submitted would be injured by heavy tobacco fumigation.

Hydrocyanic Acid Gas for Ferns

A subscriber for The Florists' Exchange, who is a large Fern grower, wishes to ascertain through our columns whether any person in the same line has used the gas for the purposes below mentioned. He writes as follows:

"Sometimes we are considerably bothered with sow bugs or wood lice and millipedes, also with small white fly and red spider, on the various kinds of Ferns, such as are used in an assortment for jardinières, also *Adiantum cuneatum* and *Cibotium Schiedei*.

"Would it be perfectly safe for me to use hydrocyanic acid gas in a house where the above mentioned plants are grown? If so, how should it be used and in what proportions?"—T. P. C., N. J.

[We would like to hear from subscribers who have had experience along these lines. For the matter of that, detailed reports of the successful use of this gas in any greenhouse operations will be welcomed.—Ed.]

The John F. Stevens Co. of Damascus, Va., inquire where they can purchase Tomato crates of one gallon, one peck and one bushel, in which to ship Tomatoes and Snap Beans. If any of our readers can supply this information, will they kindly write the firm direct.

Kalamazoo, Mich.

While the weather on Memorial Day itself was cold and threatening, that of the previous week was nice and fine, hence the business of that week was all that could be attended to, and it appears to have been most satisfactory to the trade. The plant trade certainly was strained to the limit, and satisfaction is expressed as to the amount of business done in this line during the week. Prices are quite moderate in the plant trade, as \$1.50 per dozen represents the top price for 4-in. Geraniums, and from that down to 50c. for small plants, such as *Verbenas*, *Coleus*, etc. In many cases this includes the planting out also, though as a rule that part adds but little to the cost of delivery, and competition is apparently as keen in the plant trade as it is in cut flowers, which is saying quite a little. Peddling wagons are put on the

streets by one or two concerns and as they usually get to a class who are not great patrons of the greenhouses, they, most likely, are factors of considerable educational value.

The cut flower trade was very brisk and, as usual, much funeral work, added to the regular Memorial Day's trade, made it almost impossible to keep up with the demand. There did not appear to be much trade turned away on account of the scarcity of flowers, and from all accounts this holiday has been fully as satisfactory as expected.

Prices certainly averaged a little higher than usual. Roses being quoted at \$1 to \$2 and Carnations, 60c. to \$1.75c. being the ruling price. Bouquets, ready made up, of mixed flowers, ranging in price from 25c. to \$1. formed an extensive part of the sales, and were probably the most profitable of anything sold, as very pretty mixed bunches consisting of the various colors of Snapdragon, Stocks, etc., worked off a lot of stock which could hardly have been disposed of in any other way, and gave great satisfaction to the buyers, who got good value for their money, consequently there were but few protests made on the Memorial Day prices.

Milwaukee

Memorial Day business broke all records, both as to the quantity of stock on the market and the quality, and prices realized were considerably better than in former years.

Owing to the heavy frosts we had this Spring there were no outdoor flowers in the market, consequently the demand was entirely for greenhouse grown stock and there was an enormous demand for Carnations. The price on Carnations ruled about \$5 per 100 on the best grade of stock, and inferior grades \$3 to \$4, but everything salable was sold out clean. In Roses, the demand was principally for the cheaper grades.

There was also quite a quantity of Peonies in the market, shipped in from southern points, and they found a ready market. The call for bedding stock, likewise, was extremely heavy, and up to this writing nearly everyone was cleaned out of stock which was in bloom, in Geraniums and Petunias, although there is still quite a quantity of this class of goods on hand, which will, however, from indications, be all cleaned up in the course of the next week or ten days, as, very little outdoor planting has been done yet in public places, or in the cemeteries, owing to the cold nights which have somewhat retarded it.

The Merchants' and Manufacturers' Association has taken up the protests of the business men regarding express rates being excessive, and C. C. Pollworth will represent the florists' interests in trying to secure better rates, especially on small parcels, on which the rate is extremely high in comparison with the usual 100 lb. rate, thus curtailing a great deal the shipment of smaller amounts, which could be handled were it not for the high charges.

C. C. POLLWORTH CO.

Vincennes, Ind.

A visit to Vincennes to see the Peony farm of W. A. Reiman is certainly a treat. It is located about three miles from the town. Mr. Reiman had about five acres of the best varieties of Peonies coming into bloom at a very favorable time, just before Memorial Day. For the past four years he has marketed the most of his cut in Chicago, but makes shipments to Milwaukee and Cincinnati, as well as St. Louis. He intends to build a larger and more suitable packing shed another year. Miss Reiman acts as general superintendent during the harvest.

P. C. Schultz of Vincennes intends to build this Summer, his ever increasing retail business making it necessary that he have more glass.

Detroit

With Memorial Day the coldest in forty years, it was really surprising that so many flowers were disposed of. The general call was for low priced goods, of course, and therefore it was mostly up to Carnations to fill the bill.

Outdoor planting, which is usually completed by this time, is still greatly retarded, owing to the inclement weather.

John Breitmeyer's Sons are erecting two new houses at their Mack ave. place, each 150 ft. by 50 ft., and are giving the rest of the houses a thorough overhauling. A small office building is also being added and a general florist business

is being established. Formerly nothing whatsoever was sold at the greenhouses, but the many good residences being built in that neighborhood make this change necessary.

Mr. Bloy reports a complete clean up in all lines of bedding stock, which he deprecates very much, considering the many orders still coming in.

FRANK DANZER.

Philadelphia Retail Notes

The Glenwood Flower Shop, 2700 Ridge ave., is showing cemetery lawn vases made of discarded phonograph horns of octagon shape. These were the happy discovery of Mr. Koch who reports an excellent sale thereof. Decoration Day business was very brisk and the cemetery opposite the store caused more good trade.

Fred Ebret of Broad and Ridge, is making some alterations, greatly improving his "Floral Arcadia." Decoration Day kept all hands busy and cut stock went much better than ever before.

E. McGrath, 2307 Ridge ave., has one side of his store devoted to a series of steps running from front of store back to rear ceiling in the rear which offers a splendid means of displaying stock to good advantage.

Cella's store, at 20th and Columbia, has an attractive window display of sod, seed packages and utensils, with a lattice-work background, well trimmed with greens.

Mrs. Eaton, 1110 Girard ave., has had a new bulk window placed in her store which is much better than the old arrangement, being larger and easier to arrange.

Aug. Muller of 219 So. 8th st. reports good trade this Spring and Decoration Day business as far ahead. This place has an attractive display of shrubs of all popular varieties.

E. M. Palette of 1410 City Line ave. is tearing down his range, part of which was destroyed during the past Winter by heavy snowfalls.

Ernest F. Hoehl 59th and Gibson, will break ground shortly for a residence which has been found necessary for his bride of Feb. 5. Mr. Hoehl took a trip to Brooklyn, N. Y., where he met Miss Wachter and then to his old home in Allentown, Pa., where they were married. Some excellent Sweet Peas, yellow Daisies and green stock is shown here and a fine crop of Mignonette is coming on.

Geo. W. Ueber, 5400 Gray's ave., has been very busy all Spring and says it is the best Spring he ever had. Some fine stock is produced here, principally Geraniums, Cannas and Roses, and the greatest difficulty seems to be in supplying the demand.

Ernest Daras, who died of pneumonia April 6, after three days' illness, was 33 years old. He was born in Brussels and brought up to the florist's business, having started, when very young, with the house of Linden in Brussels. He came here some eight years ago and for the past five was located at 1122 So. 47th st. Mrs. Daras will continue the store and average the landscape work until other arrangements are made.

Jos. G. Niedinger, 1513 Germantown ave., is making extensive alterations and taking on additional floor space in order to handle his increasing trade. At this time he is just finishing up a busy season on metal work, of which he has a splendid assortment. The returning travelers report increasing trade in their territories.

Westcott Bros., Ridge and Lehigh aves., have put in a busy time preparing for and handling Decoration Day trade. Several hundred vases and baskets were filled and placed in the cemeteries nearby, and some 30,000 Geraniums were disposed of.

Chas. Kircher, Lehigh av. and Napa st., has all he can attend to in vase, basket and window box work, and his location, opposite Mt. Peace Cemetery, made a busy Decoration Day for him.

Mrs. S. Hickman, 339 Girard ave., has installed a larger ice box, and says trade has been very brisk all the past Spring.

Chas. Kaelker has found his new store at 1029 Girard ave. much better than at 923, and is now very busy. A leader here is hanging baskets.

John A. Ehrler, 2133 Bellevue st., is remainting and making some alterations about his range and reports a considerable increase in landscape work. The store is turning out a large quantity of design work.

Chas. N. Pannas took over the flower stand in Broad st. station about April 1, and reports an excellent trade in cut flowers and funeral work.

J. G. Eisele of 1031 Columbia ave., has recently taken title to the property and will at once commence alterations; a storage vault will be installed in the cellar. The changes now being made by

the Reading R. R. near this store will alter the level of the street; a bridge will be laid over the crossing and a \$50,000 station erected; when finished this improvement will add greatly to the value of the Eisele property. The past few months business has been of very good character and especially so over Decoration Day.

P. M. R.

REVIEW OF THE MARKET

(Continued)

BOSTON, May 31.—In the early part of the week the market was very unsatisfactory, in fact, discouraging. However, Friday and Saturday were record breaking days and very large quantities of flowers were disposed of quickly. The market would even have been better than it was if the call for material came earlier in the week, but every one held back to the last moment and salesmen were rushed to their utmost capacity.

There were large quantities of flowers. Some were of good quality, others almost worthless, through holding over too long. There was a good demand for material of quality but the poor stock was hard to clear.

Roses were quite plentiful and sold at reasonable prices. Richmond, Killarney, Kaiserin, My Maryland, Carnot, Bride and Bridesmaid were all plentiful and sold at from 4c. to 8c.

Carnations went well and were of very high quality for this season of the year. Fresh cut flowers were in great demand and the prices obtained were 2c. to 5c. Poor material sold much cheaper.

There was plenty of Feverfew but it was not all open and the flowers did not look as well. It went at 50c. per bunch. Candytuft was plentiful and also sold at 50c. per bunch. Sweet Peas were plentiful and were in good demand, the prices obtained running from 75c. to \$1.50. Cut Spiraea was in demand and in good supply; it sold at from 3c. to 4c. per spray.

Lily of the Valley sold poorly. Stocks were not over abundant and good double flowers went at 3c. to 6c. each. Asparagus, which has been so scarce all Winter came in in great quantities. It seems strange that it should become so plentiful all at once. It sold at 50c. per bunch. All other miscellaneous stock sold well and everything was cleaned up.

R. C.

WASHINGTON, N. J.—Vandals recently visited the greenhouses of Alonzo J. Bryan and did damage to the extent of \$100 or more.

ALGONA, Ia.—August Huenhold, florist, has bought a house and grounds formerly belonging to J. P. Fohlin, and expects to move his greenhouse to the new site.

SOUTH SUDBURY, MASS.—The greenhouses in East Sudbury formerly owned by Coolidge Bros., now conducted by Chester Williams, are to pass into other hands June 1. It is said that one of the former owners is to take possession.

The Book of Water Gardening

This work supersedes all other books that have previously been written on the subject of aquatics and their surroundings, and gives in full detail all the practical information necessary to the selection, grouping and successful cultivation of aquatic and other plants required in the making of a Water Garden and its environments, and covering all conditions from that of the amateur with a few plants in tubs to the large estate or park.

By PETER BISSET
Expert Aquiculturist

Beautifully printed on heavy enameled paper, and profusely illustrated with one hundred and twenty halftones, seventeen diagrams and two double page plates.

NEW YORK, June 1.—The shipment of large numbers of Carnations to Boston and other points last week cleaned up the Carnation market sufficiently, so that the supply and demand by Saturday were better balanced and prices advanced to the extent that Carnations were bringing that day from 3c. to 6c., the latter price only for some very choice blooms, with the prevailing figure at about 4c. for the best grade. The sales at these prices were brisk and large.

The prices of Carnations influenced the prices of the lower grades of Roses also, moving them upward all the way from \$1 to \$2 per 100, and the cleaning out of these lower grades gave a like uplift to the higher grade of Roses and slightly increased the demand.

The prices of Orchids, Gardenias, Lilies and Callas were not materially affected by the Memorial Day trade. The supply of Lily of the Valley was short, and what there was moved well at \$4 per 100 for best grade. Sweet Peas were not very abundant and the quality for the most part was very poor. The demand was fairly brisk and what top grade there was in the market easily sold for \$1 and upward per dozen bunches.

Peonies were favorites and realized all the way from 50c. to \$1.50 per dozen. They moved off very briskly and sales were large.

Business on Sunday was very quiet, and Monday morning quite disappointing, retrogressing all along the line, back to the prices of the earlier part of last week where they still remain.

Today the best price obtained for American Beauty Roses, specials, is 20c. each, but most sales are made at the \$1.50 per dozen price; still the supply now arriving is not large—the demand is slack. Killarney, My Maryland, Bride and Bridesmaid Roses are in fair supply, but they are moving very slowly and 5c. is the top notch price for the best grade. A few choice Richmond are selling for 8c. each but most sales are around the 5c. mark for the best grade. The cut of Carnations is more than enough to satisfy every demand, and though many blooms of good quality are arriving, best grade flowers are easily obtainable at 3c. each.

Orchids are now arriving in very large quantity and they are moving slowly. Best grade Cattleyas in some small sales may reach 50c. each, but most of them go to the buyer at 30c. and downward. There are not many good Gardenias arriving, but there is practically no demand and the best grade hardly brings \$1.50 per dozen, and from that down to unmentionable prices.

Lily of the Valley is shy and is mistress of the market today, selling, top grades, for \$4 per 100 or better, with hardly enough to go around. Though the arrival of Lilies is not large they are moving so slowly that 5c. each is about the best price obtainable. The supply of Callas is small, but there is little demand and the best grades are closed out at \$1 per dozen.

Sweet Peas are somewhat shy and the quality in general very poor, but such top grade stock as is offered easily brings from \$1 to \$1.50 per dozen bunches, while the common stands around the 50c. mark.

The market is very full of Peonies, and the quality is fine, probably never better, but the buyers are few and are trying to make their own prices. The best grade is selling at 8c. in small sales, but in large transactions the price is around the 6c. mark, while really good blooms are selling at way down prices.

PHILADELPHIA, May 31.—The influence of Memorial Day began to be felt in the cut flower trade as early as the Thursday and Friday preceding it, in the larger shipments of out of town orders. To this was added the local

Memorial Day orders of Saturday, Sunday and Monday morning. There was plenty of everything to satisfy all demands, and no very sharp advance in prices, but the somewhat increased volume of trade helped to clean up stock.

For Memorial Day, which means the business of Saturday to Monday inclusive, American Beauty Roses, specials, showed a slight advance and sold in small quantities for 25c. each. Top grade Killarney and My Maryland in some limited transactions reached the 10c. mark, and Bride and Bridesmaid about the same figure. Richmond reached a little higher mark and sold for 12c. each. Larger sales of all the above named Roses were at a somewhat lower figure. The advance in the lower grades was the most marked, averaging from \$1 to \$2 per 100. Carnations were favorites, but the supply was sufficient, the prices ranging from 2c. to 6c., but 4c. was the prevailing price for top grades.

Peonies were abundant, and were also in the favorite class, at prices from 4c. to 10c. Lily of the Valley was scarce, with the demand good, and the top grade easily sold for \$5 per 100. For other blooms Memorial Day brought no marked change in price.

To-day the supply of American Beauty Roses is only normal, but the specials are selling for 20c. and downward. Killarney is abundant and top grade hardly reaches the 8c. mark and the same is true of Bride and Bridesmaid. Some very choice My Maryland, Kaiserin and Richmond in limited sales have realized 10c. each, but most sales are on a basis of 8c. and under.

The supply of Carnations is moderate and some fancy blooms bring 4c. each, although in most sales 3c. is the highest price obtained. The supply of Orchids is abundant and the demand slack; 30c. to 50c. is the asking price for Cattleyas, with few buyers and most sales at not above 40c. There is a fair supply of Gardenias, but not a strong demand, and \$2 per dozen is top notch and from that down. The supply of Lily of the Valley is short and with a fair demand the price for best grade is \$5 per 100. Arrivals of Lilies are not large, but enough to satisfy all demands, the best grade realizing 10c. each. There is a short supply of Callas and the best blooms bring \$1.50 per dozen. The arrivals of Peonies are steadily increasing and the quality is good. The best grade is selling for 8c. each. The quality of Sweet Peas now arriving is poor and very few realize \$1 per 100, most sales bring around the 50c. mark.

The market is well supplied with Gladioli, of nice quality, which realizes \$1.50 per dozen for best grade. Centaurea cyana and imperialis, Pyrethrum and Ten-Week Stocks are in evidence everywhere, and are moving fairly well.

INDIANAPOLIS, May 31.—Memorial Day business showed up splendidly, when the inferior business of the preceding weeks is considered. Shipping trade began Thursday and until Monday noon there was no cessation from a continuous holiday patronage. The deaths of several prominent citizens at the week's end also caused an unusual amount of flowers to be used for funeral purposes. Crown Hill Cemetery florists all report a record-breaking trade, and nearly all were completely sold out early Monday. The downtown shops, while not faring out so well, all report the receipts fully up to those of last season.

Stock of all kinds, contrary to general expectation, was plentiful and at no time was there a dearth of any one particular flower. Home grown Peonies began to arrive by the thousand on Wednesday, and many were disposed of at \$3 to \$4 per dozen wholesale, and 75c. to \$1.50 per dozen retail. Syringas, French and Spanish Iris, Poppies and Wiegela were among the outdoor flowers commonly seen. Prices for these varied

greatly along uncertain lines.

Carnations generally find some reason for selling, and on Memorial Day moved well. The public demanded many thousands of the divine flowers at 60c., 75c. and \$1 per dozen; the wholesale figures were \$3 to \$3.50 per 100.

The cheaper grade of Roses were disposed of with ease at 75c. to \$1.50 per dozen. Fancy Killarney, Richmond and Kaiserin sold little better than on ordinary occasions at double these figures. The same is true of short American Beauty at 75c. to \$3 per dozen and the longer ones at \$4 to \$9 per dozen.

Hotbed stock, such as Ten-week Stocks, Pansies, Candytuft and Mignonette, added materially to the sales, as it is the cheaper grades of flowers that are wanted in quantity. Harrisii Lilies are among the preferable flowers at this time and have found excellent sales at \$10 per 100 wholesale, \$3 per dozen retail. Callas are few in number at the same price. Canterbury Bells were on hand in unprecedented quantities, but some trouble was experienced in keeping them from spotting. The pink, lavender and purple shades were certainly most beautiful in the conservatory.

Plant sales were not greatly augmented by the Memorial Day demand but nearly all the store men carried a large supply of Hydrangeas, Feverfew, Lilies and bedding plants.

CHICAGO, May 31.—After the unusual rush of the past three or four days, market conditions have settled down to the natural quietude of the season. Fortunately there is not a large amount of stock coming in, so there is little chance of a surplus. The Memorial Day demand for cut flowers was unprecedented, although if there had been any outdoor stock much would have remained unsold. Carnations were the most sought after and many more could have been sold. This shortage, however, helped to move the Roses, of which there was a great abundance, contrary to the condition existing generally when flowers are in heavy demand. Prices held stiffly on all stock, but on Monday afternoon Roses suffered a decline in order to effect a clearance. Peonies were a disappointment in regard to quantity; many felt that there were plenty in cold storage, but this was not so, as there was a shortage at all points. Lilies moved off nicely, Harrisii meeting with the greatest demand. Other stock moved off nicely.

ST. LOUIS, May 30.—The market all of last week was in excellent condition, but stock of all kinds was entirely too plentiful during the first five days of this week. The prices were low and local retailers expected prices would be right for Memorial Day. But lo, and behold, the commission men doubled up on them and it looked as if they were trying to see which could sell at the highest price.

The stock came in in big lots, not a bit scarce, and hardly any reason for putting up the price on May 28, 29, and 30. The poor retailer, however, had to stand for it as he had orders to fill for shipping on Sunday and for the local trade on Monday. It's a plain case of killing the goose that lays the golden egg.

Memorial Day is not like Christmas, but we had to pay Christmas prices just the same. The following are the wholesale quotations for May 28 to 30. Roses, from \$5 to \$8 per 100; American Beauty, from \$4 to \$6 per doz. for long fancy; shorts, from \$1 to \$1.50 per doz.; Carnations, fancy, from \$5 to \$6 and some \$3 per 100; Sweet Peas, \$5 to \$7.50 per 1000 for fancy, and 35c. to 40c. per 100 for shorts. Peonies, \$4 to \$6 per 100; Lilies, \$10 to \$12.50; Lily of the Valley, \$3 to \$4; Cape Jasmine, \$1 to \$1.50 per 100; field Daisies, 50c. per 100. A decided drop from these prices is expected this week.

ST. PATRICK.

Newcastle, Ind.

Heller Bros. are cutting some very fine American Beauty Roses. Other Roses also are in nice shape. The variety Mme. Abel Chatenay is still being grown here.

Wm. Dittman is cutting a good supply of special American Beauty Roses for the Chicago market.

At Weiland & Olinger's a good crop of Carnations is on. Pete Weiland has just returned from Hot Springs, where he went to benefit his health.

Otto Benthey of the Frederick J. Benthey Co. has been very busy with hedging stock. The firm is growing a stock of plants for retail trade.

PECKVILLE, PA.—The new greenhouse of W. J. Broad is completed and in operation.

Special price on lots of 5000 or 10,000 plants.

**ROBERT CRAIG CO., 4900 Market Street
PHILADELPHIA, PA.**

Please mention the Exchange when writing.

Robert Craig of Philadelphia was a visitor at the Orchid show. He was perfectly satisfied and thought it was the greatest exhibition of flowers and plants ever held in this country.

George Watson, the lively critic from Philadelphia, was perfectly satisfied and thought he got his money's worth by coming to Boston.

Although we are all tired and fatigued after the strenuous work attached to the exhibition we feel satisfied that it was a great success, from the beginning to end, and the financial part is quite satisfac-

tory also. We have yet to see the person who did not think it was the greatest exhibition ever held in this country.

The next field day of the Gardeners and Florists' Club will be Saturday, June 4, and all members are requested to take surface cars at Scollay Square at 1.30 p.m. for William Sim's establishment at Cliftondale.

J. T. Butterworth of Framingham has disposed of large quantities of Spirea Gladstone, which is a fine keeper and excellent for cutting.

It would be almost useless to give a

manager to Martin Tuohy, the South Boston florist, to Delia Doherty, book-keeper at the same establishment, has been announced and it has proved a great surprise to his many friends.

The baseball team of the Boston Market at 1 Park st. is going to Madbury, N. H., June 4, to play the men at W. H. Elliott's establishment. The boys at the market expect to have a strenuous time to beat the Madbury men.

Paul Burke, of the Boston Plate Glass Co., has been on the sick list for a week, with neuralgia. His friends wish him speedy recovery.

At Park st. Market No. 1 a pump is this week being installed to get rid of the waste water which accumulates from the ice used.

All the wire frame manufacturers were so busy before Decoration Day that they stopped taking orders last Friday. They worked from 4 a.m. to 12 at night for several days and then could not catch up with their orders.

A. S. Parker of Stoneham had a wonderful crop of Sweet Peas, and the men at 1 Park st. claim that they are the best Sweet Peas ever seen at the market. They were all Spencers and the quality was wonderfully good.

Lew Smith of Tewksbury had last week a splendid cut of yellow Marguerites. They were especially fine for this season and they found ready sale.

The retail stores are especially well pleased with the business they did for Decoration Day. They disposed of immense quantities of flowers, and plants went also quite well. The wholesale men did a very large business in flowers and other goods and it is pleasing to report that every one is pleased with the business done last week.

R. C.

list of the visitors that were in Boston this week. They came from almost every State in the Union. From New York, Philadelphia, Washington and Chicago they came in great numbers. We extend to all of them our most sincere thanks for their presence and we hope they were all satisfied with what they saw.

We are much indebted to the New Jersey growers for the great interest they took in our exhibition and they can be fully assured that we all feel very grateful to them and perfectly pleased that they carried back to their State the most coveted prizes. We wish them all much success and prosperity.

Paul E. Richwagen of Needham had an extra fine crop of Candytuft for Decoration Day. It came to the market with all its flowers open, and that was more than the stock of some of the growers did.

W. D. Howard of Milford had a fine lot of well-grown Carnations for Decoration Day, which were quickly disposed of.

William Nicholson of Framingham had a fine cut of Feverfew for his customers on the holiday. It was as good as any seen in the market.

J. M. Cohen, salesman at 2 Park st., sold 30,000 Stocks for Decoration Day. The engagement of Robert O'Connor,

Philadelphia

The sale of bedding plants for Memorial Day is reported by all growers and dealers to have been very large, amounting in many cases to a complete cleanup of everything ready for sale. This sale really began many days in advance, and continued right up into Memorial Day itself.

Alphonse Pericat, who will read the paper on Orchids at the meeting of the Florists' Club next Tuesday night was among the visitors at the Orchid show at Boston.

Robert Craig Sr., who attended the Orchid show thinks that it was the greatest and best exhibition of Orchids ever given in this, and perhaps in any other country. In addition to the exhibits which won the larger prizes, Mr. Craig was much pleased with the exhibit of Mr. Roebing, a private grower of Trenton, N. J., and with the "very tastefully arranged group" of W. A. Manda of South Orange, N. J., and "the exquisite small group" put up by Joseph A. Manda.

Henry A. Dreer, 714 Chestnut st., gave an exhibition of perennial blooming plants, etc., at the meeting of the Ladies' Garden Club of the Penna. R. R. Main Line, on the grounds of the Merion Cricket Club at Haverford, Pa. May 28.

other wholesalers report a good Memorial Day business.

The S. S. Pennock-Meehan Co. is receiving some fine Festiva maxima Peonies, and reports that the Rose White Killarney is making a good showing as a warm weather Rose.

The Robt. Craig Co. reports good Memorial Day sales, especially in Geraniums and Salvias. The company has begun shipping Begonia Lorraine; and 7-in. Scottii Ferns are now ready for delivery. Its fine stock of Cyclamen is especially worthy of note. An interesting feature at the establishment is 1000 seedling Crotons, some of which are very promising.

Mrs. R. L. Henderson of Millville, N. J., will sell her greenhouses and store, and go to Porto Rico to engage in the fruit growing business.

Miss Gertrude Long Gimbel, daughter of Mr. and Mrs. Charles Gimbel, was married to Edwin Dannenbaum at the home of her parents, on Tuesday, May 31, Dr. Joseph Krauskopf officiating. A large reception followed at Horticultural Hall on Broad st. J. Wolf, Jr., 1617 No. 19th st., furnished the decorations. The hall was very elaborately decorated to give a garden effect. Large trees, in tubs, were freely used, and there was a profusion of large Palms and Cibotium Ferns. Large pink Hydrangeas were used throughout the hall, and on the many tables spread for the wedding dinner were placed great vases of white Peonies, standing in bowls of yellow Daisies. Wreathings of Smilax were used at appropriate positions. The garden scheme was well carried out and the effect very pleasing.

The following were visitors in town recently: Mr. Edwards of Bridgeton, N. J.; Mrs. John Andra, Doylestown, Pa.; J. B. Coles, Woodstown, N. J.; M. Keller of J. B. Keller & Sons, Rochester, N. Y.; and E. G. Hill of Richmond, Ind.

Chicago**Memorial Day Business**

The usual Memorial Day weather prevailed. The day opening with a raw Spring wind and occasional showers, but in spite of these unfavorable weather conditions it is declared by one and all

in the florist business to have been the greatest Memorial Day on record, as far as business is concerned. The one line that was a little disappointing was that covering plants, the weather continuing so cold people did not deem it advisable to do as much planting as is usual. There was no surplus flowers of any description; in fact, there was a shortage in Peonies and Carnations. Roses were the most plentiful of any stock, the prices holding stiff until late on Monday when they fell a little in order to move all remaining stock. Stock in nearly all instances was remarkably fine, although the "held-overs" were easily detected. The principal demand from all quarters was for Carnations, not only in the shipping trade but for local calls also. No matter how far behind the Carnation has to keep on other holidays, it certainly had a front position on Memorial Day.

Vaughan & Sperry Seed Store is receiving congratulations on the showing made of their grand Gladiolus Mrs. Frances King, forced spikes of which, grown by G. Swenson of Wheaton, Ill., are selling quickly, at Kyle & Foerster's, at the nice price of \$2 per dozen to the trade.

The J. B. Deamud Co. were last week kept hustling in all lines. This house handled a hundred thousand double white Narcissus, with many orders for same turned down. It also had hard work to meet the demand for Carnations and Peonies. It is conceded that the business done by the house last week far exceeded that of Christmas, both in volume and value.

Poehlmann Brothers Co. did a land office business in all lines of stock that they handle; everything cleaned up in fine shape, although the force was about played out owing to the rush.

Vaughan & Sperry note a great increase over the business of last year, although too early to say just how much. They complain of a shortage of Carnations and Peonies. The best Peonies seen in the market are to be found at their store this week, coming from the central part of the State.

Peter Reinberg says the call for Carnations was unprecedented. He never knew the demand to be so heavy for this particular flower before. Roses would not have moved so quickly, except for the shortage of Carnations.

Chas. L. Washburn says they did more

business on Friday and Saturday of last week than in any three days at any other time; not only in the city store did the holiday keep them busy, but the force at Hinsdale were equally so.

Wietor Brothers never had larger cuts of stock at any time than last week. Sunday, in one shipment, they received 7800 Killarney Roses alone, and nearly as many in other Rose lines. They stand by the Rose Mrs. Jardine, which is excellent at this time. As this firm receives two shipments of Roses and Carnations a day the amount of stock handled can be imagined.

Charles McKellar found Cape Jasmine much scarcer than previously at this season. Gardenias were almost non-existent, all over town. Cattleya gigas and Mossias, with some fine sprays of Dendrobium phalaenopsis are to be seen here in quantity.

The A. L. Randall Co. was kept busy filling the numerous out-of-town orders combined with those from the local trade, of which this house gets a large share. They, however, cleaned up nicely, and were able to fill nearly all orders received.

Frank Bentley, with Kyle & Foerster, never experienced before such a large Memorial Day business. The firm could easily have disposed of a thousand more Peonies if obtainable.

Hoerber Brothers find their business increasing to such an extent that they have been obliged to take on more help. Charles Endriss is now on as steady man. The first Memorial Day business with this firm reached all expectations. Stock was in excellent condition, and was disposed of readily.

Various Notes

C. A. Samuelson had considerable work for the funeral of W. E. Kelley on Tuesday. Ed. Enders left on Tuesday afternoon for Michigan City, Ind., where he will take charge of the floral arrangements at the funeral of Mrs. John H. Barker.

Strail & Hahn are very much encouraged with the way business is progressing at their new store. Mrs. Wengler, who was with A. Lange for some time, is now in their employ.

Joe Ziska, successor to the Chicago Rose Co., recently of 32 Wabash ave., is installed in temporary quarters in the basement of the same building, corner of Wabash ave. and Randolph st., during the remodeling now in progress.

Mr. Wilson, of the A. L. Randall Co., returned from a trip through the State last week, and reports that the small fruit crop, Currants, Gooseberries, Raspberries and Blackberries is totally destroyed.

The W. W. Barnard Co. found a ready sale for the quantities of small plants in baskets, Pansies, Candytuft, Forget-me-nots, English Daisies, Lobelias and Phlox Drummondii. Nothing in the cut flower line was handled this year.

The Leonard Seed Co. reports its Onion sets all progressing nicely. The company planted about the same quantity as last season. As yet it cannot be ascertained whether the Pea seed planted before the cold weather arrived escaped injury.

John Starrett, who is in charge of the flower decorations of the Hotel La Salle, says he likes the work amazingly. Every day the tables of the Palm room require 350 American Beauty Roses, with 1000 other varieties of Roses for the other dining rooms. Mr. Starrett is possibly the largest individual buyer of Roses on the market.

Otto Freese, who has been with Poehlmann Brothers Co. for a long time, left the employ of that house last Friday.

That two days' journey to attend a club meeting does not faze Harry E. Philpott is evident, as he arrived in Chicago, in time for the Chicago Florists' Club meeting on Thursday night.

Michael Fink, with Kennicott Brothers, had a thrilling experience late last Sunday night. On his way home he was held up and his watch and purse taken, but he was able to get them back without the help of the police.

Visitors: F. H. Reshore, Downiac, Mich.; A. M. York, manager, Lakeside Floral Co., Houghton, Mich.; A. O.

June 4, 1910

Brown, Springfield, Ill.; Andrew Pearson, Bloomington, Ill.; Carl Hirsch, Hillsdale, Ill.; W. Davis, of Davis Floral and Confectionery Co., Burlington, Ia.; Mrs. Robt. Muller, Racine Floral Co., Racine, Wis.

W. E. Kelley, former president of the Chicago Horticultural Society, died at his Summer home, Oconomowoc, Wis., May 27, in his 60th year. Death followed an ailment from which he had suffered for more than a year. Mr. Kelley was president of the W. E. Kelley Lumber Co., and son of one of Chicago's pioneer families. A wife, two sons and two daughters survive him. A special train bearing friends and business associates, among whom were members of the Horticultural Society, left the Union Depot at 11:30 on Tuesday a.m., to attend the funeral, which was held at his home at 4 p.m. The Horticultural Society sent a wreath of foliage and Orchids, tied with Orchid ribbon.

The Week's Work

BY
FRITZ BAHR

Timely Reminders

Don't Neglect Anything During the Rush.

We are right in the midst of the rush. Every hand is busy getting the bedding stock out; we have had it long enough. If it ever paid to look after details it is now. Stock which has required months of care and work could be ruined in a few hours. For instance, you instruct a man to pick out a hundred Salvias. He will do so, and when through leave 15 or 20 plants, which, perhaps, were not quite large enough, standing scattered on the bench. This is wrong! Such plants should be moved up at once to the rest remaining in the bench, where they can be properly watered. The same holds good with other stock. Nothing perishes quicker than plants scattered over a bench. The best man should do the watering, it is very important. If some growers would figure up what bedding stock they lose each Spring, through improper watering, they would be astonished at the results. Take advantage of the first opportunity to empty every shelf. Flats full of small stock up near the glass are suffering there now. Whenever space permits let them come down. Whenever possible, empty one house or bench completely, instead of allowing a batch of plants to remain at one end or in the middle. Stock grows better when near other plants and your place looks neater. Empty a bench, or house, and let it dry out, there is nothing healthier. There may be a batch of small Salvias, Geraniums or other stock suffering for a shift, they might be ruined in a few days if not attended to. You may be money ahead by paying for overtime in order to have the work done. What a sad story it is to hear, when pointing to a bench full of stunted plants: "We were so busy that we had to neglect them." It is too bad. If things let up a bit in a few days, don't discharge the extra help the next morning, there might be a lot of things to do. Don't put off anything for a rainy day, do everything now, quickly, and be through. It doesn't pay to have untidy conditions up to the day before you think about bringing in the soil for the Carnations.

Chrysanthemums

Grow At Least a Few Pot Plants.

If you grow Chrysanthemums at all for retailing, it will pay you to have a few pot plants along with the single stemmed ones, there is always a demand for them. Among our customers we find many who prefer a pot grown plant to a single stemmed one, rather than the cut flowers, and a single pot plant will answer for all occasions on which Chrysanthemums are used, if you have a nice batch to offer you are bound to sell most of it, and even if there are some which won't move they are attractive for the showhouse and can be used for cut flowers. To require a good man and a lot of patience, as well as time more than the average retail grower can afford to give to the work; but you can get fair results with the pot plants if you have them somewhere near the end of the hose, for from nothing will they suffer more than lack of water. As good a place as any, from now on, is a cold frame, where the pots can be plunged up to the rim. No shading is required for them, any more than for those planted in the bench. Give them all the sun possible, but keep the soil moist. Quite a good deal depends upon the pinching back they get now, as to what shaped plants you will have later.

Keep the plants short and stocky—nothing can be more than a spindly pot plant with bare stems; no flowers, no matter how well done and finished, will ever make up for such a deficiency, so allow plenty of room between the plants. Use a good, heavy, well-manured soil for potting, for the object is to grow as large plants as possible in small pots; so water and potting now, there are almost three months yet in which the plants will grow before showing signs of flower buds.

The Carnations

Pay Attention to the Stock in the Field.

Keep the hoe and the cultivator going, you cannot over-use them. In sandy soil it is an easy matter to keep the surface pulverized and clean, but when it comes to heavy or clayey soil it means work, and in such soil continuous stirring up of the surface is necessary, if you want the plants to do their best. After every rain a few hours of sun will pack the surface to such an extent as to form a hard crust. Avoid this! If hot and dry weather should set in, faithful cultivation is far more important than watering with the hose. Some growers do water their stock in the field. We have never done so, and while having to content ourselves with a stiff clay in the field, we have never experienced any trouble on account of a drought, and this is due to proper cultivation. We make it a rule to go through the Carnations once every week—oftener in rainy weather. By that I mean as soon as the soil is dry enough to cultivate after a shower. The Planet Jr. cultivator is made use of, and during a dry spell in the hottest of weather the surface of the soil may be boiling hot, but you will find it moist and cool a few inches below, if cultivating is faithfully attended to. Remove the small weeds around the plants, such as the cultivator may be unable to reach. While they may not do much harm while small, a few days of hot weather will develop them into large plants, and while removing them you might loosen the Carnations. You should not permit the plants to send up flowering shoots, resulting, perhaps, in the formation of buds. Go over the field every few days and pinch back wherever necessary, for you want short stocky plants in five weeks from now. It doesn't seem that in such a short time we shall be able to do much in order to get good plants for housing, yet a great deal can be done by proper attention.

Poinsettias

The Time for Propagating is Here.

The old plants are by this time loaded down with growth suitable for cuttings. Kind time during these busy days to remove cuttings to the propagating bench, as soon as fit to take, and thereby give the plants a chance to get in readiness for another crop. Every cutting will root; in fact, there is no trick at any time in the production of Poinsettias. The main trouble some of us have with them is due to neglecting the plants when artificial heat is required, in the Fall. You must have heat if you want to be successful with Poinsettias. No other flower is of more importance to many of us at Christmas; more and more will be used for that holiday right along. To ship them long distances is unsatisfactory under the best conditions. Why not have them on your own place? One doesn't require the latest greenhouse construction to do them well in—a tight roof, sun and sufficient heat to maintain 60° and over, no matter what the weather, is all that is necessary; so if you are contemplating growing your own supply for the coming season, it doesn't mean, alone, to start in propagating now, or buying a nice lot of young healthy stock, but also to be sure about proper heating facilities for next Fall and Winter. Think about it now and get ready to have everything in the proper shape in the way of sufficient pipes in the house intended for the Poinsettias next Fall, whether you grow them in pots or pans, or for cut flowers in the benches.

Sweet Peas

The Care of the Outdoor Plants.

Among the flowers which we grow outdoors for cutting, the Sweet Peas are among the best to make use of. The plants at this writing, grown from seed sown outdoors in early March are making a good growth and soon will be in bloom. As with the small Carnations in the field, they, too, want the hoe. Keep the soil stirred up. If you are still in doubt as to the real benefit which comes out of this, do a little experimenting. Let a part of a row go without cultivation, and you will soon see the difference. Watering during dry weather helps the Peas, but not any more than the hoe. If handy, a light mulching of well rotted manure worked into the surface of the soil is a great benefit. How about supports? Sweet Peas with crook-necked stems are no good, so don't overlook supports. We have a row of Sweet Peas which were sown out the fifth day of March, about four days before the outside ones. They were sown about

six seeds to a 4-in. pot. As the little plants advanced they were tied up on thin stakes. They made about 12 inches of growth inside, and were planted outdoors about three weeks ago, where they began to bloom about one week ago and are furnishing now fine flowers on long stems, away ahead of anything cut indoors. The variety is the ordinary Blanche Perry and a few Countess of Radnor. The only drawback is that we haven't got ten times as many, nor any white ones. It certainly pays to bring along plants in this way for they are fully three weeks ahead of the ones sown outdoors directly.

Providence, R. I.

General interest is evinced in the tree planting which is fully under way in this city, and if the trees donated and planted on the barren streets get established we shall have a city beautiful. Not only the city of Providence, which started the movement, will be benefited but East Providence and some adjoining towns and cities, inasmuch as they also have taken up the idea. Among the principal donors of trees to the city are Col. Samuel L. Colt, of Bristol, R. I., who has donated 100 trees; Dr. E. M. Harris, 25 trees; Mrs. John Custer Brown, 50 trees; the Providence Baseball Team, (The Grays), 10 trees. Up to the present time upward of 2000 trees have been donated. George Johnson & Son have the contract to plant 1000 of these trees this Spring, and others in the early Fall, as soon as it is safe to transplant them.

Geo. C. Kelley has the contract for cutting the grass for the season around the Hope Reservoir. He had a busy time around Memorial Day.

J. H. Cushing, Quinick, R. I., was in town this week, and reported a rushing business at this time. Mr. Cushing is furnishing some of the large florists with cut flowers of fine quality.

H. J. Johnson, 1800 Broad st., had fine business for Memorial Day. He has started a fine place and is growing some very nice stock, plants and cut flowers. He was formerly with J. H. Cushing, Quinick, R. I. Mr. Johnson expects soon to make an addition to his plant. The State Board of Agriculture is doing considerable planting this season in the line of school gardens. D. K. Thomas has charge of this work. Over 1000 Cabbage and Tomato plants will be planted this week at Roger Williams Park and Thayer st. school. This work is to be done entirely by the school children and prizes are offered by the Board and by individuals for the best kept garden, and for the garden that gives the best returns in dollars and cents. Seed for use in the gardens is put up in special school packages by W. S. Pino, who also furnishes the State with the plants used. The seeds can only be secured through Supt. Thomas.

F. Macrae's Son, 1138 Smith st., reports excellent trade for Memorial Day, cleaning up very well. The supply of cut flowers was somewhat short, necessitating cutting on some orders. There was a shortage of Geraniums in bloom, owing to cool, dark weather. Retail trade was above the average. They will have a fine lot of Lilies in bloom for the graduation exercises which commence in about two weeks.

Matthew Macnair reports business for Memorial Day as very heavy, closely approaching that of Easter.

T. O'Connor, Blackstone bldg., says his bedding stock was cleaned up and he had a fine trade for Memorial Day.

Florence A. Willard, 277 Mass. ave., has been very busy, the holiday necessitating the force working until 3 a. m. Monday. She has some very nice Orchids in bloom. All the bedding stock in bloom was cleaned up.

Wm. Hoffman, East ave., Pawtucket, reports the largest trade he ever had for Memorial Day and that he has been kept busy day and night for the past few days. He still has a good supply of bedding stock, but the same will be considerably reduced after orders for planting have been filled. The cut flower trade was heavy.

Johnston Bros., Dorrance st., report a large business for Memorial Day. They have the contract to grow 100 pots of corn for the trade parade to be held in Providence on July 4.

John Macrae reports that the plant trade is fine and his business in general is better than last year.

D. E. Newell, Attleboro, Mass., had fine trade for Memorial Day. Orders for bouquets for cemetery purposes, design work, and bedding stock kept him very busy.

Wm. Crompton, East Greenwich, was in town this week. He reports business

TRADE LIST

CLEMATIS paniculata, strong plants, \$10.00 per 100; 3-in. pots, \$5.00 per 100.

DIACAENA Iodiviva, 4-in. pots, \$10.00 per 100.

Indianapolis

All of Indiana's florists are certainly proud of W. W. Coles' cartoon in the preceding issue of the EXCHANGE. W. W. Coles is one of the pioneers who gave Hoosierdom its reputation as a flower growing State.

The speedway races held in Indianapolis, no doubt, influenced the flower business on Memorial Day, as no less than 60,000 people witnessed them. Acres of automobiles were crowded around a track which is boasted of as being the finest in the world. The downtown streets were thronged with visitors and the hotels, completely filled, had many calls for flowers to be used for decorative purposes.

Wm. Humfield of Muncie, Ind., was a recent visitor.

The E. G. Hill Co. has leased the establishment of E. T. Grave at Richmond, Ind., and will use the new plant for growing Carnations exclusively. I. B.

St. Louis

E. W. Guy and Henry Edmunds of Belleville, Ill., were in the city Friday, May 27, buying Memorial Day supplies. They say the Belleville florists have all been busy of late with plants and that hedging stock is running low with them.

Fred C. Weber, Jr., secretary of the St. Louis Retail Florists' Association, reports a meeting of this Association to be held on Monday evening, June 6, in the Knights of Columbus Hall, Grand and Olive sts. This, he says, will be one of the most important meetings the Association has yet held, and he hopes that all the members will attend and come early. President C. C. Sanders is expected to preside, but should he not be able to attend, vice-president Theo. Miller will take the chair.

Trustee Bentzen of the Florists' Club reports he has been too busy of late, but that this week, he would, with Messrs. Ostertag and Schoenle, the other trustees, look up a place in which to hold our annual picnic; they will work hard to make this one the best yet.

Henry Ostertag reports his firm has the decorations for the big Pulitzer-Wickham wedding for Wednesday, June 1, the cost of which is \$1500; this is the largest job of the season.

"Billy" Ossick and Rude Windt are dividing their time during the day in the flower business and at night they run a picture show in Wellston which they say has been a success.

Shaw's Garden will have its first Sunday opening for this year on June 5. The late Henry Shaw arranged in his will that the public were to be allowed to view the garden on two Sundays in the year—one in June and one in September; on all other Sundays the garden is closed. Everything is in readiness for the opening.

Our four commission houses will again, during the months of July and August, close at 5 p.m. each day and 12 noon on Saturdays.

Robert Ayers, who a few years ago was well known in the retail circles here, reports that he is leaving to make his home in California in the real estate business.

The Bentzen Ball Team will play the Sanders Ball Team for a big prize at the coming florists' picnic; the captains are John Bentzen and Frank Sanders.

The St. Louis Florists' Club will celebrate its 23d anniversary next Thursday, June 9, in their meeting rooms in the Odd Fellows Building, with a big smoker. Secretary Beneke is preparing elaborate notices to be sent to the members and, with the help of the other officers, the largest attendance the Club has yet had is expected. The trustees say that those who miss this meeting will miss the treat of their lives. ST. PATRICK.

The Mastin Automatic White-wash and Spraying Machine Is Reliable, Practical and Durable

When the machine is filled to within six inches of the top, a few strokes of the pump will compress enough air in the tank to produce a continuous mist-like spray for 15 minutes.

New Orleans

Mrs. Chopin, the mother of Peter Chopin, the florist, died in this city, May 28. Mrs. Chopin was the widow of one of the pioneer florists of New Orleans. CRESCENT CITY.

Baltimore

Trade last week was inclined to be dull with the exception of funeral work. The first of this week it started in heavily at the growers and, in the neighborhood of the cemeteries, many sold out of cut flowers early in the day, and were unable to get stock until Monday.

Decoration Day was well observed; the weather was cool and clear, and thousands of people made their way to the many different cemeteries, and of flowers there seemed to be no end; many wagon loads were sent out and thousands of bunches were carried. Any kind of bloom was salable; prices were reasonable, as cut flowers were plentiful.

The retail trade was exceedingly busy in both cut flowers and pot plants. Geraniums were in heavy demand and many growers sold out completely and it seems as though nearly everyone who had a few cents spent their money in flowers. Peonies were in demand and sold at fair prices; the white ones were in many cases inferior and a good bunch was hard to find; pink and red showed up better but were scarce. Carnations are still plentiful and the growers are glad to dispose of them at almost any price.

Roses are still coming in about as usual and as the outside blooms are steadily increasing in quantities, naturally this holds the price down on the inside blooms; they are disposed of at fair prices, and mostly used for funeral work, which is heavy.

Gladioli are finding their way into the market and move well. Lily of the Valley seems to be enough to meet the demand. Callas are shortening up in supply. Sweet Peas are still in about the same condition as previously reported. Outdoor flowers are coming in steadily, and would be in heavier supply if not for the cool days. Greens of all kinds move steadily.

E. Kress, E. North ave., reports a heavy Decoration Day business and early on Sunday sold out completely in cut flowers; he had a heavy call for Geraniums.

E. Herman had a rattling good business this week and all hands had to work hard to keep up with the demands of the business; when the writer called on him he looked as though he was tired out.

Jas. Hamilton of Mt. Washington, Md., is making heavy shipments to the South and handling a large amount of pot plants.

T. N. Gray of Catonsville had his stall heavily loaded with pot plants on Monday, and was doing a fine retail business.

F. G. Burger of Greenmount ave. has his fine lawn in good shape, adding much to the beauty of his conservatory and store. Mr. Burger handles a first-class trade for funeral work, and is well known; he is treasurer of the G. & F. Club.

J. McCormick of W. Baltimore st. is showing a window of various kinds of Carnations; business with him continues good.

Peter Eberhardt of Catonsville is doing a great business in pot plants and cut flowers.

C. J. Gregorius of the Pimlico Greenhouses has a fine house of blooming Sweet Peas; he is handicapped by lack of ground in which to set out his stock plants which are still in cold frames.

John Oler of Arlington has the sympathy of the trade in the illness of his wife, who has been ailing for some months; he reports she is no better.

GLASS

N. COWEN'S SON,
14 & 16 Wooster Street, New York

Worcester, Mass.

The past week was an extremely busy one for Worcester florists and many of them were obliged to keep an extra force of help working night and day. The flowers and shrubs have done well, especially the shrubs, and quantities of these were sold for the holiday trade. Roses, Carnations, Forget-me-nots, Lily of the Valley, Pansies in boxes and bas-

kets, Sweet Peas, and the numerous varieties of flowering shrubs, met with a splendid sale. While the first of the week showed the shops well stocked the last few days it was with difficulty that the orders were filled.

For potted plants Crimson Rambler Roses, Spiraea and varieties of Geranium, Ageratium, Petunia and Begonia were in great demand. The "living bouquet" proved a record breaker for Worcester florists this season. Quantities of them were sold for Memorial day trade. There has been nothing for years that has met the popular fancy quite as did the living bouquets. The bouquets consist of several varieties of flowering plants arranged with an eye to color, and they make an effective and durable display for home or cemetery. Artificial wreaths met with some favor and many of them were disposed of, although the general taste in wreaths turned toward those made of Boxwood sprays and Magnolia leaves. Hydrangeas are as popular as ever at this season and particularly beautiful are the colors seen in the blossoms at the Main St. florist shops.

The crescent and star shaped beds on the Worcester Common are beauty spots

to be proud of. Never has the old Common been so beautiful. The early Tulips have given way to the handsome Pansies and these will be followed by other seasonable flowers.

John Coulson, who for 35 years was gardener for Hon. Stephen Salisbury, has gone into the wholesale and retail business at 361 May St. Mr. Coulson is an authority on Begonias, and his displays in the Salisbury greenhouses attracted much attention.

The new store, at 371 Main St., of the H. F. A. Lange estate, conducted by Albert H. Lange and Carl C. Lange, sons of the late H. F. A. Lange, is one of the finest in this part of the State. It is finely equipped for displays and catering to retail and wholesale trade. Novel windows attract considerable attention daily by their artistic arrangement and magnificent materials. Potted plants in a bed of moss and handsome plants in brass jardinières or tall brass vases make a pleasing showing this week. A. H. Lange, eldest son, is one of the most artistic designers and decorators in the city. He and his brother are associated in the business which their father, who died recently, conducted for many years.

The two stores of H. F. Littlefield are busy all the time and have a number of June decorating engagements. Their Memorial Day business was a splendid success, cut flowers, living bouquets and shrubs being in great demand.

The Roses grown at the Worcester Conservatories, of which Leonard C. Midgley is owner, are more beautiful than ever this season. Mr. Midgley's Roses are special features of the Conservatories, and are always in demand. Mr. Midgley produces more varieties of the Rose than any florist about here.

Charles D. Mackie, Pleasant St., had a great demand for Memorial Day work; in fact, his attractive shop is a busy place at all times.

F. B. Madans has many June dates booked for wedding work. The funeral designs of this florist are very popular.

Mrs. May Fisher's decorations for weddings and receptions attract much attention and keep her busy arranging them, as well as serving the smaller demands.

F. A. Keyes, Highland St., is, perhaps, more interested in plants than in cut flowers and is called on frequently to grow plants for special occasions.

A florist new to many Worcester people is Frank Sokal, College Hill. Mr. Sokal caters to people of the vicinity in which his business is located. His flowers are of fine quality and his plants have a wide retail sale.

Allyne W. Hixon, Gates Lane, received a goodly share of holiday business. Mr. Hixon gave particular attention to designs, in which he was assisted by Mrs. Hixon, whose artistic work has been commented upon by the judges of the Worcester County Horticultural Society at the weekly exhibitions.

Mrs. Percy G. Forbes, Millbury Ave., although not in a downtown business, has served a large number with handsome specimens of plants and cut flowers, funeral designs and special work.

Adin A. Hixon, secretary of the Worcester County Horticultural Society, is slowly gaining in health. He has not been at his desk regularly for sometime. During the week he came downtown for a few hours each day.

Mrs. David L. Fiske, Grafton, Mr. and Mrs. Allyne W. Hixon, Mr. George McWilliam, Whitinsville, and William McAllister, Whitinsville, were among the Horticultural Society's members who visited the display of Orchids at the great Orchid show in Boston. E. D.

Hartford, Conn.

Edwin J. Church sends us a photograph showing a raised flower bed designed by him for the Luderwood Type-writer Co. of that city, with the letters "E. J. C." showing in the center in white flowers, which took upward of 2000 bulbs to fill. The size of the bed was 20 ft. each way, and it was raised 3 ft. in the rear, sloping thence gently down to the lawn. The bulbs used were Tulips Rose Blanche, pure white, and Rex Rubrum, brilliant scarlet. These, Mr. Church reports, were in full beauty on the 20th of May, after all other bulbs in that city had passed.

Syracuse, N. Y.

Memorial Day
All the florists are rushed with orders. Cold wet weather for nearly a week has given place to ideal Summer weather. There is little doubt when the books are balanced that Memorial Day trade this year will be in excess of previous years.

Outdoor cut flowers were very scarce, in fact there were none to speak of, the very heavy, cold rains ruining, practically, everything. Peonies will not be in for a week or two yet.

As a rule, bedding stock was remarkably good and no advanced prices asked. Seed stores and some groceries are handling out-of-town plants shipped in without pots, and they seem to dispose of quite a lot.

Bellamy Bros. had a very fine lot of Geraniums in flower, as well as other bedding stock; they are much encouraged with the volume of trade they have done in their new quarters. Sweet Peas and Gladioli were especially good. My opinion of their Carnation Marchioness, as a money maker, has never changed; the beds were a sheet of white, and the firm was refusing orders.

Meneilly & Sons had a very large stock of well-grown plants and were particularly strong on Geranium Mme. Salteroi. A large block of Gloxinias here are a grand lot of remarkably fine flowers, which sell well.

In my last notes I mentioned the serious illness of Gus Bartholome's eldest daughter, and now deeply regret having to record her death. Her loss is a very severe one, as she had for several years charge of the office and making up. Her work had always been of the highest order. The entire craft expresses their deepest sympathy with Mr. and Mrs. Bartholome and family.

Burt's store is a picture well worth looking at, for Mrs. Robinson sees to it that the place is always arranged with taste, such as would not disgrace a New York store. Her brother, Alfred Burt, is a past master in plant growing, and finds the material for the tasty decorations.

Bannister Bros. were particularly strong on Gen. Grant Geraniums, which they assured me sold like hot cakes. They will have a grand lot of Boston and other Ferns for Autumn.

P. R. Quinlan is cutting a splendid lot of Roses and Carnations, and had a fine cut for the holiday.

I have made diligent enquiry among the craft to find out who made the wreath described on page 960 in last issue of the EXCHANGE. All deny that such a piece was made by them. One said "Why any one who has lived in Syracuse a year or two knows there will be plenty of room in heaven"—that's what I call rubbing it in. H. Y.

PURITY

House of Purity Freesia, as grown for the Stumpp & Walter Co.

The Best and Most Salable Freesia in the American and European Markets

OUR stock of this now popular and famous Freesia is the largest in this country. We have bulbs that have been grown under glass (the illustration shows one of our houses), also bulbs grown by the originator, R. Fischer. Both of these stocks are the true Purity stock, from which we receive our bulbs. The very highest quality is guaranteed. The demand for this variety in all the wholesale markets is persistent and universal. Its popularity is undiminished; practically it has no competitor.

AMERICAN SEED TRADE ASSOCIATION

President, J. C. Robinson, Waterloo, Neb.; first vice-pres., M. H. Durvea, New York; second vice-pres., F. W. Bolgiano, Washington, D. C.; sec.-treas., C. E. Kendall, Cleveland, O.; asst.-sec., Leonard H. Vaughan, Chicago. 25th Annual Convention at Atlantic City, N. J., June 21, 22 and 23.

IMPORTS, ETC.—May 28, 29, 30.—McHutchison & Co., 40 tubs Laurel trees, 5 cases plants. May 31.—Maltus & Ware, 18 cases living plants; Dingelstedt & Co., 60 bales grass seed; Lehn & Fink, 22 bags seeds. June 1.—J. Roberts Co., 16 cases plants; Vaughan's Seed Store, 3 cases plants; A. Walreut, 94 tubs Laurel trees, 3 cases plants. June 4-5.—Carillo & Baldwin, 5 cases live plants. June 6.—D. Crosby Co., 30 bags garden seed.

WORCESTER, MASS.—The seedsmen report that bedding plants, Tomatoes, Potatoes, Summer Squash, etc., have been damaged by the recent frosts. The W. D. Ross Seed Co. has had a good business in both lines, but have learned that many of their customers have lost their crops. One man who had 20,000 plants lost at least half of them, and present indications are that such vegetables will be scarce and therefore high in price.

European Notes

Everything at present is moving in our favor. Sunshine at the rate of 15 hours per day and a gentle drying wind enables us to rogue our Turnips and Rutabagas in the most complete fashion.

Radishes and Peas are now making splendid growth and have fairly caught up to last year's position. As regards the Brassicas, the bloom is dropping a little too quickly and the pods already formed do not appear to be overloaded with seed; in other respects the plants that have survived are doing their best.

Mangel is running well but Beet makes us uneasy.

EUROPEAN SEEDS.

American Notes

Trade Still Continues Very Good.

Although now well into June, business with the seedsmen still continues very good. As a prominent member of the craft put it, "there would seem to be no end to the retail counter business this season; it simply keeps on and on." The peculiar weather which has prevailed right along, accounts, of course, in very great measure, for the extended selling season with the seedsmen; but on the other hand, in every year that passes, June is fast becoming a month of better and better sales for everything in a retail way that the seedsmen handles; also for the reason that home garden makers are learning, as never before, that, so-called, late seed plantings have innumerable advantages, and that waiting until real permanent growing conditions have established themselves gives

the best results in the end. Too much encouragement cannot be given to June plantings of seeds in the home kitchen gardens, and the same applies to the setting out of bedding and vegetable plants. There is no reason why the seedsmen should not make of June one of the best months of his Spring seed selling season. Speaking of the past week's business, it is really wonderful how well trade has continued. There has been, of course, a little of everything called for, but the total of the whole has aggregated very well indeed. The demand for both bedding and vegetable plants goes on and on, and the end of the season this year will surely find us on hand with the growers than in years. As an outlet for everything in plants, the seedsmen this season have shown as never before, their ability to handle, it may be truly said, almost unlimited quantities.

Mention should also be made as to how well bulbs of all kinds and flower seeds are still selling; the closing week, taken altogether, has certainly been very satisfactory. Regarding the weather, it is to be hoped that more favorable growing conditions will soon develop, as nothing is so conducive to impetus to the coming Autumn season as satisfaction to garden makers through the Spring plantings. Every seedsmen is now anxious that the seeds and plants he has sold shall give full value and satisfaction to his customer.

Gourds
In making up collections of flower seeds, for those customers who never know exactly what they want, the selection of ornamental Gourds will be very satisfactory. These rapid growing, and certainly most interesting annual climbers, with their pretty foliage and odd and singular shaped fruit, should by no means be lost sight of, for prominent flower seed for retail counter sales. Being tender, they should not be planted until all danger from frost is past; when it is safe to plant Nasturtiums it is so for Gourds. There are a number of most interesting varieties, among which the following sorts are always well known. Apple, Bottle-shaped, Dipper, Nest Egg and Pear-shaped; these and many other popular varieties make a very desirable mixture that can be sold for five cents per packet. The very oddity of the Gourds will please customers.

Window Decorations

Now that the height of the selling season is over, do not feel that the window decorations can be neglected. There is no time in the year when the utmost care and attention should not be given to this subject. As a reminder for the present time, there is nothing so attractive as collections of seasonable flowers, with the various varieties correctly and plainly named. This week many of the larger seedsmen are using masses of Peonies for this purpose, with grand effect. Do not, for a moment, neglect the decoration of your windows.

New York Seed Trade

The story of the week in the seed trade is one of exceptionally good sales indeed, for June. The weather still keeps cloudy and cool, which is, without question, the reason for the steadiness of the retail counter trade. Our seedsmen are all wishing for some warm, sunny days; these cannot now be far off and will make things look very different outdoors. Bedding and vegetable plants of all kinds are still selling in goodly volume. On the whole, the past week has been one of very satisfactory business.

Maurice Fuld, of W. W. Rawson & Co., Boston, Mass., was a visitor this week. Mr. Fuld, who is taking his vacation, is on his way to his home at Wheeling, W. Va. He is very enthusiastic over the satisfactory organization of the American Gladioli Society and predicts for it a future of great usefulness. Mr. Fuld considers the outlook particularly encouraging for sales of French and Dutch bulbs the coming season.

R. J. Irwin of Skidelsky & Irwin, Philadelphia, Pa., was also among our visitors this week.

The Stump & Walter Co. have on exhibition in one of their large show windows at their Barclay St. store, a dozen or more varieties of wild ducks, which have attracted, all the week, the greatest attention.

John T. Butterworth of South Framingham, Mass., and Wm. F. Jurgens of Newport, R. I., were also among our visitors the past week.

Harry A. Bunyard, of A. T. Boddington's, is very busy these days getting things into shape for the New York Florists' Club outing on June 23, when it is expected that many more members of the seed trade than usual will attend. Mr. Bunyard is also giving his attention to the coming Sweet Pea exhibition to be held in July, so, altogether, he certainly has his hands full.

Peter Henderson & Co. have been making a grand display of cut Peony blooms at their store during the past week, in connection with which this firm has been looking orders for the roots for delivery next Fall. A feature of the display has been the "Peony Field Guide" with which they have supplied prospective customers. The "Buds" seed store has commenced to receive new crop florists' flower seeds, for Summer and Autumn sowing.

W. Van Kleef Jr., of W. Van Kleef & Sons, Boskoop, Holland, sailed last Tuesday on the Cunard S. S. Lusitania, for home, after a more than usually good trip among the trade.

At Vaughan's Seed Store they are making preparations for an unusually large bulb trade. It will not be more than a fortnight now before Freesias will be ready, with Lilium Harrisii following early in July.

Weeber & Don are offering this week new crop Cineraria seed.

Wm. Elliott & Sons say that not in years have the retail sales of bedding plants continued in such large volume so late in the season.

A goodly number of the trade attended the Summer exhibition of the Horticultural Society of New York, held last Saturday and Sunday, June 4-5, at the New York Botanical Garden.

Lawrence S. Payn, traveler for Ets. André Leroy et Cie, late Peignaux et Il. Lorin, Il. Lorin, succr., wholesale seed growers in Angers, France, sailed from Boulogne, June 4, for his annual trip to the United States and hopes to arrive in New York about June 12. All letters addressed to him, c/o The Broadway Central Hotel, Broadway, New York, will receive attention.

One of the teams of Henry Nungesser & Co., which was entered in the N. Y. Work Horse Parade, May 30, took the blue ribbon.

Philadelphia Seed Trade

The cool and rainy weather has made necessary the replanting of many Beans and Cucumbers, and this misfortune of the planter has brought some late mail and express orders to seedsmen, and some counter trade. There is a heavy demand for Stowell's Evergreen Corn, and the price has already advanced 60c. per

OUR advertisements have brought us excellent results, far better than we expected; we will have more advertisements in about two weeks.

Address of this Advertiser on application.

CULTURAL DIRECTIONS

For the benefit of Seedsmen and all who retail Seeds, Bulbs, Trees, Shrubs, Fruits, etc., we have had written by experts over fifty single page leaflets covering the raising and care of these various subjects. Their free use will save your clerks much valuable time. A sample set will be forwarded on application.

A. T. DELAMARE Co. (Pubrs. F. E.)
P. O. Box 1697, New York.

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

bushel. The sale of Cow Peas has begun; the demand is likely to be heavy from present indications, and the supply is not abundant. The present price of Crimson Clover seed, around the \$9 per bushel mark, is prohibitive, and at least a month will elapse before the new crop will be in the market.

The Johnson Seed Co. reports a complete clean up of all Cynos stems, and of all bulbs and roots, with the exception of a few Gloxinias. The company's trade in bulbs and roots this Spring has been the largest in its experience, and many orders have been booked for Peonies for Fall deliveries.

The Stokes Seed Store has its "Wholesale Turnip Seed List" now ready for distribution. Mr. Stokes, in company with S. F. Willard, president of Comstock, Ferris & Co., seedsmen, Wethersfield, Conn., will sail for Europe June 15, on the Campania. They will be gone about two months, going through the seed growing districts, not only having an eye to business, but also seeking recreation and rest.

The house of Henry A. Dreer Co. will soon have its "Midsummer Strawberry List" ready for distribution. George D. Clark of this house has gone to California to look up seed stocks. The exhibit of Rose and Peony blooms in the Chestnut st. store windows still continues, and attracts a crowd of admirers. In Peonies, especially fine are the blooms of the Pottsi rosea, and Humel rosea; and in Roses, Earl of Warwick, Harry Kirk, and the Hon. I. Bingham. On one of the counters in the store lies today a Quaker Pie Pumpkin, as sound as when brought in from the field, evidencing its good keeping qualities.

Frederick J. Michell, of the Michell Seed House, 518 Market st., has gone South on a business trip for a few weeks. He will visit Washington, Baltimore, different parts of Virginia, and some other southern points. The Henry F. Michell Co., 1018 Market st., is featuring a collection of eight bedding plants of different kinds in a two-quart berry basket, which is meeting with a large sale. It is also offering "Tree Tangle Foot" with which to protect trees from the attacks of insects. This company has placed its orders for between six and seven million bulbs, and is now booking orders for future delivery. J. Rosnosky, traveling salesman for the company, says that the proper culture of French Trumpet Major for Christmas blooms is not in flats, by which method 60% often come blind, but in 8-in. pots, eight bulbs to the pot, wetted once, and placed in the dark, under a bench, until well rooted, and then brought out into the light. The opinion of others as to the best treatment of Trumpet Major would be profitable.

W. Atlee Burpee & Co., 475 No. 5th st., now have their Turnip Seed List ready for distribution.

The Callan Pure Seed Bill

This Bill, which has suffered many changes of phraseology and intent of purpose in its progress through the House of Assembly and the Senate of New York State, has now passed its third reading in the latter. As the Bill now reads, it forms a strong contrast to its original wording, and has been again considerably mutilated since its last publication in our issue of May 14, page 551.

"Section 342—Provisions concerning Actions" has been stricken out altogether. This is a very important part of the Bill, so far as relates to the seedsmen's interests.

In Section 340, the passage which originally read: "No person shall sell, offer, expose," etc., and which was changed by the Assembly to "No wholesale or retail dealer shall sell, offer, expose," etc., in the Senate Bill is now changed to read "No wholesale or retail dealer, firm or corporation, shall sell, offer, expose," etc. This, probably, is the most radical change in the Bill, and as now presented, has the appearance of a straight case of class legislation, as under its provisions, the producer (grower) can sell his seed to the consumer without his being in any way amenable to the law, whereas the "wholesale or retail dealer, firm or corporation" is bound on all sides by onerous restrictions.

Under these circumstances, it is of the utmost importance and to the advantage of the dealers throughout the State, that they write the Governor not to sign this Bill, basing their claim principally on the fact that the Bill as now passed is a class bill and does not cover as it should the point sought to be enforced by the Callan Bill, which is that the

interest of purchasers in general shall be enforced at all possible points of supply.

Boston Seed Trade

On account of the unusual rush of business, W. W. Rawson & Co. were compelled to omit publishing the April and May numbers of their very interesting monthly pamphlet, "Plant Talk." The issues, however, will be resumed for June.

French Seed Crop Report

According to a report which Charles Johnson of Marietta, Pa., agent for the United States and Canada of Denaille & Son, seed growers of Carignan, France, has sent out the prospect for seed crops of biennials, on June 6, was as follows:

Beet, good; Swiss Chard, badly flooded, nothing; Maogel Wurzel, good, except Golden Tinkard, of which roots lost, nothing; Kale, nothing; Brussels Sprouts, tall, badly flooded, nothing; Cabbage, generally good, but Select Early Jersey Wakefield and All Seasons poor, and Glory of Enkhuisen, Charleston Wakefield and Surehand, badly flooded, nothing; Carrot, good; Cauliflower, good; Celery, Paris Golden Self-Blanching, nothing, and all other varieties poor; Leek, all varieties, good; Onion, Ailsa Craig, good, other varieties little or nothing, large White Tripoli and White Victoria complete failure, with other varieties to be reported on later; Parsnip, good; Parsley, plain, Double Curled and Moss Curled, good, Emerald and Hamburg-rooted, badly flooded, complete failure; Radish, nothing; Ruta Baga, White Swede, nothing, other varieties good; Turnip, poor.

"Good" indicates that expectations have been based on favorable conditions continuing till crop has been harvested. "Poor" indicates that insufficient plants or roots survived or were preserved. "Nothing" or "complete failure" indicates that all plants or roots or bulbs perished or were lost. Good growing weather now prevails, with ample warmth and sunshine. All plants are progressing finely with the difference noted that growth appears a little slower in fields which were flooded the most.

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Furthermore, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

WE will advertise through your
paper again, beginning next
August (our season), as the
results from The Florists' Exchange
have been very satisfactory this
Spring.

Address of this Advertiser
on application.

Detroit

Once upon a time this Spring we
were ahead fully four weeks as com-
pared with other years, but the abomi-
nable weather conditions existing now
have all vegetation put back fully two
weeks from the average. During the
nights of May 31 and June 1 Coleus was
badly injured by frost at the Woodmere
Cemetery. Outdoor planting is far from
being completed and what was done
weeks ago shows the had effects of the
weather.

Growers of Carnations are complaining
to a great extent, partly because out-
door operations are so much delayed and
partly because the ground is in poor
working condition by virtue of continued
rains.

We all sympathize with our fellow
florist, Fred Pautke of Grosse Point, who
mourns the loss of his four-year-old baby
girl.

FRANK DANZER.

Skaneateles, N. Y.

J. G. White, the leading florist here,
is very pleased with his Winter and
Spring trade. Memorial Day was the
best he has ever had; a large cut of
Carnations and Sweet Peas helped him
out considerably. The long continued
wet weather has lengthened out the bed-
ding season and there are yet a great
many beds to plant. He has a very large
cemetery trade, vases being most gener-
ally used.

All his bedding stock is very good;
Coleus and Geraniums particularly so.
A good batch of Ferns and Asparagus
is coming along nicely for Fall and
Winter trade. A large block of Chrys-
anthemums promises well. The whole place
is kept beautifully neat and clean, fit
for any one to walk through. Some
wealthy New York families spend the
Summer at this delightful village.

H. Y.

New Bedford, Mass.

Business since Memorial Day has been
good. Things are now down to normal
again. Carnations are quite plentiful
and retailing at 50c. and 60c. per doz.
Good Roses are retailing at \$1.50 per doz.
Sweet Peas from indoors, are about done
for. Callas are pretty well played out.
Snapdragons are in good supply; 75c.
and \$1 per dozen retail is the general
price.

Outdoor flowers are plentiful, that is
those cut from shrubs. Everything is
looking green, the recent copious rains,
having a good effect on lawns, etc. Ge-
raniums are selling well. Fancies and
Daisies are about all gone, also Forget-
me-nots.

Everybody is well satisfied with Me-
morial Day trade, some of the florists
having to work all night to deliver or-
ders and make up.

S. S. Peckham had about 15,000 Stocks
to cut from, also thousands of Gerani-
ums. G. G. Davis had somewhere near
25,000 Stocks. Most all of the growers
got their Stocks and Candytuft in on
time.

R. H. Woodhouse was fortunate
in having about 3000 late Tulips to cut
from; these worked in fine. Wm. P.
Peirce and E. H. Chamberlain had some
fine Hydrangeas in pots which sold well.

Funeral work has been very good.
About all the young Carnation stock in
this section has been planted out; some
nice rains have helped to start them off
well. Many of our florists are busy plant-
ing young stock of 'Muus. There is a
good demand for Tomato plants, grown
in little pots.

HORTICO.

The Week's Work

BY
FRITZ BAHR

Asters

Planting Out the Late Sorts

The planting out of the late-branch-
ing Asters is taking up a good deal of
our time this week. Years ago, we put
this work off until we were through
with the main part of our Spring bed-
ding out for our customers, and the re-
sult, usually, was poor Asters during
August and September, and when we
had to fill an order which called for
good ones, it meant a telephone mes-
sage to the wholesale house. This is a poor
way for any retail grower who has a
place and facilities for growing his own
stock. Asters are far too important
flowers to be in any way neglected.
There may be times when it doesn't
pay to grow them for the market, but
as long as you have a demand for them
at home you should plant out plenty of
them. No matter how busily engaged in
filling window boxes or beds for your
patrons, don't let this interfere with at-
tending to the transplanting of the
young Aster stock. Take time to get
the plants to the field and do not allow
them to get crowded in flats or in the
cold frames; it doesn't take long for
them to grow spindly. If neglected
they will send up flower stems and
when this happens there is little hope
of ever getting good flowers from such
plants. Don't bother with such stock,
it is far better to invest a few dol-
lars in good plants.

Cyclamens

The Care of the Young Stock

If you didn't neglect the young stock
up to this date there is every reason
to believe that you will keep on giving
it the attention it deserves after this
date; but should, for some reason, the
little plants appear to be stunted it will
be far better to get a new supply and
throw your old away. For ordinary
use during the Winter months where a
good bushy 5" or 6" pot plant is de-
sired, such a you can retail at from
75c. to \$1.50, give me a good live 2"
pot plant now. Such a plant, if at all
given a show, will surely finish. Don't
get the impression that you haven't got
the right soil for the grounds to grow
Cyclamens successfully, for there are
many splendid specimens grown in poor
soil; and, again, plants in the very best
of leaf mold and mellow, sandy loam
are ruined by improper treatment. From
now on, the Cyclamens need quite a
good deal of moisture. To expose them
to a dry and hot atmosphere will ruin
the plants. If you have only a few
hundred, keep them inside, where you
can see and attend to them. During the
day time, keep the house, by spraying,
ventilating and light shading, as cool
as possible. Wet down the walks sev-
eral times during hot days. Refresh
the plants by spraying them; don't al-
low the leaves to wilt too much on ac-
count of sun and heat. A light spray-
ing toward evening is of great benefit
and helps to get fine foliage, and that
is so important. There is such a thing
as over-potting. If a plant is pot-
bound, and at the same time doesn't ap-
pear to have leaves in proportion, the
trouble is not with the soil or the size
of the pot, but the atmospheric
conditions which surround the plant.
Look for a remedy there and do not give
the plant a shift in order to make good.

Chrysanthemums

Some of the Early Commercial Varieties

To the beginner, the man who perhaps
grows only a small house of Chrysan-
themums, it is always important to
plant such varieties as are what we
term "easy to do." That means such
as will, if only given ordinary culture,
produce fair flowers. For him to plant
a dozen different early sorts would be
wrong, for he might have work to get
twelve salable flowers of one variety
ready for cutting at one time. A better
way, by far, is to rely on about three
standby's, such as have proved to do
well almost anywhere and which, while
perhaps not so finely finished or formed,
will give the greatest percentage of
salable flowers—that is the kind which
usually brings in the dollars and the
there are some which give the novel-
ties a trial, but a few of them will be
sufficient to give one an idea as to their
merits. Don't make the mistake of
filling up the benches with numberless
different sorts. We all have our fa-
vorites; some will respond better than
others to our way of treating them, but
there are some which are leaders and
found almost in every place; among
them, for a white, Estelle is one you

can always rely on. For a yellow, Monrovia is one of the best; and for a pink, Glory of the Pacific should be selected. Don't lose one minute in getting ready to plant the young stock out after this date. Most of us are getting all kinds of room from now on and the sooner the early 'Mums are planted the better. August 15 and later is about right to select the buds, if you want early flowers. There is plenty of time yet for the benching of the midseason and the late sorts, and I will write of them later, but the early ones should be getting established now in the benches, and those fortunate enough to have had a chance to plant them a month ago should feel well satisfied.

Perennial Notes

Work for June

We experienced a most successful season in the sale of potted hardy stock, especially perennials. There was a heavy call for Shasta Daisies, Coreopsis, Galliardia and a few others which were sown out last December and kept growing on in a cold house during the winter months; and while even at this date we have an occasional call for stock of this kind, it is as well to plant what is still on hand into the field, and by Fall any of them will make fine clumps for planting your customers' borders with. Select a well drained location and have the soil thoroughly, as well as deeply cultivated. The small plants of Delphiniums, Digitalis, Campanula, Dianthus and others sown out six weeks ago into the cold frame need transplanting now. Don't let them suffer for the want of room, keep them clean and the surface of the soil between them stirred up. It isn't water they are in need of most during July and August, but cultivation. Their time to grow is when the nights come again, in a couple of months from now. They are sending out roots now and are getting ready. It is not too late, by any means, to sow out a liberal sized package of most of the perennials we grow from seed. If at all interested, get busy! There is a greater demand for this class of plants than ever; are you getting your share of it?

English Ives and Vincas

Prepare Good Stocks for Next Year

After all, there are but few plant arrangements you can make which will be as satisfactory or give a richer effect than a veranda box filled with a good, dark red Geranium, and English Ivy for a vine or covering for the sides of the box. With us, there has been an unusually heavy demand for the Ives of late years. We have propagated and grown them for the bedding season for over thirty years, and have seen many Springs when the plants couldn't be given away. But of late years boxes for sunny places filled with them and Geraniums, and for more shady exposures tuberos rooted Begonias and Ives, have had a heavy call. Now is the time to plant out any small stock which may be on hand. In the field, they will by Fall make splendid plants for next Spring's use, when you have rooted cuttings or 2" stock to begin with now. If short on both, now is the time to buy a good supply. It is far cheaper to do so now and grow on your own plants than to wait till you are ready to use them for the boxes. I don't believe in the retail grower raising all of his stock. Quite often he can buy certain plants much cheaper and better from the specialist, but there are other things he ought to grow himself, and the Ives, and variegated as well as green Vincas, are among them. Neither requires any extra culture to get them fairly good, and all three are of great value to him. The market is usually cleaned up of any half way decent stock long before the bedding season is over. Only the man who has had to run all over in order to secure a few dozen plants for a certain order can appreciate what it means to him to have a good supply of his own on hand. Get ready now for the next season. See to it that a good number of each is planted out; neither of them

WE are entirely sold out in all the stock we have been advertising. Your paper certainly is a hustler.

Address of this Advertiser on application.

Why Delay Ordering Your Begonia Gloire de Lorraine?

You will soon want them sure. We are equipped better than ever to supply Excellent stock 2½-inch pots, twice transplanted, at \$15.00 per 100, \$140.00 per 1000. CYCLAMEN, 3-inch pots, \$7.00 per 100; 4-inch pots, \$10.00 per 100. POINSETTIAS, 2½-inch pots \$5.00 per 100; \$45.00 per 1000. Write us for Katalog.

SKIDELSKY & IRWIN CO., 1215 Betz Bldg., PHILADELPHIA, PA.
Please mention the Exchange when writing.

will require any especially prepared soil; they grow and thrive most anywhere, but, as with almost everything else, good soil deeply cultivated produces best results.

Bouvardias

Includes Some in Your Next Winter's Stock

It is time now to plant out a good number of these valuable plants. A part of a bench filled with them next Winter will pay for themselves as well as anything the retail grower can handle. Small plants, out of 2's or 2½'s planted out in the field now and pinched back will make fine stock for housing next September. Another of the useful plants for many of us is the Jerusalem Cherry, or Solanum capsicastrum; the small seedlings which by this time are either in 2½" pots, or flats, should be planted out now for the Summer. They also need pinching back otherwise they might grow into tall, spindly plants, and dwarf bushy specimens are what you want. Give them room in and between the rows, so as to give each plant a fair show. Quite a number of growers prefer pot culture for them during the Summer months, as in that way they obtain plants which, while not so large as the ones planted out, produce a greater amount of fruit, and that means a good deal. It is an excellent plan to give both methods a trial. You may be more successful with the outdoor culture, because the plants are more easy to attend to during the hot months of July and August when in the field than when in pots.

Connecticut Horticultural Society

Pansy Night was observed by our Society on the 27th of May, though a little late in the season; and when any one among us speaks of Pansies, John Gerard, our Pansy specialist, of New Britain, comes into view as an inseparable concomitant. Hence we had the pleasure of listening to an able address by Mr. Gerard on "The Merits of the Different Pansy Strains." Thirty-eight years ago, he began the cultivation of his favorite flower; and he has tested nearly all the novelties since produced, and has found only about a dozen to be of special merit. He traces the history of the classifications of the Pansy, commencing in 1840, when they were first divided into French, English and German strains; the first five-blotched type having originated in Switzerland. He illustrated his descriptions of the various strains by picking out specimens from a beautiful collection of blooms brought for this occasion and not for competition. In the advancement in the production of beautiful colors in Pansies, he stated that scarlet is the only color missing to complete the red shades, and that the prominent growers in Europe had offered a reward for the origination of a Pansy of that color. At the close, Mr. Gerard answered many questions regarding the culture of this flower, and emphasized heat as being its greatest enemy.

A fitting vote of thanks was expressed to the speaker for giving us the benefit of his long and intelligent study of the subject. President Huss introduced him as being one of the highest authorities in the country, in all matters pertaining to the Pansy.

Oscar F. Gritzmacher of New Britain, and Wm. W. Myers of Hartford, brought handsome collections of Pansies for competition; and the judges, Messrs. Alex. Cumming, Jr., James P. Ralph and Howard A. Pinney, awarded a certificate of merit to Mr. Gritzmacher, and recommended that a vote of thanks be given to Mr. Myers. The latter also exhibited a specimen Lemon, grown in his greenhouse, on a tree three years old and two feet high, the Lemon weighing twelve ounces.

One new member was received into the Society, S. H. Bancroft, of 20 Bodwell street, Hartford.

Our schedule for the two Fall exhibitions is now about completed; and we are thankful for two premium contributions by seedsmen, one of \$25 by Arthur T. Boddington of New York, for vegetables; and one of \$5 by Henry A. Dreer of Philadelphia, for his new "Susan" Dahlia. All such gratuities tend to the betterment of our exhibitions, and also increase the friendly rivalry among exhibitors. We hope to receive other similar offerings.

The recent lecture by Prof. John J. Ruegg, of Clifton, N. J., on "The New Science of Fertilization and Insectization" was much appreciated by a large audience; and some that hitherto have looked upon the Lava fertilizer question as unworthy of attention, have expressed much interest in the subject, and a desire to see this idea experimentally tested.

Our meeting of June 24th will probably be observed as "Hardy Rose Night," with a fitting paper on the subject.

President John F. Huss expects to sail, on July 7, for a two-months' sojourn in his native country, Switzerland.

GEORGE W. SMITH, Secretary.
Melrose, Conn., June 3, 1910.

WE PRINT CATALOGUES

Estimates Cheerfully Furnished

We feel that you cannot but agree with us when we make the statement that our firm, as Expert Horticultural Printers, with many years of experience behind them, and with all the best and latest facilities for this class of printing, are in a position to produce for you a catalogue that will be far superior to any that could be turned out by a firm not making this work a specialty. In these days the best printed, best illustrated and generally best looking catalogue is the one that purchasers examine the most closely; therefore it stands to reason that to have as much chance of making sales as any of your competitors your catalogue or printed matter must be fully up-to-date.

In conclusion, we feel that our prices are as low as any when quality and results, and the free use of our illustrations are taken into consideration.

AMERICAN ASSOCIATION OF NURSEYRYMEN

F. H. Stannard, Ottawa, Kan., President; N. P. Stark, Louisiana, Mo., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., treasurer. 25th Annual Convention at Denver, June 8, 9 and 10.

MUSKOGEE, OKLA.—Application was made in the Superior Court on May 26 for a receiver for the Hyde Park Nursery Co. The date fixed for answer to the summons is June 24.

SHERMAN, TEX.—The Texas Nursery Co. has purchased 1000 acres of land in Hidalgo County, for a cash consideration of \$40,000. The company will grow Oranges and Grape Fruit.

FRANKLIN, MASS.—M. J. van Leeuwen, manager of the Continental Nurseries at this place advises us that his firm have had a splendid although a very short season. The notice given in the EXCHANGE last Fall, of Berberis Silver Beauty, was the means. Mr. van Leeuwen reports, of their making considerable sales of that stock.

THE EVILS OF INSPECTION.—According to a La Crosse, Wis., newspaper, a large shipment of Oaks, Roses, fruit trees, and other stock for several days awaited in that city the arrival of Entomologist and Chief Inspector J. G. Sanders from Madison. The newspaper says: "The shipment arrived from Europe in fine condition and Inspector Sanders was notified immediately. Telegrams and letters have failed to bring him and park officials are getting uneasy, as the plants and trees should be planted."

G. W. Van Gelderen of Boskoop, Holland, sailed for home June 8, per S. S. Lusitania. That gentleman reports that from his observations during the four months he has traveled in the United States for the purpose of soliciting orders for nursery stock, the demand for same, it is apparent to him, has increased yearly, and he believes there is a good future in this country for the nurserymen. As to his own business, he expresses himself as being well satisfied, having taken more orders than ever before.

Our contemporary, The National Nurseryman, published at Rochester, N. Y., has disseminated a very nicely printed pamphlet of 64 pages, gotten up with the idea of advancing interest in the 35th annual meeting of the American Association of Nurserymen at Denver, Colo., which takes place this week. The pamphlet gives a résumé of the program, a short history of Denver, an article on horticulture in the West, and includes accounts of many of the prominent Western nurseries, these being embellished by photographs of several well-known owners thereof. A few well selected and handsomely printed views of Denver and vicinity serve to give particular value to this publication. We congratulate our contemporary on its enterprise.

Two inquiries came to this department this week, one as to what to do to protect Elm trees from the beetle which eats the leaves of the tree, the other asking what it is that eats the leaves of Pine trees, "leaving behind a coical, brown gummy substance."

Last year about this time, an official of one of our spraying departments handed in the following in response to an inquiry regarding the Elm leaf beetle. "As soon as the beetles appear, spray trees with arsenate of lead, 3 lbs. to 50 gallons of water; haad trees with burlap, tied loosely, as soon as the beetles commence to pupate; take off every three days and destroy the catch; when effects of arsenate of lead have disappeared spray again." This is good advice. Formerly Paris Green was used for spraying, but arsenate of lead is more popular today, because it does the work as thoroughly and adheres to the foliage better. When trees are large a man climbs them with the hose while his helper does the spraying.

The second inquiry, which refers to something eating the Pine needles, refers without a doubt to the bagworm, a too well known enemy of some evergreen trees, particularly of the Pines and Arborvites. The "conical, brown, gummy substance" is the home of the worm, which it carries about with it; when it is feeding it shows its head only, the rest of its body being in its house, thus those unacquainted with it have no idea of what it is that does the damage.

This worm can be destroyed easily, either by spraying with arsenate of lead or by picking off all the bags seen. The latter plan is an easy one, and takes less time than spraying. The worms should be burned when gathered.

Bechtel's Double-Flowering Crab

Since writing the notes on Bechtel's double-flowered Crab, which appeared in our notes recently, we have secured a good photograph of a nice young tree of it in perfection of bloom, which we illustrate herewith. This tree, as understood, is a double form of the wild Western Crab, *Pyrus Ioensis*, and assuredly it is one of the handsomest of early Spring blooming small trees, its pink flowers resembling small double Roses.

If one's recollection is not amiss, it was discovered by the Bechtel folks in the corner of an old garden, where it must have been planted by some one who first discovered it; but we are not sure we have this quite right.

It will soon be the season to bud this ornamental tree on the common Apple stocks, July and August being the usual months for the work.

If florists would have a lot of these in pots to sell in Spring, when in flower, there would be few left unsold. It is a beautiful thing.

[Mr. Meehan's first notes on the Bechtel double-flowered Crab appeared on page 895 of our issue of May 21. Subsequently, in our issue of June 4 (page 991) Professor John Craig of Ithaca, N. Y., writes a warm recommendation of the Bechtel Crab.—Ed.]

Pyrus Ioensis. Bechtel's Double Flowered Crab

Golden Privet for Hedging

The California Privet with light golden leaves is well known to almost every one who has had to do with the common green one, because the golden form is apt to run back to the green again, and then, when this green part is propagated from, very often its shoots will take on the golden leaves afresh. This has deceived many into the belief that they had found a treasure when, unaware of the fact of there being a golden leaved one known, they discovered a branch with golden leaves springing out from their green bushes. This golden leaved form did not satisfy those who grew it. It has a habit of running back to the green form, making much work in cutting out this latter growth, besides that it seemed to lack the vigor of the ordinary green one.

Reference is made to this one as a preliminary to the mentioning of a much superior yellow leaved variety now getting well known about Philadelphia. The yellow color is of the best, its growth also is all that could be desired so that its great popularity is well merited. This latter is now usually understood to be intended when speaking of the Golden Privet.

Whether as a hedge of the usual size or as one of a dwarf character, it fills the place well. It is frequently found used as a golden border to flower beds, kept down in height to about 12 inches; again it is seen as a hedge of four feet or more, and in either of

these as well as in other positions, it always appears as a most attractive object.

Grown in tubs for lawn use to place near dwellings or in other positions it is unsurpassed in its way, there being no other golden leaved plant of greater merit. Golden Yews are always in demand, and well they may be, but in their case the golden color is not as prominent toward the close of Summer as at its commencement. The Yew is evergreen, it is true, but so is the Golden Privet when in a building in Winter and even when outdoors in a well sheltered place.

Andromeda Japonica and floribunda

One of our readers, who had found much trouble in getting something nice to plant at the corners of an enclosed cemetery lot, tells us he has hit on the very thing in the evergreen bush, *Andromeda Japonica*. He had thought of many things and had tried quite a number, but there seemed objections of one kind and another to all tried or thought of until, seeing some of this *Andromeda*, he secured plants thereof, and finds now they answer perfectly, being evergreen, bushy, dwarf growing and bearing paicles of lovely white flowers in early Spring.

Its hardiness, too, is greatly in its favor. He was undecided at first between it and our native species, *A. floribunda*, but the brighter green leaves and more compact habit of the former won the day as against this latter. *A. Japonica* possesses another feature not often referred to which is that the foliage, when unfolding in early Spring, is of a reddish pink color, contrasting well with the green of the older leaves.

It is an evergreen of great merit wherever used, but it is referred to now as a suitable one for cemeteries because so many persons inquire of florists for a hardy evergreen of dwarf compact habit for this purpose.

Salamoni Willow *Salix Babylonica Salamoni* is a weeping Willow, and may be described as sturdier and less drooping. For many situations it is better adapted than the type, that is, wherever a less drooping one is the main consideration. Those unaware of there being such a kind in cultivation become puzzled when they come on it for the first time. They assume it to be a weeping Willow, but just which one they cannot tell. A Philadelphia nursery claims to have had it years ago, in a collection of Willows imported from Germany.

The greater vigor of the tree, the branches and leaves larger than the common *Babylonica* and its moderate drooping features, distinguish it from the type. The appearance of *S. Salamoni* is in every respect bolder than the type.

Is Magnolia glauca Raised from Seeds?

At this season the fragrance of the flowers of *Magnolia glauca* cause many inquiries for the plants from those who meet with the blossoms. But few nurseries have a good stock of this *Magnolia*, many of the proprietors claiming inability to

raise them from seed. There is no trouble in getting the seeds of this and all other *Magnolias* to grow, treated as recommended in our recent article "Sowing seeds of *Magnolias*." One reason why plants are not prominent in nurseries is because they are not set in the best position. They like a wet place, without a doubt. It is claimed by some that because found wild in low ground it does not follow this is from choice, it may be from necessity or other circumstances. While true in the case of some plants, this *Magnolia*, while it will thrive well in ordinary situations, is ever as luxuriant as when growing in low deep soil.

In addition to the beauty and fragrance of its flowers the bright green of its foliage must not be overlooked, for this is a very pleasing feature at all times. In our northern climate the foliage is not persistent excepting in well favored places, where hard frosts do not catch it. When near belts of evergreens or other trees that shelter them the leaves are persistent as they are in the South, and even with us, when plants are young and get well covered with snow in Winter, Spring finds them still carrying their foliage in good condition.

In mild climates it makes little difference whether this *Magnolia* is planted in Fall or Spring, but where Winters are severe, Spring is the better time by far.

Calochortus

Observations by P. D. Barnhart of Los Angeles, Cal., on How to Successfully Grow this Gorgeous Species of Bulbous Flowers

CALOCHORTUS. This queen of California wild flowers has not been the success when brought under cultivation, even in this the land of its nativity, that its merits warrant, and the expectations of those gardeners who love to see beautiful subjects growing in their gardens. I tried them repeatedly while living in the East, and while they were not an absolute failure they were so inferior in size and color that their culture was abandoned. During April and the first half of May of this year I have roamed over the hills of this State where these beautiful subjects grow to perfection and, charmed with their beauty, sat down among them with the express purpose of thinking out the reasons why we fail, even here, to successfully grow them to that degree of perfection in which we find them in their native habitat. The first essentials to learn in the cultivation of any plant are the conditions and environments under which it grows naturally, and having learned these, if we can imitate them artificially we may reasonably hope to succeed.

For the benefit of the readers of these notes, I shall endeavor to state the condition of both soil and climate as it exists where they grow. First then, the soil. It is a clay or stiff, black adobe, in which they are found, six to eight, even ten inches, beneath the surface. Frost never reaches them. They are started into growth when the Winter

immediately after blooming, and kept in sand, at least six inches deep, and in such manner that mice cannot get at them, until the season for planting them returns in November or December. There are a number of other flowering bulbs of the same family—Liliaceae—which flourish under the same conditions, and if planted in the same bed and given the same treatment would give a succession of bloom from March 1 to July. Brodiaea, of which there are five sub-genera, all of them of some shade of violet or blue; Bloomeria, which is yellow; Allium serotum, the flowers of which are composed of three sepals and three petals, magenta colored, borne on a scape a foot high. This is a very attractive flowering bulb and, as the specific name indicates, the flowers which open have the appearance of six saw teeth.

The practice has been, and is yet, to water them as we do Tulips, Narcissus and other flowering bulbs. Herein lies the cause of their failure to do their best. I also discovered that they have made their growth, and the bulb is sufficiently mature to be collected without detriment to them as soon as the flowers begin to fade, which facilitates the work, and when that fact becomes generally known we may hope to get them in greater quantities, and perhaps at less cost. But no matter about the first cost, after we have learned how to grow them successfully, they can then be propagated by seed or by the bulbets which grow on the scape between the corm and the surface of the soil. These observations are for that part of the State of California where the average annual rainfall is from six to sixteen inches, and that during the Winter or rainy season only, where the temperature ranges from sixty-five to one hundred degrees and the relative humidity from ten to sixty-five per cent.—generally about fifty per cent. Never lose sight of that important factor, humidity, which makes for success or failure in gardening to a greater degree than is generally supposed.

Coming Exhibitions

Boston, Mass., June 14 and 15.—(Postponed from June 9 and 10, owing to cool weather). Peony exhibition of the American Peony Society and the Massachusetts Horticultural Society at Horticultural Hall, 300 Massachusetts Ave. Secretary of the Peony Society, A. H. Fewkes, Newton Highlands, Mass.

Newport, E. I., June 23 and 24.—June exhibition of the Newport Horticultural Society at Masonic Hall. Secretary, Daniel J. Coughlin.

Orange, N. J., October 1, 1910.—Fifth Annual Dahlia Show of the New Jersey Floricultural Society, from 4 to 10 p.m. Schedules on application to William Reid, secretary.

St. Louis, Mo., Nov. 8-12, 1910.—St. Louis Horticultural Society, Fourth Fall Floral Exhibition and Pomological Display at the Coliseum, Jefferson & Washington ave. Otto G. Koenig, Secretary, 6473 Florissant ave. St. Louis.

Tarrytown, N. Y., June 14.—June Show of the Tarrytown Horticultural Society. E. W. Neubrand, secretary.

POTASSIUM SILICATE AS A FERTILIZER.—Comparatively recently a new potassium fertilizer has been placed upon the market in the form of potassium silicate. It contains about 9-12 per cent. of potash, and although insoluble in water, it is readily absorbed by the roots of plants. Potash silicate contains no salt or other chlorides, and in this respect would appear to possess some advantage over kainit and muriate of potash, the chlorides in which are sometimes found to act deleteriously on growing plants. Where a slow-acting and lasting source of potash is required, this new fertilizer is worthy of trial. Satisfactory results have been obtained in most cases where it has been tried in the garden and field.—*Gardeners' Chronicle* (Eng.).

The Florists' Exchange No. 2 Duane St. New York

Calochortus

rains begin, which varies as to the time of year. Sometimes enough moisture will dampen the earth to start them into activity as early as October, then again not before the middle of December, and by March 1 they will have made their growth of foliage which is in most varieties two narrow leaves a foot long. The flower then begins to push up and out of the ground, appearing from the fifteenth of April to the first of July, according to the elevation above sea level in which it is found, those growing in the lowest ground blooming first. As a rule the rains have ceased by the time the flower stem appears, the foliage has died away, and the flowers show in all their glory, in soil so dry that one is led to wonder how the bulb will survive. The atmosphere, warm during the day, is cool at night and no fog or even dew moistens it.

To the readers of these notes who live in this State, I would advise that they plant the bulbs in beds by themselves, which have been properly prepared and moderately fertilized, not allowing a drop of water to be applied to it after the soaking given them when planted, and under no circumstances permitting a hoe to be used. Should weeds appear take them out by hand.

To those who have beds devoted to Cacti, Calochortus are admirably suited, and when grown therein need not be lifted when through blooming. If, however, they are grown in the ordinary garden, where flower beds are worked to their full capacity, they must be lifted

High Prices Asked for Daffodils

We are in receipt of a special trade offer of Daffodils, May-flowering Darwin and Cottage Tulips, dated May, 1910, from Barr & Sons, 11-13 King st., Covent Garden, London. The price asked for certain varieties of Daffodils serves to show there must be great public interest in that country in new varieties. For instance, Daffodil Bedouin is offered at £16, Cecil Rhodes £4, 10s., C. H. Curtis £7, 7s., Masterpiece £15, Peter Barr £6 each, and numerous other varieties at somewhat lower figures.

This special trade offer is particularly interesting as showing the value at which desirable new varieties of Daffodils are held on the other side.

In the price list is included two Anemones collected for the firm in Greece—one, Anemone fulgens Græca, the great scarlet Windflower, with much handsomer flowers than those of the common Anemone fulgens, being described as of a rich glowing crimson scarlet, with broad petals and black central boss; the other, Anemone, Beauty of Athens, a remarkably pretty variety of Anemone Hortensis (stellata), bearing flowers ranging in color from brilliant carmine to cherry rose and sometimes a blush.

VINCA VARIEGATA 4 inch \$10.00 per 100.
GREVILLEA ROBUSTA 4-in. (splendid for Vase and Boxwork), \$10.00 per 100.
ASPARAGUS SPRENGERI Heavy tops, \$6.00 per 100.
 Strong, thrifty stock.

The Horticultural Society of New York

A meeting of the Horticultural Society of New York was held at the Museum Building, New York Botanical Garden, on Saturday, June 4. At this meeting twenty-six new members were elected, seven of which were life members, the remainder annual members. This is most encouraging progress, and it is hoped that the increase in membership may be kept up. All that is needed is a large membership to make horticulture an important element in New York. Let all join the Society, and this result will soon be accomplished.

The meeting of the Society was followed by a lecture by Dr. N. L. Britton, on "Summer Flowers." The lecture was illustrated with colored lantern slides.

The Summer Exhibition

The important feature of the meeting, however, was the Summer exhibition given in connection with it. This was open in the Museum Building, on Saturday afternoon, from 2 to 6, and on the next day, Sunday, from 10 to 5. There was a large attendance on Saturday, and also on Sunday, in spite of the inclemency of the weather. A bright day would have insured a large crowd. The exhibitions of the Society are becoming more and more popular and well known, and the feature of holding them on a Sunday seems to be fully appreciated by flower lovers.

There were three classes of entries: Class P., Peonies, under six subdivisions; Class M., Miscellaneous, under nine subdivisions, and Class S., Special. Between thirty and forty entries in all were made by commercial and private growers. Two large exhibits of Peonies were made in Class P. 6, covering the largest and best collection of Peonies, not less than six flowers of a kind, one by George H. Peterson of Fair Lawn, N. J., who showed eighty-two varieties, among which Duchess de Nemours, Mme. Calot, Mons. Martin Cabuzac, and Madam Barillet Deschamps were especially beautiful; and another exhibit by F. R. Pierson Co., Tarrytown, N. Y., which showed fifty varieties, among which General MacMahon, Mons. Jules Elie, and La Tendresse were very fine. Both of these exhibits comprised many blooms of very fine form and color and were very meritorious displays. In Classes P. 1, 2, 3 and 4, for the best three varieties of six flowers each, No. 1, in white, No. 2, in light pink, No. 3, in rose, and No. 4, in crimson, entries were made of some wonderfully fine blooms, by the same exhibitors, and by Albert Lahodny, gardener for T. A. Havemeyer, Hempstead, N. Y., in whose exhibit the variety Sarabande was especially attractive. A collection of handsome single Peonies, three varieties, was shown by F. R. Pierson Co., Tarrytown, N. Y.

In Class M. 1, for the best collection of hardy Roses, two exhibits were made, one by James Stuart, gardener for Mrs. F. A. Constable, Mamaroneck, N. Y., who showed twenty-seven varieties, and another by F. R. Pierson Co., of six varieties. In the Stuart exhibit was a vase of very fine Dawsons; and in the Pierson display one of beautiful white Rosa rugosa. In Class M. 2, for the best collection of hardy flowering shrubs and trees, there were two remarkably fine exhibits, one by Frances Milne, gardener for E. H. Weatherbee, Mamaroneck, N. Y., of forty-four varieties, and another by Albert Lahodny, gardener for T. A. Havemeyer, Hempstead, N. Y., with forty-two varieties. Both these exhibits were of marked excellence.

In Class M. 3, for the best exhibition of hardy Rhododendrons and Azaleas, or either, there were three exhibits, one by Albert Lahodny, one by F. R. Pierson Co., and another by Howard Nichols, gardener for Mrs. J. B. Trevor, Yonkers, N. Y., with fifty, twenty-four, and twelve varieties respectively. These three exhibits of these most beautiful, perhaps, of all flowering shrubs, deservedly attracted much attention.

In Class M. 4, for the best collection of hardy herbaceous plants there was keen competition shown in three exhibits of great excellence, and much admired. One exhibit was made by Bobbink & Atkins, Rutherford, N. J., an almost unsurpassable collection of ninety-five varieties, among which may be noted the Oriental Poppies, Delphiniums, Columbines and the comparatively rare Lilium tenuifolium, with its scarlet blooms, and the very striking Eremurus robustus, with its long spikes of flowers; another exhibit was by Albert Lahodny, with fifty-seven varieties, among which were double Pyrethrum through the whole range, nearly, of colors; a third exhibit was by Frances Milne, in which was noted that beautiful little perennial, Heuchera sanguinea.

There were only two entries in Class M. 5, for the best collection of Irises, but these were very large, one by Albert Lahodny, gardener for T. A. Havemeyer, numbering one hundred and twenty-eight varieties, covering the whole range of Iris colors and combinations of colors; and another by Bobbink & Atkins, Rutherford, N. J., with fifty exquisite varieties of blooms of fine quality.

In Class M. 6, for six best Orchid plants in bloom, six varieties, there was one entry—by James F. Dye, gardener for Clement Moore, Hackensack, N. J., in which, especially beautiful and well grown, was a plant of Laelia purpurata, and another of Laelia tenebrosa grandes.

In Class M. 9, for the best collection of cut Orchids, there was one entry, by J. A. Manda, West Orange, N. J., with an attractive collection of exquisite varieties, among which may be noted two Cattleyas, a gigas Sandersoniana and Gaskelliana var. Helen Roebbling.

Outside of the regular classes, three vases of beautiful Campanulas and three of Sweet Peas, and some beautiful Iris, were exhibited by George Wittlinger, warden for Miss Blanche Potter, Ossining, N. Y.

John Lewis Childs, Floral Park, N. Y., exhibited six vases of beautiful Gladioli, among which was noted Gladiolus Childsii Irene, with very attractive blooms. Mr. Childs also showed thirteen other interesting blooms.

Bobbink & Atkins showed a single vase of Rosa rugosa, var. Souvenir de Pierre Lapidrieux, with splendid foliage and rich blooms.

Considering the space available, the flowers were well staged and much credit is due to the committee in charge for the successful conduct of a meritorious and pleasing exhibition, which gave pleasure to a very large number of visitors.

The Awards

Peonies.

For the best 3 white varieties, 6 flowers each—1, Geo. H. Peterson, Fair Lawn, N. J.; 2, F. R. Pierson Co., Tarrytown, N. Y.

For the best 3 light pink varieties, 6 flowers each—1, Geo. H. Peterson; 2, T. A. Havemeyer, Hempstead, N. Y., gdr. Albert Lahodny.

For the best 3 Rose varieties, 6 flowers each—1, Geo. H. Peterson; 2, F. R. Pierson Co.

For the best 3 crimson varieties, 6 flowers each—1, Geo. H. Peterson.

For the best collection of singles, 3 flowers each—1, T. A. Havemeyer.

For the largest and finest collection, not less than 6 flowers of each variety—1, Geo. H. Peterson; 2, F. R. Pierson Co.

Miscellaneous.

For the best collection of hardy Roses—1, Mrs. F. A. Constable, Mamaroneck, N. Y., gdr. James Stuart; 2, F. R. Pierson Co.

For the best collection of hardy flowering shrubs and trees—1, E. H. Weatherbee, Mamaroneck, N.Y., gdr. Frances Milne; 2, T. A. Havemeyer.

For the best collection of hardy Rhododendrons and Azaleas, or either—1, T. A. Havemeyer; 2, F. R. Pierson Co.

For the best collection of hardy herbaceous plants—1, Bobbink & Atkins, Rutherford, N. J.; 2, E. H. Weatherbee.

For the best collection of Irises—1, Bobbink & Atkins; 2, T. A. Havemeyer.

For the best 6 Orchid plants in bloom, 6 varieties—1, Clement Moore, Hackensack, N. J., gdr. James F. Dye.

For the best collection of cut Orchids—1, J. A. Manda, West Orange, N. J.

Special.

For display of Campanulas and Sweet Peas—Miss Blanche Potter, Ossining, N. Y., gdr. George Wittlinger.

For display of Ismenes, Gladioli and miscellaneous flowers—John Lewis Childs, Floral Park, N. Y. Honorable Mention.

Cattleya Gaskelliana, var. Helen Roebbling—J. A. Manda, certificate of merit.

The Orchid as a Commercial Proposition

Paper read by Alphonse Pericat before the Florists' Club of Philadelphia, June 7, 1910.

Your committee have gotten me here tonight to talk Orchids very much against my own inclinations. In the first place, it is a very difficult subject and, in the second place, I hardly know what to say. Of course, I have been in Orchids all my life, both in the amateur and commercial lines, but the field is so large that it is difficult to choose any phase of it that would be interesting to you. I think the best I can do under the circumstances is to indicate a few of the species and varieties that have so far proved themselves commercially possible. There is no doubt but what the Orchid has come rapidly to the front commercially in the past ten years, and it may be confidently looked forward to as a constantly increasing factor in the flower markets of America.

The first of the family important commercially is, of course, the Cattleya. This species with its many varieties is so showy and of such varied colors and can be had by successive plantings through so long a season, that it is small wonder it takes premier position. The best of them all is, of course, C. Trianae, because it is not only a lovely flower, but also because it blooms at a season when cut flowers are most in demand. Next to that comes C. labiata, which flowers in the Fall when Roses and Carnations are scarce and variety is needed to supplement the Chrysanthemum and other Fall flowers. The other members of the same family of importance are C. Schroederiae and C. Mossiae, as these come in succession and flower at a time when the others cannot be had. C. gigas and C. Gaskelliana are, of course, the important ones for Summer flowering.

Next to the Cattleya the important Orchid commercially is the Cypripedium. C. insigne flowers more freely than any other and is most easily grown. C. Leeanaum and C. Spicerianum rank next. The Cypripedium can be grown and sold for less than other Orchids, hence it is one of the most important although not the showiest.

On account of the demand for white Orchids in the Fall, Dendrobium formosum occupies a very important place. The plants go back after two or three years and it is necessary to renew stock. D. Phalaenopsis is fine for sprays.

Oncidium is of great merit in many ways, the several varieties flowering in succession from September to February. They are much liked for decorations on account of their spray formation and beautiful colors. Some are easily managed, some not. O. splendidum is one of the best growers; it is a fine flower and likely to be more grown in the future. O. varicosum Rogersii is a favorite on account of its fine spray which is easily adapted to many decorative purposes. The plants run out quickly, however, very much the same as D. formosum.

These species and varieties mentioned are practically all that are much grown today; but there are a number of others that will be on the market soon, as the demand is constantly extending. Phalaenopsis amabilis is one; this can now be got from the Philippines at a very reasonable price and will be heard from shortly. P. Schillerianum is also a good one and its pink is a good

New Seedling Rambler Lady Blanche
Originated by M. H. Walsh, Woods Hole, Mass.

contrast to the white of P. amabilis, flowering about the same time.

Vanda coerulea is a good species to grow for cut flowers and can be made to pay. It is about the only one of its color (blue) that is worth anything to grow.

In conclusion, let me add a serious and emphatic caution to all Orchid growers. Never sell your flowers too cheap. The Orchid is an expensive flower to grow, but

sometimes there are too many of them at one time. Rather lose a few of these than sell them cheap. That breaks the market and you lose far more in the long run. The market is not easily mended once it is broken. Therefore, it is good policy for the grower to be very careful not to overcrowd with more than the market will absorb.

Popularity of the Marguerite

One of the greatest lines handled in this country is the Marguerite, and one of the biggest and finest stocks is continually to be found near London at Bntler Bros.' Nurseries, Bealey Heath.

The Marguerite is a close relative of the common Ox-eye Daisy of our fields, and is quite distinct from the Shasta type. It is of French origin, and the great Henry Cannell was one of the first to handle it. He first saw it at an exhibition in Paris. Seeing that it was distinct from the common Daisy, he secured a stock but for a long time the variety proved a "white elephant," for it got about that it was merely the Ox-eye Daisy, and people refused to touch it, despite Cannell's advocacy. Eventually, however, the yellow form was introduced and noting its value people took to it, and, incidentally, the white found favor also, and has retained it. For Summer hedging it is used by the million, and from one year's end to another, especially in the early Spring, the white Marguerite is one of the chief market flowers.

The plants are grown in 4½-in. pots for market, and the standard price is about 6/ (\$1.50) per dozen. The most essential feature of Marguerite culture is coolness. Too much heat means thin, weakly growth, and to counteract this tendency all market men treat their plants to a brief period out of doors before flowering.—T. A. W., Eng.

M. H. Walsh's New Rambler Rose, Lady Blanche

We have pleasure in introducing to our readers another promising Rose, the production of that skilled hybridist, M. H. Walsh of Woods Hole, Mass.

This new Rambler Rose, Lady Blanche, shown herewith is an American-raised Rose produced by Mr. Walsh at Woods Hole, and is distinct from any of the white Rambler Roses in cultivation, so far as Mr. Walsh is aware. It is a seedling and not a sport. It has fine glossy Wichuraiana foliage, double flowers of the purest white, and has the added merit of being fragrant. The Rose is perfectly hardy, a free grower and floriferous.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsman and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. DeLa Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. DeLa Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9.30 to 12. Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Jos. H. Sperry, our representative, care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following. Likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

For wonderful word painting in which will be found countless grains of strong common sense suggestions, do not fail to read, in this week's columns, the talk of our gifted Nebraska florist and nurseryman, C. S. Harrison, before the Am. Ass'n of Nurserymen.

The ranks of the florists are exceptionally well filled with arators and writers possessing strong individuality and charming descriptive powers, developed, without doubt, through their constant communing with Nature's life, and, in this great art, C. S. Harrison outtops them all. His present effort should be spread before millions.

The Approaching S. A. F. Convention

Mr. Chas. H. Vick, Superintendent of the Trade Exhibition, writes us as follows:

I am sending a diagram of the space in Convention Hall for the S. A. F. Trade Exhibit, and you will note that fully 60 to 70 per cent. of the space is already reserved. There are a number of large growers, who will undoubtedly exhibit, from whom I have not heard. I wish you would kindly say for me, in your paper, that if all manufacturers, florists and florists' supply houses contemplating exhibiting, would kindly notify me at once, stating required number of square feet of space it will facilitate matters greatly. A diagram similar to the one sent you [and published in this issue] with each exhibitor's space designated, is being sent out to the general trade.

The Souvenir Album, on which the local committee are working, will certainly be a work of art. We expect to have it out about the first of July. It will contain one hundred pages, with many original views of the streets, parks, private residences, public buildings, river and lake, also several interesting articles as follows:

"Rochester Florists," Geo. B. Hart
"Rochester from the Nurserymen's Viewpoint," William C. Barry,
"The Seed Industry," Charles W. Grosman
"Rochester Florists' Association," Fred W. Vick
"Rochester," Sec'y Chamber of Commerce

Every member of the S. A. F. will receive a copy. It will be so attractive and interesting it will be retained for a long time as a memento and for this reason will be well worth the cost of advertising space.

THE ADVTS. IN THE FLORISTS' EXCHANGE are ALWAYS read.

The circular generally goes into the waste basket WITHOUT BEING READ.

American Gladiolus Society

At the organization meeting of this Society in Boston on May 27, it was determined that it should affiliate with the S. A. F. & O. H. just as soon as the latter Society makes complete arrangements to that effect covering all other kindred societies.

The date of the annual meeting of the American Gladiolus Society has been fixed to take place at the same time as that of the S. A. F. The middle of August is an appropriate time for a Gladiolus exhibition, and this fixture will make it necessary to travel to but one place in order to enjoy the proceedings of both societies.

With regard to membership: Opportunity to all desirous of becoming charter members of the Gladiolus Society will be held open until the meeting at Rochester in August; those wishing to join up to that date can do so for the first year on payment of \$2; after that time the initiation fee will be \$1 and the annual dues \$2. Those desirous of sending in their membership application now can do so by applying to any of the officers named in our issue of June 4. The officers elected at the Boston meeting hold over until August, 1911.

English Horticultural Notes

The Temple Show

The great Spring show of the Royal Horticultural Society, familiarly spoken of as the Temple Show, after the place where the show is held, was an almost similar dates to your Boston exhibition. It was as good as ever, and there were some good novelties in Orchids. *Odontiodas* King George V and Royal Gem, both from Mons. Chas. Vuylsteke, Loochristie, Belgium, were splendid, with beautifully colored flowers as large as those of a big *Odontoglossum*. They were from secondary crosses, and a price of over £1000 was said to be placed upon the first named. *Odontioda* Bradshawiae and *Odontioda* Charlesworthi are resplendent Orchids which in a few years, are likely to be utilized by florists. There are but comparatively few batches about yet, but growers are busily propagating and the prices will quickly drop. Among the trade groups of Orchids, those of Sander & Sons, St. Albans and Charlesworth & Co., Hayward's Heath, obtained gold medals. Each group had a most choice selection, including several certificated novelties. Messrs. Sander had a new *Cattleya* Mossiae ("Magali Sander"), *Miltonia* memoria Baron Schroeder (very chaste), and *Odontoglossum* eximium Emperor (ardentissimum × crispum). Messrs. Charlesworth had a new species of *Sobralia*—rich crimson—named after themselves, and an albino form of *Cattleya* Lawrenceana, the first in seventy years and thought of very highly, especially coming from so red a flower.

Messrs. Alex. Dickson of Newtownards, Ireland, had a new H. T. Rose, named Duchess of Westminster of a rich rosy pink shade, a very beautiful and distinct flower. It is deeper than Lady Ashtown, but after that style. The new American *Wichuraiana* variety Excelsa, sent out by M. H. Walsh, made its first appearance, and was admired all around, obtaining an award of merit. Messrs. Paul & Son, Cheshunt, won this award with plants shown as tall weeping standards. These were infinitely brighter than plants of the same from cuttings.

Two of Messrs. John Waterer & Sons' (Bagshot) *Rhododendrons* obtained awards. One is a deeper colored "Pink Pearl," named Alice, not quite so choice as that variety; and the other was Princess Juliana, a lovely Apple blossom colored hardy hybrid; this has large fringed flowers and goes off nearly white.

Three other certificated novelties deserve attention, namely: Marguerite Mrs. F. Sander, a large-flowered, pure white form of the Queen Alexandra type, now well-known; this will be sent out by Sander & Sons in the Autumn, as cuttings, at 25s. per hundred. The next, subject was *Rhus typhina* lacinata, a very fine form, much dissected, shown by R. C. Notcutt, Woodbridge, Suffolk. The third was *Azalea* Florida golden reddish saffron, from R. and G. Cuthbert, Southgate.

In the show itself Messrs. Sutton & Sons, Reading, staged pretty plants of *Clarkia* Firefly, a vivid salmon scarlet variety, grown in pots as big bushes. I am sure if your growers of purely floral decorative stock for the shops could have seen these plants, they would have been delighted. The variety is superb and the plants made graceful ovals 5 ft. high. Splendid double Stocks, in many good colors, including pale yellow, old rose and crimson, shown as pot plants (sown last September), came from Toogood, Southampton. Messrs. Stuart Low had the new yellow *Carnation* J. Whitcomb Riley and other American novelties. Mr. Waters (Balcombe) and Mr. Burnett (Guernsey) each had remarkably fine *Carnations*, Edith Waters being quite an improvement on Mrs. T. W. Lawson. Some of the "fancy" varieties were also very fine.

Postponement of the Peony Society Convention

Secretary A. H. Fewkes reports that, owing to the continued cold weather, it has been found necessary to postpone the meeting of the American Peony Society from the original dates appointed in the present week, June 9 and 10, to Tuesday and Wednesday, June 14 and 15 of next week. This show, it is understood, is to be held in conjunction with that of the Massachusetts Horticultural Society at Horticultural Hall, Boston, Mass.

American Association of Nurserymen

Thirty-Fifth Annual Convention
Held at Denver, Col., June 8, 9, 10, 1910

The convention of the American Association of Nurserymen met in first session at the Brown Palace Hotel, Denver, Col., on Wednesday morning, June 8.

After addresses of welcome by Col. J. S. Irby and J. H. Reynolds, President F. H. Stannard opened the business proceedings with the presidential address.

The reports of the secretary and treasurer, and of the committees on entertainment, publicity, forestry and National Council of Horticulture followed. The sum of \$300 was voted for the use of a publicity committee, to be appointed by the incoming president.

The following papers were read: "The Part Nurserymen have taken in the Growth and Development of the Nation," by I. B. Marey, Dansville, N. Y. "Co-operation between Nurserymen and Fruit Growers," by W. L. Howard, secretary, Missouri State Board of Agriculture. "The Commercial Side of the Nursery Business," by H. W. Marshall, Arlington, Neb. "Effects of Tree Planting in the Middle West," by Geo. H. Whiting, Yankton, S. D. "Influence of California's Horticultural Development on the Nursery Business," by Geo. C. Roeding, Fresno, Cal. "Resultant Evils of Replace Policy," by J. W. Mayhew, Waxahachie, Texas.

The Eastern members traveled on a special train. The total attendance was about one hundred and fifty.

Exhibits

The following exhibits were made: C. S. Harrison & Co., York, Neb.—Peonies; The Fruit Grawer, St. Joseph, Mo.—advertising matter; A. B. Morse & Co., St. Joseph, Mich.—designs for illustrations; Orlando Harrison, Maryland—fruit and ornamental trees; Vincennes Nurseries, Vincennes, Ind.—one and two-year-old Cherries; T. V. Munson & Sons, Denison, Texas—books, and Grape culture; Benjamin Chase Co., Derry, N. H.—wood labels and plant-stakes; Stecher Lithographing Co., Rochester, N. Y.—lithographs. Carroll R. Tiffany, Franklin Forks, Pa.—tree trimmers; Rochester Lithograph Co., Rochester, N. Y.—lithographs; The Deming Co., Salem, O.—spray pumps, nozzles, and appliances; Dayton Fruit Tree Label Co., Dayton, O.—tree labels, The McFarland Publicity Service, Harrisburg, Pa.—advertising and printed matter; Nathan R. Graves, Rochester, N. Y.—photographs of fruits and flowers; B. G. Pratt & Co., 50 Church st., New York—scaleclides; G. V. Cedarborg, Denver, Col.—Cedarborg Frost Alarm.

Society of American Florists

Registration of Rose.

Public notice is hereby given that A. N. Pierson, Inc., of Cromwell, Conn., offers for registration the Rose described below. Any person objecting to the registration or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

Name: "Red Killarney."

Raiser's Description: A sport of Killarney, originating with A. N. Pierson, Inc., in 1908. It is identical with Killarney except in color, which is much brighter, showing a strong tendency to red, some blooms having been as dark as Richmond, the average the entire year a shade lighter than Richmond.

H. B. DORNER, Secretary.

A Severe Hailstorm

The most violent hailstorm occurring in the memory of the earliest inhabitants of the region struck the section northeast of Dayton, Ohio, on May 29 at 4 p.m., causing a tremendous destruction of all crops planted out in the ground, as well as stripping the foliage off the trees in many places. The hail stones falling were reported to be the size of large guinea eggs, and so hard that, by supper time, they had melted but little. The storm was characterized by H. H. Ritter of Dayton as the worst hailstorm he had ever experienced. It did not strike the city of Dayton itself. To date we have not heard of damage to greenhouse property.

THE FLORISTS' EXCHANGE
A Business Paper For Business Men

June 11, 1910

Haarlem Jubilee Flower Show—A Good Example of Hyacinth Bedding

A Mathematical Flower Bed

J. H. Wainwright of Trenton, N. J., sends us a clipping from a newspaper embodying the following problem, thinking the question might interest "our mathematical brethren" who are occasionally confronted with such:

"John Gardiner was perplexed. He had been employed to lay out an ornamental flower bed of Geraniums in the City Hall Park, and not having the necessary plants in stock, had gone down to a florist with

whom he dealt, to figure on an order for them, and now, on his arrival he could not find his memoranda of the dimensions of the bed. All that he could remember was that the bed was circular in form with a square in it, the corners of which touched the outer edges of the bed, and that inside of the square was a smaller circular bed touching the four sides of the square. Outside of the square were to be red Geraniums, in the square outside of the inner circle pink ones, and in the inner circle white ones. His contracts called for five plants to each square foot of surface. His friend, the florist, said encouragingly, 'Come, come, see if you can't recall your measurements. You must be able to remember some of them.' John racked his brain and finally replied, 'It's no use, all I can remember is that the square measured fifteen feet on a side.' 'Why, that is all we need to figure it out from,' rejoined his friend. How many plants of each color were required?"

Mr. Wainwright supplies the diagram, with the answer, which is: 884 white, 241 pink, and 642 red Geraniums, a total of 1767 plants.

Canarina Campanula

This unique shrub, with its beautiful bell-shaped flowers, is known far too little outside of its habitat, the Canary Islands, though it is there the admiration of botanists and tourists, according to a writer in Moeller's. The flowers, which sometimes reach a length of nearly two inches, are orange yellow in color at the base, veined with red, shading into a pure, deep blood red toward

the edges; they remind one of the flowers of the Fritillaria though they are clearer and brighter in color. They rise free out of the lanceolated leaves, whose fresh green often takes on a bluish shimmer.

The plant is easy to cultivate, for it is not exacting in its demands as to heat or light. In the Canaries it grows wild in the higher mountain regions, at an elevation of about 3300 ft. Its principal period of flowering is during the cool season, in January and February, when the temperature in the open occasionally falls close to the freezing point at night. It continues to bloom until early Summer, and dies back as the dry season comes on. It unfolds its wealth of flowers equally in the semi-darkness of deep gorges and along open, sunny slopes. Its cultivation is further facilitated by the fact that, being a bulbous plant, it is easy to carry over from season to season. The roots, when taken out of the ground, should be stored in a dry place. The plant is effective as a foreground to shrubbery or low woods; the branches, which reach a length of 3 to 6 ft., may be trained on a trellis or arbor, or allowed to trail around the branches of low trees. But it is especially decorative as a rambler or hanging plant in rockeries, on slopes or around grottoes, being often set out as Tradescantias are.

Cultivated under glass for florists' use, it should be planted in October in a temperate house on the bench, not in pots; it will not thrive in the latter. It

wants a soil well mixed with sand, plenty of liquid manure, and good drainage. This splendid plant recommends itself to the attention of florists as a unique Winter bloomer, whose handsome flowers are very lasting, both on the plant and when cut.

Present Day English Flower Gardens

Instances of the farthest development in the newest form of flower gardening are, of course, chiefly to be found in the first-class parks of the larger cities and towns, as at Edinburgh, Leeds, Cardiff, and London—possibly elsewhere as well. Such intensive flower gardening is immensely costly, but being demanded the cost is of no account. Batches of Lilliums which may only last fresh for five weeks, or less, are plunged from their pots into the bed just vacated by a similar quantity of the newer Spiraea. There is no pause in the succession, and the changes are rung three or even more times in the course of our short lived Summer. *Humea elegans* over *Lilium Thunbergianum*, *Iberis* (Candytuft) with *Linum perenne* and *Mignonette*, *Gypsophila* with the beautiful dwarf perennial *Aster subcaeruleus*, *Campanula Moorheimi* and one or other of the new gorgeous *Antirrhinums*, as *Fire King*, *Fiery Belt*, or *Defiance*. Sweet Williams under Swainsonas, *Impatiens Olivieri* over *Kalosanthes coccinea*—these and a hundred similar contrasts are what we have seen in examples of the most refined and most highly developed flower bedding of the present day. Can the ordinary garden cope with the demands? If it cannot it is here that the great nursery establishments fill the breach and supply the most exacting requirements. This, we believe, is the probable explanation of the multiplicity of the bedding lists and of the pursuit of business in this direction by our friends, the nurserymen.

C. S. Harrison's Select Nursery, York, Neb.

The above firm is now incorporated for \$25,000. C. S. Harrison has charge of propagating and cultivating. Homer S. King, also of York, attends to the business department. Fred G. Yule of Lincoln, Neb., has the selling department. Mr. Yule is an experienced salesman and has already shown his ability in that direction. The firm contemplates a branch at Lincoln before long. The business has grown wonderfully the past year. They have bought additional land and doubled the plant.

David Neely

David Neely, a pioneer resident of California, who resided at University ave., east of San Pablo ave., Berkeley, died at his home, May 25, aged 77 years. He was a native of County Derry, Ireland, and had resided in Berkeley the last twenty years. He was a florist and kept up a large garden at his place of residence. He is not survived by any near relatives.

Haarlem Jubilee Flower Show

This parterre, in orthodox French style, was shown by the Lisse section of the General Bulb Growers' Society. The photograph shows the first plantation with Crocuses (March 23); this was later replaced by Hyacinths (April 15) and Tulips (April 25).

Wm. Sim's new residence and some of the members of the G. & F. Club of Boston who held their Field Day at his establishment on Saturday, June 4

Field Day of the G. and F. Club of Boston

The G. and F. Club of Boston had a Field Day on Saturday, June 4, and visited the establishment of William Sim of Cliftondale, Mass.

These outings are grand good things and help to stimulate interest and sociability in our business, while the day off breaks up the monotony of the steady grind of hard work at this busy season. We were more than gratified to see such a large number of men belonging to all branches of the business join in and make the day as pleasant as possible.

A special car was provided by Mr. Sim for the Boston delegation and fifty-five members boarded it at Scollay Sq. Others came in automobiles and carriages, and there were one hundred and fifty altogether in the gathering at the greenhouses.

Mr. Sim grows Sweet Peas during the Winter in his large, commodious greenhouses; in the Summer these are filled with Tomatoes and it was the wonderful crops now showing which furnished the attraction. Every house except one to Spencer Sweet Peas, was filled with Tomatoes. They look exceedingly well and most of the plants are carrying a heavy crop. They are grown to a single stem, eighteen inches apart in the row and two feet between the rows. In all, Mr. Sim has fifty thousand plants and during the picking season he sends to the market daily two tons of Tomatoes. The variety grown is mostly Comet.

The house of Spencer Peas was of special interest to the delegation as a splendid crop of flowers is just now being picked.

Mr. Sim owns fifty acres of fertile land, almost wholly given up this season to a crop of early Corn which he expects to be quite profitable. The Corn was started in the greenhouse, in 4-in. pots, being afterwards transplanted into rows in the fields. It looks promising and should be ready for marketing two or three weeks ahead of Corn sown outdoors in the orthodox way.

The next attraction was the new mansion, which was finished but a few weeks ago and consequently only recently. The photograph shows the beautiful situation and the handsome residence, while Mr. Sim has spared no expense in laying out the grounds.

In the background is a massive rock covered with Juniperus Virginiana springing naturally from its crevices. The grounds around and in the vicinity of the house are advantageously planted with shrubbery. Retinisporsas, Junipers and Cypresses are used very effectively close to the house. On the whole, the plantings of the home grounds prove that the owner has good ability as a landscape gardener.

Mr. Sim is practically but a short time in the business and his wonderfully rapid progress is the admiration of all who know him. His effective handling of certain crops has been astonishing. Violets have been one of his specialties, and his success in growing them has been unprecedented in this part of the country. He was the first to grow large quantities of Sweet Peas under glass for the Boston Market and made a great hit with them. His Tomatoes are just as well grown as are his other crops and are certainly as profitable.

Early Corn is his latest venture and we will watch with interest to see how it turns out.

William Sim is one of the most unpretentious men one could meet, but his canny Scotch ways have guided him through many snarls unto the high road of success.

After inspecting the greenhouses and grounds a snmp-tuous luncheon was served; short speeches were then made by Peter Millar, Michael Norton, Thomas Grey and Allan Peirce. The company returned to Boston by special cars, much enjoying their outing. R. CAMERON.

Propagating Pansies from Cuttings

A short time since, I was referring to the system of propagating Pansies from cuttings, and I find that some of the finest Pansies sold in Covent Garden are raised in this way. The only kind possessing a name, in the market, is Copper King, a bronzy flower of giant size, and this variety has become exceedingly popular in the trade. Generally speaking, the finest seedling Pansies that are sold in this country are those grown by H. B. May & Sons of Edmonton, and the specimens they exhibit are truly wonderful. Owing to the demand for Pansies under color, however, this firm is now working all their best selections by cutting propagation, and, doubtless, many will avail themselves of this opportunity to procure stock.

Cuttings do not make such vigorous plants as seedlings, but I must confess that if one desires to possess a choice collection it is the only method. I have grown Pansies by the thousand, and tested no end of strains, including English, German, French and American, but the gems are very few. Indeed, one may say that no matter how carefully the seed is purchased the proportion of really choice flowers is very small. I have more than once expressed the view that no specialist ever disposes of his best seed, for such seed would be worth its weight in gold. Therefore, anyone who desires to sell Pansy plants that will induce the modern amateur to enthrone, must either work up his own seed stock, or propagate all his best plants from cuttings.

T. A. W., Eng.

At Cannell's Swanley, Eng.

When visiting Cannells of Swanley I was fortunate enough to find the great Henry Cannell, V.M.H. As is well known Cannells possess one of the finest collections of Cacti in the world, many of the specimens having begun business before Mr. Cannell did himself, and among them there are many species that flower only at night.

Mr. Cannell has a wonderful memory for so aged a man, and his tales about Geranium breeding are endless. It is not idle to say that he is the greatest living authority on Zonal Pelargoniums, the present day types being largely brought about by his efforts. Perhaps the most extraordinary result of crossing Pelargoniums was the introducing of the dark zone in the leaf. This was produced by working *P. quercifolium*, which has an elongated dark blotch, on to the plain green, round leaf of *Vesuvius*, or one of its relatives. Instead of the dark blotch appearing as was expected, the coloring took a circular form, which nothing has altered, and to this day Mr. Cannell can advance no reason as to why this circular zone appeared. Mr. Cannell has bred from many species, and even at the present time he possesses a collection embracing many of the ancient types.

It was at Cannells that I saw a big batch of the American Pillar Rose, the giant single variety that seems to be making friends among forcers in the land of its birth. Mr. Cannell thinks very highly of this Rose, and it was, I believe, his firm that first exhibited it when it gained an award of merit. Cannells have experienced a great demand for the variety, and other firms are now stocking it. Paul & Son of Waltham Cross were showing it recently, but the flowers were undersized. A wonderful feature of this variety is its foliage. I have grown some enormous leaves on *Crimson Rambler*, but American Pillar, with its nine leaflets on a petiole, bids fair to outdo any variety I have grown.

T. A. W., Eng.

Publications Received

Publicity, and consequently advertising, in the shape in which we like to see it, is embodied in a folder recently received, entitled "Solid Facts Concerning Spencer, Ind., The County Seat of Indiana's Banner County." The advantages of the city of Spencer, the county seat of Owen County, are ably set forth, and the folder is considerably assisted in its demand for attention through the numerous fine illustrations showing the various business enterprises being carried on there. Naturally, from such a good showing an enterprising florist would not absent himself, and Mr. T. Barnes, conductor of the National Co-operative Show Gardens, takes considerable space therein, with a description of his plant and the following views: "Dahlias by the Millions," "A View in the National Co-operative Show Gardens," "A Ten Acre Dahlia Field, and two further views, "Gordon Manor, a Fine Country Home" (which he marks down as being his next garden) and "McCormack's Creek," another location which he evidently intends to annex to his business.

KING CONSTRUCTION CO., North Tonawanda, N. Y.—Bulletin No. 35, describing the King Iron Frame Greenhouses is just received. It is a publication of considerable merit and opens up some valuable information to growers and intending builders. The subjects covered are: Points about King Iron Frame Greenhouses, Types of King Iron Frame Greenhouses, with illustrations showing structural details in widths from 14 to 172 ft., the latest, being that recently built for the Florex Gardens of North Wales, Pa. Many pages of the bulletin are filled with representative houses built by the King Construction Co. in various parts of the country, grouped by sections. It also contains a photographic reproduction of a King iron frame greenhouse built last year for Mr. E. Vieters of Hampton, England.

There is no trade medium published that begins to equal the EXCHANGE in giving returns to all of its advertisers. Test it for yourself.

[Readers desirous of further information on any subject mentioned in this series will have their questions freely answered. Address your envelopes Construction Dept., care of this paper]

Article IV

Material and Construction

Some years ago greenhouse structures were composed almost entirely of wood, the earlier ones being constructed mostly of pine. Many years of experiment and experience has demonstrated that a quality of Cypress, known as Red Gulf or Tank Cypress, endures the varying conditions of heat, moisture and the changes of temperature found in connection with greenhouse structures better than any other wood.

This Cypress is found mostly near the coast from Cape Romano, Fla., west through the Gulf States to the valley of Nueces River, Texas, and through Arkansas to western Tennessee, but the trees in the swamps near to the sea thrive better than those further inland or in drier locations. The wood is of a resinous nature which makes it capable of resisting the weather, and of withstanding deterioration when immersed in water over an extended period. The annual rings are very close, thus indicating that it is of slow growth. The wood is fine and of a uniform texture and straight grained, and of a reddish yellow color, and is very durable with the exception of the sappy portion of the tree which is found near the outside and is easily detected, being almost white and, when dry, much lighter in weight. It has frequently been found that sappy wood used in connection with greenhouse structures will not last over three or four years therefore, for greenhouse structural work, nothing should be used but the very best quality and that thoroughly air dried.

The trees reach a height of from 70' to 130' with a diameter of from 5' to 13'. When the trees are sawn for the market the lumber is divided into several grades, as follows: Tank, 1st and 2d; selects, shop, No. 1 shop, No. 2 shop; selected common, No. 1 common, No. 2 common; cull or pecky. The latter has been largely and successfully used for bench purposes, but we will treat of this later. A large amount of Cypress cut is used for the manufacture of doors, sash and interior finish for residences, etc., and in such work it is allowable to use a certain proportion of sap and knots, the grade rule with planing mills for 1sts and 2ds (the quality of material used for this purpose) being as follows:

Pieces 8" wide may have 1" sap on both edges. Pieces 12" wide may have 2" sap on both edges. On all pieces 13" wide or over sap is not a defect. Pieces 12" or less in width may have sap across one face for one-tenth the length of the board provided there are no other defects. Season checks are no defects, but where sappy wood is used in connection with greenhouse work its life is very short, seldom lasting over three or four years. Therefore, when purchasing Cypress for greenhouse construction, it is better to secure it from those dealers or manufacturers who make a specialty of greenhouse material, as they appreciate better the absolute necessity of furnishing the lumber free from sap, season checks and large knots.

It is apparent from the foregoing that with material so selected, as far as the matter of strength and durability are concerned, a greenhouse structure composed entirely of Cypress is thoroughly satisfactory, but to obtain the necessary strength the various structural members have had to be made quite heavy, especially as the size of the greenhouse structures increased, but as the main object in connection with such structures is to obtain the greatest amount of light it has been found that many of the structural members can be made of iron and so furnish a house of the necessary strength with much smaller members, thereby increasing the amount of light obtainable.

Hence, as the improvements in greenhouse structures have progressed, iron and steel has entered more largely into their construction, and there is no doubt that, as the size of greenhouses continues to increase, the use of iron will be still more pronounced. It has not been found advisable to use iron altogether, owing to the varying changes of temperature and to the liability of glass to break when set in a greenhouse structure bedded on iron, but the highest type of greenhouse structure today is constructed on the basis of as nearly as possible all iron inside and all wood outside. However, as these articles are written with a view to assist the grower who is about to branch out in business on his own account and, as is frequently the case with limited capital, we will take up the consideration of the cheapest type of house first.

There are also many growers of vegetables for the market who, at the present time, are expending a tremendous amount of time and energy in the cultivation of their stock by means of hotheaded sash and frames who, if this same sash were placed upon a framework so as

to raise them sufficiently high to admit of head room, could accomplish the same amount of work and secure much better results with considerably less expenditure of time and energy, also making it possible to give attention to the crop at times when, owing to the condition of the weather, it is almost impossible to do so when used in connection with the ordinary hotheaded frame; therefore, with a view of assisting those who desire to erect a greenhouse with the least possible expenditure of money, irrespective of the matter of the greatest amount of light obtainable, we will take up the consideration of some of the forms of house of this class.

Type of Zvolanek's New True Orchid-flowered Winter-flowering Sweet Peas

Ideal Bench Construction Reported Not Solved Readers, Please Note!

Having received a communication from a correspondent bringing before us the fact that improvements in bench construction had not kept pace with the improvements in the construction of the greenhouse itself, and stating that at the present time he did not know of any form of bench construction which was thoroughly coming up to the requirements, and with the object of securing an expression of opinion from those who have built benches and who can furnish the necessary data, we have formulated the following questions:

- 1.—Cost of the materials
- 2.—Cost of erection
- 3.—Durability

and so as to get this information in as concise a form as possible we have divided the various makes of benches into classes as follows:

Wood	{ Cypress Hemlock Pecky Cypress
Iron	{ Pipe or angle iron frames, wood sides and bottoms Pipe or angle iron frames, tile bottoms, wood sides Pipe or angle iron frames, cast iron bottoms and sides
Concrete	{ Solid poured in forms Built up with blocks
Brick	
Tile	

If some of our readers, having used any one or more

than one style of bench of those enumerated above, would send us in whatever information possible regarding each of the constructions (bearing in mind points 1, 2 and 3), their material will be collated and published in such shape so as to be available for reference, and we feel sure that in this way we will be able to get at considerable information which will be of benefit to all growers, and no doubt some information will be elicited to assist in solving the bench problem, so as to bring this part of the construction up to the present day standard of the balance of greenhouse construction work.

Review of New Books

A MANUAL ON THE PHLOX.—By C. S. Harrison, York, Neb. Second edition. Published on behalf of the nurseryman and amateur. Showing how to grow Phlox and how to originate new and choice varieties. Price, 25c.

The present Manual gives, as a preliminary, a sketch of the Phloxes. It then takes up the subject matter in Mr. Harrison's usual fluent style, and in chapter 2 describes the various varieties of Phlox, together with methods of improvements; and in separate chapters from 3 to 10 deals with Saving and Planting the Seeds, Preparing the Ground, Kind of Phloxes Needed, Regulating the Time of Blooming, On the Importance of Keeping Varieties Separate, How to Multiply Phloxes, Winter Protection, Summer Care and Experimenting. Chapter 11 gives an extensive list of Phloxes, including most of the newer sorts, and in which the effort has been made to give the various heights (as dwarf, middle and tall) for convenience in arranging the beds. The present list is the most extensive we are aware of. The book contains several illustrations, the most telling of which is that contrasting the petals of the new variety "Arete" as against some of those of the older and smaller kinds, showing the vast improvement made as to size.

Among the Growers

BOUND BROOK, N. J.

Anton C. Zvolanek

In the new catalog of Zvolanek's Winter-flowering Sweet Pea seed, just received, we find listed the following novelties for 1910: Snow Queen.—Pure white, with large, wavy flowers. Zvolanek's Pink.—A clear soft pink with large open flowers. Zvolanek's Blue (of which find an illustration in this issue).—Also a large flower, in shape like Le Marquis, but of a clear sky-blue during the winter months and coming somewhat darker in color in March and later on. Blue Bird.—The same shape as Mrs. Alex. Wallace, but some three shades darker; namely, a very fine lilac-blue self color. Zvolanek's Orange.—Represented as a Winter-flowering Miss Willmot.

More than fifty per cent. of the new crop, which will be ready about August 1, has already been ordered in advance, Mr. Zvolanek says. This fact attests to the popularity of the Zvolanek Winter-flowering Sweet Peas.

We also show a type of Zvolanek's true Orchid-flowered Winter-flowering Sweet Peas, some twenty different colors of which have been obtained from Countess Spencer. These, it is expected, will be introduced in 1911. Mr. Zvolanek claims that this new type of Winter-flowering Sweet Peas will outclass almost any other in existence.

SECAUCUS, N. J.

Secaucus, in the State of New Jersey, and five miles from New York City, is one of the great Sweet Pea growing localities. With only one or two exceptions every florist in this section grows Sweet Peas in considerable quantities. The plants are not grown on benches, but either directly in the soil of the greenhouse or in solid beds about 8 to 12 in. deep, built directly on the ground. For early blooms Zvolanek's Christmas and other early varieties are largely used also Earliest of All, Dorothy Eckford and others. For the later blooms Gladys Unwin, Helen Pierce, etc., are planted, but the Spencer types also are being largely tried. The recent spell of damp weather has been very injurious to the late blooming Sweet Peas in this section, causing them to drop nearly all of their buds. One grower alone reports his loss to be at least \$1000. Some of the Secaucus establishments are as follows:

Komitsch & Junge

Nine years ago this firm began to build. For the first two years, to use Mr. Junge's expressive language "It was just one big struggle." That period, evidently, has happily passed. The Lord & Burnham Co. is now erecting for this firm three semi-iron greenhouses, with tile outer walls, each 151 x 18 ft. 6 in., and one iron frame house 150 x 22 ft. When these are completed the range will consist of sixteen substantially built houses, embracing 150,000 feet of glass. The houses have all been built by the Lord & Burnham Co., and the heating plant is a hot water system installed by the

same concern. The whole range is devoted to growing Orchids and Sweet Peas, about twelve houses to the former and four to the latter.

The following varieties of Cattleyas are grown: Trianae, labiata, Mossie, Mendelii, gigas, Schrodere, Gaskelliana, Lawrenceana, and a few each of several other varieties.

Several varieties of Dendrobiums also are grown, among which are Wardenium, formosum, aureum and a few others. Other Orchids are grown in smaller numbers, such as Phalaenopsis Schrodere, Odontoglossum citrosum, about 2000 plants of Vanda coerulea, etc. The most attention is given to growing Cattleyas. An importation of one hundred and twenty-five cases of Orchids, of forty plants each, has just arrived, and others will soon follow.

Many of the plants are just now off crop, but some fine blooms of Cattleya gigas, and Dendrobium Wardenium are being cut. When the plants are on crop, sometimes as many as 2000 blooms per day are cut. Last Christmas week the cut amounted to about 10,000 blooms.

Sweet Peas are the second most important crop at this range. The early varieties have gone by, and later kinds are now blooming, but the continued damp weather has curtailed the cut of flowers. When on crop sometimes 5000 bunches of Sweet Peas are cut each day.

This firm leases another establishment, on the County road, of about 75,000 ft. of glass, where they grow Sweet Peas and 'Mums exclusively, some fifty varieties of the latter being grown, from which in the height of the season they cut often three wagon loads per day. Everything in sight at Komitsch & Junge's gives evidence of system and progress.

Otto Grundmann

Mr. Grundmann's range consists of ten houses, amounting to about 35,000 ft. of glass. Table Ferns are his specialty, of which he sells annually, in small pots, about 300,000, and in flats, about 2000 flats. He carries all the usual varieties, which he produces from the spores. Two houses are devoted to Sweet Peas, and two to 'Mums, the list of which latter is confined to ten varieties, giving an annual cut of 40,000 blooms. Two houses are utilized for Lillium multiflorum, which yield about 20,000 flowers. Twenty thousand Salvia plants also are grown here.

Herman Mende

The ten houses, each 90 ft. long, of Mr. Mende's range are devoted to growing bedding plants. In Geraniums 20,000 Nutt, Ricard, and Poitevine, 2000 tricolor, and 1500 Ivy are grown; also about 3000 Heliotropes and 2000 Salvias. These are followed by 'Mums, Major Bonaffon, Maud Dean, Dr. Enguehard, Chadwick and Ivory being the varieties grown.

The bedding plants are sold in New York at the Canal st. market.

H. J. Ramm

Mr. Ramm has been on his present place 22 years. His range now consists of three houses, he having several years ago leased eight other houses to parties who have recently subleased them to Carlo Sackman. Mr. Ramm confines his attention to two crops—Sweet Peas and 'Mums. Of the former he plants Zvolanek's varieties for early blooms, and the Spencer types for late. The Peas are followed by 'Mums, Major Bonaffon, Chadwick, Newman, Ivory, and Dr. Enguehard being the varieties most used. Both the Sweet Peas and 'Mums are grown directly in the soil of the greenhouses, without bench or solid bed.

Carlo Sackman

Last December Mr. Sackman leased from Carillo & Baldwin, eight houses, ranging from 80 to 100 ft. long. In these he is growing Sweet Peas, Carnations, Lillium Harrisii, Formosum and giganteum, 'Mums, and Gladioli. In Carnations he is confined to only Enchantress and White Perfection, and in 'Mums only Ivory and Major Bonaffon. In Gladioli he grows America, Augusta and Mrs. Francis King. The Gladioli are looking remarkably well, as are also some giganteum Lillies now ready for cutting.

Mr. Sackman is making ready to plant a house to Asparagus plumosus, in solid beds. Some Asters already set are making good growth. Mr. Sackman was for several years with Julius Roehrs Co., and also with E. G. Asmus & Son.

Considering the fact that he started his work at this range in Midwinter, he is certainly showing good results.

Emil Savoy

Emil Savoy's present specialty is Bougainvillea Sandieriana glabra, which he grows for Christmas and Easter chiefly. He is now bedding this out in the open ground. He forces about 3000 pots. He also grows table Ferns, in pots, to the number of 50,000, and about 800 flats of the same, in ten varieties. He devotes one

house to Boston Ferns and another to Dracaenas and Pandanus. At present he has only one house devoted to Orchids, but he will build a new house 100 x 20 ft. this Summer, in which he will grow Cattleya Trianae, which he thinks is the best paying variety. Mr. Savoy's range consists of six houses, each 100 ft. long.

Meerbott Floral Co.

The specialties of this company are Sweet Peas and 'Mums. For Early Peas Mont Blanc, Earliest of All and Dorothy Eckford are being used; and for late largely the new Spencer varieties. In all, thirty-two varieties of 'Mums are grown, among which are Wm. H. Taft, Appleton, Brutus, Merza, Rosier, Monrovia, Adelle, Ongawa, Director Girard, etc. They are going to force 300,000 Valley and 30,000 Freezias next season. The King Construction Co. is now erecting for them two connected iron frame houses, each 125 x 41 ft., with concrete walls, and side and roof ventilation; and another house, 60 x 10 ft., for forcing Valley. The Johnson Heating Co., 138 East 31st st., New York City, furnishes the heating apparatus for the whole range, which consists of eight houses, 125 x 25 ft. each.

H. Schurman

In the eight houses of Mr. Schurman's range are grown Sweet Peas, Stocks, Stevia, and 'Mums. All plants here are grown in solid beds. The cut flowers from this range are sold at the N. Y. Cut Flower Exchange, New York City. For Sweet Peas, Zvolanek's varieties are used for early, and some of the Spencer types as well

True to its name, this is an "exotic nursery." The greenhouses are all filled with exotic plants, large and small, all of which show excellent culture. First may be mentioned the Palms of many varieties filling ten or more houses. Palms from one foot or less to eight or more feet in height, and from a value of fifty cents to fifty dollars.

A splendid display of Phoenix is seen here: P. reclinata, P. Canariensis, P. Roebelenii, etc.; also equally well grown Kentias, Arecas, Latanias, Cocos, and others. One house is devoted to Dracaena terminalis, whose coloring is very beautiful; another to Dracaena Massangeana in fine form. Especially noticeable and praiseworthy are the more than twenty varieties of Crotons, which fill several houses. Among the Crotons is Reedii, considered one of the best. Some four or more houses are given up to Ferns of the following varieties: Nephrolepis elegantissima Bostoniensis, N. Scottii N. Amerpohli, N. Scholzei, and others. One house is filled with Cibotium Schiedei, plants which are well worth going a long distance to see. Also are seen here Pandanus Veitchii and utilis, Aspidistras, Aueubas, etc. Mention, too, must be made of two varieties of one genus of plant not seen elsewhere, but grown here in perfection, viz., the beautiful Aralia Sieboldii, with its striking large, light green, digitate leaves, and A. elegatissima, with bronzy red, more finely dissected leaves of the same shape.

A rustic inside office, of white birch bark is in keeping with the whole artistic building, as also the electric lighting, with other up-to-date furnishings of this establishment.

In the open field are grown 12,000 English Ivies.

John Albrecht, Pencoyd, Pa.

Mr. Albrecht's estate, where he has lived for twenty-nine years, is a somewhat unique one. It consists of a few acres of land upon which he has built eight side hill greenhouses, each 150 ft. long, twelve good-sized, substantial dwelling houses, and a Union church, where all, of whatsoever denominations, may worship. In connection with the church there is a Sunday school. There is also a library, a uniformed band of instrumentalists, a place for concerts and amusements, and an athletic club for the boys.

Mr. Albrecht evidently believes in the truth of the old adage "All work and no play makes Jack a dull boy, but all play and no work makes Jack a great shirk," for he requires of his own boys the work and also allows the play; and he has two good boys, one of whom keeps the books and the other manages the teams. Mr. Albrecht is obliged, in the busy season, to run six wagons, his two-horse wagon being the best one, which goes into Philadelphia.

For many years Mr. Albrecht catered to the West Laurel Hill Cemetery trade, but this year the Cemetery Association, having built its own greenhouses, shut out from the Cemetery outside florists. On this account Mr. Albrecht went into the wholesale business and began advertising. He is well satisfied with the results and finds that advertising pays. He imports between 1000 and 2000 Azaleas, which he forces for Easter. He is one of the largest growers of Dutch Hyacinths, growing 12,000 per year, in pots. He is a large grower of Ficus elastica, using one entire house for this purpose; he cannot grow enough of them to supply the demand.

Another house is devoted to Pandanus utilis, Crotons and Ficus pandanus are used for Carnations.

At present he is growing a large line of bedding plants: 20,000 Geraniums, mostly Nutt, Ricard, Poitevine, and Jean Viaud; 20,000 Alternantheras, and several thousands each of Echeveria, Coleus, Petunias, Phlox, Vinca variegata, and English Ivy. The trade in these is very brisk, thousands going out each day. The plants are well grown and everything shows a prosperous business.

Mr. Albrecht has hit upon the following plan for increasing small sales: he knocks six plants of different kinds out of their pots, and places them in a two-quart berry basket, with handle, in damp moss, and sends them in to the retailers. Just at present these baskets are meeting with a very large sale.

F. E.—Best Advertising Medium

Gallery Plan at Convention Hall, Rochester, N. Y., showing apportionment of space to date to trade exhibitors at S. A. F. Meeting next August

Space 4, Reed & Keller, New York City; 7, S. S. Pennock-Meehan Co., Philadelphia, Pa.; 9, M. Rice & Co., Philadelphia, Pa.; 11, 12, 13, H. Bayersdorfer & Co., Philadelphia, Pa.; Wm. J. Boas, Philadelphia, Pa.

as others for late. Stevia is very largely grown for December cutting, and Stocks and 'Mums are important crops.

A block of 1000 outdoor Gen. Jacqueminot Rose bushes are well covered with buds which are now bursting into bloom, and give promise of a very large cut of flowers.

Secaucus Exotic Nursery

This substantial, well arranged and artistic establishment, of concrete and iron, consisting of twenty-two greenhouses, aggregating 75,000 sq. ft. of glass, was planned by the proprietors, Morris and Edward Mutillod, and built by them. They are now building an adjoined dwelling house of attractive and unique design, a brick and concrete structure surmounted with an artistic, tile covered spire.

AT BAYSIDE, L. I., N. Y.

Different localities seem to be given more or less to growing certain flowers or plants. In Bayside the florists, with a few exceptions, grow *Centaurea imperialis* under glass, and double-flowering *Pyrethrum* outside.

Bernard Breckner

Mr. Breckner is the son of the late Gustav Breckner, who died Nov. 23 last in his 72d year, and who saw the beginning of the 34th st. market, and was a subscriber for the EXCHANGE from its first issue. Mr. Breckner has an estate of six and one-half acres, and a range of four greenhouses. In the Winter Carnations are grown in nearly all these houses; 'Mums, Stocks, and *Centaurea imperialis* are also grown. Beginning with the present season Carnations will be dropped, and the crops will be 'Mums, followed by *Centaureas* and Stocks, but the specialty will be *Centaureas*. Outside, the specialties here are Sweet Peas and Dahlias. In Dahlias, Jack Rose, Storm King, and a light pink seedling long grown here without name, and an old canary yellow Dahlia of unknown name are the favorites; Peonies, *Pyrethrum*, Gen. Jacqueminot Roses, and some shrubs are also grown. The property was recently on the market for sale, but has been withdrawn, as Mr. Breckner has decided not to sell and expects to build a new range of houses, possibly this Summer.

Charles Thienel

Mr. Thienel's range consists of five houses, on a three acre estate. Four of these houses are used for Carnations, the varieties being Enchantress, Scott, Winsor, Lawson, Boston Market and Maceo. In one house are grown 'Mums, which are followed by Stevia, and this by Stocks, *Centaurea*, and Callas grown in plunged pots. Outside are grown *Pyrethrum*, Carnations, Peonies, Ulrich Brunner Roses, Asters, Sweet Peas, California and Prince of Wales Violets in frames, Lilacs and Hydrangeas.

F. Finger

Six greenhouses on two acres of land constitute Mr. Finger's holding, which he improves to the limit. Outside, he has some of the earliest and finest Sweet Peas yet observed, from which he began to cut blooms on May 21. He is growing the following varieties: Blanche Ferry Spencer, White Spencer, Pink Spencer, and Enchantress Spencer, Dorothy Eckford, and Lady Grisell Hamilton. The Spencers are found to be hardy, stand the rainy weather well, and give large blooms.

Frau Karl Druschki and Brunner Roses are grown, a variety of Peonies, and an attractive light pink *Pyrethrum* sport. Three houses are devoted to Carnations, such as Enchantress, Victory, Lawson and White Perfection.

One house is used for 'Mums, which are followed by Stevia, and this by *Centaureas* and Stocks.

Joseph H. Beschamps

In twelve of his fourteen greenhouses, which are on his fourteen acre holding, Mr. Beschamps, grows Carnations. He is now cutting some very good blooms of the variety Lady Bountiful. In two houses 'Mums are grown, which are followed by Stocks. Outside, Asters only are grown.

John H. Taylor

Roses are grown in all the twenty-nine houses of this range, as follows: Seven houses to Bride, fourteen to Bridesmaid, four to Richmond, and two each to Killarney and Wellesley. The houses of Richmond are giving some nice blooms at present. The houses are all situated on a beautiful estate of two hundred and ten acres, an elevated situation overlooking Little Neck Harbor.

John Wallenborn

One house, in which is grown Enchantress and Victory Carnations, and one devoted to Sweet Peas, make up this range. The Sweet Peas are the very best indoor stock seen anywhere. They are in splendid condition and full of blooms of a high quality. The varieties are Shasta, Unwin, and Countess of Radnor. The Sweet Peas will be followed by 'Mums. The Carnations also are, considering the season, looking remarkably well.

F. Smith

Five of Mr. Smith's ten greenhouses are used for growing Enchantress and Boston Market Carnations, and five for 'Mums, chiefly Maj. Bonaffon, and Ivory. These are followed by giganteum and multiflorum Lilies, Stocks and potted Callas. Outside, Sweet Peas and Asters are grown. The outside Sweet Peas are looking remarkably well.

Herman Blumenscheid

On his three acres of land Mr. Blumenscheid has seven greenhouses in which he grows Carnations only, the varieties being Enchantress, Lady Bountiful, Snowflake, and Victory. These Carnations show good culture and are giving some excellent blooms. Outdoors, Asters only are grown.

IN MARYLAND

R. Vincent, Jr. & Sons Co., White Marsh.

A visit to these well-known growers in a really quiet season, so far as many of their special industries are concerned, will perhaps afford the casual visitor as good an opportunity for obtaining an insight into the workings of the immense business undertakings as when one particular feature is predominating; for instance, in the Dahlia or Geranium shipping seasons.

The latest addition to the large range, two 35-ft. houses, which were erected throughout the coolest weather of last Winter and comprising something like 40,000 sq. ft., is now in full operation, being devoted principally to Geraniums; a special Herendeen boiler had to be installed for the purpose of heating this section.

In their preparation for next season's Geranium demand, special attention will be given to the Ivy class, it being the observation of the firm that these sorts are coming more and more into popular favor. A number of very fine and rarely seen varieties are being propagated, and will undoubtedly be a leading feature of next season's business.

Their Dahlia plantings will probably be larger than ever. Some thirty acres of ground are to be set out with these Autumn flowers, the greater part of the bulbs and young plants being now in the ground. A section of the Dahlia grounds will be devoted to trials under name; that is, a certain number of Dahlias of each variety grown will be laid out in one large plot so as to facilitate and render less arduous the observation by visitors of the merits of each. A somewhat similar plan, arranged in a different way, is being pursued with regard to Canas, and the newest varieties will be given a prominent position on the trial grounds so that they also can be inspected without having to go through the great space which the entire plantation occupies.

As an instance of the size of the orders received by this firm, a letter was shown, received on the morning of the writer's visit, calling for 30,000 Canas out of 3-in. pots.

The real estate of the firm now comprises some 375 acres, nearly every portion of which is under cultivation.

A list showing the sales of vegetables and flowering plants and bulbs for the preceding week was shown the writer, the number of plants sold in both lines running up into the hundreds of thousands.

THE SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS TWENTY-SIXTH ANNUAL CONVENTION, ROCHESTER, N. Y., AUGUST 16 TO 19, 1910

CONVENTION HALL GROUND FLOOR PLAN FOR THE TRADE EXHIBITION

At Rochester, N. Y., showing apportionment of space to date to trade exhibitors at S. A. F. Meeting next August

Spaces 1, 2, 3, 4 will be occupied by Kroeschell Bros. Co., Chicago, Ill.; 10, King Construction Co., N. Tonawanda, N. Y.; 11, E. C. Brown Co., Rochester, N. Y.; 13, Wilson-Hoyt Co., New York City; 14, A. H. Hews & Co., Cambridge, Mass.; 19, H. F. Michell Co., Philadelphia, Pa.; 20, Arthur T. Boddington, New York City; 24, Benjamin Hammond, Fishkill-on-Hudson, N. Y.; 26, Morehead Mfg. Co., Detroit, Mich.; A, C, Robert Craig Co., Philadelphia, Pa.; B, J. H. Eichholz, Waynesboro, Pa.; D, Vick & Hill Co., Rochester, N. Y.; E, F, James Vick's Sons, Rochester, N. Y.; G, H, I, Henry A. Dreer Inc., Philadelphia, Pa.; K, Kessler Bros., New York and Geo. A. Kuhl, Pekin, Ill.; L, Ellwanger & Barry, Rochester, N. Y.; N, O, John Lewis Childs, Floral Park, N. Y.; M, Shaw Fern Co.; P, Arthur Cowee, Berlin, N. Y.; R, Chas. D. Bull, Philadelphia, Pa.; S, T, Geo. B. Hart, Rochester, N. Y.; W, X, S. A. Anderson, Buffalo, N. Y.; Z, Jackson & Perkins, Newark, N. Y.

The Dahlia exhibition will take place as usual in the early Fall. Renewed efforts will be made to have this especially attractive to induce visitors to come to White Marsh from far and wide.

Richard Vincent, Jr., has just returned from a trip to Belgium, Holland and England, which he evidently much enjoyed, and he has accumulated considerable information as to the methods of florists abroad, with the details of which he will entertain the members of the Maryland State Horticultural Society at their show which takes place late this Fall. Lantern slides from pictures of the Haarlem Jubilee Show, the bulb fields, etc., will enliven this discourse. Mr. Vincent, as president of the Society, is working hard to make this the grandest show that has ever been held. He is possessing very good health, indeed, and is lending all his energy and mentality to place the Maryland State Horticultural Society as near the top of contemporary organizations as possible. In this he is ably assisted by many lieutenants, and as Mr. Vincent is undoubtedly the most popular florist in Maryland, that he will succeed in his endeavors is beyond question.

The greenhouses are well filled with young stock, and the company expects that in Geraniums, which is one of their specialties, they will make a record showing next season.

Flowers at King Edward's Funeral

No written description can give an adequate idea of the numerous wreaths (between 4000 and 5000), crosses, and floral decorations which were gathered together at Windsor from all parts of the world. The special correspondent of the *Journal of Horticulture* paid a visit to Windsor and found the center of the cloisters filled with magnificent tokens of sympathy. Owing to the number of visitors, however, it was only possible to get a passing glance. Around the sides of the chapel and cloisters were hundreds of others, and among them was noted a fine wreath of *Odontoglossum crispum* and *Asparagus plumosus*, bearing the words, "With the deepest sympathy and most profound respect from His Majesty's loyal subjects, Mr. and Mrs. Leopold de Rothschild." Near by was a tribute from Mr. J. Chamberlain, consisting largely of Orchids from the famous Highbury collection. They included sprays of *Odontoglossum crispum*, *Cattleyas Schroederei*, *Mendels* and *Skinnerii*, *Phalenopsis Rimestadii*, *Miltonia vexillaria*, *Lilium longiflorum*, and *Lily of the Valley*. From the Duc d'Abuzzi came a tall pyramidal display of large pink Carnations and white Heather, with Palm leaves at the back. A large cross with no name attached, about 6 ft. in height, was made of *Marechal Niel* Roses; and from ex-President Roosevelt came a gigantic wreath of *Odontoglossum crispum* and *Cattleyas*.

In a recess close by, but not open to the public, could be seen one from the German Emperor, also principally made of Orchids; but one of the best was the large wreath, some 6 ft. or 7 ft. across, from the Sultan of Zanzibar, with *Cycas* leaves for a groundwork, and Orchids most artistically arranged. Another was "From New Zealand to her King," chiefly Orchids, with a bright patch of pink *Pelargoniums*, which provided a striking contrast. A flag was tastefully worked in red, white and blue upon a green base, as the token from Natal; and in "Loyal and affectionate remembrance from the citizens of Liverpool" came a large square design consisting of a groundwork of fresh green moss, with a border of *Arboretum*. Near the two top corners "Edward VII" was worked in red and white respectively, and the principal feature was an anchor of Roses, *Lily of the Valley*, and *Lilium longiflorum*—truly a fine example of the florists' art. The Royal Irish Constabulary, the City of Loudon Imperial Yeomanry, the people of Wigan also sent conspicuous designs.

A wreath of white Heather came from the Highland Society, New Zealand; in fact, all the colonies were well represented by floral emblems. The people of Maidenhead, Berks., contributed an eagle upon a pedestal made chiefly of white Stocks. From Hammersmith (London), an open book with the words across its pages, "Hammersmith mourns our Beloved King." Another book design, edged with Laurel leaves, and a border of Violets with a groundwork of white Stocks, on which were displayed the words of the late King's favorite hymn, "Nearer my God to Thee," came from Sir Arthur and Lady Paget; the other leaf of this book was relieved with a small cross of Violets and a spray of *Odontoglossum crispum*.

Several cushions were seen. One was composed of green moss surmounted with the crown made of red Geraniums, which was forwarded by the Headquarters Staff of the Southern Command, "In honored and unfading memory of a great King." A cross 4 ft. high, from Lady Beerbohm Tree, of yellow Irises and yellow Arums, made quite a pleasing contrast, being unique and different from the majority in color, with an appropriate, biblical quotation. Red Roses in great quantity came from Lancaster; but some of the most touching tributes were those from school children. One wreath, between 4 ft. and 5 ft. in diameter, and bearing this inscription, "A loyal and loving tribute from school children of Trowbridge" (Wiltshire), was composed entirely of *Orchis mascula*, a native plant. Then there were quite small posies of Buttercups and other wild flowers, which shows the loving sympathy that existed between his late Majesty and the humblest of his subject. Another small group of common flowers had been gathered "by little children who loved their King."

Wreaths formed the bulk of the floral tributes, and the flowers chiefly employed were *Odontoglossum crispum*, of which there must have been thousands of spikes, *Cattleyas*, *Roses*, *Richardias*, white Stocks, *Lilium longiflorum*, and white Heaths. The foliage consisted of *Asparagus*, Palm leaves, *Cycas*, and *Caladiums*. Such a gorgeous display of the finest flowers that it was possible to procure was a fitting testimony to the opulence and prosperity of such a glorious reign, and as the writer left St. George's Chapel, the scene brought to mind the stanza of Grey's *Elegy*, which was written not far from Windsor:

"The boast of heraldry, the pomp of power,
And all that beauty, all that wealth e'er gave,
Await alike the inevitable hour—
The paths of glory lead but to the grave."

One of the loveliest tokens was that from the Greek community. It consisted of a broken column on three steps, made entirely of white Stocks, with a magnificent group of mauve and white Orchids at base, with inscription printed on purple ribbon in silver. Another very beautiful wreath took the form of a chaplet of Laurel, with spray of green and white Orchids and scarlet and white ribbon, with inscription printed in silver. A Russian cross of immense length and woven of Parma Violets was the offering of the Grand Duke Michael and Countess Torby. The Aya Khan's gigantic wheel of Lilies and Roses, the 14 ft. long cross of Laurels, Lilies, Roses and Orchids from Prince Ching, and a huge wreath of *Malmays* from the Duke of Orleans, were each conspicuous among the great mass of floral tokens, which together it is estimated weighed about twenty-five tons. From Lancaster a special messenger was despatched to Windsor with a beautiful chaplet of red Lancashire Roses 7 ft. in height, and resting on a 6 ft. base, bearing an inscription.

The "Glasgow Evening Times," May 16, in figuring the wreath "From the Lord Provost, Corporation, and Citizens of Glasgow, in memoriam of their late beloved Sovereign, King Edward," says it was an elegant combination of flowers grown in the municipal conservatories. The wreath was circular and about 4 ft. in diameter. Around the outer edge was a broad band of royal purple Cape flowers, with white Arum Lilies on the

top. A St. Andrew's cross was composed of pure white *Gnaphaliums* surmounted by white and purple Orchids. In the center of the cross was an imperial crown formed of golden yellow flowers, above and beneath which were the dates of King Edward's birth and death, 1841 and 1910, while in the spaces to the left and right respectively were the letters "E" and "R," the figures and initials being worked out in bright red *Gnaphaliums* on a background of Ferns. The wreath was designed by Mr. James Whitton, superintendent of parks, and made up by Mr. William Leighton, florist, Renfield st.

A very handsome and imposing wreath was sent by the Corporation of the City of Edinburgh. This was designed by Mr. McHattie, the well-known city gardener, and executed by Mr. Harry Erskine, florist, Frederick st. Circular in shape, the wreath was 6 ft. in diameter, and composed entirely of various Heaths. On a groundwork of Indian moss, the body of the wreath was composed of *Erica persoluta alba*, the Heath most resembling Scottish white Heather, and no this, in artistic fashion, were clumps of *Ericas Cavendishii*, *magnifica*, *hybrida*, *canadensis*, various varieties of *ventricosa*, *transluca*, etc. The center was filled in with white satin, on which was sewn in black the City of Edinburgh Arms. In its composition there were, we understand, nearly 200 pots of Heath used. Before being despatched to Windsor it was on view in Mr. Erskine's shop, and visited by many thousands of people. A number of other wreaths were sent from Edinburgh, the most notable, from public bodies, being a very handsome one from the Masonic Lodges, executed by Mr. John Downie; one in Forget-me-nots and *Marechal Niel* Roses from the Boy Scouts of Scotland, by Messrs. Todd & Co., and one from the Clan MacDougall, by Mr. Thos. Fortune.

There were two conspicuous wreaths from Reading, one of which, from the Royal Seed Establishment of Messrs. Sutton & Sons, was noble in its magnificence. This magnificent floral tribute was not less than 7 ft. in diameter, and was noble in its simplicity, the only flower used being *Lilium longiflorum giganteum* set in a background of Palms and *Cycas* leaves, draped with royal purple ribbon and bearing the following inscription: "A grateful token of the heartfelt sorrow and loyal devotion of His Majesty's most obedient and humble servants, Martin J. Sutton, A. W. Sutton, L. G. Sutton, M. H. F. Sutton and E. P. F. Sutton."

Manchester City also contributed a magnificent wreath in token of its grief.

The cost of the floral tokens was reported to vary from £10 to £100. Assuming there were 4500 at £20 apiece, this would mean a sum of £90,000.—*Journal of Horticulture*.

The Dinner to President Taft at Detroit

Retailers in general are very busy and will be so during the next few commencement and wedding weeks. From all appearances it will be difficult to procure the necessary supplies.

The arrival of Pres. Taft gave Breitmeyer's a good deal of work and they decorated the large armory, where about 900 ft. of tables, to accommodate some 800 members of the Board of Commerce, were laid for the big banquet.

The ugly rafters of the ceiling were successfully covered with sheets of white and yellow cotton, criss-crossed with Laurel wreathing and American flags, using up nearly 1000 yds. of Laurel. All the sides were covered with red, white and blue cotton, large groups of Palms breaking up the otherwise straight lines. Back of the speakers' table were eight high columns, surmounted by electric lights, each column flanked with tall *Kenias* and connected by Laurel. Seven large colonial gold dishes, partly round, partly loag, square-shaped, filled profusely with Richmond Roses and *Deutzia*, using up about 1000 Roses, were used as table decorations for the speakers' table. The other tables were strewn with Fern leaves and 3000 Carnations.

Palmer's (Buffalo, N. Y.) Memorial Day Window

June 11, 1910

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Albany, N. Y.
11 North Pearl Street
Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Leading Florist
AMSTERDAM, N. Y.
Schenectady, N. Y.
Estab. 1877

Atlanta, Georgia
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Boston, Mass.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

Boston, Mass.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Boston, Mass.
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of New England. Also special delivery to any outgoing steamship without extra charge.

Brooklyn, N. Y.
Fulton St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Bride's Bouquet

Composed of Lily of the Valley and Orchids, showered with Lily of the Valley
By W. J. Palmer & Son, Buffalo.

As usual, the following morning the center pieces were called for to be brought back to the store and, as they were missing, a general search was made, conditions, however, preventing this from being very thorough. Great was the surprise when our local florist detective, Hugo Schroeter, called up Breitmeyer, conveying the surprising news that a young man was trying to sell them among the florists. There was some very hasty moving from flower store to flower store but, in less than an hour, the culprit, Wm. Tucker, was safely landed in jail. He is exclusively a local talent and need not be feared by other florists, although he seems to be greatly attached to the florist trade, having stung Breitmeyer's twice before. Notwithstanding this fact, Mr. Phil. Breitmeyer refused to prosecute, being satisfied with giving him a strong lesson by keeping him two days under suspense in jail.

John Breitmeyer's Sons
DETROIT, MICH.
Broadway and Gratiot Ave.
We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros. Co.
INDIANAPOLIS, IND.
241 Massachusetts Ave.
Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co.
JACKSONVILLE, FLA.
20 Laura St.
We cover all Florida—St. Augustine, Palm Beach, Miami, Tampa, etc.; also lower Georgia. Choice seasonal flowers always on hand.

Samuel Murray
KANSAS CITY, MO.
1017 Broadway
I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonal varieties of flowers on hand. Wire me your orders.

Jacob Schulz
LOUISVILLE, KY.
644 Fourth Avenue
Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of flowers always in stock; delivery facilities perfect.

Hall & Robinson
MONTREAL, CANADA
855 St. Catherine St., West
We can fill all orders for cut flowers, designs, etc., and can ship to any city as far as Halifax to the East and Windsor, Ont., in the West.

Alex. McConnell
NEW YORK
571 Fifth Avenue
American and European Correspondence.

Young & Nugent
NEW YORK
42 West 28th Street
We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

J. B. Keller Sons
ROCHESTER, N. Y.
25 Clinton Avenue, North
We can deliver flowers at any time, promptly, in Rochester, and surrounding territory. A first-class line of seasonal flowers always on hand.

Clark Florist
SCRANTON, PA.
122 and 124 Washington Ave
Telephone or telegraphic orders for any city or town in Northeastern Pennsylvania will receive prompt execution. Usual discount. Phone No. 2454, on either Bell or Consolidated phones.

Holm & Olson
ST. PAUL, MINN.
20-22-24 West Fifth Street
We fill orders for any place in the TWIN CITIES and for all points in the NORTHWEST. THE LARGEST STORE IN AMERICA; the largest stock, the greatest variety. Write, wire, or phone. We are alive night and day.

Herbaceous Plants

A paper read by C. S. Harrison of York, Neb., before the Am. Ass'n of Nurserymen, in convention at Denver, Colo., June 8 to 10.

I should have an hour or two for my subject, but as I am confined to a narrower space of time I must throw out my thoughts in chunks and let you masticate and digest them at your leisure.

There is a forward movement all around us; you can feel it in the air and hear its tread on the earth. Utility is giving way to refinement and beauty. Farm and home adornments are coming to the front. The whole land is in the throes of a new birth when symmetry is going to take the place of deformity. Too often the home has been an unsightly carbuncle on the face of Nature instead of a fair picture in harmonious framework matching the splendor of the sky, the freshness of the forest, field, and the lake which flashes like diamonds pinned to the bosom of Mother Earth. The whole world begins to feel like the little girl who went from the unkempt, unadorned farm-home to visit some friends who lived in a fine house with a spacious lawn hemmed in with charming trees, with attractive flower beds and ivy, where there was a touch of taste and refinement. These things woke up the soul within her and, when she got home and was saying her evening prayer, she added, "Oh, Lord, can't you give us a little more style?" And that simple prayer has broadened out into a mighty importunity which is reaching to heaven and bringing answers down to earth.

It is strange, when the mission of the nurseryman is to proclaim through all the land the evangel of beauty, that you will find him lagging in the rear. He does not keep up with the procession or keep step with the age or with God. He doesn't raise choice flowers and plants and fine ornamentals. He says there is no call for them. He is mistaken. The calls last Spring took most of the stock and what is left doubled in value. If there was no call it is his business to make one. That is what he is here for.

It is a shame to let the average Tom, Dick and Harry run the nursery business and set the pace for the grandest calling on earth and raise only what they have call for. Horticulture should have a higher mission than to secure the dollar; and yet there are dollars in decency, refinement and improvement. Let your motto be, "Beauty is wealth, therefore raise a lot of it and be rich."

Don't be the tail to the kite. Be the kite itself and let others do the wagging to keep up with you.

Too often the nurseryman waits for others to write things up and create an interest. Then after awhile he follows on to reap where others have sown, often buying the cheapest and selling at prices which belong to the best.

Seedsman and florists are often at fault. I know of one firm which buys Peonies for five to ten cents, and then pushes the price up to \$1, the price of choice ones.

On the grounds of every nursery in these days of progress there should be the finest collection of ornamentals and perennials adapted to the soil and climatic conditions, which the world affords. The nurseryman should stay with them, get acquainted with them himself, have his salesmen understand them. They should be grown where the visiting neighbors can see them.

Herbaceous Perennials

Have come to stay. We, in Spring time, find the West is located at the busy end of the world. We are in the midst of a maelstrom where tremendous activities are surging around us. We cannot bother with annuals. We must have perennials, something that will stay planted.

Providence has kindly marshalled for us a procession of beauty reaching from early Spring until the hard frosts of Autumn. The tired wife can rest herself every day in companionship with the finest behaved and best dressed company the earth affords. She can take a vacation in an elysium of her own which is far better and cheaper than a vacation in an asylum or a longer one in the cemetery. The soul of a woman is starving for communion with beauty. Let her have it. Don't defraud her of her own.

I cannot go into details over propagation and cultivation as we have manuals which give needed information.

First come the Crocus, Narcissus, Tulips and Ilyacinths, harbingers of coming splendor. There is the lovely family of Columbines (Aquilegias). These use all the tints of the rainbow in making their garments. A. cerulea, State flower of Colorado, is a photograph of the fleecy clouds and the intense blue of the mountain skies. A. chrysantha is a flower of pure gold from the Yellowstone Park. There are 50 native sorts with hundreds of hybrids, many of which surpass the parents. It is hard to find a more beautiful spectacle than a great blend of color in a mass of Columbines. Why don't people plant in abundance and so match God's great out of doors? It is a shame to expect two or three little flowers to adorn a farm or home!

People spend thousands on their dwellings, but when they step out of doors they are stricken with a stinginess which fairly withers them. If they have to pay

more than a quarter for anything to adorn the yard they are terribly abused. A thousand dollar picture in a ten-cent frame seems to be their ideal.

Oriental Poppies are like flames flashing in the sunlight. A bed of them is like a miniature sea of fire. They will bloom from the same plant for twenty years. Take a single flower, look within and see the delicate skill bestowed on that great seed ball and the tremulous stamens that guard it—all done up in jet.

Here are the glorious Peonies. While at their best they are peerless. There is nothing to match them. Here are 50,000 in hundreds of varieties. You go out and visit them. You are welcomed like a god. You wade in billows of fragrance that float all around them. Now they are making their toilet. Never a beautiful maiden preparing for her nuptials put on fairer garments. Tens of thousands smile upon you, vying with each other to please you. How winsome the lure of these beautiful flowers! While they last you want to be with them. And here are thousands of seedlings, some of them of superior beauty which will have a future.

Here are Pyrethrums. None but the Divine Artist could paint these delicate petals.

The Boltonias have their place in late Summer when most needed.

Polygonums and Bocconias have their place in some background, but don't give them much leeway, for they want the earth if they can get it.

Zvolanek's
New Blue
Winter-flowering
Sweet Pea

The Platycodons, the white, blue and double, are among the hardiest of our perennials and are very satisfactory.

The Gaillardias, Stokes' Asters, Digitalis and Shasta Daisies are fine, but they need especial Winter protection. The Lupines would be superb but they will damp off badly.

The great family of Phloxes reach from early Spring until late in the Fall. The subulata, or creeping Phlox, cover the ground with bloom early in the Spring. P. suffruticosa comes next with the stately Miss Lingard in the lead but, in the main, this family is not satisfactory.

Then comes P. paniculata, often called decussata. This great family is the real thing. They are natives of America. Growing and thriving in the wild like a robust Indian maiden, they were taken to Europe and underwent such a transformation that they came back to us in garments fit for the courts of kings.

In the early stages of transformation there is a tendency to reversion. The progeny want to get back to their parents, reminding us of the song, "But she is young and can't leave her mother." But age makes a great

difference. Now these flowers, like the Dahlia, have wandered so far from the originals, they break out in a riot of voluptuous beauty. And here is where you come in. We are just beginning to find the possibilities of this flower. For years we have produced new ones of great hardiness and you will find in the Phlox Manual, which has the kindest endorsement from the highest authority, the simple process by which a child can evolve new and charming varieties.

The Iris has been rather late in coming into notice, but it has come to stay. The different varieties bloom from March until August. There are 170 native sorts and the hybrids reach probably into the thousands. I found an undescribed one in the Black Hills last August, growing on stony bluffs, exposed to 40° below zero; it belongs to the Siberian type. This family now has 30 varieties and is increasing every year.

Oh beautiful, beautiful flower!
The ward of the sunbeam and shower;
In garments of woven delight,
Of the sunset, Aurora and light.
While over thy beauty there plays
Such delicate tints and rays,
Such blending of color and shade,
Well becoming a heavenly maid.
Ethereal, lovely and sweet,
Thy presence we joyously greet.

Thy Mother, fair Iris, in beauty supreme,
Took all her rich garments of loveliest sheen,
The robes of the rainbow, flower garden of air,
Of bewildering beauty, resplendently fair,
And made for her child such a dazzling dress,
No daughter of royalty e'er could possess.

Though her form seems so fragile, yet wondrously brave,
Away in the Northland, where fierce tempests rave,
She awakes from her sleep in her cradle of snow
And beams on the world with a radiant glow.
Away on the plains, in the drought and the heat,
She is cheerfully waiting, admirers to greet;
To her fairy presence must ever belong
The tribute of praise and the rapture of song.

We are not to forget the stately and imposing Delphiniums. These give us all the shadings of the blue. We see some of immense size. The Boston shows often exhibit those of rare merit. It would take a strong imagination to suggest an improvement—the main stems straight and tall and the branches packed with blooms, some single and some double. In the West, if planted in exposed places in the full sweep of the wind, they will need staking.

All perennials need shelter from the cruel blasts which often sweep at the rate of forty miles an hour. You can produce a calm by planting a hedge around your flower garden. If you want something tall, the flowers of which will add to the attractiveness of the display take the grandiflora, tatarica, or Manchurian Honeysuckle. The silver Tamarisk, charming both in bloom and foliage, makes an excellent hedge. This is the best of ten sorts which we have tested at York.

Brothers, do you know your own power. You can take a dull and sombre piece of earth and make an elysium of it. You can take the mantles of the stars, the splendor of the sunsets, and the coloring of the rainbow, and weave them all into a jeweled carpet fit for the touch of angels' feet.

Beauty has a mission. God might have made Apples of the color of cobblestones and given the Strawberry and Cherry the drab of gravel instead of the appetizing tints which are the despair of the artist.

On earth there is beauty everywhere, from the prodigal blooms of the tropics to the vast profusion of flowers in the frozen tundras of the North.

This world is only the porch of another. Flowers and gems are the prophecy of the glory to be revealed. How superbly the great Landscape Artist laid out this world of ours! What a land he gave us before it was marred by the greed of men! Did you ever think that this same Artist, who laid out this earth along the lines of harmony and beauty, also has landscaped the universe. When you get through your schooling down here, and have faithfully proclaimed the great evangel of beauty, when you have passed away, you will leave a path lined with radiant forms of loveliness. It will be said of you "He passed this way and these are his footprints."

When you stand as victor under that arch on which is written "All things are yours," you will receive the salutations of the universe, and the eternal beauty is yours. As the land of promise rose in wondrous mirage to the vision of Moses on Tabor, so will the broad fields of light rise to your gaze, and behold the universe itself is one great flower garden. Who can describe the clustered glories, the harmonious mingling of colors of the Milky Way, so thick with Immortelles. How amazing the vastness!—tremendous abysses of distance illumined by the smile of Jehovah. He drove his plowshare through the fields of azure, and all the furrows were flowered with stars, Orion and the Pleiades—great bouquets held in the hand of the Creator; the constellations, gardens of surpassing splendor.

So remember that the beauty of earth is a prophecy of that opal sea, jeweled walls and the great gardens of God. Let the higher shore give some promise of the future shore. We spent a few moments down here; most of our life is over there. So draw down a section of Paradise and live in it, and thus have an introduction to the Paradise beyond.

Retail Notes

LONDON, O.—E. J. Gould & Sons, flor-
ists, have opened a retail store on Main
st., opposite the postoffice.

HOUSTON, TEX.—Henry H. Kuhlman
has purchased the florist business of Wm.
Kutschbach. The purchase includes the
downtown store at 913 Main st. together
with two blocks devoted to culture at
2526 Washington st. and twenty acres of
land at Houston Heights. The business
will be continued temporarily under the
name of the Kutschbach Floral Com-
pany. It is, however, Mr. Kuhlman's
plan to organize a company and combine
under one management his business at
1703 McGowen ave. and the properties
purchased from Mr. Kutschbach. Mr.
Kutschbach is a pioneer florist of the
city and has conducted a successful busi-
ness for many years here.

Philadelphia Retail Notes

Edward Reiger, 267 So. 20th, is mak-
ing preparations to close his store about
June 20 and expects to reopen about
Sept. 15. This has been his custom for
several years.

Martin & Co., 2612 Columbia ave., re-
port trade for past two months as being
far ahead of same period last year, and
believes his design work is also far ahead
in originality and value.

W. L. Grover of the "Diamond Flower
Shop," is now located at 2926 Ridge ave.,
having removed from 30th and Diamond
sts. to Ridge ave. about Feb. 1. The new
location is conducive to more trade, be-
ing in a much busier neighborhood.

Rudolph Barth, of 11th and Master
sts., has devised a frame for spray work
which saves considerable time and mat-
erial. The frame, when filled, has the
appearance of a short baseball bat, and
has the advantages of being cheap and
easily made. Mr. Barth has filled a
quantity of all style frames and these are
ready for making-up when placed in
water for the purpose of wetting the
moss. Mr. Barth has enjoyed a nice lot of
funeral work. It seems as though this
kind of work always comes at a time
when other branches of trade are also
very good.

P. Joseph Schembs, 629 No. 17th st.,
has a wooden sign board on which is
lettered "Rose Specials" as a headline,
space being left below for chalk figures,
which, of course, vary. Mr. Schembs does
considerable business in special sales on
Roses and Sweet Peas, also in window
box work.

Miss Nora Ohi, 828 No. Broad st., re-
ports some good trade, especially in fu-
neral work, widow boxes and hanging
baskets.

Victor Ridenour, Ridge ave. and Dau-
phin st. is busy preparing for consider-
able alterations at his store. One house
has been removed and a larger building is
to be erected. A very busy Winter's
trade is reported, and at present funeral
and landscape work demand is exceed-
ingly brisk.

Carl Kelmuth, 1542 No. 27th, reports
present season the "very best ever," and
that the new Geranium "American
Beauty," was by far his best seller. He
has 3000 sq. ft. of glass devoted to Ferns,
and is working overtime to keep down the
orders for funeral work.

We Issue to Members a Credit List With Quarterly Supplements

The list now contains between 7000 and
8000 names. Membership fee \$10.00, in-
cluding privilege of obtaining unlimited
number of commercial ratings at cost. We
also collect accounts at standard rates.

Design Book

It is handsomely printed on enameled
stock, and contains 80 pages, size
9x12 inches, with strong paper cover

Every florist who has to "make up"
designs will receive valuable ideas from
its contents, which include over Two
Hundred Illustrations, embracing nearly
every variety of order that will come to
you.

This Design Book can be obtained
only through a subscription for this
paper, the leading florists' trade organ
of America, issued every Saturday, at
\$1.00 per annum. The Florists' Ex-
change two years, and one copy of the
Design Book, \$2.50. Paid up subscribers
will be mailed one copy for 75 cents.
Positively this Design Book can be ob-
tained only through becoming a sub-
scriber.

Lady Hillingdon Rose

The New Rose Lady Hillingdon

Respecting the new Rose, Lady Hillingdon. I am, through the kindness of Messrs. Mount, and Lowe & Shawyer, enabled to send a photo of this beautiful variety. The flowers are scarcely as large as some I have seen, but the photo shows the form and the beautiful foliage.

T. A. W., Eng.

The Waning of Interest in Orchids

The Orchid, about which so much has been written, both by the traveler and imaginative author, seems to be having a rather bad time. In days past, the Orchid family loomed largely, and all wealthy people considered it "the thing" to possess themselves of a collection, some indeed bringing themselves into financial difficulty through the craze for Orchid growing.

This kind of thing, like the Tulip craze, appears to be over, and no Orchid hunter or breeder is likely to win fame and fortune in the future, for there are signs that Orchids are failing to hold. Quite recently, Heath & Son cleared out their stock, the whole collection being offered at a low rate to all and sundry. Now the famous house of Rochford has issued the fiat that Orchids with them are to be "no more," and their whole stock, of some 50,000, is to be sold by auction during the Temple Show period. So far as the press is concerned, it must be admitted that Orchids do not receive anything like the attention formerly paid them and, therefore, it is not going too far to state that Orchids over here are done.

T. A. W., Eng.

Sixty Years of Retrospect With Notes by the Way

By Stephen Taplin, Nurseryman and Florist

(Continued from Page 785)

I remained at the Albrighton place nearly two years. Although there was much new work going on all that time I found it a very quiet, easy going place and I wanted a change.

Rochester, N. Y.

May business, taken on the average, was all that could be desired, a brisk demand for stock being the rule, with the possible exception of a week or so of dull business. Roses, especially white sorts, were a little too plentiful. Carnations, too, accumulated at times, but the monthly average will undoubtedly be a good one.

The demand for Carnations for Memorial Day was a surprise to everybody, and far in advance of that of any previous year, the supply falling short by many thousands, the shortage brought about, no doubt, by the continued dark, cold weather that we experienced and which we regret to say is still with us. Outdoor flowers were also out of the question, which made matters still harder and difficult for the wholesaler, who has to bear the brunt of all these happenings.

The trade in bedding plants was extremely heavy, and the amount handled far in excess of any season heretofore;

and at the time of writing stock is very hard to get hold of and there will, no doubt, still be demands for stock, as the weather is yet cold and wet, and it is the opinion of many that much bedding out has not been touched yet owing to the unseasonable weather conditions. June trade looks promising, and a busy month will, no doubt, be experienced, the many weddings and commencement creating a large demand for cut flowers. Sweet Peas seem to be most popular, together with pink Killarney Roses, and owing to dull weather both these flowers are scarce and the supply unequal to the demand. Prices current for the week are as follows: Roses, 3c. to 5c.; Carnations 2c. to 3c.; Sweet Peas 50c. to \$1; Valley 3c. to \$4; Am. Beauty Roses \$5 to \$25.

A meeting of the chairmen of the committees in connection with the S. A. F. convention was held on Monday evening, June 6, to formulate plans and express opinions, so as to be in readiness for the regular monthly meeting, June

I then, a second time, made arrangements to go into Veitch's nursery, in Chelsea, London, and was fortunate enough to be placed with the foreman of the small specimen grounds. Choice specimens of both coniferous, evergreen and deciduous trees and shrubs were brought from the other nurseries to the specimen grounds, where they were put in crates or boxes and sunk into the ground in rows or beds. Some of them would be sold at once, others would be ready to ship when wanted. The crate treatment would include all the choice conifer family, also specimens of both evergreen and deciduous trees and shrubs, including in evergreens Holly, Box, Yew, Laurels, Bays, etc., and in deciduous Magnolias and many others, most of which would be selected by the purchaser on the grounds. When prices were named there would be no dickering about the price of a certain piece. Everything in these grounds was ready to ship at once, to take a place for immediate effect, and the arrangement would give purchasers of a cheaper grade of some varieties a good idea of what they were buying.

I was much disappointed at not being able to put in a year, at least, in the ornamental nursery outside of London, but about December, on a Friday, I was ordered to report at a place in Glamorganshire, South Wales, about ten miles from Swansea, either Saturday or not later than the following Monday, as foreman at a private place. Under such circumstances anyone could draw at the office to pay traveling expenses, but this I did not care to do, as a particular friend (as I supposed) was in my debt to the amount I was short of, and I stopped in London over Sunday to look him up, with the usual result in such cases—he was sorry, etc.; so I looked up someone else and made up the amount necessary to enable me to leave London on the 6 a.m. train on Monday, with two shillings in my pocket. A London nursery at twelve shillings per week is not quite the place for anyone to get much ahead financially.

I reached my destination about 6 p.m. and took supper with the gardener, and his sister who kept house for him. My appetite was at its best, as I had not broken my fast since 11 p.m. Sunday. I found the gardener to be a good gardener, a first-class man in every way, except in health—he was a consumptive of long standing; I did not expect him to live three months.

The place was the most old-fashioned I ever saw. Pines, Grapes, Peaches, etc., were grown on a limited

scale. Among the plants there was a lot of old-fashioned stock, many plants I could not even name. The principal feature of the place was an Orange house, 140 ft. long, which would look like a large house even at the present time. It had a dead roof and back wall, with some sky lights in the roof; the front was arched and filled in with glass, which gave it a fine effect at a distance. It was entirely filled with Orange trees, in large square boxes, some of them with stems 10 in. through. They looked as if they had not been overhauled in twenty-five years, although they had been taken out of the house each Spring and set along the carriage drives in the pleasure grounds. There was a system of underground flues in the house, but no one could tell whether they had ever been used. The Winter I was there the thermometer did not go below 30°, as the place is close to salt water and is backed by mountains. Camellias would make large clumps outside. There were clumps of Hydrangeas, greenhouse varieties, 8 ft. high and 10 ft. through, one mass of bloom, and the most of them the finest blue I have ever seen.

The Arbutus, or Strawberry Tree, could be found among shrubbery in many parts of England, but suffered more or less from frost and was very seldom found in fruit. There could be seen large shrubs of it 10 and 12 ft. high, and, at Christmas, completely covered with fruit the shape, size and color of the hardy wild Strawberry; the birds went for the fruit in Winter the same as they would to a bed of Strawberries in Summer.

There was another house which, I should think, might have been a hundred years old. It was built something like one of the very old-fashioned Peach houses that I saw when I was a boy, with a dead back wall, the roof part hip and part lean-to, about 100 ft. long, with a trellis standing out from the back wall, on which was trained a collection of Lemons, Citrons, Shaddocks and all that class of fruit, many of which I had never seen before or since. I do not know if these fruits were ever made use of, or what use they could be put to, but it certainly was an interesting sight, fruit of all sizes, shapes and stages of growth.

The gardener had only been there about two years. He had been trying to modernize some things, but in his state of health he could not do much in that line. His predecessor had been there as boy and man for over fifty years and was retired with a pension for life.

The scenery was very fine from the mountains; and across the bay, Port Talbot, about two miles distant, was a great shipping port, copper ore coming in from all parts to the extensive smelting works, from which works the smoke was carried away up the mountains through a funnel-like flue, as it was fond so destructive to vegetation. The copper slag was broken up and used in road making; it was also run out into molds like large bricks, and used to build walls; there were many miles of such walls each side of the main roads, and they were about the only thing that could stand the wind at times.

The gardener had been foreman under John Spencer at Bowood, the seat of the Marquis of Lansdowne. He often talked to me about Bowood and the extent and quality of the fruit grown there. He was corresponding with John Spencer, and often told me about the trouble Spencer had with his foreman, the second one in two years. One day he told me he had just received a letter from Spencer saying he must make a change as soon as he could hear of a likely man, and he asked me if I would take the place, saying he would recommend me, as he thought I was losing time where I was, and he was sure from all my former experience I would be just the man for the place. As it was, from his description, just the chance I wanted, a week later I received a letter from Spencer saying the place would be open for me in two weeks.

(To be Continued)

Readers will confer a favor upon us of more than passing value if, when ordering stock of our advertisers, they will mention seeing the advt. in the Exchange.

Notes

DORCHESTER, MASS.—The Rosemere Conservatories, 38 King st., are now under the management of W. L. Tomlinson.

HAMILTON, O.—The condition of John Lodder, florist, who has been ill during Winter and Spring, is said to be improved.

TAUNTON, MASS.—C. D. Babbitt, the florist of Berkley, was kicked by a horse recently and will probably be lame for some time to come.

WHEELING, W. VA.—John Hellstern, the Pleasant Valley florist, who was injured a few weeks ago when struck by an automobile, is now able to leave his home.

MONTGOMERY, ALA.—The florist store of W. B. Paterson was visited by thieves during the night of May 25, but beyond a few postage stamps nothing of value was secured. Several locks on cabinets and drawers were damaged.

LARNED, KAS.—Joel Smith has purchased the Tyra Montgomery place in the southwest part of the town, and has erected a fine greenhouse. The foundation is of cement and the building is 20x110 ft.

SALEM, MASS.—The Ward estate 90 and 92 North st., has been sold at auction for \$6700. The property comprises about 25,000 sq. ft. of land, on which is a two-family dwelling house and several greenhouses, recently occupied by Harvey E. Ward.

SPECIAL NOTICE

To the Growers and Retailers of Flowers

HAVING succeeded John I. Raynor in his very large and old-established Wholesale Florists' Business, at 49 West 28th Street, New York City; and having been his general manager for the past seventeen years, I wish to assure all the old patrons of the past of this reliable house, that a continuation of their patronage is respectfully solicited. I am prepared to take care of all new patrons, who will find, on first trial, that I have only their best interests in view, and

I Can Furnish the Finest Quality of Flowers of Every Variety Obtainable in this Market

An early call will be appreciated. Mail, Telephone or Telegraph Orders will receive prompt and personal attention. Consignors solicited. Prompt returns and best market prices.

San Francisco

The Market

Memorial Day has come and gone for another year, and trade in general is back to its normal state. Taken, all in all, we had every reason to be satisfied with the business done in the cut flower line during the past week, and the reports which I have received from the various growers since last I wrote fully justify my saying that Memorial Day was one of the best on record, from a florist's point of view. We had lots of flowers of all descriptions and they invariably brought good prices; and telephones were kept busy all day calling for extra stock.

San Francisco differs from many of the large Eastern cities in this respect, that most of the retail stores do not handle pot plants in any quantity. This is not as it should be, and I am convinced that some effort should be made to interest the retail stores in this class of stock, as there is a painful scarcity of pot plants of any description in the stores at present. In the cut flower line Carnations are now beginning to slacken up a bit and prices show a steady improvement. Indoor Roses are beginning to suffer from the prolonged hot spell we have been having of late, and the quality of the stock brought into the market is very poor indeed. Outdoor Roses are still plentiful and meet with a good demand. Lilies have been very popular of late and good blooms have sold rapidly, at good prices. Sweet Peas are plentiful as also are Gladioli. There was quite a demand for choice flowers of all descriptions in the last few days and Orchids of all sorts sold well. Valley was somewhat scarce; what there was of it sold well, and at good prices.

Various Notes

San Francisco experienced the hottest day of the year on Memorial Day, when the thermometer registered 92° in the shade. In many parts of the State the glass registered over 100° in the shade.

The Sievers' Floral Co., for many years doing business on Geary St., and which recently failed, have no connection whatever with the J. H. Sievers

Co. on Powell st., or J. H. Sievers of Polk st.

A. Plath of Ocean View is shipping some fine Adiantum to town at present. The finest collection of Ferns in the State of California is to be seen at his place on Wyoming ave.

A large shipment of Cattleya labiata was received in fine shape at the Coryell Estate at Fair Oaks this week.

F. Ludemann, whose nurseries are situated on Baker st., is handling a fine lot of Araucarias at present. A large lot of Asparagus plumosus in 2-in. pots also looks fine.

Some fine stems of Cycas circinalis is being handled at present by the MacRorie-McLaren Co.

Fred Grohe of Santa Rosa has had an enormous demand this year for bedding stock of all descriptions.

F. Ludwig of Portland was a recent visitor in town.

H. Hill of Oakland is sending some fine Cattleyas into town at present. Mr. Hill reports having had a most successful season with his Orchids.

Frank Roach of Menlo, who recently bought the old Lynch nursery, will devote most of his houses to the growing of Roses and Carnations for the San Francisco market.

Flower stores in the Mission district did a splendid business on Memorial Day, owing to their being right in the center of the cemetery district.

A visit was recently made to the Crocker Estate at Uplands, San Mateo County. The glass department was first inspected and Mr. Munro, the head gardener, is to be congratulated upon the fine class of stock he has in the houses. The Carnations and Roses looked particularly fine, while a large lot of Cattleyas showed the effects of good culture.

WM. McM. BROWN.

Washington, D.C.

The weather during the past week has been a record breaker for June in Washington, the mercury falling to 46° with cold rains. Grass is about the only thing making any growth. Considerable anxiety was felt for the many tropical plants which adorn the various city parks.

WE beg to announce that on and after July 1st, 1910, the premises on the first floor of the Coogan Building will be under the management of A. Moltz & Company, who will sell, at wholesale only, all Flowers in Season in addition to Roses.

A. MOLTZ & COMPANY, Wholesale Florists

The stores are showing a larger number of pot-grown Hydrangeas this season than usual, and Gladioli are on the increase each week.

Owing to the unfavorable season, greenhouses are still being relied upon to furnish most of the cut flowers, with supply and demand about equal. The commencement season is on and there is a rather good demand for floral baskets, artistically arranged, in which the Rose, Carnation and Orchid form conspicuous features.

Sunday was Memorial Day for the 265 Confederate dead who rest in Arlington National Cemetery, an occasion which each year meets with growing enthusiasm from the various relief organizations here, and there is likewise an increased demand for blossoms of white and red, which represent the colors.

It is an annual custom, on the Sunday after the 30th of May, for these forces to unite at Arlington and offer a most impressive and interesting program.

One of the special features is the unveiling of a very large floral cross by young ladies composing the Confederate choir, dressed in white with red sash and red Peony. These same ladies then form into a living cross and render sacred music, after which the flower committees take up their work of placing upon each grave its allotment of loose cut flowers, while set pieces adorn the tombs of those who won most distinction. Crimson Rambler Roses, Daisies and Carnations constituted the bulk of flowers used this season but, owing to the very inclement weather, the full program could not be carried out.

JAS. L. CARBERRY.

F. H. Kramer of 916 F. st. still continues his effective campaign of newspaper advertising, occupying space freely in the columns of the Washington Sunday papers. The keynote of his claim for patronage is based on the fact that he is "the florist who grows his own flowers."

Please mention the Exchange when writing.

NEW YORK, June 8.—Monday and Tuesday stock moved somewhat better and prices were a trifle firmer, but today fails to keep up the pace and the market is painfully quiet; everything now suggests that Summer conditions are close at hand, and that shorter days and vacations will soon be in order.

The cut of American Beauty Roses is fully equal to the demand. A few choice specials bring 25c. each, but \$2 per doz. and under is the ruling price for specials. No. 2 and 3 grades move very slowly indeed. There are abundant arrivals of Killarney and My Maryland; and the latter and pink Killarney are rivals for public favor, while White Killarney seems able to "take the bone out of Kaiserin's mouth" as a white Summer Rose, and to surpass the Bride. A few very choice blooms of Killarney and My Maryland are selling for 8c. each, but most sales for top grades are around the 5c. mark and moving slowly. Richmond is coming in cut tight, and moving off very slowly, probably on account of the present supply of outdoor Jacquemont. For top grade the best price is the same as Killarney, but with fewer buyers. Bride and Bridesmaid are suffering from the usual Summer mildew, and also from comparison with the two Killarneys. The demand is light, and the best grade arriving hardly reaches the 5c. mark, and from that way down.

Carnations are fairly plentiful, and the quality mostly medium to poor, and selling slowly at 2c. each for top grade, with a few sales of the choicest blooms at the 3c. mark.

There is only a moderate supply of Gardenias, but more than enough to satisfy the present demand, and the choicest blooms are selling at \$1.50 per dozen and down; and Southern Gardenia florida finds no buyers. There is an abundant supply of Orchids, and a very limited demand; the choicest Cattleyas are selling for 50c. each and from that down to unquotable prices.

Lily of the Valley is coming in more abundantly and is not selling as well as it has been for several months. \$3 per 100 is the highest figure for top grade. Lilies are coming in more slowly, but there are enough, and the best grade is selling for 75c. per dozen, while most sales are around the 5c. mark. There is about the normal Summer supply of Callas, but the demand is small, and \$1 per doz. is the top notch price for the best grade.

Cold frame Sweet Peas of excellent quality are arriving and a few from open ground also. The demand is not over brisk, and the best grades sell for \$1. per doz. bunches, while a few extra choice flowers reach the \$1.50 per doz. mark.

There is in the market a large supply of Peonies, good blooms, but they are not selling briskly and the best grade is changing hands around the 4c. figure, with a few sales of choice blooms at 6c. each. The large supply of outdoor greens is probably answerable for the present slow movement of all indoor, greens and the drop in price of Smilax to \$1.50 and less per doz. strings.

PHILADELPHIA, June 6.—The local Peony crop is about over, though a few late pinks are still coming into the market. Boughs of Kalmia are appearing, also an early white variety of hardy Phlox, Coreopsis, and Gaillardia, of good quality.

The supply of American Beauty Roses is more than equal to the demand, although the quality is not all that might be wished, there are some heavy shipments, and they are moving well, specials selling for 25c. each, and in small quantities choice blooms, especially of Eastern stock, realize a somewhat better figure. Killarney and My Maryland are neck and neck in popularity, with the quality still

very good, and top grade flowers bringing 8c. each, and moving fairly well. Richmond has to be cut very tight in order to arrive in fair condition, and is inclined now to be weak necked. The very choicest blooms in small sales bring 10c. each, but otherwise 8c. and downward is the prevailing price. Bride and Bridesmaid are of indifferent quality on account of mildew, and no real specials are arriving; the best obtainable is bringing 8c. and under. Mrs. Jardine is deteriorating in quality and the best grade obtainable is selling for 10c. per supply, as usual, being limited. Kaiserin is in better condition and is moving well at 10c. each for the best grade and from that down to 2c. each.

The supply of Carnations is fully equal to the demand and the blooms are from medium to poor quality. Still they are moving off at 3c. each for the very best obtainable and from that down, very few reaching above the 2c. mark.

Gardenias are moving rather slowly, and with the continuous abundant supply hardly get up to the \$2 per doz. mark, with many sales at one-half that figure.

Orchids are coming in fairly enough to satisfy all demands, and top grade blooms bring 50c. each. They seem to be moving somewhat better.

Callas are not abundant, nor are Lilies coming in so freely, and with a somewhat better demand the top grades of each are selling for \$1.50 per doz. but in large sales Lilies hardly realize more than 8c. each. Outdoor Sweet Peas are now coming into the market in good supply and of very nice quality. They are moving freely at \$1 per 100 for the best.

CHICAGO, June 7.—The weather conditions still control the market, and while more business would result with warm, sunny weather, the crops would also increase and flowers become soft, so that the profits would not be as great as they are under the prevailing conditions.

There is a shortage of American Beauty Roses, both in long and medium lengths. All other Roses are plentiful, solid and of good color. The Sunrise Rose is being used extensively for corsage bouquets for commencement exercises and is in fine shape. This small Rose is commanding the same price as its larger brothers, Killarney, Richmond and My Maryland, \$5 to \$8 per 100.

Carnations have fallen off somewhat in price, although the stock in nearly all instances is in excellent condition. White varieties are the hardest to move, except in the fancy stock. Extra fine flowers are selling for 2½c. each, although good quality is obtainable at 1½c.

Callas are in greater demand than Lilies; the stock is decreasing daily, and the demand varies. Lily of the Valley finds its usual June demand, for bridal work.

Sweet Peas, generally speaking, are plentiful, although at times there is a scarcity. The Spencer type is holding at \$1.50 per 100 for the best. White Peas of this type have become very prominent at weddings, and bridal bouquets. The shorter stock is to be had for 40c. or 50c.

Peonies are the one scarce thing, and are greatly missed. The call for them makes one realize how the public depends on a certain flower at certain seasons. Ordinary flowers are bringing 60c. and 75c. per doz., while such fancy stock as is available brings \$1 per doz. Gladioli continue in fine form and bring \$1 per dozen. America and Frances King bring \$1.50 and \$2 per doz. Orchids are in good demand, as they have also become popular for weddings. The quantity is increasing considerably. Cape Jasmine is in greater profusion than last week. Gardenias are getting very scarce. There is very little showing of miscellaneous stock.

BOSTON, June 7.—Business during the early part of the week was very good and large quantities of flowers were disposed of at very good prices. Friday and Saturday were quiet days. There were never better flowers for this time of year than now. The cool, moist weather keeps them in fine condition. Roses are of very fine quality and there is a good supply of them, the prices running from 3 to 6c., and on fancy grades higher.

Carnations are of very fine quality and often, earlier in the season, poorer material was seen. There is quite a good demand for them and the color is very good. The prices run from 1½ to 2c.

Easter Lilies are in good demand and there is quite a lot of them in the market. Stocks are not as plentiful now, many of the houses being cleaned up of them. Candytuft is also scarcer now. Sweet Peas are in very good demand and some fine flowers are seen in the market, with extra long stems. Lily of the Valley is in excellent demand now, large quantities being used for weddings. Peonies are just beginning to come in. Iris of the German type are also for sale now, as are Oriental Poppies. Asparagus is more plentiful but cleans up well.

R. C.

INDIANAPOLIS, June 5.—A perusal of the general trade conditions in any newspapers would, at this time, give the reader an insight into the conditions prevailing in the flower market. The weather dominates the sale of flowers and, as it has been invariably rainy and cold, there is little to be expected from the flower loving public. The necessities in the flower line, as they might be termed, such as those for funerals or weddings, keep steadily in sale, but counter trade suffers keenly.

The market is well filled with all grades of stock and quotations are many times reduced to effect a clearance. Carnations continue fine in quality but have dropped to \$2 per 100 for medium grades. A few fancies bring \$2.50 to \$3 per 100. At retail the prices range from 35c. to 75c. per doz.

But few Roses are being shipped in right now and many hundreds of the local cut are sent to surrounding cities. Bride and Bridesmaid are a principal factor at \$2 to \$6 per 100. A few special Killarney bring \$7 to \$8 per 100. The retail figure for Am. Beauty is \$1 to \$6 per doz.; wholesale prices are mostly \$5 to \$25 per 100.

Peonies are certainly beautiful; many of the best varieties are grown in this

section, but the bottom seemingly has dropped out of the market and the grower generally takes what he can get without any reference to price lists. From \$1 to \$3 per 100 is asked for them. The shopmen are asking 40c. to 75c. per doz. for choice ones.

Harrisii and auratum and Callas are seen in large numbers at \$10 to \$12.50 per 100.

The bedding season is drawing to a close. General reports are indicative of a good trade in this line. Several of the growers this season have refused to sell direct to the public as they do their other flowers, but have relied wholly on the street vendors and peddlers who are satisfied with all the troubles of planting them at a small profit.

Candytuft, Everfew, Sweet Alyssum, Spanish Iris, Daisies, Mignonette, Pansies, Poppies and Coreopsis are part of the show now seen in the flower quarters. I. B.

ST. LOUIS, June 5.—Business for the last week was reported very good in all lines. There have been a great many weddings, school graduations and several large funerals at which a considerable lot of work was done by all the retailers in all parts of the city. Judging from the reports of the leading retailers, business for Decoration Day was as good as any they have had, with more shipping orders than any previous year. The greenhouse men say they had a big call for plants, more than ever before, and they say they gained by the high prices on cut flowers.

Our commission men say they did well, both in local and shipping orders and that the high prices prevailing were caused by the scarcity of outdoor flowers and the big demand, and they say they pleased their consignors.

This, Monday morning, June 5, we find the commission houses well supplied with extra good Roses which bring from \$4 to \$6 per 100, American Beauty Roses, long fancy, at \$3 per doz. and shorts at from \$3 to \$10 per 100. Carnations also of good quality, ranging from \$1.50 to \$3 per 100 are clearing up fairly well. Gladioli spikes are coming in fine at from \$6 to \$8 per 100. Harrisii Lilies sell well at \$10 per 100. Sweet Peas have been quite plentiful, but the recent rains caused a scarcity; they bring from 25c. to 50c. per 100. Extra fine Lily of the Valley sells from \$3 to \$4 per 100. Fancy Ferns are up to \$2.50 per 1000, and scarce at that, and dagers bring \$2. Galax, Adiantum, Smilax and Asparagus sold well all last week.

ST. PATRICK.

New York

P. J. Smith, successor to John I. Raynor, will be found at the old stand, 49 West 28th st., ready to welcome both old and new customers. Mr. Smith was for seventeen years with Mr. Raynor, and he has the good wishes of his many friends in his well earned accession to the business.

George Saltford, 43 West 28th st., is receiving some of the finest Peonies now arriving.

James McManus, 42 West 28th st., is receiving a full line of all seasonable Orchids, among which may be mentioned Cattleyas gigas and Gaskelliana.

The Growers' Cut Flower Co., 41 West 28th st., is receiving a large cut of good Gladioli, especially in scarlets.

At the meeting of the directors of the N. Y. Cut Flower Exchange at Long Island City, on June 4, an annual dividend of 10 per cent. was declared. A stand at the Exchange was assigned to Gustave Müller, Farm Road, Secaucus, N. J.

The Kervan Co., 113 West 28th st., is doing an up-to-the-limit business in all outdoor greens.

The new store front is now going in at M. C. Ford's store, 121 West 28th st. The mammoth ice box from the old store has been installed in the basement and it is only a matter of a few days before the store is completed. Meanwhile the business progresses with its old-time vigor.

George Cotsonas & Co. are in their new quarters at 127 West 28th st. The building is undergoing extensive improvements, including a new glass front for both stories. On the second floor there will be banded florists' supplies. N. J. Hill, wholesale florist, will continue to occupy quarters with Cotsonas.

A son was born to Bernard Breckner, Bayside, L. I., on June 3. Congratulations on the advent of a new florist are in order.

It is reported that the market is short on rooted Mum cuttings.

P. R. Pierson, Tarrytown, N. Y., was in attendance at the Summer exhibition of plants and flowers in the Museum Building of the N. Y. Botanical Garden on June 4, where he was chairman of the exhibition committee.

Kessler Bros., 450 Sixth ave., are making large sales of Bay trees and Phoenix Palms.

There is nothing doing, so far, at the prospective new quarters of George Saltford, which have been vacated and will be put in first-class order before July 15, when Mr. Saltford will make the sixth mover among the wholesale florists and plantmen on 28th st. Who next?

Charles H. Totty of Madison, N. J., will shortly make a trip to England, and it is expected he will be accompanied by Joseph S. Fenrich, who feels the need of a quiet vacation.

Philip F. Kessler will move on June 15 into quarters on the third floor of the Coogan Building, 26th st. side, the same floor as that occupied by the N. Y. Cut Flower Exchange.

Frank H. Traendly, chairman of the transportation committee of the N. Y. Florists' Club, expects to make a report at the Club meeting on Monday next, June 13, on arrangements made for the transportation of members and friends to Rochester, for the S. A. F. convention. A big attendance is expected at this meeting, as it is the last meeting until September, and at it will be made the first exhibition in the points competition for the Hitchings cup of merit.

The joint will of the late James Bolling, florist of Montgomery st. and West Side ave., Jersey City, and Mrs. Bolling, was probated last week, and was the first such will admitted to probate in Hudson County in ten years. The husband died in August, 1907, and the wife on April 16 last. The florist business is bequeathed to the son, Charles, who also receives an equal share of the real estate with two sisters.

E. S. Miller of Wading River, L. I., met with a very painful accident on Sunday morning, June 5, while riding his bicycle. The fork broke at the head, throwing him heavily to the ground, and cutting his face badly. Several stitches were taken in each lip and the nose. Besides the cuts, he was bruised and generally shaken up, so that he will be confined to the house for some time to come.

Buffalo

The daughter of Otto Gillis, one of W. J. Palmer & Son's employees, was operated on for appendicitis on Saturday of last week; at this writing she is doing as well as could be expected.

Robert Scott still has to use his canes to get around with, owing to the affliction he has in his knees.

The writer in going the rounds of the different greenhouses found them all pretty well sold out, many having had to buy stock to fill orders; this speaks pretty well for trade in their line.

The Wm. Scott Co.'s place, cor. Main & Balcom sts. grows about 30,000 Geraniums, besides a large line of bedding plants, which stock all looks well. They have been busy for the past three weeks filling a large number of cemetery vases with outdoor stock; owing to the rainy weather this work has been greatly held up.

D. Newlands & Co., at Main and Delaware aves., grow about 20,000 Geraniums for their cemetery work; being located right across the street from the main entrance thereof they enjoy one of the largest trades of this kind in the city; they had been rushed for the past three weeks, and were looking for a breathing spell.

W. H. G.

Boston

Trade conditions have been quite good after the large business done on Memorial Day, and excellent reports are heard everywhere regarding the holiday business.

Flowers of all kinds in the market this week are of excellent quality, considering that it is June. Roses and Carnations are seen of the very highest quality and the color of the Carnations is very good. No doubt the cool weather we are having has something to do with this. Since the beginning of June the weather has been exceptionally cool, and although we had such an early Spring the season is backward and the Peony exhibition had to be postponed this week, due to the fact that few Peonies have opened yet. On the night of June 4 there was quite a hard frost in some sections and early and tender crops suffered somewhat.

College and school graduations are the principal outlets for quantities of flowers at this time, and Boston has so many of these institutions that several retail florists reap a good harvest from them.

Floral decorations for June weddings are being done and many orders have been booked for the past week; in fact, many of the retail florists have been quite busy since the beginning of the month.

Growers are busy clearing up their houses of Stocks, Candytuft and other Memorial Day products and many of the houses are being replanted with Chrysanthemums and other plants suitable for Autumn sales. Others are busy with repairs, painting, glazing, etc., and no time is better suited for such work than the present, when most of the houses are empty.

Edgar Bros. of Waverley are shipping some very nice dark red Peonies, presumably P. officinalis rubra, to the market at 1 Park st.

Becker & Co. of Billerica had a splendid crop of Carnations, which they are shipping to 1 Park st. Their Red Prince Carnation holds its color very well, is a splendid keeper in hot weather, and sells at highest prices.

H. W. Vose of Hyde Park has some very fine Gladioli of the early kinds, and his productions of this flower at the market look remarkably well and are sold readily.

Peirce Bros. of Waltham are still cutting good Lilium longiflorum and they keep the market well supplied with their various kinds of Gladioli.

Mann Bros. of Randolph are also shipping Lilies and they are in good demand, many of them being used in church decorations.

At W. H. Elliott's, Madbury, N. H., establishment the hands are busy clearing out their Roses, and this week will see most of the old soil moved and fresh material put in the benches. Next week they will begin planting with young stock and will finish up in about three weeks.

Willow Hill Greenhouses, West Roxbury, are this week, through Thomas Peglar at 1 Park st. market, disposing of some well grown standard Fuchsia and Heliotrope plants, which are picked up readily at good prices.

Elijah Wood of Newtonville has a fine stock of the favorite market varieties of Peonies and is just beginning to ship this week. He has the largest supply of Festiva maxima of any of the growers, and his cut flowers of this variety are always the best in the market.

Special price on lots of 5000 or 10,000 plants.

**ROBERT CRAIG CO., 4900 Market Street
PHILADELPHIA, PA.**

Please mention the Exchange when writing.

F. Gordon Fisher of Montvale, Mass., has gone to Durham, N. H., to take the entry examination at the college this week. He expects to enter college next Fall. He is very much interested in forestry and no doubt inherited this fondness from his father, David Fisher, who was a trained forester as well as a good gardener and florist.

Paine Brothers, of Randolph, Mass., have pulled up all their Sweet Peas and are now cleaning up their houses and repairing them for their Fall crops.

Adolph Koch, florist, of Nobscoot, Mass.,

met with a very painful accident this week. He lost part of his forefinger while working with a hot air engine.

Walter H. Knapp of Newton is cutting some good Oriental Poppies, and The Hanover Greenhouses, Hanover, Mass., have a good cut of Kaiserin Roses and fine Carnations. Both ship to 1 Park st. market.

Zinn the Park st. florist has been quite busy with wedding decorations and has many orders on his books for the remainder of the month. He made a very large funeral piece last week which went

VALLEY

For the June Girl

The celebrated Pennock Brand. The very best pips were selected and planted for June work, which is giving us a quality much above the average.

to Rochester, N. H. It was a 6-ft. horse-shoe, made with Rhea Reid Roses, and inside, on a panel backed with Magnolia leaves, was a large horse's head made of white Carnations.

The baseball team of the market at 1 Park st. went to Madbury, N. H., on Saturday, June 4, to play the Madbury Rose Farm team. The men who have been breathing the invigorating fresh air of the New Hampshire hills for several years were a little too much for the city men, and the result was that they played 12 innings. The Madbury men scored 10 and the market men 9.

Robert E. Lessman of Waverley has a good crop of Pyrethrum which he is shipping to the market at 2 Park st.

A. M. Tuttle, nurseryman, of Melrose has been shipping some extra fine Iris dalmatica, which sells readily and at a good price. The light lavender color is very pleasing.

Final Memorial Day Notes

J. H. Leach of North Easton, Mass., had a splendid crop of Spirea for Decoration Day; he sold in one order to Galvin 4000 sprays. His Queen Alexandra was of very high grade and sold as high as 6c a spray.

A. Roper of Tewksbury had a large crop of Carnations of high quality. His

Fair Maids and Bay State were worthy of special mention.

John Barr of South Natick had the best Carnations in the market; he never has trouble in disposing of them at the highest prices going.

W. S. Phelps of Marlborough had some very fine Gladioli, which went quickly.

Philadelphia

Pennock Bros., 1514 Chestnut st., are making a very attractive window display. One-half of the window is filled with baskets of flowers in ten different arrangements, the other half with some nice specimens of Crotons, Hydrangea Otaksa and Cibotium Schiedei. One basket, filled with pink Snapdragon, pink Sweet Peas, and pink Hydrangea with Fern trimmings and blue chiffon bow, is very pretty.

Charles Meehan of the S. S. Pennock-Meehan Co. went to Washington on Monday to look after the interests of the company's Washington branch.

Robert Craig, Jr. and Duncan MacCaw, on their New York trip last week called on the plant growers at Woodside, Whitestone and Flushing, L. I., and Secaucus, N. J., and also on the Julius Roehrs Co. and Bobbink & Atkins, Rutherford, N. J. They report a very enjoyable visit and they were especially charmed with the Roehrs' Orchids and Bobbink & Atkins' evergreens.

The Robert Craig Co. is sending out great numbers of Cyclamen, Begonia Lorraine, Dracena terminalis and Crotons.

Edward Reid, 1516 Ranstead st., is making large shipments of American Beauty, Killarney and My Maryland

Roses. Mr. Reid's reputation as a very successful shipper, especially to southern points, is well known.

George Aeule, the new and energetic young manager of the Philadelphia Cut Flower Co., is evidently "making good" at 1517 Sansom st.

It would be hard to find either in Philadelphia or any other city, a wholesale commission florist's establishment where things are moving faster than at S. S. Pennock-Meehan Co.'s, with its forty or more employees.

Some blooms of the new Rose Princeton, brought out by Stockton & Howe of Princeton, N. J., have been shown in this city. The color is rose pink and the buds are long, and it is thought to be very promising. The firm will devote one house to it next winter.

The Leo Niessen Co., 1209 Arch st., are receiving some very fine Sweet Peas and My Maryland Roses.

Godfrey Aschmann, 1012 West Ontario st., has bought the adjacent house at 3348-50 North Tenth st., and is having it renovated and put in first-class order for tenement purposes. Mr. Aschmann will sail for Europe early in July to make selections of Azaleas and other plants for importation.

Mrs. Alphouse Pericat and her two daughters, Misses Odette and Jeanne, will sail for Europe on Saturday, June 11, on the LaGascogne for a three months' stay. Miss Odette will remain in France for two years, to complete her French education.

which were supplied by the Chicago market.

J. G. Crozier, and son Milo, arrived in Chicago on Monday from Cedar Rapids, Ia., and will visit the growers and nurserymen in this locality. Mr. Crozier is looking ahead, as he expects to build an addition to his place next year.

A cablegram from O. P. Bassett last Saturday announced his arrival in England on that day, after a most enjoyable voyage, during which he was not sick a minute and ate three hearty meals every day. He expected to start on his auto tour on the following Monday.

Will Young, of St. Louis, was a visitor in town the first of the week, and left for Rockford, Ill., and other points throughout the State.

C. Currie, one of the Toledo, O., retailers, spent Monday in town, en route for Delaware, O., where he expects to spend a few days.

Ed. Kirschner of the Winona Floral Co., Winona, Wis., passed through Chicago last Friday on his way to New York, to leave there the last of the week for Germany on an extended visit.

The Briggs House Florist has opened another shop in the Masonic Temple, next door to the store recently vacated by the Visas Brothers.

The Bohannon Floral Co. bought an entire shipment of Orchids last week. By running a special sale Mr. Bohannon says he disposed of every one on a good margin of profit. They had three weddings on hand Saturday, besides several funeral orders, which kept all hands hustling.

D. D. Johnson of the Evergreen Brand Fertilizer house is busy working on some circulars pertaining to the fertilizer, which he will be pleased to send to any desiring them.

J. Mangel says that he has many orders booked for graduation and commencement exercises. Several functions held at the Blackstone Hotel last week gave his hands plenty to do.

Muir of 35th st. and Michigan ave. says business has continued brisk all the season; funeral work and wedding orders have kept everyone busy.

Visitors: A. L. Glaser, Dubuque, Ia.; F. Flossfeder, Berkeley, Cal.; W. A. Harkatt, Dubuque, Ia.; Chas. Connon, St. Louis, Mo.; G. W. Stumpner, Argos, Ind.; Aug. Casper, Rochelle, Ill.; Mr. Anderson, Moline, Ill.; C. L. W. Sneider, manager of El Paso Carnation Co., El Paso, Ill.

Fred Munzing, one of the employees of Frank Oechsin, sailed from New York June 8, on the Lusitania, for England, where he will spend the Summer.

Bowling

The averages of the bowlers in the competition for places on the S. A. F. convention team on June 3 were as follows:

	Games	Pins	Average
E. Johnson	3	541	180 1-3
Yarnall	15	2508	167 3-15
J. Zech	6	1004	167 2-6

Vogel	5	607	121 2-5
Krauss	3	359	119 2-3

Chicago Florists' Club

A regular monthly meeting of the Chicago Florists' Club was held on June 2, at the Union Restaurant. There was not a very large number of members present. Vice-president Harry E. Philpott presided. No new members were proposed. George Grimm, 523 So. Peoria st. and P. J. Saunders, 4901 Cottage Grove ave. were elected members. It was voted that the Club on July 7 give a banquet to the members of the Club, at a dollar a head, the expense to be defrayed by the Club. Any members wishing to bring friends may do so at the rate of one dollar per plate. Nothing of further importance was discussed.

Worcester, Mass.**Final Memorial Day Reports**

Worcester florists are satisfied with Memorial Day business and feel they have had their share of the trade. The shops were opened day and night and business kept up until well into the afternoon of Monday.

The demand for cut flowers was good but plants and flowering shrubs had the greatest sale. Quantities of Spiraeas, Hydrangeas, Geraniums and living bouquets, were sold.

All florists report an excellent supply and demand, and consider the day's trade as an indication that money is more plentiful this year than last.

Lily of the Valley is about gone. Sweet Pans for corsage bouquets are much in demand and Pansies are also in favor.

Orders for wedding decorations are fast coming in and June promises to be a busy month in this line of the business.

W. D. Ross Bros., seed and implement dealers at 90 and 92 Front st., are busy filling orders in both departments. The seedsmen are doing a fine business in spite of the cold and rainy weather. Flowering and bedding plants are especially good. Bay trees and Boxwood are in great demand for landscape work and specimens of each are found in all of the shops for use by the home or professional landscape gardener. The James Draper Nurseries are doing a good business. James Edwin Draper is making much progress in the business established by his father, James Draper, the former commissioner of parks.

H. F. A. Lange has one of the most attractive window displays of the season, in his new store. A center vase of brass, about 3 ft. high, holds two dozen Easter Lilies and around it pots of Canterbury Bells, Ferns and Palms are arranged; the white of the Lilies and the delicate colors of the Bells making a pleasing contrast. The other window is designed in mosses, Ferns and Palms.

H. F. Littlefield's store at 409 Main st. is beautiful with fine shades of Hydrangea, Spiraea and greenery as a window display.

The Elm beetle seems to be causing a disturbance and some worry in this vicinity. A number of people who have found the pest on their premises have begun to fight it. Many who are not familiar with its characteristics have visited Horticultural Hall to gather information.

The cold, rainy weather and heavy frosts have worked much destruction to outdoor plants and flowers in Worcester and vicinity. The florists are cutting blooms now that should have been ready for Memorial Day.

The hothouse flowers have also been retarded by the changeable cold weather and, although business is good, seasonable flowers are late.

Charles D. Mackie reports an exceptional business in Baby Ramblers. These have been demanded for cemetery and home decorations. Funeral designs are receiving many calls, and Roses, Carnations, Pansies, Sweet Peas, with Boxwood sprays and Magnolia leaves are good sellers.

The Worcester garden city, the first in the world, located on the Island district, is attracting much attention. The flowers and vegetable plants were slightly affected by the frosts. Rev. R. J. Hardy, who is in charge, on advice of Sec. A. A. Hixon of the Worcester Co. Hort. Society, did not permit the little ones to plant as early as usual because of the weather conditions.

Marguerites in yellow and white are in great demand for weddings and receptions. An arm garland is particularly popular.

Edward O. Orpet, gardener E. V. R. Thayer estate, Lancaster, whose Orchids are famous all over the country, is planning to leave for Forest Hill Park, Ill., where he will have full charge of a large estate.

Enchantress, Lawson, Winona and White Perfection Carnations are favorites for luncheons and receptions.

Mme. Chatenay, Mrs. Jardine, the varieties of Killarney, Bride and Bridesmaid Roses are sold in abundance for weddings. The florists are producing a large number of these and Carnations to meet the demand for Worcester trade, which is partial to these varieties. E. D.

We are much pleased with The Florists' Exchange. The series now running on "Greenhouse Construction and Heating" alone is worth ten years' subscription to your paper.

H. D. W., New Hampshire.

THE FLORISTS' EXCHANGE

Providence, R. I.

Memorial Day has passed with every florist satisfied, although some have not caught up as yet in the line of bedding plants. Still there is an assurance of getting there sometime soon. The main hindrance has been the weather which, rainy and cool, has kept much stock and cut flowers from coming on the market. Mr. Bryant, representing the A. H. Hews Pottery Co. of Cambridge, Mass., was in town Thursday calling on trade; he reports business has been very good with them.

Wm. Crompton of East Greenwich reports busy times and is still putting out quite some bedding plants.

Lawrence May of E. Providence is bringing in some nice Mme. Saleroi

Geraniums, also is doing quite some grading and seeding at Agawam Hunt Club.

Mr. Scott, proprietor of the Westminster Greenhouses, had a large wedding decoration this week. The ceremony took place under a finely decorated arch of Lily of the Valley and Asparagus. The shower bouquet for the bride consisted of Orchids and Lily of the Valley. The seven bridesmaids each carried a basket of Sweet Peas.

Martin Renkauf of H. Bayersdorfer & Co., Phila., was in town this week.

H. C. Neubrand last Sunday attended the annual outing of the Red Men's bowling league at the R. I. Yacht Club, Providence Island, as guest of Mr. Fred Goff, proprietor of the E. Providence bowling alleys. There were fifteen in the party; all present had a very enjoyable time

and the fish and lobster dinner served at the Yacht Club's dining rooms was heartily appreciated.

M. J. Lench & Sons of Pawtucket are busy with wedding decorations this week; they had a very good business Memorial week.

Macnair reports the past Memorial Day averaged 10 per cent. in advance of the same time last season; Mr. Macnair has one of the best locations for retail trade in Providence.

J. J. Kelley of Valley Falls has recently been elected on the City Council; we wish him success.

ing their supply, then awakening and finding a surplus. As this condition does not prevail at Christmas, the retailers cannot see why it should Memorial Day or at Easter.

John Burke is bringing in some very fine Roses for Wm. Hay, of Oaklawn, R. I. H. C. N.

Jamesville, N. Y.

Everyone was on the jump at T. M. Miller's place when I called. Business has been and is very good with him. Memorial Day trade is fully up to the average; great difficulty was experienced in filling orders for cut flowers. Although he had a fine cut of Carnations, outside stock was mostly over, and hard to get. The bedding stock is all in good shape. He has about 20,000 Asters, nice stocky plants, for which he finds a ready sale. The show house looked very attractive, with some well-bloomed Hydrangeas. About 10,000 Chrysanthemums are grown, and promise well for Fall and Winter bloom. His seedling Geranium, which I have often mentioned, seems to improve, if that were possible. The trusses are enormous, everyone who sees the variety wants it, and he has been compelled to lock plants up in a house by themselves. I am sure when he exhibits it at the convention at Rochester, all will agree that I have not over-rated it. H. Y.

Pittsburgh, Pa.

Business has been unusually good the past week, for both wholesaler and retailers; and the fact that Memorial Day is just past.

The retailers all seem busy, and this looks as though it will be a big month for weddings. Large wedding decorations and commencement bouquet orders are helping greatly.

Carnations are coming in pretty heavily and of good quality. Am. Beauty are poor, stems fine, but flowers small.

F. H. Westhoff of DeHaven, Pa., is building several large Rose houses.

P. Demas and family sailed for Greece on the S. S. Athens, June 7. They expect to be gone four or five months. Mr. Demas will spend most of his time in Sparta, Greece, while abroad. He intends to meet our friend, Mr. E. C. Reineman, who left here the latter part of April.

C. H. Puhlman of Carnegie, Pa., had one of his greenhouses badly damaged by an automobile running into it. His houses are situated along a forty-foot street, but in some way the auto got beyond the control of the driver and ran into the greenhouse with great force, putting the house completely out of shape and breaking a lot of glass.

McCallum Co. are receiving some very fine Lily of the Valley, the best coming to Pittsburgh for some time.

J. B. Murdock & Co. report a big cut of fine Carnations from their own plant at Van Emman, Pa.

Excellent Sweet Peas are being handled by the Pittsburgh Cut Flower Co., also fine Peonies from their Bakerstown establishment.

Gladioli are making their appearance in good quality and the Pittsburgh Florists' Exchange are receiving some fine stock.

Wagon load upon wagon load of bedding plants can be seen at the depots these days from the John Bader establishment at Troy Hill.

De Forest W. Ludwig has returned from an extensive trip East and North through New England. He reports having picked up some very choice novelties and valuable information in regard to the "Posey" business. D. W. L.

Cincinnati

The past week has been quite an improvement over the fore part of its predecessor and stock cleaned up very nicely. American Beauty are coming into this market from the Heller Bros. in fine shape, also from the Grand Rapids Greenhouse Co. We are now in a position to fill orders for American Beauty, on short notice, with good stock for the time of year, Pink Killarney, Carnations, etc.

The commencements of the different high schools used many bunches of flowers, and the surrounding towns this week will do likewise, so that all good stock will be cleaned up nicely. The opening of the Latonia race track, June 6, being Derby Day, there will be a few flowers used over there.

E. G. GILLET.

St. Louis

E. W. Guy of Belleville and Alex Siegel, a local florist, took the Shrine Rank in one of the local Masonic lodges the past week. Mr. Guy says he will take his 32d degree in Masonry in Chicago shortly.

Miss May Burns is now in the employ of the Paris Floral Co., which is run by the Foster Floral Co., at 507 Olive St. Miss Burns is well known in the trade, having been employed by several of the downtown retail florists.

J. E. Ammann of Edwardsville reports that his friends, C. A. Kuehn and Pierre Schneider, paid him a visit on Sunday, June 4, and spent a most enjoyable day with him.

William C. Young, secretary of the C. Young & Sons Co., is visiting all the big plant growers around Chicago and Milwaukee this week. Before leaving, he granted his chief clerk, Miss Frances Kling, a two-months' vacation, which she says she will spend at Atlantic City.

Victor Peterson of Vaughan's Greenhouses, Western Springs, Ill., spent the past week in the city, a guest of A. G. Ellison. Mr. Peterson contemplates making his home in St. Louis in the near future.

John Barnard, who was formerly with the W. C. Smith Wholesale Floral Co. and Grimm & Gorley, is now in the employ of the Bentzen Floral Co. at their Grand ave. store, and John will make them a good storeman.

C. Young & Sons Co. did splendid work in planting at Delmar Garden and the St. Regis, one of the most fashionable apartments in the West End.

The Paris Floral Co. reports a splendid trade since the opening of their new store at Broadway and Olive sts. Fred Foster, Jr., who has charge of their old stand in the Century Bldg., says that trade continues as good as ever.

Shaw's Garden now known as The Missouri Botanical Garden, was opened to the public Sunday, June 4, for the first time this year. The weather was fine and the public took advantage of it. Superintendent H. C. Irish reports that after the close the number of visitors was 17,406. The garden was in splendid shape and a most enjoyable afternoon was spent by those present.

Judge W. J. Vesey and Miss M. Vesey of Fort Wayne, Ind., were in the city June 4 to visit some of the trade here. They were guests of the Misses Meinhardt.

A big delegation of nurserymen from Rochester, N. Y., Alabama and Georgia got in on Monday, June 5, and left with the St. Louis delegation for Denver to attend the 35th Annual Convention of the American Association of Nurserymen. Frank A. Weber of the H. J. Weber & Sons Nursery Co., and J. H. Schwette took charge of them during their short stay. They all left at 12 noon, and they say they will stop at Kansas City and Omaha and take on the delegates of those places. Frank Weber is chairman of the entertainment committee and has \$2000 to spend for sports at Denver. Most of the delegates favor St. Louis for holding the 1911 meeting.

1 MADISON AVE. NEW YORK

Please mention the Exchange when writing.

Indianapolis

Harry Balsley has been with us for some time and is enjoying himself looking orders.

The State Florists' Association of Indiana will hold its monthly meeting Tuesday, June 5. Much important business is scheduled in connection with same. Albert Kenpe, Baur & Smith, the Indianapolis Flower and Plant Co., Berman Bros. Co. and Smith & Young, are among the growers offering Peonies in quantity.

The June wedding season so far has been a light one; quite a few are booked for the close of the month but none of them are equal in importance to those of last season.

Hydrangea alba and the best varieties of Camellias are being offered by the department stores; 6c. apiece is asked for the latter.

Charles Vollrath is reported to be in a serious condition. I. B.

Newcastle, Ind.

The sale of a half interest in the Weiland & Olinger greenhouse plant, comprising twenty-one greenhouses east of the city, three retail houses near the Union depot and a retail store in Cincinnati, was announced on June 4.

Peter Weiland, who has had charge of the business, disposed of his interest to his partner, Peter Olinger, of Cincinnati, who is now sole owner. The price was \$30,000, and was paid cash.

Mr. Weiland is well known over the country as a florist, and will not permanently quit the business. He has been troubled with rheumatism and will rest for several months, when he will erect a modern range of ten houses on a farm of fifty-seven acres west of the city, which he purchased several years ago of Mahlon Harvey. The site is ideal for such an institution, as coal can be unloaded directly into the furnace room from the Big Four, which adjoins the land. At the plant east of the city there are no railroad facilities, and coal and other supplies have to be hauled by wagons.

Newport, R. I.

Arthur Griffen, formerly gardener for Commodore Elbridge T. Gerry, has bought a place at Woburn, Mass., comprising some 11½ acres, and proposes to take up the cultivation of flowers for the cut flower market. Carnations are to be one of his leading crops. In addition to the glass already on the place several new houses are to be added, including a propagating house. The dwelling house is being put in first-class order for his family, who expect to move there about July 1.

T. Jenkins is now the gardener in charge at the "Breakers," Mrs. Cornelius Vanderbilt's. He has had the disagreeable experience of having to pick up a new set of men as all the men there have gone out on strike.

At several other places there was trouble, but most of the proprietors have either given the rate of wage asked or secured new men.

The Rhode Island Hort. Society propose to make a trip to Newport when on their annual outing, coming on June 24, the day of our Rose and Strawberry Show, which is to be one of the attractions.

Roses and Strawberries are looking well and will be in good season for the show. ALEX. MACLELLAN.

OUR TWO COLUMN 60 FT. IRON FRAME HOUSE

Here is a safe house because it is made a safe way. A few years ago our first 40 foot iron frame house having only two small columns was much the talk. Some of the old gray beards shook their heads and "had their doubts if such a house, 700 feet long, would stand the wind and snow strain."

Since then we have built hundreds of 40 "footers." During the last year we did a lot of hard thinking about how an equally safe house, half as wide again, could be made with the same number of columns. We knew that it was not safe engineering practice to put the strain of that immense roof on the side posts and fittings at the ridge, which was bound to be the case if supported by trusses alone.

We also realized that a series of trusses that were "brought in place" by a nut and thread tension plan, were dangerous, as any sudden unexpected strain might strip the threads, and should this occur on

several of the trusses, the roof would be in great danger of collapse. It was evident that to keep watch of these innumerable tension truss rods was out of the question.

Knowing these things we have gone slow—slow but sure, and now here is a house 60 feet wide that is stiffened between the two columns, spaced 29 feet apart, by an angle iron compression truss which is formed by bolting the angle irons directly to the fish plates, and the column and ridge fittings. No trussing between the iron rafters is necessary.

You get nine 4 ft. 6 in. benches; two 24 inch side walks and eight 22 inch walks.

Next week we will show you a section of a house 72 feet wide. If you want more particulars of this week's house, or can't wait for next week's, write us. Better yet, call at any of our five offices.

THE PRICES ADVERTISED IN THESE COLUMNS
ARE FOR THE TRADE ONLY

FERTILIZERS

Nitrate of Soda 5 lbs. 25c., 50 lbs. \$2.25, 100 lbs. \$4.00, ton (2000 lbs.) \$65.00.

Blood Fertilizer Fourteen per cent. ammonia. Excellent for carnations. 10 lbs. 60c., 50 lbs. \$2.50, 100 lbs. \$4.00.

Clay's Celebrated Fertilizer On account of the high reputation which this fertilizer has in England, and as we have had many inquiries for it by gardeners here, we have imported some from Messrs. Clay & Son, which we offer at the following prices. It is undoubtedly one of the best manures for all horticultural purposes, either in greenhouse or garden, and we believe its high reputation is well deserved. It is productive and lasting, and notwithstanding its apparently high price, it is quite economical. Prices, in bags, 1 cwt. (112 lbs.) \$5.50, ½ cwt. (56 lbs.) \$3.25, ¼ cwt. (28 lbs.) \$1.75, ⅛ cwt. (14 lbs.) \$1.00.

General Use Bone This bone is ground to about pinhead size, with a fair percentage of flour bone, and, where a high grade bone for immediate and continuous use is wanted, would advise using this grade. 50 lbs. \$1.50, 100 lbs. \$2.50, ton \$40.00.

IMPORTS, ETC.—June 6.—D. Crosby & Co., 30 bags garden seed; F. B. Vandegrift & Co., 15 bags garden seed. June 7.—F. B. Vandegrift & Co., 6 cases plants.

American Seed Trade Association

Seedsmen and others interested are reminded that the 28th annual convention of this organization takes place at Atlantic City, N. J., from June 21 to 23. The headquarters will be Hotel Strand. It is expected that this convention will prove of more than ordinary interest; a fine series of papers have been prepared through the efforts of the Executive Committee. On Friday, June 24, there will be a reception to the members of the Am. Seed Trade Ass'n and their families at W. A. Burpee & Co.'s establishment at Fordhook Farms, Doylestown, Pa. Mr. Burpee and Mr. Earl will have returned from their trip to California in time to be present at this function; it is an event none should miss.

European Notes

"The 'Merry Month of May' has preserved its fickle character throughout, and on the eve of June we appear to be as far off as ever from Summer.

Some belated correspondence from northern Italy informs us that during the past ten days there have been heavy falls of snow on the plains of Lombardy, but now Nature has resumed her normal course, and, with warmer nights, all may yet be well.

The cultures that most concern us in that part of Europe are the red and white Bisagno Onions, so highly esteemed by the northern gardeners. For purity of strain and reliability they are not to be equalled, but as the land where they can be grown to the greatest perfection is so very limited, on account of the proximity of the mountains, and proportionately valuable, the price at which they can be grown is too high for the majority of trade dealers; but once they have been grown, they will always be asked for. At present they are doing badly.

Of the making of new Radishes there appears to be no end, and very little profit. One of the most reliable seed growers in the neighborhood of Paris has introduced a new form of the French Breakfast type, named 'Pernot,' a name possessed of very mixed associations. It is almost square, like a blunt-ended Golden Tankard Mangel; the color is

thing seasonable, and a most encouraging outlook for a satisfactory Fall season.

Muskmelons

The demand for Muskmelon (Cantaloupe) seed, in a retail way, is always most excellent during June. As required for other tender vine seeds, the ground must be warm and dry before plantings begin. It is quite a difficult matter for the dealer to decide upon how many and what varieties he shall carry in stock, for the reason that the list of sorts is a very long one, and every sort has its good points. But, as advised with other vegetable seeds, confine the selections for regular stock to a few varieties which are most popular in your locality, and purchase from the wholesale seedsmen the seldom wanted kinds as needed. In Muskmelons, there are those with green flesh and those with red or salmon-colored flesh; you will need two or three of the best varieties of each division for your regular seed stock. In the green-fleshed varieties, the well-known and most popular Rocky Ford will find many purchasers; the Extra-Early Hackensack is another good one, and so is the Long Island Beauty. In the red or salmon-fleshed sorts, the Emerald Gem is a very superior variety, in fact, it is considered by many seedsmen to be the finest Melon grown. The Miller's Cream is another good one, and so is the Osage Gem. As already mentioned, there are a great many varieties, but two or three kinds of merit that are popular in the locality where they are to be sold will satisfy most customers.

The Coming Vacations

The seed selling season just about to end has been an unusually hard one; the long days with evening work added, which this year lasted many weeks longer than customary, have had a most depressing effect; and if ever both employers and employees alike have faithfully earned and certainly deserve a substantial vacation as can be arranged, they do this year. The Saturday half-holidays, which with a large part of the trade have already begun, are giving many a much needed rest. These end of the week recreations, together with the annual vacations of two weeks, which also have already commenced, will give new vim to all, and return us to work with renewed strength to take up the business of the soon opening season of bulb selling, which from present indications will be an unusually active one.

French Bulb Deliveries Retarded

The employees of the French Southern Railways are striking, a very bad prospect, indeed, for the American florists and seedsmen who want their Roman Hyacinths, Paperwhite Narcissus, etc., so very early. I think, under circumstances change, that many a French exporter will get into difficulties with his customers on deliveries.

J. BEUMER.

Holland Bulb Notes

The growers are lifting the early Tulips, a bad crop indeed. About the later kinds I can tell you that Mou Trésor, Keizerskroon, La Reine, Cottage Maid, Rose Gris de Lin, etc., will produce some 30 or 40 per cent. less than last year.

Hyacinth will be small; they die down too early with this high temperature, and cannot grow up to the standard, but I can say beforehand that they are in the very best condition for forcing next season. We know that when the Hyacinths are ripening with dry, warm weather, we can and may expect the best forcing results, that is to say, the flowers will be up to the general size and very easily forced.

It is a sad sight to look at Narcissus Double von Sion or Golden Spur. They were too early infected by "fire" and the foliage was quite destroyed. The only damage is that the bulbs cannot reach the average size, but it does not make the forcing results less than other years. The bulbs die down and go to their rest very early but will force no less than any other season.

Crocuses are good but dear. Gladiolus promises more than Spiraeas.

J. BEUMER.

WE PRINT CATALOGUES

Estimates Cheerfully Furnished

We feel that you cannot but agree with us when we make the statement that our firm, as Expert Horticultural Printers, with many years of experience behind them, and with all the best and latest facilities for the class of printing, are in a position to produce for you a catalogue that will be far superior to any that could be turned out by a firm not making this work a specialty. In these days the best printed, best illustrated and generally best looking catalogue is the one that purchasers examine the most closely; therefore it stands to reason that to have as much chance of making sales as any of your competitors your catalogue or printed matter must be fully up to date.

In conclusion, we feel that our prices are as low as any when quality and results, and the free use of our illustrations are taken into consideration.

identical with Cooper's Sparkler; the white tip is sufficiently pronounced to satisfy the most fastidious modern taste. But it must be used on the day it is ready to pull or it is of no service. Where market gardeners are in the habit of supplying hotels and other large establishments direct it will prove a decided acquisition.

As regards Radishes in general, the recent rains have started the newly transplanted roots in very good style.

EUROPEAN SEEDS.

American Notes

Business Begins to Slacken

The past week has seen business fall off considerably with the seedsmen; but little else could be expected, considering the almost continual cloudy and rainy weather we have had. It is really, remarkable how well the retail counter trade has kept on and on this season. The wholesale dealers are still receiving a few filling-in seed orders, but most of their business, of course, now is with reference to next year's needs. The usual demand for seeds for the various late plantings will come with better weather, and it certainly does now seem as if some seasonable growing conditions were due. Sales of bedding plants are yet continuing, and especially during the past fortnight have very large amounts of all kinds of bedding stock been disposed of, and at most profitable prices for the growers, by the auction companies in all the larger cities. Seed Potatoes are still in considerable demand, but good samples are now very difficult to obtain; it has been a most satisfactory season of sales in this line, even considering the reduced prices obtained, as compared with last year. The demand for Muskmelon, Squash, and in fact all seasonable vine seeds, has been urgent the last few days. Turnip and Ruta-baga seeds are also in increasing request. Seeds for fodder crops, such as Hungarian and German Millets, Sweet Fodder Corn, Ensilage Corn in the many varieties, etc., are all selling very briskly. Another week will see Freesia bulbs, and it will not be long before Harrisii Lily bulbs are ready also. Speaking of bulbs, it is very encouraging to note how enthusiastic, without exception, the seedsmen all are over the bright prospects for a much better season than for several years in both French and Dutch bulbs. Such, very briefly, is the condition of affairs in the seed trade as the week ends—a good demand for every-

OUR advertisements have brought us excellent results, far better than we expected; we will have more advertisements in about two weeks.

Address of this Advertiser on application.

Seed Co., Ottumwa; Conger-Hall Co., Sae City; Summers Seed House, Malvern; Shugart-Owen Co., Council Bluffs; Adams Seed Co., Decatur; Sioux City Seed and Nursery Co., Sioux City; Mel. Webster Co., Independence; Younkers Seed Co., Council Bluffs; Hoberger Seed Co., Des Moines; J. W. Rutkin & Co., Shenandoah; Cole Seed House, Tella; A. C. Croft Seed Co., Moulton; A. A. Berry Seed Co., Clarinda; M. Young & Co., Winterest; Henry Field Seed Co., Shenandoah; E. J. Olsen, Ames; W. H. Brown, Mitchellville; all from the State of Iowa.

An executive session was held in the morning and evening and the afternoon session was an open one. Addresses were made by Prof. Atchison of the "Iowa Homestead"; Henry Wallace of the "Wallace Farmer"; W. B. Barney, Iowa State Food Commissioner; Prof. L. H. Panel, State Botanist; H. W. Graham of the "20th Century Farmer"; L. R. Campbell, Seed Analyst of Iowa College, representing American Seed Co., and members of the Association.

The meeting was one of the best that has been held in the history of the Association. The new State Commissioner, Mr. Barney, is a man of broad mind and thoroughly conversant with the Iowa Seed Law and its relation to both dealers and users. Prof. Panel has in mind several changes in the law which he will bring to the attention of the Legislature the coming winter.

At the conclusion of the last session a banquet was given by the Iowa Seed Co. to the visitors.

C. N. Page, president of the Iowa Seed Company of Des Moines was elected president for the fourth successive term. Other officers were also re-elected. They are as follows: Henry Field of Shenandoah, vice-president; John T. Hamilton of Cedar Rapids, treasurer; B. H. Adams of Decatur, secretary.

The meeting next year will again be held at Des Moines on the second Tuesday in June.

B. H. ADAMS, Secy.

Lompoc, Cal.

Writing from the ranch here recently purchased by W. A. Burpee & Co., and which has been named "Floradale," Mr. Burpee expresses himself as extremely well pleased with the investment. Luther Burbank, who was traveling in company with Mr. Burpee, said of Floradale that he would give \$1000 an acre for such soil.

Mr. Burpee reports that while in certain sections the hot weather has curtailed the Sweet Pea crops to some extent, in general the yield will be fair, but nowhere else in California, however, has he seen such splendid growths and such large blooms on the vines as in the Lompoc Valley. Lompoc means "Little Hills."

Mr. Burpee confirms the recent statement in the daily press of the purchase of two novelties from Luther Burbank (bought a year ago, however), and states these are behaving so well on the trial grounds at Lompoc that his firm will feature both of them for 1911. One is a Poppy; the other a Primrose.

As an instance of seed growing in California, Mr. Burbank relates that in the Lompoc Valley alone there are 3000 acres planted to Kentucky Wonder Beans.

New York Seed Trade

It is a relief to at last have some sunny weather. How long it will continue cannot be said. Let us hope it has come to stay. With the good weather, trade at once shows an improvement in all seasonable lines with the seedsmen. Every day that passes now brings us nearer and nearer to the first bulb arrivals. It will only be a few days before Freesias will be ready and then the Harrisii Lilies. Prospects for a very satisfactory bulb season for so early are especially good.

Present indications point to a larger attendance of the trade than usual at the annual convention of seedsmen at Atlantic City, N. J., next week.

Stump & Walter Co. have had, for a number of days, the new Strawberry, Chesapeake, on exhibition at the Barclay st. store. The fruit is of good size, pear-shaped and medium season in ripening. The house is booking orders for potted plants at \$1 per dozen and \$6 per 100.

Vauchan's Seed Store has offered a special prize of \$5, to be awarded at the outing of the New York Florists' Club on June 28, for the largest family in attendance.

Speaking of the outing of the New

York Florists' Club, it is pleasing to note that the seed trade will be well represented this year.

Albert Protin, with J. M. Thorburn & Co., has been in Cleveland, O., for a week.

The Stump & Walter Co. has had on exhibition during the past few days a magnificent pair of Egyptian Flamingos. These most ornamental birds have attracted great attention.

Wm. M. Hunt, with Arthur T. Roddington, represented his house at the Glen Cove, L. I., horticultural exhibition last week. Mr. Hunt expresses himself as particularly well pleased with the quality of the show in its every department.

Peter Henderson & Co. are continuing their display of Peonies, both in their show windows and in their store, the whole effect of the splendid flowers attracting much attention. The Peony Field Guide which they have been distributing to customers has resulted in many orders being booked for Autumn delivery. There can be no question that these exhibitions of the various flowers in their season do bring many additional orders.

Philadelphia Seed Trade

There is the joy of anticipation, and also that of realization. The gardeners, both amateur and market, experienced the first joy when they placed the fertile seeds in the ground this Spring, and now they are waiting for the second in the hoped-for crop of vegetables and flowers. The seedsmen have done their part; their consciences are clear. The rest depends upon Providence and the gardeners. Some of the seedsmen are going abroad now, and some are out of their stores on business trips, while others are beginning to take an inventory of stocks on hand. All of this is indicative that the busy season is over, so far as seeds and plants are concerned, and that the chief sales now will be along the line of insecticides, and garden, lawn and farm utensils.

Even before the crop of Crimson Clover seed is harvested, growers in Delaware are receiving offers of \$8 to \$8.50 per bushel.

The Johnson Seed Co. is making ready to book orders for Johnson's Prize Winner Pansy seed, a mixture of all the best European strains. The house is now ready to book orders for all Dutch and French bulbs. Mr. Sherry of this company reports a very delightful trip, recently, with some friends, namely Mr. and Mrs. C. H. Hill, and W. McConnell, all of Palmyra, N. J., and C. G. Bergendahl of Reading, Pa., all flower lovers. They visited Bertrand Farr of Wyomissing, Pa., a grower of Peonies, and the Mohican Peony Gardens of W. C. Kline, Sinking Springs, Pa. At both places their eyes feasted on the blooms of choice Peonies, Oriental Poppies, Delphiniums, and other herbaceous perennials being grown. At the Mohican Gardens, Mrs. Kline, in Mr. Kline's absence, showed the visitors every courtesy, and Mr. Farr sent the visitors away with so many of the fine Peonies which had been cut for the postponed Boston Peony show, that they looked like a bridal party. Mr. Kline confines himself to about 100 varieties of high-grade Peonies. The party dined at the Hotel Penn at Reading, where Mr. Bergendahl in turn acted as guide.

At Stokes' Seed Store is noted "Sterlingworth Lawn Compound; kills weeds in lawns without killing grass, and is an excellent top dressing making the lawn green and velvety." Sterling Chemical Co., Cambridge, Mass." Oh, pity of pities, that this cannot be applied to the gardens also, to kill the weeds without killing the vegetables. That some chemist should bring out such a compound that would kill the weeds and make the vegetables grow is "a consummation devoutly to be wished." Poor Johnnie would then be saved many a garden headache.

The Moore Seed Co. is making a display of Alsike and Crimson Clover, Millet, Timothy and Alfalfa seeds. The taking of the Summer inventory of stock has begun.

The Rose display is still continued in one window at Henry A. Dreer's, 714 Chestnut st. Among these Roses is noted especially, La Detroit, flesh pink with full center, Pharisae, a salmon pink, and Lady Ashtown, rose pink, all very beautiful. In the other window is a display of double and single Sweet Williams, consisting of a large number of choice varieties.

In the window at Henry F. Michell Co.'s store is a very pretty arbor scene, with two dear little tow-headed girls, and a third with hair just off the arbor, climbing ladders to gather the Grapes,

some of the clusters of which are bagged in true vineyard custom. Both men and boys gather in front of the window to admire the pretty scene, who would pass by in scorn a display of good serviceable hoes, and spades, etc. It looks just as if the plant selling season at Michell's would never end.

There will be a full attendance of the Philadelphia seedsmen at the coming seedsmen's convention at Atlantic City.

MEMPHIS, TENN.—Otto Schwill & Co. are erecting a large new warehouse at Georgia ave. and Kentucky st. The building is to be built in two sections, one of two stories and the other of four stories. Upon completion, the four-story section will be used for the company's business, the downtown office being continued as a branch.

A Dangerous Word

A well-dressed man entered a florist's shop, threw down a sovereign, and said he wanted some flowers to take home. He was very unsteady, evidently having been on the spree, and the flowers apparently were intended as a domestic peace offering.

The florist picked out a dozen Chrysanthemums and the customer started to leave.

At the door he hesitated. "I say," he said thickly, "watsh these flowersh called?"

"Chrysanthemums."

The customer shook his head. "Gottter have something easier than that," he said. "Gimme a dozen Pinks."—*Etc.*

Louisville, Ky.

During the past week, the florist trade in Louisville has opened up magnificently on account of the fine weather. The planting season has been resumed and big sales are reported along this line by all the Louisville dealers. Planting this season has been very much prolonged, for the weather was ideal for Spring during the month of March and during the first two weeks of April, and people felt that Winter was over and were impelled to do their planting early. The plants that were put out at this time were all more or less harmed by the continued rains and cold weather that has prevailed since, and at the present time people are restocking in plants and the florists are profiting much thereby. For this reason, the complaints that arose during the period of unreasonable weather have all been overbalanced by the excess of business during the past week.

Commencements and June weddings are now holding sway in Louisville and are an additional cause for rejoicing in local flower circles. A number of social events have taken place in honor of the various June brides and much decorating has accrued from these sources.

A rumor of general interest to florists is to the effect that a big corporation is being formed in Louisville to make a combination of several of the largest flower firms in the city. This corporation, which is pretty well assured at the present time, although no definite information can be given, is backed by New York capitalists and has the support of the Louisville Commercial Club. There has been much need of such a concern in Louisville for some time, for although Louisville is one of the large floral centers of the United States, no big interests have concentrated at this point and the big demand for flowers, coming from all over the State, has been handled with difficulty. The New York men propose to build a large number of greenhouses throughout Jefferson County and operate nurseries in conjunction with them.

The convention of the S. A. F. & O. H. in Rochester, N. Y., next August, will be largely attended by Louisville florists. A good deal of interest is taken in the affairs of the Society by local men and a large delegation is expected to represent the Gateway of the South at the convention.

A three-story warehouse on the farm of H. F. Hillenmeyer, near Sandersville, Ky., was burned recently, with a loss of about \$2,500 on building and machinery, nursery supplies, etc., with no insurance. It is believed that the fire was started through the carelessness of some employee who dropped a match among the packing boxes and excelsior which were in the building. Mr. Hillenmeyer is a prominent Lexington nurseryman.

In the weekly report of the Louisville Flower Mission, the following Louisville florists were thanked for donations of flowers: M. D. Reimers, Fred L. Schulz, William Walker, C. B. Thompson, Jacob Schulz, August R. Baumer, and A. Rasmussen of New Albany, Ind.

The New Albany, Ind., branch of F. Walker & Co. was recently victimized to the extent of forty dollars by an employee who took French leave after three days' service. After being in the service of the firm for three days, he broke open Mr. Walker's desk, procured several blank checks and forged these checks, for various amounts. The checks were cashed at various saloons in the neighborhood, as it was represented that they were checks for salary. In one case, thirty-five dollars was obtained on one check and five dollars as part payment on an eighteen dollar check. The man gave his name as George Blanck, of German descent, five feet three inches in height, black hair and eyes, and very thin visaged. His left arm was heavily tattooed and a large scar ran from knee to ankle on his right leg. It is believed that he will attempt to work the same game as other florists, as he was a good workman and could easily obtain a position.

The recent opening of the new Country Club has given Louisville florists an excellent opportunity for displaying their decorative ability at the various luncheons and other social events which marked the opening. The Club is one of the handsomest in the South, costing more than \$150,000 to build. August R. Baumer has used large quantities of Sweet Peas very effectively at two luncheons given at the Club during the past week.

"We are preparing to handle some very elaborate weddings during the next week," said Henry Nanz of the firm of Nanz & Neuner "for we have done some very fine work along this line. During the

WE have received favorable replies from our advertisers in The Florists' Exchange.

Address of this Advertiser on application.

past week, our firm has taken care of several exceedingly large funeral orders, which required a large stock. The outlook for Fall planting of shrubbery and evergreens looks very good, as there are several large estates in Jefferson County which the owners contemplate having beautified. I expect to attend the convention of the S. A. F. at Rochester, next August.

Jacob Schulz supplied at least fifty bunches of various varieties of flowers to the entertainment given by the society people of Louisville for the benefit of the Children's Free Hospital. Three very handsome palls were prepared by Mr. Schulz during the past week, one of white Sweet Peas, one of pink and white Carnations and one of Golden Gate Roses. The new greenhouse at the Schulz nursery, in the eastern part of the city, will be completed by the latter part of this week. It is of concrete construction, 28 by 150 ft., and is up to date in every respect.

Fred Haupt says business is booming, and he has all that he can possibly take care of at present and the outlook is very

getting rid of aphids on pot plants. He placed the affected plants in a box, threw in a few Laurel leaves, first crushing them somewhat, closed the box, and in 10 minutes or so the aphids appeared to be all dead. The explanation of the insecticidal action of the crushed Laurel leaves is, of course, as simple as the remedy. Laurel, like many other plants, contains a complex substance (a glucoside) which, when the leaf is injured, is acted on by a ferment (also contained in the leaf), and, decomposing, gives rise, amongst other things, to the excessive poisonous gas—hydrocyanic acid. The gardener who devised this remedy was, therefore, unconsciously fumigating with hydrocyanic acid gas. If the Laurel leaves are placed in a basin and a drop or two of chloroform added, the gas is liberated more quickly, and hence the insects succumb to it sooner. We do not suggest that the method is capable of wide or general use; but a fumigating box and a few Laurel leaves might come in handy where an occasional pot plant requires insecticidal treatment.—*Gardeners' Chronicle* (Eng.)

Rose Climbing American Beauty

encouraging for a continuance of these conditions. Mr. Haupt was one of the Louisville owners of automobiles who took the orphans of the city on their annual outing to the amusement parks, keeping them well supplied with peanuts and ice-cream. Another section of the orphans will be given an outing on June 18. As an evidence that he is an enthusiastic motorist, Mr. Haupt toured to Indianapolis to the auto races on the speedway and enjoyed one of the finest trips he has ever had. The proposed floral parade by Louisville motorists will be held in this city during the month of August, according to present assurances.

One of the handsomest funeral palls that has been seen in Louisville for some time was prepared recently by M. D. Reimers. The pall, which included the grave lining, was made of the finest green stock procurable; the grave lining was made of the same materials, with a very deep border of pink Roses. A large line of fancy Gardenias is a feature of the Reimers establishment.

For a woman florist to handle three large weddings in one day is considered to be "going some." Mrs. C. B. Thompson achieved this enviable record during the past week.

A Simply Prepared Insecticide

A gardener recently brought to our notice an extremely simple method of

Rose Climbing American Beauty

We have often drawn the attention of our readers to this Rose, and are pleased to be enabled to show this photograph of it. Messrs. Hoopes, Bro. & Thomas Co. of West Chester, Pa., the originators, describe it as follows:

"It is a cross between American Beauty and an unnamed seedling. The color is rosy-crimson, similar to its pollen parent; the flowers are 3 to 4 in. in diameter and fragrant, finely formed on long stems. Blooms very freely in May and June and occasionally during the Summer. The plant is a strong grower, making shoots 10 to 12 ft. in a season, and perfectly hardy. The foliage is of good size, a deep glossy green in color, does not mildew, is not subject to black spot and remains on until frost!"

The firm advise us that climbing American Beauty Rose, as well as their new variety, Christine Wright, also a climber, bright clear pink in color, carrying flowers 4 in. in diameter and as many as 14 buds and flowers in a cluster, have been examined by quite a number of specialists, who all give it as their opinion that these are the two finest climbing Roses they know of. The fact that from both of these Roses fine flowers on long stems can be cut for house decoration is very much in their favor. They are also good keepers.

The Book of Water Gardening

This work supersedes all other books that have previously been written on the subject of aquatics and their surroundings, and gives in full detail all the practical information necessary to the selection, grouping and successful cultivation of aquatic and other plants required in the making of a Water Garden and its environments, and covering all conditions from that of the amateur with a few plants in tubs to the large estate or park.

AMERICAN ASSOCIATION OF NURSEYMEN

W. P. Stark, Louisiana, Mo., President; E. S. Welch, Shenandoah, Ia., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer. 26th Annual Convention at St. Louis, Mo., 1911.

HOUSTON, TEX.—The Teas' Nursery Co., has been incorporated, with a capital of \$20,000. The incorporators are A. J. Condit, Edw. Teas, and C. S. Preston.

Viburnum plicatum The Japanese Snowball, **rotundifolium** *Viburnum plicatum*, is one of the best known and valued of

shrubs; but the one of our illustration, a variety of it, called *rotundifolium*, is very little known, for which reason, as well as for that of its beauty, we are pleased to illustrate it. It differs from *V. plicatum* in having round leaves, larger flowers and larger "snowballs" than it, and in flowering a week or so in advance of it. The bush itself is apt to become less upright in growth than *plicatum*, which is caused, to some extent, by the extreme points of its shoots being lost in severe Winters, a something that does not happen to *plicatum*. That it is hardy may be inferred from the specimen photographed, which has stood in its present position for several years unprotected; yet, when side by side, *rotundifolium* will often have an inch or two of its tops killed in Winter, while *plicatum* has never been hurt here in the severest Winters.

It has always seemed to us that this one, *rotundifolium*, would make an excellent plant for forcing for Christmas. The "balls" of flowers are so large and distinct from *plicatum* that the difference is easily seen, and its more bushy growth might be in its favor. There is to be considered, too, that it flowers a week in advance of *plicatum*.

To ensure this variety passing through the Winter well, it should be planted on rather high ground, where its wood will get well hardened before growth for the season ceases.

Hydrangea hortensis In the vicinity of Philadelphia the **Outdoors** *Hydrangea hortensis* cannot be

deemed a hardy shrub, for unless in a very much sheltered position the cold of Winter will kill its tops more or less, and with the killing of these tops there is a great lessening of the number of heads of flowers produced. The side buds may form shoots to bear flowers, some of them always do, but that they will be never so assured as that the terminal bud will. Because of this, it is correct to say this species is not hardy. Were it only desired to preserve a portion of the lower part of each shoot it would pass easily as a hardy shrub, for it is rarely killed to the ground when unprotected.

The writer has kept this *Hydrangea* in good condition in two ways; placing a barrel with both ends knocked out over it; and digging it up, burying it completely under ground in a corner of the garden. Both ways have been satisfactory. At the present time there is one, well supplied with embryo flower heads, which was wintered with the barrel over it. The barrel, after being set in position, was filled with forest leaves, then two narrow strips of wood nailed to the top of the barrel to prevent the leaves being disturbed, but not hiding them from view. To see the plant today is evidence of the effectiveness of this method of wintering it; and the trouble in this case, the work, was much less than that of digging up a plant and burying it in some corner.

Another plan was tested for results: A large sack, open at both ends, was placed over a plant after the shoots of the plant were tied close together. This bag was then in the same position as the barrel spoken of; forest leaves were packed in around the plant, the bag made secure in position, and when opened in Spring this plant, too, was in excellent condition.

Transplanting Trees in Leaf All nurserymen have experience with

customers who come late; sometimes because ground are not ready, at other times on account of recent occupancy of a place, etc.; thus those who want trees when they are in leaf may always be looked for. When such trees can be moved with large balls of soil attached to the roots there is no great trouble in doing the transplanting safely, but when no ball can be had it is hardly feasible to remove them without sacrificing some of the foliage at least. There is no question, however, that large trees in leaf can be transplanted with safety; it is often done with well known difficult subjects such as Oaks which may be harder to handle than Elms, Maples and such easier moved kinds. The process of transplanting such trees is as follows: Holes to receive them are prepared in advance, the trees are dug with all the care possible and

roots kept moist by covering with wet mats. The young growth is shortened back considerably, but not enough to take all the leaves with it as, to be successful, a fair proportion must be left on the tree, it being a great mistake to cut off all of them. Plant the tree in the usual careful way, using fine sandy soil for the first filling in about the roots, in order that it may penetrate all crevices. As usual, when the hole is half filled in pour in water right up to the rim, renewing this operation when the first lot has soaked away. The hole may then be filled up, partly but not wholly, for water has to be poured in it continually for several days giving it so much that it is about impossible for the foliage to droop. It is on this constant supply of water that the success of the operation depends. The hole should be filled with water a half-dozen times a day for a week, by which time, in all likelihood, the tree could sustain itself, foliage and all, without a less amount, and very soon with no more than any other tree requires. With the leaves preserved in this way in a short time the functions of the tree will proceed as usual. Probably not much new growth would be made the same season, but the foliage will perfect sap which will be ready to give the tree a good start the Spring following.

Yellow Magnolias In recent conversation with a gentleman who has been a lover of trees all his long life, he regretted to have missed in late years in collection of trees the "Yellow Magnolia," as he called it. Years ago, he said, he used to see it occasionally, especially on private grounds in the vicinity of New York City. The gentleman much have referred to *Magnolia cordata*, which really may be called a yellow, a light yellow, but nearer this color than approached by any other species. *Magnolia Fraseri* is called yellow,

deciduous nature, are now in the height of growth, which makes it the best time of the whole year to prune to make them bushy.

It is presumed that earlier pruning has shaped them properly, so that the cutting in now will not require to be back to the old line, for were it done it would be beyond the living foliage, which would be injurious. The present pruning may be to the extent of reducing the length of the shoots to within an inch or two of the original Spring pruning, if desired; but then it is not necessary to prune back so much, unless some reason exists for it. As the sap is still being rushed to all parts of the plants, very soon numerous shoots appear in place of everyone shortened, and the bushiness, a pleasing feature of an ideal hedge, follows.

Evergreen hedges rarely require any pruning in Spring before the one in June; in fact, no hedge does if brought into a good shape in the Autumn previous; so that one given them now, and another in September is all many give them. Some of our gardeners, however, give three prunings to such quick growing plants as the Privet—one in May, another in July, and a third in September. Pruning is easier under this plan, they say, and the hedges always present a neat appearance.

The writer noticed a second pruning of a Privet hedge going on a few days ago. The gardener doing it must be a stickler for extreme neatness, as not much growth had been made since the May operation.

Weeping Hemlock In the Spring time, when growth is strong with the common Hemlock Spruce, it has such a drooping appearance that many call it Weeping Hemlock and, as there is a true weeping variety, it makes confusion in ordering from nurseries. Quite often an order for Weeping Hemlock means but

**Viburnum Plicatum Rotundifolium**

and it is entitled to it, being of a light canary yellow color, both the nearest to a real yellow of all the kinds. *Magnolia cordata* is a beauty; and what is strange is that it never was prominent in collections, nor is it today.

As the old Parsons' Nursery, at Flushing, N. Y. made a practice of stocking up with all such nice things, the specimens referred to by this gentleman, no doubt, came from there. Praise is due this old concern for the many nice things it offered in its day, including this *Magnolia*.

Magnolia Fraseri, the other species approaching a yellow, is far too rare in collections. As both plants and seeds can be had from its native mountains in North Carolina, it would be to the profit of nurserymen to raise thousands of them. Additional to its canary yellow flowers, its fragrance is most delightful, hardly as perceptible at such a distance as that from *M. glauca*, but more pleasing to some than the last named, famed as that is.

Should it be that anyone has a good stock of these two *Magnolias* it would be a service to all horticulturists to make the fact known.

Thickening Hedges This is the month in which hedges need pruning, when bushiness is desired. Growth is made quickly at this time, and wherever a shoot loses its point a half-dozen more often take its place. All hedges, whether of an evergreen or

the common one, and unless there is something else to go by, besides the order, what to send is sometimes a puzzle. An acquaintance with the customer is sometimes a help, affording a clue based on his knowledge of trees. If well up on arboriculture, it is safe to send him the true weeper; if he is not, the common Hemlock is what is wanted, in all probability.

At this season of the year, when the new growth on the Hemlock is of good length, there is no more beautiful tree than it. As the young growth elongates it droops gracefully, adding greatly to the charm the tree always possesses. Even the very topmost shoot, the leader, droops too; and all continue to until late Summer, when the gradual ripening of the wood causes it to hold the shoot stiffer, until at length the weeping part is lost.

The true weeping Hemlock Spruce is known as Sargent's Weeping. It is increased by grafting it on the common stock. A group of these trees, some half-dozen or more, set out in Fairmount Park, Philadelphia, many years ago, is much admired; they are now about 8 ft. high and as many feet in width.

It is well to pot some strong young plants of the common Hemlock in a greenhouse in Winter, looking to the grafting of the weeper on them. When under cover of this kind, more observation can be given them, adding to the chance of the cions succeeding.

SPECIAL OFFER

We will give one copy Plant Culture and The Florist's Exchange two years, all for \$3.00.

Plant Culture

NEW, THOROUGHLY REVISED EDITION. JUST PUBLISHED

By Geo. W. Oliver, Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture

Printed on enamelled paper and illustrated with one hundred plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50

A WORKING handbook of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Stove and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines and a chapter of General Directions, covering Propagation, Seeds, Grafting, Hybridization, etc.

This reliable cultural work has been gotten up for use, not ornament; therefore the price has been fixed at a figure within the reach of all. It contains more real practical information for those for whom it is intended than is found in much more pretentious works.

Providence, R. I.

Messrs. Burke & Burns, Cranston, R. I., who have purchased the Dyer ave. place, formerly owned by Wm. Hay (now of Oaklawn, R. I.), will take possession of same July 1. They will grow Roses for wholesale trade, mainly Richmond, Bride, Bridesmaid, Killarney, also Carnations and Violets.

Mr. Burke takes a two weeks' vacation before commencing for himself; he has been head salesman for Wm. Hay for some time and we wish him success in his new undertaking.

Wm. Hay, Oaklawn, R. I., opened his new store Monday; it is on Clements st. just off Washington st. Mr. Hay at present will wholesale his own production; later it is his intention to sell the products of other growers and to do a general wholesale florist business. Mr. Hay has a fine plant at Oaklawn and is an expert in Rose growing.

Mr. Burt West, formerly with T. Curley, has accepted a position with Wm. Hay.

Mr. Ed Murray takes the position made vacant by John Burke as salesman for Wm. Hay.

Our horticultural society had an enjoyable outing at Kingston College last Thursday.

W. S. Nichols has been quite busy of late; his crop of Sweet Peas is doing finely. Sunday, Mr. Nichols had a large amount of bouquet work and decorations for Fireman's Day, upward of 30 bouquets were made for the members of Hampton Meadows Fire Co.

Mr. Fred Hoffman, Pawtucket, R. I., is a very active man these days; when business does not keep him at home he is enjoying the pleasure of automobiling. Mr. Hoffman has had a grand season this Spring. He will soon commence tearing down and enlarging his plant and office.

Mr. John Sharkey, manager Elmwood Nurseries, was at Fall River, Mass., last week on a business trip for the firm. Mr. Sharkey was instrumental in getting the order for the second thousand trees to be planted by the city of Providence. The number of trees now pledged by individuals and corporations to beautify Providence is nearing the 3000 mark, with fair prospects of 5000 or more.

Swan Peterson, East Providence, was busy with funeral work and bouquets for Fireman's Day last Sunday.

Mr. Sterns, representing Sefton Mfg. Co. of Chicago was in town recently. Walter Mott was also a visitor among the trade.

Read & Keller's representative was in Providence Saturday calling on the trade. Wm. Jergens of Newport, R. I., was in town recently, getting orders for Lily of Valley and American Beauty Roses.

Senator Henry C. Anthony of Portsmouth, R. I., was in town Monday calling on the trade. Mr. Anthony has a large acreage devoted to seed growing; Onion seed he grows by the ton, also Turnips, Beets, Kale, Sweet Corn, Beans, etc. The recent cold weather has damaged some of the growing crops.

Johnston Bros., Dorrance st., had a large decoration at Narragansett Hotel for the infantry company last week, which consisted mainly of red Roses. Their display of Gladioli America in their window has caused quite some comment; their window always has an inviting appearance.

F. Macrea & Sons report business same

as usual; they are cutting some nice Roses, Carnations and Lilies.

N. D. Pierce, Norwood, R. I., Nurseries, was in town this week, also Wm. Crompton of East Greenwich, R. I.

J. H. Cushing of Quinick, R. I., was in town; he is offering some fine Geraniums, Salvias, Viucas and Chrysanthemums to the trade.

T. J. Johnston & Co., Weybosset st., report business going on same as usual, no special rush. Sunday was Fireman's Day in the New England States and this made business good among the trade in line of decorations, bouquets, etc.

The continued wet weather is causing a considerable amount of replanting among the farmers and market gardeners. Corn and vine seeds have suffered to a considerable extent; so far this month we have had but few pleasant days.

A. J. Olsen of East Providence is bringing in some fine Carnations and Sweet Peas.

Halliday Bros. of East Providence, seedsmen, have commenced closing their store for the usual half holiday Thursday afternoons. The Providence seed houses, W. S. Pino, Providence Seed Co., W. E. Barrett Co., will close as usual Saturdays at one o'clock during July, August and September.

J. Koppleman & Co. are treating their store to a coat of paint and making a few changes to the interior which will improve its appearance. H. C. N.

St. Louis

Visitors in town last week were S. S. Skidelsky of Philadelphia, Harry Balsey of Detroit, E. W. Guy, H. Edmunds, A. S. Halsted and Geo. Grashart of Belleville, H. Johann of Collinsville, Ill., and J. F. Ammann of Edwardsville, Ill.; all had a good word for this season's business. The visitors all attended the Florists' Club meeting on Thursday.

Richard Frow and the Eggeling Floral Co. suffered a big loss of glass during the hailstorm at Normandy on Thursday, June 9. The storm also did great damage in the local parks and especially those in the western part of the city.

The doctor's convention last week made considerable business for florists near the big hotels. All say that doctors are great lovers of flowers.

The Paris Floral Co., which is owned by F. J. Foster at Broadway and Olive sts., received their handsome new ice box last week.

F. H. Weber has purchased a stylish new automobile of the latest type in which he and his wife make frequent trips to the country.

Frank A. Weber, who was at Denver last week attending the Nurserymen's convention, writes that he will make a two weeks' trip West from there and be home the latter part of the month.

An important meeting was held last week by the St. Louis Retail Florists' Association in the Knights of Columbus Hall. The meeting took place Monday, June 6, with 18 members present and C. C. Sanders presiding. The proceedings were not made public. The program was on the wholesalers selling at retail and the high prices that prevailed at the different holidays. Secretary Weber states that another important meeting will be held in two weeks when these two subjects would be brought to a head for the Association to act upon.

FIELD-GROWN CARNATIONS

The Engelman Botanical Club held a pleasant and well attended meeting on Monday evening, June 13, at the Missouri Botanical Garden. A feature of the meeting was a paper by Dr. Herman Von Schrenk of the Missouri Forestry Commission on "Forestry in Missouri," which was pleasing and interesting. Mr. L. P. Jensen, the secretary and treasurer of the Club, says the Club had a most successful year. Each meeting during the month was well attended and all papers read proved beneficial to the members.

The lady florists, who also have an organization, called The Ladies' Home Circle, held their monthly meeting at Chautauqua, just above Alton, Ill. They spent a night and a whole day at a cottage owned by the Misses Meinhardt. The party left Wednesday, June 8, at 7 p.m. and returned Thursday, 7 p.m.; the only drawback was the bad weather; it rained nearly all the time. The meeting took place on Thursday afternoon, and Mrs. F. H. Meinhardt entertained the members with a reading on wild flowers which was much enjoyed. After the meeting the time was spent in climbing the hills and gathering flowers and ferns which they brought home with them, roots and all, for cultivation. The next meeting of the Circle will take place at Central, St. Louis Co., the home of Mrs. John Steidle, the president of the Club, and all were instructed to bring their better halves with them. Those who made the trip were Mrs. John Steidle, Mrs. Theo. Miller, Mrs. J. J. Beneke, Mrs. Otto Koenig, Mrs. F. H. Meinhardt, Mrs. Schitzle, Mrs. J. L. Koenig, Mrs. F. C. Weber, Miss Adel Weber, Miss T. Meinhardt and Miss B. Meinhardt. ST. PATRICK.

F. E.—The Best Advertising Medium

A Prominent Florist Recently Came to Wyncote and Looked Over Our Palm Houses, Including This One

He has purchased heavily from us before, and came several hundred miles to personally place his order again this year.

Before he left, he assured us that he wouldn't have any more imported Palms. "Heacock Quality" had convinced him, and had made him a "repeat" customer.

We have on our books scores of others like him—customers who stay with us year after year because our stock

has "made good" with them and their trade and enabled them to build up a Palm department showing a steady profit.

Have you learned the advantages of handling our Palms? If not, you cannot select a better time to commence than this Summer; we have an unusually fine stock just now, and

can ship on short notice. Look over the list and get in touch with us by next mail.

Los Angeles, Cal.

E. D. Sturtevant of Hollywood has succeeded in crossing Calochortus vinnus with the Gesneriana family of Tulips; and now that this veteran horticulturist, with the enthusiasm of youth in his work among plants, has pointed out the way to plant breeders, in hybridizing these two beautiful members of the same family, what may we expect in the race of plants which may be the result of this union. One parent is a native of a country which is rainless, and without fog or

dew, six months of the year, and has the hairy appearance and exquisite coloring of some large butterflies; the other is a native of more humid regions, and has gorgeous colored flowers, smooth of petal and large of size. It does not enter into the heart of man to conceive the beautiful scenes in flower gardens of the future, because of the tireless energy of this one man. Evidently, we are only entering the borderland of horticultural and floral possibilities, without a probability of reaching the center a century hence.

Wm. Niel Campbell, seedsman, of Pasadena, has made great improvements in his store, to facilitate the handling with dispatch his increased business.

A new nursery and plant growing establishment has been founded at Hollywood, Cal., by Mous. P. J. Stockman. It is to be known as the Cocos and Kentia Palm Co. Extensive lathhouses are in course of construction, as well as cold frames and a greenhouse for propagating. This is only the preliminary work of

an extensive nursery, the exact location of which has not yet been decided upon. The founder is a priest in the Catholic Church, an enthusiastic and thoroughly trained horticulturist, with ample means and executive ability to carry the project to a successful conclusion. Because of a siege of sickness, from which he is rapidly recovering, the work was not pushed as rapidly the past two months as it otherwise would have been.

Charles Winsel, our enterprising seedsman, will occupy part of the new fireproof building now being constructed on the corner of Second and Main sts. as soon as it is finished, which will be some time in July, perhaps not until Aug. 1. The growth and development of this man's business is amazing. He outgrows his quarters so rapidly that soon he will be under the necessity of renting or buying an entire building to meet the requirements of his trade.

The Pasadena Gardeners' Association, undaunted by the financial loss they sustained in connection with their last flower show have decided to hold their regular Fall flower show, Nov. 3, 4 and 5. The management of Hotel Maryland, one of our best Summer and Winter caravansaries, has tendered "the boys" the use of their spacious grounds free of charge for the purpose, and also offered to furnish the electric lights. An active campaign is to be started at once to secure a fund for premiums which will be large enough to induce growers outside of Pasadena to enter the contest. The premium list will be made out and be ready for distribution about July 15, and may be had by applying to the secretary.

June 18, 1910

Florists' Club of Washington, D. C.

The Florists' Club of Washington, D. C., held its regular monthly meeting on the evening of June 7, at the store of the Eros Co., President John Robertson in the chair. The name of Albert Schnell, manager for the local Florists' Exchange, was proposed for membership.

It was the endeavor of some present to have the Club's annual outing take place this month, but owing to pressure of business on the part of the committees who usually manage such affairs the outing was postponed until July and at the next meeting a committee on same will be formed and no doubt given full authority in the matter of selecting a place, date, etc. For the past two or three years the Club has gone to the Great Falls of the Potomac, and as each time the outing proved such a success, and was so much enjoyed by the florists, their families and friends, there is but little doubt that history will repeat itself upon the forthcoming occasion.

The first Tuesday in July will be the next meeting night of the Club, and a large attendance is earnestly looked for.

Newport (R. I.) Horticultural Soc.

A regular meeting of this Society was held on Tuesday evening, June 14, with a fair attendance. Pres. Robertson was in the chair. C. Oscar Schultz had on exhibition a remarkably well flowered plant of Cattleya Mossiae, grown in an 8-in. basket, carrying 31 open flowers, beside buds, and nine blooms had been cut. On recommendation of the committee on awards a first-class certificate of merit was awarded for superior culture to Mr. Schultz. Mr. Schultz was asked to give his method of treatment, which evidently gives good results, and he very modestly gave all the credit to the young man who has charge of his Orchids, Walter Egelston, but stated, however, that while his Orchids were not given any stimulants in watering, yet they are given liquid food in the form of vapor during the growing season, varying from cow to sheep manure, which is simply sprayed about the floors and benches at the time of closing up for the night. Mr. Schultz stated that trying to retard Cattleya gigas so as to have flowers for the Newport season, by keeping them in a temperature of from 40° to 45° simply ruins the stock. An offer of a silver cup by Henry J. Diner, Inc., was accepted, with the thanks of the Society; the cup is offered for a collection of from 15 to 18 species of herbaceous cut flowers, to be shown at the September show, on a table 3x10 ft., and is to be won twice before becoming the property of any competitor. The names of Frank Jenkins and William Gray were proposed for membership. The president appointed James McLeish as chairman of the committee of arrangements for the June show, with Andrew S. Meikle as assistant. Messrs. Forbes and Schultz gave a good account of the Orchid Show recently held in Boston, speaking only in praise of what they considered the best show ever given in this country.

A. MacL.

Morris Co. (N. J.) G. and F. Society

This organization gathered in goodly number, June 8, to hear Mr. John E. Lager tell us something about Orchids. That gentleman spoke with notes, and the outset he said he considered it presumptuous to speak on culture in the presence of so many who could grow as well as he, some perhaps better, and he only did it because he was so requested.

The different families of the Orchid were gone over and something in a general way of the requirements of each was dwelt on. Mr. Lager gave practical instructive notes and advised of the many pitfalls that were in the pathway of the Orchid grower.

A hearty vote of thanks was accorded to the speaker. Many questions were asked of Mr. Lager on potting, housing, feeding, shading and watering, all of which he was much pleased to answer. Arrangements by the committee for the Fall flower show are going on steadily. Arthur Herrington was unanimously chosen as manager of the show.

Mr. Herrington is a busy man in his new calling, that of landscape architect, but it is hoped that he can be up with his work by November sufficiently to give his time to the show. We are sure that we have chosen the right man for the position, and it is fortunate that he is able to accept this responsibility, for no man is more alive to the requirements, nor better fitted to fulfill them. Joseph Manda, of the Boston Orchid Show, as did A. Herrington. The very highest tribute was paid to it, and New Jersey's part there was noticeable. Wm. Duckham spoke of the Boston Park system, advising us to visit it as opportunity was afforded.

The society adjourned its monthly meeting until September 14 next, this being the custom for some years.

E. R.

Nassau County (N. Y.) Hort. Soc.

The annual Summer show of the Society was held at Pembroke Hall, Glen Cove, on June 8. The hall was well filled, and visitors were unanimous in their praises of the fine display. Messrs. H. Turner, Walter Shaw and D. McFarlane acted as judges for the day. H. S. Phipps, Jr., Roslyn, was elected an honorary member; two active members were also elected, and two applications for membership received. The next meeting is to be Sweet Pea night, several prizes being offered for competition. The awards in the floricultural classes were: Best collection T. and H. T. Roses—C. H. Wilson, Roslyn. Best 12 H. P. Roses—G. A. Smith, Glen Cove; 2, G. Wilson. Best 12 T. and H. T. Roses, 1, H. Gaut, Glen Cove; 2, G. Wilson. Best vase of H. P. Roses—H. Marshall, Glen Cove. Best vase H. T. Roses—H. Gaut, Glen Cove. Best collection Rambler Roses—H. Gaut. Best collection herbaceous flowers—J. Holloway, Glen Cove, with a fine exhibit of 59 varieties, much admired by all, especially a beautiful display of 20 distinct varieties of Pinks: Best 3 vases of Peonies—1, H. Gaut; 2, J. Elmisle. Best vase of Peonies—H. Gaut. Best vase of Delphiniums—J. Elmisle, Glen Cove. Best vase Snapdragons—H. Gaut.

A cultural certificate was awarded to F. O. Johnson for 7 vases of Roses, best blooms in the show; also to Julius Roehrs Co., for a splendid display of Orchids, and to H. Fleishauer for a grand display of Roses, Sweet Peas and Strawberries. Hon. mention was awarded to W. Ross, gardener to H. S. Phipps, Roslyn, for two beautiful Ferns, also a vote of thanks for display of Roses not entered for competition; votes of thanks to V. Cleres for Campanulas, E. Westerbe for vase of Roses, Paul Reuil for vase of Roses. The winners of the monthly prizes were: G. B. Wilson for best Pteris, also best Adiantum; I. McDonald for best Nephrolepis.

OSCAR E. ADDOR, Cor. Sec.

St. Louis Florists' Club

One of the most pleasant and largely attended meetings the club has had for many years took place on Thursday afternoon, June 9, in Odd Fellows' Building. The occasion being the 23d anniversary of the Club, the trustees had arranged for a smoker. This, with the elaborate notices sent out by Secretary Bencke, brought out the big attendance, which was a pleasure to see, and the officers were in great glee. The report showed fifty members present and two visitors, Harry Baisley of Detroit, and S. S. Skidelsky of Philadelphia.

The meeting was called to order at 2 p.m., and the opening preliminaries dispensed with, the chairman called on the trustees to make full reports. Mr. Bentzen, chairman of the trustees, reported that they had arranged the date and place for holding the annual outing of the club, which will take place Thursday, July 21, at Romona Park.

The Bulletin Committee, with Mr. De Vever chairman, reported that the committee wished to have more time for a full report. After a lengthy discussion, it was decided that the committee get to work at once a.d., if possible, have the first issue out by the next meeting of the club.

Transportation for the members who will attend the S. A. F. convention was discussed at length, and, as no notification has as yet been received by the State Vice-President, the club appointed Secretary J. J. Bencke to look after the interest of the Florists' Club members for the coming trip to Rochester.

Messrs. Weber and Beyer presented the application of H. A. Erich, a florist of Webster Grove, for membership. Treasurer Smith's report showed the Club in a healthy condition financially.

This ended the business matters of the meeting and the trustees took charge and entertained the members with plenty of good cigars and good discussions.

First on the program was J. J. Bencke with a paper on "Brotherly Love Among the Florists." This, Mr. Bencke stated, was written by Fritz Blumenschnider, who requested him to read it before the meeting, but it was not for publication in any of the trade papers. The paper

was full of wit and humor and German dialect and, during the reading hit all three—the grower, the retailer and the commission man.

Mr. Skidelsky and Mr. Baisley were then called upon and entertained the members with good sound talk. A great discussion followed on high prices for the holidays. The issue was taken up by R. J. Winder for the retailer, J. E. Amann for the grower, and W. C. Smith for the commission man. As the hour was growing late, the discussion will be continued at the next meeting, which will be held July 14. At this meeting, the nomination of officers will take place. This, with the picnic, the first issue of the bulletin, and the discussion of high prices for flowers for the holidays, could bring out another large attendance.

ST. PATRICK.

G. and F. Club of Baltimore

The regular meeting of this Club was held in its room, June 13, President George Morrison in the chair. The meeting was well attended and considerable business was transacted. The members were so interested that many did not realize that the midnight hour for fast approaching and many had to catch trains and suburban cars and did not reach home until morning, and it is feared many excuses had to be made to the good ladies of the household.

Thomas H. White of the Md. Hort. College made an address on Fertilizers for the Greenhouses. Many questions were asked, and the address led into hot discussions. R. Vincent, Jr., spoke on fertilizers and claims he never used manure on his place and grows all his crops without its use. The Plant and Land Food Co. was well represented at the meeting.

R. Vincent, Jr., president of the Maryland Horticultural Society, spoke of the meeting of the S. A. F. to be held in Rochester in August and urged the club to send a big delegation. He also mentioned the Summer meeting of the Md. Hort. Soc. to be held at J. G. Harrison's Nurseries, Berlin, Md., Thursday, July 28. The visitors expect to reach Berlin at 1 p.m., luncheon will be served, and accommodation made from 2 to 3, and after that carriages will drive over the nurseries and orchards for the visitors to see the incipient fruit in its ripe condition, and no doubt this will be enjoyed by all. Supper will be served at 7 p.m., after which the train will leave at 8 p.m. for Ocean City and the many hotels will accommodate the guests. On July 29, at 10 a.m., discussions on different subjects will be brought forward, after which a gala day will be spent. Arrangements for tickets are now being made and endeavor is being made to secure a special rate from the hotels. Ten thousand programs will be sent out July 1, giving full information, and a large crowd is expected to attend.

Mr. Vincent will give a talk on his trip to Europe later on, and will show 250 views from Brussels, London and other centers of interest.

No assessment will be called by the Club for the late J. McNab.

The question was dispensed with. It was reported that the 14 year old daughter of George Muhl, Fullerton, Md., died last Sunday at his home. J. L. T.

New Jersey Floricultural Society

The regular meeting of this Society was held in Lindsay Hall, 240 Main st., Orange, on Friday June 10. The Orchid exhibits from Lager & Hurrell, Summit, N. J., Joseph A. Manda, West Orange, N. J., and Wm. Runkle, Edgemoor, N. J., were especially noteworthy. Rose night was also observed, there being a grand display from the private estates in the Oranges. Mr. John R. Le Count of Maplewood, N. J., donated to the Society a handsome silver cup, to be competed for in such manner as might be decided upon; it will more than likely be competed for at the Chrysanthemum show in November. A hearty vote of thanks was extended to Mr. Le Count for his beautiful gift. During the evening we were honored by a visit from Mayor Arthur B. Seymour of Orange, who complimented the Society upon the excellence of its exhibits.

The Society is proud of the fact that five of its members carried off the principal prizes at the Boston Orchid Show, held recently. A standing vote of thanks was extended to such members for the courage they displayed in going to Boston and cleaning up the boards. Henry Hurrell responded saying, "I don't see why it is necessary for us to go to Boston for an Orchid show. Why can't we have one here in New York, or New Jersey? There is a tremendous loss resulting from shipping the flowers so great a distance." Joseph Manda replied in like manner, and said there was no reason why the idea could not be successfully carried out. New Jersey did itself proud, 95 per cent. of the exhibitors were Jerseymen, and 90 per cent. of the prizes were carried off by the growers from this State.

John J. Dervan, gdr. to A. C. Von Gasbeck, read a very instructive paper on "Growing Roses under Glass," which

was well received. Mr. Dervan is a very successful Rose grower. He recommended propagating about January 15, using heel cuttings for the purpose, and when rooted using a mixture of one part manure to 8 parts loam, potting the plants into 2 in. pots. For the next shift he uses 3 in. pots, potting into a mixture of one part manure to six parts loam; finally potting into 4 in. pots, one part manure to four parts loam. He advised planting about June 15, on raised benches, with a compost of one part cow manure to three of good fresh loam, and pressing good and hard. Before planting in the benches he advised giving the houses a thorough cleaning, and a good fumigating with hydrocyanic acid gas, which kills all insect life.

The awards in competition for points were as follows: Roses: S. M. & A. Colgate, gdr. Wm. Reid, 95; A. E. Jenkins, gdr. Albert F. Larson, 85; A. C. Von Gasbeck, gdr. John J. Dervan, 85; Thos. Edison, gdr. Frank Drew, 80. Carnations: Chas. Hathaway, gdr. Max Schneider, 85; William Reid, 80; John J. Dervan, 78. Flowering plants: William Reid, 95; John J. Dervan, 60. Foliage plants: William Reid, 85; Lager & Hurrell for display of Orchids, 95; Wm. Runkle, gdr. Dederich Kindsgrub, Orchids, 95. Certificates were awarded as follows, for the exhibits not in competition for points: Joseph A. Manda, Orchids, certificate of merit; Wm. Reid, Roses, cultural certificate; Chas. Ashmead, Strawberries, cultural certificate; Max Schneider, Cauliflower and Strawberries, cultural certificates; John J. Dervan, Roses, certificate of merit; Dederich Kindsgrub, Roses, certificate of merit; Fritz Berghund, gdr. for the Gladioli and Carnations. The Society will not meet again until September.

Wm. Reid, Secretary.

Huntington (N. Y.) H. and A. Soc.

The annual Rose and Strawberry exhibition of this Society was held on June 9. The classes were mostly well filled and the quality was excellent.

The prize winners were: Robert Kelly, two for Strawberries, two for Roses and one for Peonies. Miss Cornelia Prime, for Roses. R. R. Conklin (E. A. Smith, gdr.), two for Strawberries, two for Roses, one for collection hardy flowers. John Andrew and Emmett Hawkins for Roses. Huntington Nursery Co., three for Climbing and Moss Roses and one for vase hardy flowers. Mrs. Rebt. Stafford, for early vegetables.

The five dollar prize for best Rose in the show, offered by Huntington Nursery Co. was won by R. R. Conklin, (E. S. Smith, gdr.).

A. H. FUNNELL, Secy.

Buffalo

Business is running a little slack just at present but with graduations near there is something to look forward to before the dull season does strike us. Carnations seem to be plentiful with the rain we have been having and the cool weather in general. They have held their own as to size, but as usual they have a tendency to spot and grow smaller at this time of year, but so far have not done so.

Killarney Roses could not be much better than they are at present in both pink and white, and as to size, color and length of stem. Sweet Peas have been scarce in this section; one of the largest growers of outdoor Sweet Peas reports that while all his Peas bud, with the continued rains we have been having, they blast and fall off; with a little sunshine he expects to have them in for graduations.

We are sorry to report at this writing that the daughter and only child of Mr. and Mrs. Otto Gilles, bookkeeper for W. J. Palmer & Son, died on June 7. She had been operated on for appendicitis and was thought to have a good chance for recovery, but complications set in. The parents have the heartfelt sympathy of the trade.

There have been no large weddings this June. W. J. Palmer & Son had about the best one the past week, at the Westminster Church, using too large columns, with about 400 Peonies in each, with a large Palm background; it was very effective.

The growers of hedding stock are getting a chance to catch up with their outdoor work now.

The firm of Geo. McClure & Son have been held back by the rain but, with a little decent weather will be able to fill their large orders.

W. H. G.

SALEM, MASS.—E. A. Stearns has purchased the Ward greenhouses on North st., and will conduct the same business under the firm name of Stearns & Lake. Mr. Lake is a practical florist, and Mr. Stearns is a well known contractor and business man.

SPECIAL SALE AT AUCTION

We Will Offer on Tuesday, June 21st, at 10.30 a.m.

A SPLENDID ASSORTMENT OF PALMS, FERNS, Etc.

500 Boston Ferns, 5 to 12 inch pots. 200 Rubber Plants, various sizes. 300 English Ivy, in pots. 200 Aspidistra, from 15 to 30 Leaves. 200 Hydrangeas, 18 to 30 Blooms (fine plants, should flower all Summer). 200 Dracaena Massangeana and Lindenii, Etc., Etc.

All the above for immediate decorative use, or for growing on.

Also miscellaneous BEDDING PLANTS and an assortment of BAY TREES IN DESIRABLE SIZES

→ This sale will present a great opportunity for buyers to secure a seasonable stock.

The Fruit Auction Co. 200-204 Franklin Street
(Corner Washington Street)
NEW YORK CITY

Horticultural Department, J. P. CLEARY, Manager

NOTE THE DAY AND DATE

Please mention the Exchange when writing.

We wish to impress upon our readers that all questions intended for this department must bear the name of the sender, not necessarily for publication but as a guarantee of good faith. We will endeavor to answer all questions submitted to us by subscribers, but we cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, if stated whether it be shrub, tree, herbaceous, wild or cultivated, location where growing, it would often enable identification of specimens difficult to determine otherwise.

(137) Can you tell me where the cutting method is employed in the woods, field or wayside by Nature?

—If this subscriber means nature propagating in the woods, fields and wayside, I would say yes; twigs are often broken from plants in various ways and they root when they fall, forming new plants. Bedding plants will often increase themselves in this way, also from leaves which become detached from the shoots. J. M.

(138) Root for Identification.—Sent from Springfield, L. I. found growing in reclaimed swamp land. The owner says he has acres of this growth.—A. F. J., L. I.

—The specimen forwarded me is *Gilenia trifoliata* (L.) Moench, included in Britton's Manual as *Porteranthus trifoliatus*; also commonly known as Indian Physic and Bowman's Root. Its natural distribution is in woodlands from New York to Michigan, thence southward to Georgia and Missouri, and it is, therefore, quite hardy.—W. F. Wight, Botanist in Charge of Economic Collections, Bureau of Plant Industry, Washington, D. C.

(139) The Work of the Spruce Gall Louse.—I send specimen herewith showing a trouble which extends all over my Spruce trees; these are about 8 years old. Can you tell me the cause and the remedy?—H. H., New Jersey.

—The insect working on the specimen submitted is the Spruce gall louse of the genus *Chermes*. It is commonly met with on the White Spruce, both as a native tree and when transplanted. As a rule, this insect does no serious damage to the vitality of the tree but causes an unsightly and deformed condition of the twigs and branches. The insect can be controlled on a few small to medium sized shade trees by spraying with kerosene emulsion about the time the new growth of the twigs starts in the Spring. It is now too late to do

anything until next Spring.—A. D. HOPKINS, in charge of Forest Insect Investigations, Bureau of Entomology, Washington, D. C.

(140) *Rhododendron Leaves Discolored*.—Wellesley, Mass.

—If it was, as you assume, some insect attacking the leaves of your *Rhododendron* last year, which caused the foliage to turn yellow, the insect does not appear on the specimens of the leaves which you submit. Should the same trouble come upon the new leaves this season, spray them, especially underside, when the sun is not shining, with Nikoteen, as directed on the package, or a solution made by dissolving Ivory soap in the proportion of one pound to twenty-five gallons of water, applied when lukewarm. Furthermore, *Rhododendrons* should be protected in the Winter by setting up in the ground evergreen boughs on the south side of them or a shielding of boards to keep the foliage green and save the buds.

Worcester, Mass.

Peonies are doing nicely in Worcester and there are some exquisite displays in the local florists' shops. There is considerable demand for these blossoms for studio decorations at the musicales which are so numerous this month. Wedding decorations are calling for Peonies also and they are employed artistically for color and mass on mantels and in receiving bowers.

Arthur J. Marble, Allyne W. Hixon, and Leonard C. Midgely were prize winners at the Peony display at the Worcester County Horticultural Society's Show on Thursday. The blooms were in splendid condition in spite of the heavy frosts.

The shower bouquet is a leader in this vicinity for the June bride. An arm garland of Roses, and Ferns of Carnations and Ferns is also a good seller.

Window displays are more beautiful than ever. Large's, this week, is of Peonies, and Ferns. Potted plants in many varieties make an attractive display in the window of F. A. Madaus.

Worcester florists have generously contributed to the work of the social settlement and garden city and, not only have the children who are learning a lesson in horticulture been benefited by their donations, but the public in general. On Tuesday, 3000 Pansies, donated by the florists, were set out in the Shrewsbury st. garden city and made a pleasing addition to the garden, which

was formerly an unsightly dump.

Business in Worcester is said to be good, and orders keep coming in daily. Funeral work keeps some of the florists busy all of the time, but June usually brings its quota of weddings, receptions and recital decorations which call for the better quality of flowers.

Plants, especially those of the flowering varieties have met with a splendid sale this Summer. The increased demand would indicate that window boxes, and home gardens are more favored than in other Summers. E. D.

Wildwood, N. J.

S. R. Banks is the only florist having a store here and his central location at 3411 Pacific ave., is handy to the railroad station and business section of the resort. Mr. Banks opened this store about May 1, after being out of the business for some five years, and at present time has work enough on hand to keep several men busy. One handicap is lack of suitable soil which has to be brought in by freight service. Landscape work is the leader now that the cottages are being opened for the Summer. Several hundred potted *Verbena*s and *Petunias* are being prepared for the opening of the Casino, June 16, and will be given

away by its proprietors. Around each pot will be wrapped a paper napkin on which Mr. Banks has printed his name. Birds will be added as a side line for Summer trade. P. M. R.

Camden, N. J.

C. Wonderlin, 535 Federal st., reports a splendid season. On Memorial Day he prepared 16,000 sprays which were used by the local G. A. R. These sprays required the services of seven assistants who worked all Sunday night. Mr. Wonderlin has recently bought a new delivery wagon.

L. M. Mowers, 520 Federal st., is very busy this season, more so than in former years, and reports funeral work far ahead. P. M. R.

Major Bonnaffon Cuttings

Fine, healthy stock, out of soil, \$2.00 per 100 \$15.00 per 1000. Cash with order.

JOHN COOMBS, West Hartford, Conn.

Please mention the Exchange when writing.

Unheard of Prices

The stock given below is all first-class in every respect. We need room to plant out our large stock of Ferns. Send your orders in and we know you will be satisfied with the plants we send you.

AGERATUM, exceptionally fine, beautiful tall and dwarf varieties, 3 in., \$1.50 per 100, \$12.50 per 1000.
ALYSUM, 2½ in., \$1.25 per 100, \$10.00 per 1000.
CANNAS, Mme. Crozy, Florence Vaughan, Queen Charlotte, Mme. Berat, Pillar of Fire, A. Bouvier, Pres. McKieley, Chas. Henderson, 4 in., strong, 12 in. to 18 in., \$4.00 per 100, \$40.00 per 1000.
COLEUS, Golden Bedder, Queen Victoria, Verschaffeltii, Fire Braud, Buttery, etc., 2½ in., fine strong stock, \$1.25 per 100, \$10.00 per 1000.
DRACENA INDIVISA, beautiful, clean stock, 18 in. to 2 ft., 5 in. pots, \$1.50 per doz., \$10.00 per 100.
DRACENA INDIVISA, 6 in. pots, perfect beauties, \$2.00 per doz., \$15.00 per 100.
GERANIUMS, Mad. Landry, S. A. Nutt, A. Ricard, J. Vland, 4 in., strong in bud and bloom, \$4.50 per 100, \$45.00 per 1000.
HELIOTROPE, beautiful stock, 3 in., strong, \$1.50 per 100, \$12.50 per 1000.
MARIGOLDS, very strong, 3 in., \$1.50 per 100, \$12.50 per 1000.
MAD. SALLEROL, 2½ and 3 in., very fine, bushy stock, \$1.50 per 100, \$12.50 per 1000.
PARLOR IVY, 3 in., \$1.50 per 100, \$12.50 per 1000.
PERIVINKLE Var., 4 in., strong, \$4.50 per 100.
PERIVINKLE Var., extra strong, \$6.50 per 100.
SCARLET SAGE, 4 in., extra strong, \$4.00 per 100.
SCARLET SAGE, 3 in., \$2.00 per 100.
VERBENAS, strong, 3 in., \$1.25 per 100, \$10.00 per 1000.
Cash with order, please!

THADDEUS N. YATES & CO., MT. AIRY, PHILADELPHIA, PA.

Baltimore

Business the past week was not as brisk as could be expected. The disagreeable weather certainly played havoc. The market florists trade fell off considerably and the stalls made little show.

The retailers had funeral work to fall back on, many commencements, banquets and three conventions were held last week, but all combined did not make any rush for flowers. Some little decoration work was on hand. The June brides called for their usual share of cut flowers. The rainy spell at present writing seems to let up after much damage to outdoor crops. However, the market still has a heavy supply in cut and pot flowers and they are moving slowly.

It is feared that some of the growers will have many pot plants left on their hands as the season has been anything but favorable to outdoor planting. What is planted out is looking sick from the cold rains. Roses are a little heavy in supply and are disposed of at close figures. Carnations are slackening up some, what, but many are on the market. Sweet Peas are coming in heavily and they find a good demand. Callas are shortening up. Lily of the Valley is a little scarce. Pot plants are almost a glut and offered at extremely low prices.

J. Spillman, Lexington Market, found the florist business slow, so opened up an ice cream stand.

A. Hilsner, E. North ave., has leased the establishment of John Schunke, his brother-in-law. The Baltimore st. store will still be run as before by Mr. Schunke.

Alfred Fielder is building another greenhouse 16x100.

M. C. Baner, Govanstown, is tearing down three houses to make ready for two up-to-date ones.

Conrad Hess is having trouble with his foliage on Gladioli. J. L. T.

San Francisco

The Market

As a rule we find that after Memorial Day is past the market shows signs of depression, and prices drop to an alarming extent. At present, however, no such thing has happened; on the contrary, trade is brisk, prices are up to the average and everything points to a very busy month. A recent visit to the principal retailers in town fully bears out the statement that the month of June will be one of the busiest months of the year so far.

Carnations are not quite so plentiful and the best blooms sell out well at from 25c. to 30c. per dozen, which is quite an improvement from what we were getting in the days preceding Memorial Day.

Roses are very poor at present, in fact the Roses brought into the market this week have been the worst we have had for a long time back. Bride and Bridesmaid are not worth quoting, as prices vary so much, and growers are content to get any price at all for their blooms. American Beauty also shows a slight falling off in quality; the best blooms bring from \$1.50 to \$2 per doz. Lilies maintain a good average price, the best of them bringing from \$2 to \$2.50 per doz. Sweet Peas are very plentiful and it is surprising how well they take with the flower buying public; from 70c. to 80c. per doz. bunches is a fair return for them at present. Bride Gladioli are still to be bought in quantity and sell well at \$1 per 100. Marguerites are plentiful and of splendid quality. Other flowers being disposed of in quantity are Cornflowers, Coreopsis, Gypsophila, Shasta Daisies, Candytuft and Dahlias. Orchids are in good demand, although they are becoming very scarce, and hard to get at any price. A fine lot of Cattleya gigas brought into the market this week realized 70c. per bloom. Phalaenopsis are also in demand for wedding bouquets, etc. Some fine bunches of Stephanotis have made an appearance in the stores and there are few flowers which sell better. Lily of the Valley is becoming more plentiful and prices still hold out well. In green goods, Asparagus Sprengeri and plumosus are in good demand, as also is Smilax, the latter especially bringing good prices. Adiantum is plentiful and of splendid quality. A few growers have been shipping some fine fronds of Adiantum Farleyense lately, which have brought as high as 20c. per frond; this is a Fern well worth growing, either for cut purposes or to sell in pots.

Various Notes
W. Atlee Burpee and Howard M. Earl of Philadelphia were recent visitors. After a brief stay in the city they left for Lompoc, Santa Barbara County, to inspect the extensive seed farms in that vicinity.
J. G. Morley, late superintendent of the Los Angeles parks, has decided to go into business as a landscape architect, and will have as his partner J. Hyde Powers, who is well known in that district. We wish Mr. Morley every success in his new venture, and we feel sure that his abilities in this line of work will be appreciated by the people of Los Angeles and vicinity, whom he served so faithfully during his tenure as park superintendent.

Prof. Albert Snyder of the botany department of the Pharmaceutical Society of California has addressed a letter to

C. EISELE

11th & Westmoreland Sts., PHILADELPHIA, PA.

Please mention the Exchange when writing.

interested parties requesting co-operation in the passage of a bill by the next Legislature for the establishment of an experimental garden in Golden Gate Park, for medicinal plants. A tract of five acres is to be planted, providing the Legislature authorizes an appropriation to care for the plants. John McLaren, superintendent of Golden Gate Park, and Prof. Snyder are both of the opinion that such a garden would prove of great educational interest to the people of San Francisco.

The park at Harrison st. and Stanley Place, donated to the city of San Francisco by the Miller, Griffith Co., has been named Home Park, at the request of the donors.

The planting of emblematic designs to commemorate the 60th anniversary of the admission of California to the Union, by the Native Sons, has been completed in Golden Gate Park, and Superintendent McLaren is to be congratulated upon the fine example of carpet bedding which he has given us. Among the designs are a prairie schooner crossing the plains, with pioneers leading the way, and an Indian in the distance; the great seal of the State; the bear flag; the emblem of the Native Daughters; and a large American flag. Beneath these pretty designs, the word "welcome" in large letters appears, flanked by "1876," the year of the founding of the Native Sons and "1910," the present year. Altogether it is a magnificent example of carpet bedding, and one of the finest pieces of this class of work seen in the park for many years.

The Mac-Rorie-McLaren Co. received a shipment of fifty cases of Cattleyas this week. This concern has been doing a fine business in Orchids of late.

H. Moulton, horticultural inspector for San Francisco reports that this year has been an exceptionally busy one for the department of horticulture. He reports that the shipments of bulbs and shrubs from Japan have been especially heavy this year, and as a rule they were badly infested with scale and other insect pests, and naturally have kept the fumigating staff continually on the move.

Four new greenhouses will be built on the Sterus' Estate at Menlo this Summer. The Lord & Burnham Co. has been awarded the contract for their construction.

Kenneth Murray of Redwood City is busy among his Carnations these days. He has a grand lot of field-grown stock this year.

Frank Roach of Menlo intends to grow over eighty thousand 'Mums this year, in addition to various houses devoted to Carnations and Roses. One of the finest collections of Crotons and Anthuriums in America is to be seen at the J. B. Corvett Estate at Menlo Park at present. Mr. McDonald, the head gardener, is to be congratulated upon the fine condition of these plants, which are a credit both to himself and his employer.

George Ward, late of the Mills Nursery at Palo Alto, has accepted a position on the Smith Estate at the Peppers, near Palo Alto.

The Board of Trade recently formed

WE call special attention to our large stock of **FERNS**, in all the leading varieties. We particularly mention **NEPHROLEPIS SCHOLZELI** and **NEPHROLEPIS COMPACTA**, both of which are exceptionally fine varieties for growing on.

Neph. Scholzei

2½-in. pots, strong plants, \$3.00 per 100; \$75.00 per 1000

Ficus Pandurata,

at \$2.00, \$3.00, \$4.00 and \$5.00 each (Branch), at \$2.50, \$3.00, \$4.00 and \$5.00 each

Crotons

4-in. well colored, \$25.00 per 100
 5-in. well colored, \$50.00 and \$75.00 per 100
 6-in. well colored, \$9.00, \$12.00 and \$15.00 per doz.
 Well colored specimens at \$1.50, \$2.00, \$2.50, \$3.00, \$3.50 and \$4.00 each.

Pandanus Veitchii

Beautifully colored, \$6.00 per doz.; \$45.00 per 100

Cyclamen.

We are the largest growers of Cyclamen in America. The stock offered this year is the very highest quality.

2½-in. pots, very strong, \$3.00 per 100; \$75.00 per 1000
 3-in. pots, very strong, \$10.00 per 100; \$90.00 per 1000

This stock is much heavier than is generally offered in the above sized pots and will make specimen plants for Christmas sales.

Gardenia Veitchii

2½-in. pots, \$8.00 per 100; \$75.00 per 1000
 5-in. pots, \$5.00 per doz.; \$35.00 per 100
 6-in. pots, \$6.00 per doz.

Standard Baby Ramblers, Crimson, very strong, \$1.25 each.
 Standard Baby Ramblers, White, very strong, \$1.25 each.

CHRYSANTHEMUMS

General Collection, 2½-in. pots, \$3.00 per 100, \$25.00 per 1000.

ROBERT CRAIG COMPANY, 4900 PHILADELPHIA, PA.

Please mention the Exchange when writing.

GERANIUMS

Fine Stock. In Bud and Bloom.

500 B. Poltevine, 300 Doyle, 4-in., 300 Nutt, 3½-in., 6c. each; 1000 S. A. Nutt, out of sand, ready for 3-in., \$15.00 for the lot.
 150 SALVIA Zurich, 4-in., 8c.; 200 P. TUNIA, double white, 3-in., 4c., nice blooms; 200 Kathleen Mallard LOBELIA, double, 2½-in., 3c.; 100 Dwarf French MARIGOLD, 3-in., 3c.; 100 VERENAS, assorted colors, 2-in., 3c.; 200 COLEUS, well colored, 3-in., 3c.; 100 ABUTILON or SILVER MAPLE, 3 and 4 in., 10c. each.
 Later will have 4000 Bride and Bride-maid ROSES, 3½-in., in fine condition; stock grown for own use.
 Cash please with order.

LLEWELLYN, Florist, Olean, N.Y.

Please mention the Exchange when writing.

by the leading growers of San Francisco and vicinity, for the purpose of protecting themselves against business people of doubtful character, is progressing favorably. A meeting will be held next week for the purpose of electing officers and putting the Society on a firm financial basis.

The usual monthly meeting of the Pacific Coast Horticultural Society was held in Poleta Hall, June 5, with President Matara in the chair. The exhibition committee reported that it had been decided to hold the annual exhibition in the Hotel Fairmont, Oct. 20-22. Some very fine exhibits were to be seen on the exhibition table, including a new form of Pteris cristata and a collection of Primulas from H. Plath, also a fine lot of Campanulas from B. Kettlewell. Three new members were elected and a most enjoyable evening came to a close at 11 p.m.

Retail florists report that June weddings have been more numerous this year than in previous years and that business is rushing all the time.

The Oakland Horticultural Society has decided to hold its annual picnic at Santa Cruz this year.

Julius Eppstein, the St. Francis florist, has been putting up some very effective decorations in the St. Francis Hotel lately. Mr. Eppstein is rapidly gaining a reputation in the decorative art.

Adolph Johnson of Oakland is at present touring through Mexico on his vacation.

J. Holland of Berkeley is busy erecting a new plant house.

WM. McM. BROWN.

New Bedford, Mass.

Trade has been rather quiet the past week. Flowers are plentiful, with demand rather light. Carnations are in good supply, retailing at 50c. per doz. Roses of good quality sell at \$1.50 per doz.; Lilies, \$2 per doz.; Soapdragons,

VINCA VARIEGATA

4 inch \$10.00 per 100.

GREVILLEA ROBUSTA

4-in. (splendid for Vase and Boxwork), \$10.00 per 100.

ASPARAGUS SPRENGERI

Heavy tops, \$6.00 per 100

Strong, thrifty stock.

Hatcher

Bedding Plants**GERANIUMS**

S. A. Nutt, Beante Poltevine, and A. Ricard, 3½-in., \$5.00 per 100.

HELIOTROPE and ROSE GERANIUMS, 4-in., \$5.00 per 100.

VINCA Variegata, 4-in., \$10.00 per 100.

FUCHSIAS, 4-in., \$7.00 per 100.

Mme. Sallerol Geraniums, 3-in., \$4.00 per 100.

COLEUS, Verschaffeltii, \$15.00 per 1000.

CANNAS, Souv. de Ant. Grey and Duke of Marlborough, 4-in., \$6.00 per 100.

Zinnias, Ageratum, Sweet Alyssum, Heliotrope, Begonia Vernon, 2½-in., \$2.00 per 100.

SEA CLIFF NURSERIES, Sea Cliff, N. Y.

Please mention the Exchange when writing.

SUBSCRIBERS PLEASE NOTE.—The Florists' Exchange is a trade paper, and its ads. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

75c. and \$1 per doz.; Gladioli, \$1 per doz., all retail. Flowers from out of doors, are now blooming freely. Roses are in bloom. There is still a good call for Geraniums and other bedding plants. Pansies and Daisies are about all done; it has been a very good season for them.

Funeral work is very good; this uses up large quantities of stock. The street fakir is still on deck, selling Roses and Carnations at awfully cheap prices.

Wm. P. Peirce is showing lots of bedding plants and flowers at his Union st. store. M. B. Sylvia, of the Dartmouth St. nurseries, reports a continued demand for shrubs; this has been a good season with him. Wm. Livesey and M. B. Sylvia were in Boston the past week and while there visited the New England Nurseries at Bedford, Mass.

The children in the home garden contest are already showing surprising results in their work.

Young stock in the field is looking fine; the recent copious rain have started them off well. There is a good demand for Aster plants; they sell at 10c. and 15c. per doz. retail; also a good demand for Tomato plants to be set out in the garden.

R. H. Woodhouse will have an immense lot of 'Mums for this Fall.
 HORTICO.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Fonzau, treasurer. The address of the office is the address of this paper. Start address: P. O. Box 1697, New York. Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9:30 to 12. Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Jos. H. Sperry, our representative, care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.60. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florex, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 6 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

Two notable conventions are reported in this week's issue; namely, that of the American Association of Nurserymen and that of the American Peony Society. Readers interested in the work of either of these societies and who are desirous of keeping abreast of the times, would do well to read our very full accounts.

The American Association of Nurserymen has set forth clearly and distinctly certain principles which, if adhered to, will undoubtedly be of benefit to that business.

The address of President B. H. Farr and reports of other officials of the American Peony Society are bristling with good points and suggestions.

The National Spring Flower Show

It has been decided to hold the exhibition the last week in March, 1911. Mechanics' Building on Huntington ave., Boston, was selected. Mr. Frank R. Pierson, chairman of the Flower Show committee, in issuing a call on the guarantors for 20 per cent. in order to make a payment on the lease and to meet other necessary incidental expenses, states that everything points toward this being the most successful show ever held in America.

The city of Boston, for the 1911 Show, was urged by the EXCHANGE from the very beginning. It is, to our mind, the ideal Eastern location for this huge enterprise, its own people are great patrons of floriculture, and it is in every respect a most fitting center from which to inaugurate the first of our S. A. F. National Spring Flower Shows.

National Sweet Pea Society of America

The following additional prizes have been offered for the annual exhibition of this Society to be held in July:

Stumpp & Walter Co.'s Prize; for the best three vases of Sweet Peas, Spencer type; 1st \$5, 2d \$3, 3d \$2.

J. M. Thorburn & Co.'s Prize; for the best vase of pink Sweet Peas; 1st \$5, 2d \$3, 3d \$2.

John Lewis Childs' Prize; for the best vase of white Sweet Peas; 1st \$5, 2d \$3, 3d \$2.

Sutton & Sons' Prize, (Reading, Eng.); cup, value \$25, for the best table of Sweet Peas, to be arranged on a space four by three ft., and not to exceed three ft. in height.

We are now working on the final schedule and hope to have same ready in about two weeks. Concerns or individuals wishing to offer prizes for this exhibition should notify the secretary immediately.

HARRY A. BUNYARD, Sec.

342 W. 14th st., New York.

The American Gladiolus Society

The executive committee of the American Gladiolus Society have decided to keep the charter list open until the time of the Rochester meeting in August. Applications and inquiries are coming in daily and this will afford all ample opportunity to join in time for the Society's first exhibit, which will take place at that time in connection with the Society of American Florists' annual exhibition.

Already there has been contributed the following prizes to be contested for at our first show:

From W. W. Rawson & Co. Boston:

Rawson's Silver-Gilt Medal for the best American seedling Gladiolus never before exhibited, nor yet disseminated. This prize can be awarded if there is only one exhibit but said exhibit must possess special merit.

Rawson's Silver Medal for the best collection of 25 varieties of Gladioli, each variety to be represented by three spikes; size of flower, openness of form, color and number of flowers on a spike to be considered.

Rawson's Silver Medal for the most artistic basket of Gladiolus America, judged for arrangement only.

Rawson's Silver Medal for 10 spikes of the purest white Gladioli.

Rawson's Bronze Medal for 10 spikes of the best scarlet Gladioli.

From Peter Henderson & Co., New York City:

This firm offers ten dollars in gold for the best collection of (12) twelve new Gladioli not yet on the market, three spikes each to be exhibited.

From Vaughan's Seed Store, Chicago and New York:

Vaughan's Seed Store Silver Medal for the best 25 spikes of Gladiolus Mrs. Francis King.

To Gladiolus Exhibitors.

Will all who wish to exhibit at the American Gladiolus Society's first show in connection with the annual exhibition of the S. A. F. at Rochester, N. Y., August 16 to 19, 1910, please communicate with me at once so that adequate space may be secured.

L. MERTON GAGE, Cor. Secy.

New York Florists' Club

The June meeting of the New York Florists' Club was held at the Club rooms in the Grand Opera House Building, 23d st. and Eighth ave., on Tuesday evening, June 13, with President A. L. Miller in the chair, and a good attendance of members.

The Proposed New Market

W. H. Siebrecht, Jr., secretary of the joint committees of the different florists' associations reported progress in the movement to secure quarters underneath the Queensboro Bridge for a plant and flower market. The matter was now before the Board of Aldermen's committee on streets, highways and sewers, and there would be a public hearing on the subject in the Aldermanic Chamber, City Hall, on Monday, June 20, at 2 p. m., when it was earnestly hoped that all florists interested in the movement would be present, and bring as many others with them as possible, as such attendance was vitally necessary to show that the florists themselves were actually interested in the project. The bridge commissioner was in favor of the market, but there was opposition to the plan in some quarters, which it was hoped would be removed at the hearing. The importance of the florists' attendance at the hearing could not be too strongly urged.

Club Transportation to Rochester

Frank H. Traendly, chairman of the transportation committee, reported that after consideration the committee had obtained terms from the N. Y. Central R. R. and the Lehigh Valley R. R. for transportation of the Club's members and their friends to Rochester, to attend the S. A. F. convention next August. Both roads offered the fare and three-fifths rate for the round trip, and special trains providing the number of passengers was large enough. The fare on the N. Y. C., round trip would be about \$12.24, and on the L. V. about \$11.20. The latter road offered to hold their train at Glen Summit Springs, on the top of the mountains, an hour for lunch. Train time of leaving on both roads would be about 10 a.m. P. O'Mara moved that the committee be instructed to secure transportation on the N. Y. C. road, and J. H. Pepper moved in amendment that the L. V. road be chosen. By consent the chairman called for a vote on both routes, with the result that a majority favored the L. V. road. On further motion of Mr. O'Mara the Club made an appropriation of \$50 for refreshments on the train. Mr. O'Mara then moved that the committee also arrange for the stop-over at Glen Summit Springs, and this motion was carried.

The Outing

Harry A. Bunyard, chairman of the outing committee, reported progress. Arrangements for the outing to Witzel's Point View Grove on June 28 were in course of completion, and it was hoped that the outing this year would eclipse that of any previous year.

Membership

P. J. Smith, Maurice L. Glass and Robt J. Young, all of New York, were nominated for membership, to be elected at the next meeting. The resignation of Wm. Plumb was received and accepted.

The chairman announced that Prof. Craig of Cornell had sent several copies of the new Peony Check List for distribution to members desiring them; and a letter was read from Prof. Craig in which he said that all members desiring a copy of the list could have same on application to him.

Convention Preparations

C. B. Weathered called the attention of the Club to the fact that in previous years it had been the intention of such members of the Club as belonged to the S. A. F. to stand together in matters in which the Club was interested and to be brought before the Society at its convention, but no real organization was effected and interest in consequence vanished. He suggested that this year such matters be discussed at a special meeting of the Club to be called for August 8, and a course of action decided upon. After some discussion it was not deemed desirable to take any action upon the suggestion.

Mr. O'Mara brought up the subject of the howling tournament at the convention, and suggested that although the Club had no howling club, some steps should be taken to see that there was a representative team, and he made a motion that Wm. Duckham be authorized to form such a team. Mr. Duckham, however, declined the office, as he could not go to Rochester. Robt. E. Berry then moved that Joseph A. Manda be empowered to select a team, and the motion was carried.

Committee Appointments

President Miller announced the appointment of the following committees: Nominating Committee—C. B. Weathered, Walter F. Sheridan, P. O'Mara, John Birnie, F. R. Pierson, R. E. Berry and Frank H. Traendly. Committee on securing a State appropriation of \$50,000 for experimental greenhouses at Cornell—P. O'Mara, Alfred H. Langjahr, J. A. Shaw, C. H. Totty, C. Weber, E. Dailledonze, and W. E. Marshall. Advisory Committee—James Dean, I. H. Hendrickson, J. H. Pepper, W. A. Manda and Benjamin Hammond.

The Points Competition

There were two entries in the competition for the Hitchings Cup of Merit, Harry Turner of Castle Gould staged some grand vases of Cattleyas Mendellii, gigas, Mossiae, Gaskelliana, and Vanda coerulea, for which he was awarded 85 points. A. J. Manda of Brooklyn, N. Y., staged a splendid vase of Gardenia Veitchii, for which he was awarded 25 points.

John Lewis Childs of Floral Park made an exhibit, not for competition, of Gladioli, embracing the varieties Wm. Falconer, Irene, compacta, Dr. Hogg, Fantastic, and Little Blush, for which he was awarded a vote of thanks.

President Miller called attention to the fact that the leading prize winners at the recent Orchid show in Boston were all members of the Club, a showing which should be very gratifying to the Club members. J. T. Butterworth, of So. Framingham, Mass., who was present, pointed out that the first and second prizes for specimen Cattleyas were won by Boston exhibitors.

T. Mellstrom of Sander & Son, Bruges, Belgium, elected to membership at the last meeting, was present, and upon being introduced to the meeting made suitable response.

"On Horseback Through Hayti"

This was the subject of a lecture, illustrated by lantern slides, which closed the evening's proceedings. The lecturer, Geo. V. Nash of the New York Botanical Garden, described, in a most entertaining manner, two trips made through the western section of the island, and threw upon the screen a large number of pictures which he made on the trips. The lecture was much enjoyed and at the conclusion Mr. Nash was awarded a hearty vote of thanks.

A Tour of Agricultural College Investigation in America by an English Committee

A committee, consisting of several of the directors of the Reading University College, Reading, England, among whose numbers were Dr. Frederick Keeble of Cambridge University, Cambridge, England, and also Mr. Leonard Sutton of the well-known seed house of Sutton & Sons, London, England, have been visiting, in an official capacity, the agricultural colleges of the United States and Canada, with the object in view of investigating fully their methods of management, and especially college library management, methods of indexing and all the details connected with the books. This committee has been with us some four weeks or more, during which period they have made the very best use of their time, visiting many of our most prominent agricultural colleges and also the larger universities having horticultural and agricultural experiment stations conducted in connection with them.

They were particularly impressed with the methods in vogue at the University of Wisconsin at Madison; their visits also extended to Harvard, Yale, Cornell, as well as many other leading agricultural experiment stations.

In the short time at their disposal they have been "on the go" continually, and have certainly covered a great

deal of ground, and express themselves as well satisfied with what they have seen.

Dr. Keeble and Mr. Sutton, and the committee generally, were particularly impressed with the business-like way in which our colleges conduct their libraries, and especially with the methods of indexing.

The committee finished their work of investigation last Saturday and returned to England on the S. S. St. Louis of the American Line.

As stated above, this committee was particularly interested in agricultural college methods, but also found time to visit many of our best horticultural establishments as they proceeded on their travels, and were very much impressed by what they saw.

While in New York (which was only for a very few days last week) they were taken in charge by Messrs. Doubleday, Page & Co. and Arthur T. Boddington, and shown as much as possible of the commercial and horticultural side of things.

Both Dr. Keeble and Mr. Sutton expressing a wish to see some of our larger estates, Mr. Boddington took them to several of our representative estates in this vicinity. The first place visited was Greystone, the estate of Samuel Untermyer at Yonkers, N. Y. At the Untermyer establishment the visitors were much impressed with the new rock garden which has recently been built. Mr. Waite, the superintendent, was complimented as having done wonderfully well with this rock garden in the short time of 18 months which has been spent upon it, the many perennials and other plants being particularly well established in that time.

From there they went to Miss Helen Gould's place at Irvington-on-Hudson to see the plantation of Rhododendrons and the magnificent trees for which this place is famous. The feature which impressed the visitors was the many attractive little bungalows which she has erected for the entertainment of poor children during the Summer.

Mr. Boddington then conducted the committee to see the two Rockefeller estates, both at Tarrytown-on-Hudson. They visited first Rockwood Hall, Wm. Rockefeller's estate, and then Pocantico Hills, the John D. Rockefeller estate.

An amusing incident happened at Greystone, Yonkers. Mr. Leonard Sutton examined most carefully a house of Melons which were raised from seed supplied by his firm, the variety being Sutton's "Superlative," and on each Melon was the word "Greystone." Asking Mr. Boddington the cause of this, he was told that we could do anything of this kind in our climate. To be serious, Mr. Waite, the superintendent, explained that when the Melons were half grown, the name "Greystone" was written deeply into them with a sharply pointed instrument, and growth continuing, the word was formed.

At all of these estates the visitors were much impressed by the splendid display of early vegetables, and particularly with the Strawberries.

This committee has also given its attention to our methods of greenhouse construction and heating.

English Horticultural Notes

A Florists' Rescue! An extraordinary thing has happened. Last year, in *The Florists' Exchange*, I drew special attention to the fact that the great international horse show, which is held in one of our largest London arenas, was almost a failure during the first year or two of its occurrence as an annual event, until the officials conceived the idea of calling in the marvellous assistance of the decorative florists. In one year the imagination of the public was aroused and captivated. Press puffs were of almost daily appearance, telling of the wonderful transformation scene that had occurred or was occurring, at Olympia, the rendezvous of the show. This grim, gaunt, gigantic glass and iron building, like a smaller edition of our Crystal Palace, was to be converted into a huge flower-garden, a hall of blossoms, a vast conservatory, with thousands of pound sterling worth of plants and creepers, and hedged-out flowers. The roof was one mass of Wistaria in great decorative clusters—but this feature was done in artificial material, all the rest was natural, borders of choice indoor plants, Roses, etc. The public flocked in its thousands, and the result was success. Good horses there were and plenty of them—your own American owners sending over some of the leading sets. The same thing again has been followed out, and there is the same record to relate of success. Among the chief competitors are Judge Moore (60 horses), Alfred Vanderbilt (16 stalls), Walter Winans (26 stalls), and Miss Loula Long, daughter of Mr. R. A. Long, the lumber millionaire of Kansas City. England, America, the Argentine, and most of the countries of Europe are represented.

But, as exemplifying the "drawing" power of the floral decorations (apart from the horses and the jumping, etc.), I quote the headlines announcing the opening ceremony, as printed in the London *Evening News*, the evening edition of the world-known *Daily Mail*. Here they are:

A PALACE OF FLOWERS Opening of the Horse Show GARDEN SCENE Etc.

The point of merit to the floricultural world is that the "flower show" was regarded as the *piece de resistance*, and the announcement of the real *raison d'être* of the event was lost sight of. *Sic passim, Flora!*

As I have not yet seen the scheme, I can only report second-hand, so far. The main arrangement of the arena is that of an old English garden. At the end of the arena, where the horses enter, rises a striking representation of Lowther Castle, a north-country edifice belonging to the chief official of the show—Lord Lonsdale. At the other end of the building is a Grecian Temple, approached by grassy slopes; and in another part, falling water makes tuneful music among huge boulders which flank the great open doors of exit. Color and form and garden art compose an enchanting scene.

J. HARRISON DICK.

Open Air Show at Haarlem

After the Hyacinths, early Tulips and Narcissus were gone, the Darwin and Rembrandt Tulips drew our attention. This race has come strongly to the front the past few years, and it must be said that a bed of Darwin Tulips is a very fine sight. The colors ran from the softest and lightest shades to the deepest, darkest red and black. On their tall, upright and strong stems the big cups beckon to one with every soft breeze and all who have seen them understand why the demand for these Tulips increases every year.

Darwin Tulips suffering from atavism (returning to the form of their ancestors) and showing the different colors of the race whence they come, drawn in bizarre flames and feathers, are called Rembrandt Tulips, a rather famous name for hard colors that cry to each other. Darwin Tulips are mono-colors, having only one shade; if they show flames or stripes they are called Rembrandts; these latter may be beautiful but I prefer Darwins.

Several growers and sections of the General Society planted large beds of Darwins, others made an exhibit of cut flowers, with the tall stems set in glasses.

Seven large beds of Cottage Tulips were planted and flowered just now. A very nice sight, indeed, these big cups of different fine colors. Some new varieties among them call for attention: Hammer Hales, very big, orange brown; Yellow Hammer, golden yellow, margined with red; Markoma, orange red; Beauty of Bath, soft rose and yellow; Orange King, lively orange; Scarlet Emperor, pure scarlet; Flame, orange scarlet, etc.

Last Thursday Her Majesty the Queen and H. R. H. the Prince of the Netherlands paid a visit to the exhibition. The picture hall was transformed into a reception saloon. The bulbs were taken away from the beds before this building and in their place large beds of zonal Pelargoniums were planted.

Last Sunday (May 29) our exhibition was closed. It was quite a success. Visitors came from every country of Europe, florists, seedsmen and nurserymen, amateurs, in fact, all those in the florists and nursery line; it was also a success financially, as there is a considerable surplus in the treasury.

J. BEUMER.

Rhododendrons

Editor *The Florists' Exchange*:

With reference to the note of Mr. Matthews in *The Florists' Exchange* regarding double Rhododendrons, the blue one he is referring to seems to me must be Rhododendron fastuosum flore pleno, practically the only Rhododendron with double flowers. It is not hardy in this locality or the northern States; it may be around Philadelphia.

The hardy Rhododendrons are quite an acquisition to our ornamental nursery stock, especially those which originated at the Parsons Nurseries, the best of which are Album elegans for white, or nearly white; Boule de Neige, pure white, dwarf grower; Chas. Dickens, Hunnewell, H. W. Sargent, Atrosanguinea, Mrs. Milner and several others for the best red; while Caratacus and Parsons' grandiflora are very nice red ones, too. Catawbiense, Everestianum and Roseum elegans are nice in the purple shades.

The people, in a general way, are just starting to learn the value of these plants, but they do not fully understand yet the value of giving them the best of soil to get good results.

Springfield, N. J.

C. J. W. OTTOFLANDER.

New Gladiolus Pink Beauty

Editor *Florists' Exchange*:

In further comment on the article you published some time ago concerning this splendid new variety, which cannot be recommended too highly, we would like to say that Mr. P. Vos of Sassenheim sold to Mr. C. de Jong of Loosduinen, near The Hague, a number of bulbs of it, which the latter gentleman planted in November last with other long stalked Gladioli. At the beginning of February they were brought into a temperature of 70 to 85 degrees Fahrenheit, and the first flowers were cut on May 5 with stalks 50 ins. long. Other long stalked Gladioli receiving the same treatment did not flower until June 5. Mr. Vos sent other bulbs of Pink Beauty to a grower at Rynsburg; these were planted November 12 and flowered May 20. The above experiments prove this Gladiolus to be the earliest of all long stalked Gladioli.

C. J. SPEELMAN & SONS.

Sassenheim, Holland, May 31, 1910.

A Lady Nursery "man"

Miss Curry, one of our leading exhibitors, is one of the few ladies who control nurseries on this side, and her exhibits of Daffodils rarely fail to gain highest awards. Needless to say, the prices of her novelties are exceedingly high, and I was amused, at an exhibition recently, to see a stylish gentleman jotting down names of extra good varieties shown on her stand, prior to securing the catalog. When he obtained it, and found his choice had lighted upon varieties listed at anything from \$25 to \$100 per bulb, he quickly skeddaddled, a sadder but wiser man.

T. A. W., Eng.

Society of American Florists

Department of Registration.

As no objections have been filed, public notice is hereby given that the registration of the Fern, "Nephelepis Roosevelt," by The American Rose and Plant Co. of Springfield, Ohio, becomes complete.

H. B. DORNER, Secretary.

June 9, 1910.

Publications Received

AMERICAN ASSOCIATION OF PARK SUPERINTENDENTS.—Proceedings of the eleventh annual convention, held at Seattle, Wash., Aug. 9 to 11, 1909.

NATIONAL ROSE SOCIETY (Great Britain).—Arrangements for 1910. We are now in receipt of the final publication for 1910, issued by this Society. This pamphlet contains a list of members, schedules of prizes, by-laws and regulations, etc., for the year. During the year 1910 the Society has sent out the following publications: "The Enemies of the Rose," "The New Official Catalog of Roses," "Hints on Planting Roses" and the Society's "Rose Annual for 1910." All these publications may be obtained through an annual subscription of half a guinea, and certainly we know of no society giving so great value for the money. In addition to all this literature two tickets of admission are given to the Autumn Rose Show.

H. J. Billings

H. J. Billings, florist, Rockland, Me., died on Sunday, June 5, after a few days' illness. He is survived by a wife. The remains were taken to Boston for interment.

Caleb Boggs

Caleb Boggs of Cheswold, Del., founder of the nursery business of Caleb Boggs & Son, dropped dead on May 15, shortly after arising and preparing for this usual Sunday worship. He had been a Sunday school superintendent for many years. He was an old soldier, and carried an empty sleeve as a service decoration. He is survived by a wife, three daughters and two sons.

James McNab

James McNab of Rosemont, Catonsville, Md., died Monday morning, June 13, at Atlantic City, where he and his wife had gone to spend the Summer. He was about 54 years old.

Mr. McNab, who was a chemist, was born in Scotland. At the age of 24 years he went to Camden, N. J., and after that he located in Baltimore where he was connected with the Davidson Chemical Co. He retired several years ago. He was a member of the Gardeners and Florists' Club of Baltimore and was well known among the trade. He was also a Mason and elder of Catonsville Presbyterian Church. The body was taken to the home of Mr. McNab's brother-in-law, Isaac H. Moss, at Govanstown. The funeral took place last Wednesday afternoon, with interment in Loudon Park Cemetery.

[Readers desirous of further information on any subject mentioned in this series will have their questions freely answered. Address your envelopes Construction Dept., care of this paper]

Article IV—Continued

Material and Construction

Fig. 27 shows a small and a large section of what may be considered the crudest form of greenhouse. We show practically all the members of the house, composed of stock sizes of Cypress, and the design is such that no special milling is required. This is done with a view to assist those who are in out of the way places where it is difficult to secure special milled Cypress, but should it be desired to erect a house of this character at a point convenient to those who make it a business of supplying Cypress for greenhouse purposes, it would be much better as before stated, to secure this material from such houses, as there will always be the certainty of obtaining the very best quality of Cypress for greenhouse work, which is not the case if it is secured from the ordinary lumber

should be supported temporarily at the height desired which, in the case of the section shown, is at a point 6' above the sunken walk "M." As before stated, the roof of the house is of regular standard 3"x6" booted sash "C," consisting of three 10" lights if possible. The top rail of the sash should be planed off so as to come evenly against the ridge at the required pitch. The sash should be firmly secured by either nails or screws to the eaves plates and the ridge, every second or third alternate sash being left loose and then secured to the ridge with galvanized steel butts with brass centers as shown at "E," two butts being allowed for each sash. This will admit of these sash being raised for ventilation by means of push rods which should be drilled with several holes to regulate the opening of sash. The remaining sash being firmly secured to both the ridge and the eaves plate form a permanent support for the ridge when the temporary supports have been removed.

FIG. 27A

yards throughout the country, as these yards generally make it a business to carry only such stock as is adapted for inside trim and in which case sappy lumber is very frequently used; the greenhouse builder would be more than likely to secure from such sources material of this character which is simply a waste of money.

The roof of the house is composed of booted sash which it will be necessary to purchase from a regular manufacturer, as it would not pay a grower to attempt to make the sash himself. If possible sash should be obtained with three lights of 10" glass—rather than four lights of 8" as is sometimes used. The sash can be purchased glazed and painted one coat. The second coat should be applied when the sash is in place; but it is frequently desirable (especially where the freight traffic is considerable) to purchase the sash unglazed, with the glass packed in boxes, as the danger of breakage is thereby lessened and the freight charges reduced, as well as effecting a saving in the matter of the cost of labor (glazing), which can be done by the grower if the time can be spared.

The section shows a house of width of 10' 3", with the sash placed at a pitch of about 7". This width, of course, will vary as the pitch of the roof is changed. If the sash were set at a pitch of less than 7" it would increase the width of the house.

The side walls consist of 3"x3" wooden posts "A," composed of either Locust, Chestnut, Cedar or Cypress. These posts should be charred on the ends that go in the ground and, if possible, dipped in crude petroleum. The posts should be of sufficient length to admit of being placed 3' below grade so as to get under frost line. Of course this depth will have to be increased in localities where the temperature in winter goes considerably below zero, but where it seldom drops much below zero a depth of 3' has been found sufficient to prevent any trouble from this source. They should be set upon a flat stone so as to prevent working further down in soft ground. These posts may be set about 4' apart and, when they are placed, a chalk or level line should be carried along at the required height of the eaves plate (which in this case is shown to be 1' 6" above the outside and each post marked).

The eaves plate "B" consists of 2"x3" Red Gulf Cypress, which should be firmly nailed to top of the posts after they have all been sawn off level at the required height, care being taken to set the eaves plate at the same pitch or angle it is intended to set the roof sash.

The ridge "D" consists of 2"x4", cypress, and this

Cypress, or Pine sheathing "G," about 3/8" thick, these being securely nailed to the side posts and, outside of this tongued and grooved sheathing, should be placed heavy asphalt roofing felt "H". This, of course, as an outside covering is not as durable as an outer covering of clapboard but, where a house of this character is erected, it is presumed that it is absolutely necessary to cut down the first cost; therefore, the asphalt felt will make a sufficiently durable and warm covering. It is well to turn the felt over at the top of the siding "G," where it comes against the eaves plate and, when this is thoroughly cemented with asphalt cement at this point and firmly nailed, it will make the joint impervious to any water of condensation which may run down the sash.

All of the joints of the asphalt paper should be firmly secured with asphalt cement and large head tacks furnished for this purpose. It will be noticed that the sash are shown with an overhang at "O". This is to admit of the shedding of the water without running down the side of the house. If it is intended to use an outside siding this overhang, of course, would have to be made sufficient to clear the outer siding.

A serious objection experienced in many greenhouses is in the matter of the drip of the water of condensation from the underside of the roof glass, as where this falls upon the plants, or is allowed to run down the inside of the greenhouse, it is injurious both to plants and house. This may be avoided even in a cheap construction, as shown on drawing. It will be noticed that where the bottom rail of the sash rests on the eaves plate "B," it is carried down sufficiently far to allow a space at the point "P," in which the water of condensation from the roof glass will collect and, if at intervals the bottom rail of the sash is notched so as to form an outlet, this water of condensation will run directly outside and pass down the asphalt paper.

As will be seen, it is intended that this house should be constructed with solid beds; these are formed by excavating a space for a walk to the required depth and constructing two retaining walls as shown at "K," about 1' 6" apart. These walls can be constructed with wooden planks, 2" thick, secured to two 2"x2" wood posts ("J") placed in the ground about 6' or 8' apart.

The gable of a greenhouse of this character is generally boarded up solid with tongued and grooved sheathing and asphalt roofing felt on the outside, the same as the sides of the house, provision being made for a door by placing two 2"x4" door jambs and header with sill at proper point.

In the erection of a greenhouse, no matter how cheap the structure, it is absolutely necessary to start right. The ground should first be leveled off and, if it is necessary to fill in any part of the site, the posts should be set in the part to be filled before the filling is placed. This will save digging the post holes afterwards and will insure the ends of the posts being placed at hard bottom.

Before placing the posts there should be a straight line fixed bounding the four sides of the greenhouse and placed in such a way that this will form a guide for their setting. Stakes must be driven into the ground to which the line should be secured, and care has to be taken to see that the line is carried on a level irrespective of the grade of the ground. This line may be any distance from the ground but the four lines bounding the location should be at the same height from the ground. It is a comparatively easy matter to be sure

FIG. 27

that these lines are level but, with some, it is more difficult to be absolutely sure that they are square; this latter factor is very essential as, if the posts are not set square, there will be difficulty in placing the roof sash.

To more fully explain this we show in Fig. 27 (at "A") a good method of laying out the location for the greenhouse. The eight points marked "A" show stakes driven into the ground at the required points, and the lines B-1, B-2, B-3 and B-4 indicate the level lines secured to these stakes. B-2 and B-3 are placed at a distance of 10' 3" apart, which is the width of the house outside of 2"x3" posts. Lines B-1 and B-4 are placed at the required distance for whatever length may be decided upon to build the greenhouse. When the lines are set they should be tested to see that they are absolutely square. A good way to do this is what is generally known as the 3, 4, 5 method (but we prefer to double the numbers).

From the point "C," where the lines B-3 and B-4 intersect, measure along the line B-3 a distance of 8' to point "D," and from the point "C" measure along line B-4 a distance of 6' to point "E"; the distance between "E" and "D" should then be exactly 10' if the lines are square. If not they should be moved until these proportions are obtained. This process

being carried out at each of the four corners will insure the building being square. Of course, if the greenhouse is short, it will be possible to measure from corner to corner diagonally, and see that they are equal, then if such prove the case, the building is square. Where the distance is very great the sag in the measuring line will sometimes cause a variation; in such instance it is better to use the method above indicated or one of a similar character.

When it is assured that the lines are absolutely square the post holes may be laid out at whatever distance is decided upon. As shown on the plan these are placed at a distance of 4' apart. The holes should be dug to the required depth, which should be at least 3' below grade or to hard bottom and, where the posts are to set in the earth without the use of concrete, it is better to place a flat stone at the bottom of the hole as shown on section. Care should be taken to see that the posts are plumb before filling in earth around same. When the posts are all set they can be sawn off at a level point, as mentioned previously, and then the work may proceed with every assurance that when the sash are placed on the roof there will be no difficulty experienced owing to the building being out of square.

"Publicity Campaigns on the Part of Nurserymen," was the subject of a paper by Mr. James M. Irvine of St. Joseph, Mo. He said: "Advertising must be in the form of good display advertising, good copy must be prepared, and space must be bought in papers which are really worth using. This is the plan which other organizations follow to create a demand for their respective products, and it is one which can well be coöperated by nurserymen. The best kind of advertising which can be done by individual nursery firms is that which creates business. And yet I venture to suggest, with all due respect to the men who write the nursery advertisements, that most advertisements of this kind are not calculated to create business—they are, rather, designed to attract orders which might otherwise have gone to another firm. And this is not good advertising. Advertisements reading like this are all too familiar:

"John Jones, Grower of General Line of Nursery Stock, Peach Trees a Specialty."

"The upstate merchant has greatly advanced in his advertising methods, and his advertisements now literally coax the money out of one's pocket. They create a demand for the goods he has for sale. Advertising space is expensive, and it costs as much to fill it with poor copy as with copy which will create a demand for nursery stock. If you cannot prepare good copy yourself, get the services of men who can. Such men are available; they have had experience, and their services are well worth using."

Mr. J. B. Morey of Dansville, N. Y., read a paper on, "The Part Nurserymen have taken in the Growth and Development of the Nation." "The lumberman has laid bare our great forest, and today, through the efforts and work of the nurseryman our barren wastes are being reforested, so that in years to come the ring of the woodman's axe will be heard again, thus preventing our becoming a treeless country. Through the untiring efforts of the nurseryman our present forests are being guarded against the fearful havoc of the woodman. Go to a community where you find a nurseryman, and the citizens of that community will tell you that he is one of its best and leading men. He stands for a free and liberal education, he stands for the improvement of the city parks, he stands for the improvement of the highway, he encourages all improvements that tend to lighten the burdens and increase the happiness of man; his hand and strength is ever ready for assistance, all worthy enterprises have his endorsement and help. We have in the United States about 5000 nurseries; they cover more than 200,000 acres of land, giving employment to more than 50,000 men and women, and the industry is growing yearly. The millions of trees, both fruit and ornamental, plants, vines and shrubs that go to plant the commercial orchards, the home orchards, and to beautify the parks and drives of our towns and private homes, all tend to make the country more prosperous and more beautiful. The planting of trees goes hand in hand with civilization. In the early days a log cabin was hardly

American Association of Nurserymen

THIRTY-FIFTH ANNUAL CONVENTION

HELD AT DENVER, COLO., JUNE 8, 9, 10, 1910

On the second day of its meeting the Association elected the following officers: President, W. P. Stark, Louisiana, Mo.; Vice-president, E. S. Welch, Shenandoah, Ia.; secretary, John Hall, Rochester, N. Y.; Treasurer, C. L. Yates, Rochester, N. Y. Executive Committee: J. H. Dayton, Dayton, O.; E. M. Sherman, Charles City, Ia.; W. B. Chase, Huntsville, Ala.

St. Louis was decided upon as the next place of meeting.

Report of the Legislative Committee

The Legislative Committee reported that the year has been a very quiet one. There has been nothing of consequence doing aside from procuring legal opinions upon one or two of the State laws, which opinions have appeared in the trade papers, with one notable exception, that of the work of the committee in connection with the proposed Federal bill. This bill was introduced in the House of Representatives and a hearing was appointed on April 27, 1910, before the House Committee on Agriculture. The committee appeared at the hearing and made the best argument possible against the bill, particularly against the foreign quarantine section No. 8. The committee took the position that it could not stand for the granting of such very large discretionary powers to the Secretary of Agriculture, whereby the absolute control of the importations of nursery stock and particularly of fruit tree seedlings, would be placed in the hands of any one official, as it meant the control of the raw material of the nurserymen. After the hearing the bill was referred to a sub-committee of five, and it does not seem probable that any legislation will be enacted during the present session of Congress.

Report on National Council of Horticulture

Col. Watrous, Chairman of Committee on National Council of Horticulture, reported as follows: The Council seems to be a self-appointed organization with nine delegates at large. Mr. J. C. Vaughan, a seedsman and florist of Chicago, is president, and Mr. H. C. Irish of the Missouri Botanical Gardens is secretary. At a meeting of the Council in Chicago, Jan. 17, 1910, fifty subjects for press bureau work were suggested. Two of these relate distinctly to trees, the others to the work of seedsmen and florists. Your committee would recommend that, in the future, the whole subject of co-operation with, and paying money to, the National Council of Horticulture, be placed in the hands of the Committee on Publicity of this Association.

In the discussion which followed the report the opinion was expressed that the work of the Council was being conducted almost entirely in the interest of seedsmen and florists, and a motion was carried, placing the matter entirely within the control of the Publicity Committee of the American Association of Nurserymen. A motion, adopted later, placed the sum of \$500 at the disposal of this committee.

Extraets from Leading Papers Read at Convention

Mr. A. Willis of Ottawa, Kansas, read a paper entitled, "Should a Young Man Choose the Nursery Business for a Vocation?" He said in part: "Before advising a young man to choose this vocation, think what your advice may mean. Remember that few nurserymen are rich. So far as is known to the writer there is no nurseryman worth a million dollars who has made his money in the nursery business in this country. There have been few great men among nurserymen, and few ever had high official position. This calling does not promise large success in a business way, nor yet in offi-

cial honors or preferments, but it does promise, if faithfully followed, a comfortable support, and in some cases a degree of luxury for its members. It promises, if carefully cultivated, good character and in large degree the confidence and good will of those with whom you associate. You will have the satisfaction of knowing that no one does more to adorn the landscape or make beautiful the home of the working man or the mansion of the rich, and no one has contributed more to promote the pleasure and good health of his fellow men than the people who have supplied the planter, and the orchardist and the landscape artist with the fruit and ornamental trees they have needed for their work. The nurseryman has supplied these, and he has supplied millions of trees for the forester, and the new work of conservation will, from every standpoint, be more dependent on him than on the followers of any other calling, for who but he will produce the trees needed for the reforestation of forest reservations and denuded hillsides, and the products of his handiwork will be in large demand in the years to come, and who would not feel glad to be one of those who would help in this good work?"

A Field of Callas in California

The illustration we are enabled to present herewith is said to show the finest field of Callas in California, the property of the MacRorie-McLaren Co. Mr. Daniel MacRorie can be seen on the right-hand side examining the Callas, the flowers being waist-high.

built before a place was cleared in the forest and an orchard planted, and as the pioneer traveled to the West and his home was built upon the plains, trees were planted about his home to protect it from the winds and storms, and in most instances a few scattering fruit trees were planted. The growing of trees has been reduced to a science, and the large nurseries carry on their business as systematically as does a manufacturer. The selling of the products is carried on by agents and by advertising, and a man who is capable of directing a force of nursery agents from his office could easily occupy the position of commander-in-chief of our army. There is no other line of industry in which there are so small a number of people engaged that has added so large a percentage of wealth to the country."

Mr. J. H. Dayton of Dayton, Ohio, submitted a list of recommendations or rules to serve as a guide in the conduct of the nursery business, and the same were unanimously adopted. They are as follows:

Regulations Adopted to Serve as a Guide in the Conducting of a Nursery Business

That our lowest prices or trade lists should be mailed only to nurserymen or dealers with established headquarters, who are known to be actively engaged in the trade.

That some effort should be made to have our price lists and quotations to orchardists and retail buyers under a uniform basis for same grades and varieties of stock.

That, as the practice of cutting prices as the season advances is one of the great demoralizers of both the wholesale and retail trade, established rates should be adhered to throughout the season.

That parks, cemeteries and other public institutions are not in the trade and are not entitled to trade rates. That stock shipped on orders of landscape architects and invoiced direct to their customers should be billed at same retail rates as if the order came direct from the planter.

Crown and Root Gall on Apple Trees Not Contagious

Papers on crown and root gall were read by Messrs. Peter Youngers of Nebraska, and E. A. Smith of the Jewell Nurseries, Lake City, Minn., both giving the results of experiments conducted for a series of years with these diseases, and both pointing to the conclusion that these diseases are not contagious, and that in most cases the trees outgrow root or crown gall within a few years after coming from the nursery row. The following resolution was adopted, after some discussion:

WHEREAS, The hard or hairy form of root or crown gall by practical experiments has not been found injurious or contagious to apple trees;

THEREFORE, Be it resolved that we, the American Association of Nurserymen of America, do hereby protest against and condemn the action of State Legislatures in refusing to grant certificates of admission and acceptance of Apple trees in their respective States because of the presence of hard or hairy form of root or crown gall, and we hereby urge upon the Legislatures, their agents or persons having this matter in charge, the advisability of admitting this class of stock, and recommend that the laws be so changed as to permit the delivery of Apple trees showing hard or hairy form of root or crown gall; also, that this resolution be placed in the hands of our Legislative Committee with power to act at their discretion.

The Replacing Policy to be Discouraged

Mr. J. R. Mayhew of Waxahachie, Texas, after reading a paper setting forth the evils resulting from the replacing policy, and vigorously denouncing this practice instituted by nurserymen, offered the following resolution, which was adopted:

WHEREAS, the policy of replacing nursery stock at less than full value, heretofore extensively practiced over the country generally, has resulted in serious injury to the nurserymen, exercised a demoralizing influence over the salesmen, and has not really benefited the planter because it has encouraged negligence on his part in planting and looking after trees and plants purchased by him, and led him to underestimate the value of such nursery stock sold him; and

WHEREAS, this Association was instituted and is maintained to promote the best interests of both nurserymen and planter, which said interests are being seriously crippled by the above policy; and

WHEREAS, said practice necessarily tends to destroy the confidence of the planter in the nurseryman, and produces in his mind an erroneous impression as to the real value of the goods sold by the nurseryman, now therefore,

BE IT RESOLVED, That this Association unqualifiedly condemns the said policy of replacing nursery stock at less than its full market value as being unwise, unbusinesslike and wholly unnecessary, and

BE IT FURTHER RESOLVED, That the real interests of the nurseryman and planter will be best promoted by the exercise of sound business methods in this, as well as other dealings, with them.

An interesting talk, illustrated by lantern slides, was given by Prof. John Craig of Ithaca, N. Y., entitled, "Observations upon European Nursery Stock and their Plant Growing Methods."

Other papers read were: "Orchard Pests Still Unknown to the Colorado Fruit Grower," Prof. G. P. Gillette, Fort Collins, Colo. "Nursery Inspection as a Common Necessity of Nurseryman and Planter," Prof. E. P. Taylor, Grand Junction, Colo. "Soils and Fertilizers," F. L. Rounsvel, Denver, Colo. "Varieties," E. S. Osborne, Rochester, N. Y. "Transplanted Raspberries for the Retail Trade," W. N. Scarff, New Carlisle, Ohio. "Herbaceous Plants," C. S. Harrison, York, Neb. "A Study of the Nursery Lands of the United States," W. H. Stark, Mo.

The Entertainment Program

An attractive entertainment program had been planned by the Denver Convention League, Western Nurserymen and the Colorado State Board of Immigration. The ladies were entertained royally by excursions and theater parties during the two days of the convention and, after adjournment, two entire days were devoted to sightseeing, one over the Moffat Road, viewing some of the finest mountain scenery in Colorado, another over the fertile plains skirting the foothills, stopping at Boulder, Longmont, Loveland, Fort Collins, Greeley and Lupton. At each stopping place automobiles stood ready to take the visitors to places of interest in the surrounding country, addresses of welcome were made and bountiful refreshments served at noon and toward evening.

CONVENTION OF THE AMERICAN PEONY SOCIETY

AT BOSTON, JUNE 14 and 15, 1910

The Exhibition was held in Conjunction with the Massachusetts Horticultural Society and in the Hall of the latter

The annual meeting of the American Peony Society was held at Horticultural Hall in Boston on June 14 and 15.

The meeting was called to order by President B. H. Farr at 3 p.m. on the first day. There was a very small attendance of members, only about half a dozen being present.

Secretary Arthur H. Fewkes read the minutes of the last meeting and following that the president made a pleasing address as follows:

President's Address

I was initiated into the American Peony Society in this very hall, at the Society's exhibition held four years ago. I have ever since had the most vivid and pleasant recollections of my visit here and the cordial reception given us by the Massachusetts Horticultural Society, and by the many friends of the Peony whom I met during that visit and who have many of them since become personal friends.

I well remember the splendid exhibition made at the time by Mr. Shaylor, and the Thurlows, Mr. Hollis and others, and my visits to their establishments. It gives me the greatest of pleasure to be here again with you to meet the same lovers of the Peony and to note that their enthusiasm has not in any way diminished as the years have passed, as evidenced by the splendid exhibition of flowers which they have again made.

While I have, for many years, grown and admired the Peony, I may say that it was enthusiasm which I took home from my first visit to Boston that has been responsible in a large degree for the serious study which I have given the Peony ever since. Eight years have passed since the American Peony Society was organized for the purpose of trying to straighten out the confusion existing in the nomenclature of the Peony, and publishing accurate descriptions by means of which all authentic varieties may be identified. It was known that the task would be a difficult one, but it is only on looking back over the ground covered that one begins to realize how almost hopeless it was and how futile would have been the effort were it not for the singularly fortunate combination of men and circumstances with which it has been the Society's great good fortune to be favored, the result of which enables me to have the satisfaction of announcing to my fellow members of the American Peony Society here assembled that there is now the most encouraging prospect of a speedy and successful conclusion of the nomenclature work which the Society set out eight years ago to accomplish.

The main factors which have carried the work, so far, toward ultimate success are each so dependent on the other that had one been lacking the work would undoubtedly have ended in failure before this.

Most of the members of the Society are more or less familiar with the first steps which led to the organization of the Society. We are indebted, first, to Mr. C. W. Ward, who conceived the idea and issued the first call, and through whose efforts the co-operation of Cornell University was secured and the test plot established.

We must acknowledge, too, the ready response of our home growers, whose generous contribution of plants, running into the thousands, made the test plot an established fact. To these were added, through the efforts of Mr. Ward and Professor John Craig of Cornell University, the splendid foreign collections of A. Dessert, Croux & Son, and L. Paillet of France; Goos & Koenemann of Germany; De Graaff Bros., and Von Leeuwen & Son of Holland; and Peter Barr of London; which have proved to be of the most vital importance; in fact,

it is doubtful whether without these we could have accomplished much with any degree of certainty.

The work of preparing and planting the Peony plot was done by Cornell University, who from that time on assumed the great burden of the whole work, and it is doubtful whether many members of the Society realize the full extent of our indebtedness to the University and to those who have had the work directly in charge, especially to Dean L. H. Bailey, who during the last two years has given Professor Batchelor "carte blanche" to go ahead and do everything which in his judgment was needed to bring the experiment to a successful issue; also to Professor John Craig, of the Department of Horticulture, who has taken a deep personal interest in the work which has been done under his personal supervision.

We must not forget that while the work and interests of the Peony Society are national in their scope, the University is an institution of the State of New York, and while the American Peony Society has made donations toward the cost to some extent, the greater part of the expense of caring for the test plot, publishing the bulletins, photographing, etc., and the men detailed to carry on the studies have been furnished and paid for by the University.

The test plot has proved the necessity for its establishment, at the same time proving how useless it would have been without the co-operation of the University, as it would have been out of the question for any individual or firm to have carried on this test, on so large a scale, for so long a period.

Last, but not least, we realize how much has depended on those at Cornell who have had the actual work to do, and whose indefatigable and scholarly efforts have cleared the way to ultimate success. To Professor J. Elliot Coit we are indebted for the check list containing all the names of Peonies known to exist in commerce, upward of three thousand in all, together with a most comprehensive bibliography of the Peony extending back to the sixteenth century; also for the first bulletin containing the history of the Peony, classification, cultivation, etc., and the preliminary descriptive list of about fifty varieties.

To Professor Leon D. Batchelor, who has so ably and conscientiously carried on the work from where Professor Coit left it, we owe the second bulletin, covering the work of the nomenclature committee last year, with a careful description in detail of two hundred and ninety additional varieties. Following up the plan adopted last year, Mr. Batchelor has, in co-operation with the special committee appointed for this work, visited other collections where the season is earlier than at Cornell, and so far over one hundred new descriptions have been made this season, and it is expected before the season closes at Ithaca a total list of approximately five hundred varieties will have been identified and described. It is proposed to publish a fourth bulletin, covering the work to date, early this Fall.

A new planting has been made, containing three plants each of all the varieties so far identified, and to these will be added, this Fall, specimens of the additional varieties described, so that when the Society again meets at Ithaca the net results of the work accomplished will be condensed and may be seen by all. This meeting should in my opinion be held two years hence, which period will allow the plants to become well established. It will allow time also for the discussion of descriptions as published, and the correction of errors, before the publication of the final official catalog of the Society. This, too, will mark the conclusion, for all practical purposes, of test, and the accomplishment, so far as this goes, of the original object for which the Society was formed.

So far this season the committee has visited and worked among the Peonies at Wyomissing, Andorra Nurseries, Cottage Gardens Co., Geo. H. Peterson's Fairlaw, N. J., and it is a significant fact that the descriptions already taken practically cover everything to be found in any of these large collections, with but few exceptions covering almost completely the extensive catalogs of Lemoine and Dessert.

With the conclusion of the test at Cornell, what is to be the future of the Society? Shall it consider its work completed and disband, or will it find new interests to keep it alive? The Dahlia, the Gladiolus and other flowers have newly formed societies, composed of their devotees, to say nothing of the old societies in other lines, and it would seem that surely a flower so beautiful and popular as the Peony, with a history and pedigree not approached by that of any other flower, should find abundant support from its enthusiastic admirers to maintain its organization.

The interest in the nomenclature committee was largely a commercial one, arising from the difficulties which dealers experience in purchasing from each other with any degree of certainty as to what they would receive. But as dealers acquire what stock they desire they will deal with each other less, and future sales will depend more on the popularity of the Peony with the general public. New membership in the Society will come more and more from the amateurs who become interested in the Peony and acquire large collections, because of their admiration of the flower rather than from commercial motives.

We should give the amateurs and private growers our warmest welcome, for upon them we must depend for our finest specimen blooms for the exhibition table, and our premium lists should encourage as much as possible

June 18, 1910

the keenest competition in the amateur class. It will be through the influence of larger collections throughout the country, and the exhibitions, that the general public will come to know and appreciate the modern Peony, and the exhibitions should be held at central points, easily accessible, so that they may be attended by a large number of people. Every effort should be made to have the exhibitions as attractive as possible and every commercial dealer should deem it not only a duty, but of vital importance to his own interest to do his share by sending flowers whenever it is at all possible. It is, of course, impossible for a grower a long distance away, where the season of bloom materially differs from that in the locality where the exhibition is held, to compete on an equal footing with the local growers, who can select their best blooms at the most favorable time, just before the show. In judging exhibits from a different latitude, due allowance should be made, indeed, it has occurred to me that it might be a good idea to form a separate class for the encouragement of exhibits from a long distance.

The Peony, for Memorial Day, has become almost the national flower, and justly so, for certainly nothing else can so well serve that purpose; but it is unfortunate that in many places there is a tendency to consider that the Peony has served its purpose as soon as Memorial Day is passed. There should be no reason for this, as the varieties which follow later are superior, both in beauty and keeping qualities, to those which may be best for Memorial Day, and it is gratifying to note that in many localities the usefulness of the Peony for general decorative purposes is being recognized. In many western cities, particularly, there is a steady demand for blooms which are kept in storage until well into July. The most valuable varieties after the very early ones are the very late ones, which come in and are in demand after the earlier ones are gone.

In narrowing the list of varieties down to the "best hundred," much will depend on the point of view. For the florist, fifty varieties would doubtless be ample. For him a variety is of no value if it does not keep well, ship well and have the right shade of color, and it must be fragrant.

The landscape gardener will consider, chiefly, the habit of the plant, its floriferousness and its general effect at a distance, planted in masses. The full size and heaviness of many of the finest cut-flower varieties render them unfit for this purpose, and both classes would debar entirely, for one reason or another, hundreds of the varieties which would appeal to the amateur, who would see so much beauty in many of the various forms which would not appeal to the landscape architect, or which, for some reason, would debar them from the commercial or cut-flower class.

Many amateurs admire the semi-doubles, the loose crown types and other distinct types, so that in selecting our list of the "best hundred" the tastes of all classes must be taken into consideration.

I must confess that my own taste in the selection of the varieties is largely that of the amateur, since my prime motive in growing Peonies has never been for cut flowers as a specialty. The single Peony as a cut-flower is not a good seller, but where can there be found among all the doubles anything to compare with such singles as Stanley, Jupiter or La Fiancee, for large massing of color effect. Their upright habit and lightness of flower enables them to withstand the rain and winds so destructive to the heavier double kinds. There are, it is true, a large number of inferior single varieties which should be promptly eliminated from our list, which is true also of a large number among the other classes.

We have previously been cautioned against the tendency to name new seedlings which are inferior to varieties already in existence. There are so many almost perfect varieties that many believe it nearly impossible to make any additions that are genuine improvements. The American Peony Society should, and it is to be hoped will, come to be recognized as the authority competent to pass on the merits of a new introduction, and it should be so conservative that its certificate of merit granted to a new variety should become a guarantee of the value of the new introduction.

The splendid collection which will be in existence at Cornell University will furnish the Society with unusual facilities for judging a new variety. Whenever possible, a specimen plant of the new variety should be sent to Cornell, in order that it may prove its merits among the older varieties already established. This cannot always be done while the originator is in possession of only a few plants which he would not wish to disturb, or part with, neither is it possible for him always to send flowers to the exhibition, which may be held so far away, or at a season when his plants are out of bloom.

To overcome this, I offer the suggestion that committees be appointed in several localities, to whom a new variety might be submitted, and if it met with the approval of the sub-committee they might recommend the variety and have it passed upon by the Society, as a whole, at a later date. This would necessitate some delay in final recognition, which would not be unwise, as the merits of a variety cannot always be finally judged until after several years have passed.

Mr. Rosenfield has set us a good example of con-

servationism in this matter of naming new varieties, for while he has grown seedlings for many years he has introduced but comparatively few varieties, and I am sure all who have seen his Karl Rosenfield will agree that it is a worthy addition to our list, and that, even among the vast number of rebs, there was room for this one. There is room also for an early red to compare with and bloom with Festiva maxima; and while the standard established by the French growers is high we should not fail to recognize and encourage any good thing which originates at home.

I must not forget to mention the courtesy of the Society of American Florists, in sending, through the secretary, an invitation to the American Peony Society to meet with them during their last meeting at Cincinnati and making the suggestion that the American Peony Society and the Society of American Florists should cooperate, as our interests are mutual. It was not deemed advisable to attempt to have a meeting with them last Fall, as at that season of the year we would not have blooms to show. But it is possible that in the future a joint meeting might be arranged, and we cannot fail to appreciate the courtesy extended to us and to reciprocate the friendly feeling shown toward us.

I am also pleased to be the bearer of a message from our honorary president, Mr. C. W. Ward, to the Society, expressing his regret that continued ill health makes it impossible for him to be with us at this meeting. But he wishes me to assure you that he retains all his interest in the Society and that he hopes in the near future to be able to take an active part in its work.

The report of the secretary was next read, and was as follows:

Secretary's Report

The present membership of the American Peony Society includes fifty-two active members and five honorary members. During the year we have lost one member by death—Thomas C. Thurlow of West Newbury, Mass., who passed away July 2 last. He was a charter member of the Society, taking great interest in all that pertained to it, and was one of the first to make a specialty of the Peony in this country. In his death the Society has lost a valuable member and those of us who were privileged to know him intimately have lost an esteemed friend.

Since the organization of the Society in 1903, we have lost by death three members, and by withdrawals, and those who have dropped out, twelve.

Starting with a mere handful of signers in 1902, the membership increased to thirty-six during the year of organization, and notwithstanding these losses, has steadily grown to its present number. It is very encouraging to note that at least two of the members who dropped out have this year reinstated themselves, showing that the work accomplished by the Society has a substantial value and that although they have been a long time in maturing, the fruits of our labors are beginning to be available and all honor is due to those who have stood by and made it possible to accomplish these results. The way has not been altogether a smooth one and many obstacles have presented themselves, the most embarrassing of which has been the comparative smallness of our membership, which has necessarily limited our available funds,

both for carrying on the nomenclature work and the payment of prize money to successful exhibitors.

The original membership was very largely composed of commercial men and included the greater part of the large dealers of the country. The number of these latter must necessarily be limited, and it is to the amateur class that we must look for future members and to which the commercial man must look for his most profitable business. The field is a large one and every member should feel it incumbent upon himself to use what influence he may have with such of these as he may come in contact with, to interest them in our work and secure them as members. The circular sent out a short time ago was a move in this direction and was intended to help to present the matter to the public.

From the inception of our Society the interest has centered almost entirely upon the herbaceous class of Peonies, particularly the albiflora varieties. This in itself is not surprising, as this class is by far the most common and easiest of cultivation; but the time must come when more thought will be given to the Montan class, or Tree Peonies. In them we find an entirely different range of color, many of them being exquisitely beautiful in shade and texture. Preceding in their time of flowering as they do the albiflora class, they widen the Peony season very materially and add a peculiar charm to the garden.

Undoubtedly the great reason for their scarcity is the impression that has gone forth that they are very difficult to cultivate. It is true they are slow in coming to perfection, and that grafting must be resorted to, to perpetuate the varieties, but where love and skill is bestowed upon them these difficulties fade away and the reward is a ravishing display of beauty that will repay all the time and care given them. Without doubt, many will take exception to these statements but in reply to them I would say that to be convinced that what I have said is true they should visit the gardens of Prof. C. S. Sargent at Brookline, Mass., and see what can be done with the Montan when its culture is made a specialty of, as it has been done there under the management of Charles Sander.

The exhibition in connection with the meeting at Queens, last June, was a fairly good one and did much credit to the exhibitors, who, though few in numbers, staged a large number of fine flowers. B. H. Farr, Geo. H. Peterson, S. G. Harris, T. A. Havemeyer and John Lewis Childs were the exhibitors. Although the exhibition of cut blooms was a good one, the display in the fields proved the greater attraction, for it is seldom that such a magnificent display of flowers is to be seen. They were growing on perfectly level land in one immense block of about seven acres, with rows five hundred ft. in length, and offering an unusual opportunity for studying the individual characteristics of the varieties, as well as the color effects in masses.

The visiting members and friends feel deeply indebted to the Cottage Gardens Co. for the many courtesies shown them during the two days of the meeting, which was marred only by the unavoidable absence of Mr. Ward, our ex-president, and head of the Cottage Gardens establishment.

(Concluded on page 1082)

A Nebraska Peony Field

Our view is that of one of the fields of Peonies of J. F. Rosenfield, Peony specialist at West Point, Neb. Mr. Rosenfield says: "The illustration shows how well Peonies will recover from a serious freeze-up. On April 12 last, after our plants had attained several inches of growth, we had the worst blizzard and freeze we have ever known. The Peonies were knee-high in snow, but recovered and have been blooming well this Spring."

The Australian canyon shown in the photograph was designed and constructed by James Veitch & Sons, the whole being constructed of "real" stone, with trickling waters and a pool. Exotic Ferns and plants adorned the structure, which was one of the finest features of the great Australian Building at the 1908 Exhibition.
T. A. W., Eng.

Among the Growers

ENGLEWOOD AND TENAFLY, N. J.

A visitor to the several greenhouses in Englewood and Tenafly is impressed, not with the size of the ranges, but with the substantial build, and good state of repair in which they are kept, and the general air and tone of prosperity. There appears to be no specialty in common among the growers of this section, except that several of them give considerable attention to the growing of single Violets. Many of the growers have some good local trade. Some consign to New York wholesalers, and some sell direct to the retail trade.

John Lange, Englewood

An acre of land right in the heart of a beautiful town

on which are six well built greenhouses, with 15,000 ft. of glass, a hot water heating system, a pretty dwelling house, and well kept grounds sum up Mr. Lange's establishment.

One house is used for growing white and pink Killarney Roses, and a second for Carnations, white and pink Enchantress, Beacon, White Perfection and Winsor being the varieties used. 'Mums are grown in one house; the varieties chiefly used are Golden Glow, Polly Rose, Glory of Pacific, Virginia Poebmann, Appleton, white and yellow Eaton, Dr. Enguebard and yellow and white Jones, which latter Mr. Lange considers most profitable of all 'Mums. He is trying out some new varieties, such as Pres. Taft, Golden Eagle, etc. Four blooms are produced on each plant. The early varieties are grown on benches, and the late ones in solid beds.

One house is devoted to Mignonette. The seeds are sown in the first part of August and blooms are cut by Christmas, and continue to be cut until after Easter. Mr. Lange uses seed of his own saving and has been making careful selections for eight years. Boston Ferns occupy another house.

Smilax and Asparagus are grown, and some Palms and Dracenas. Some bedding plants are also grown; about 8000 each of Geraniums and Salvias, 5000 Coleus, etc. Mr. Lange has a first-class local trade which takes most of his products, including about 1000 Poinsettias grown for Christmas. He makes some consignments to Alexander J. Guttman, 34 West 28th st., New York City.

McQuaid Bros., Englewood

McQuaid Bros. have five acres of level land on the Tenafly road, on which are seven houses with 15,000 ft. of glass, heated with hot water. Raised benches are used. Four houses are used for Carnations, of the varieties white and pink Enchantress, Winsor, Beacon, and Victory. It may be noted here that the up-to-date varieties of Carnations are used among the growers of this section.

Richmond, Perle and Ivory Roses are grown in one house, and Palms and Ferns, used mostly for local decorations, occupy a house. One house is used for 'Mums, and one for California Violets. A few Violet plants are taken in fairly early, but the rest are left out very late, even until November, and it is found that when these Violet plants are benched so late, they at once begin to produce blooms, instead of running to leaves.

Some bedding plants are also grown; about 8000 each of Geraniums and Salvias, Coleus, etc.

The Carnations have given in the past season very satisfactory results. Ten thousand to twelve thousand young Carnation plants in the field are very promising. Consignments are made to J. K. Allen, 106 West 28th st., New York City.

F. R. Barrett, Englewood

Mr. Barrett has three acres of land on which are four greenhouses with 12,000 ft. of glass, and hot water heat. Carnations are grown in two houses, on benches. The varieties used are pink and rose pink Enchantress, Harlowden, Beacon, Winsor, and White Perfection. The old plants have all been taken out, and carefully set in the open ground, at the same depth as they were when on the benches, and with the wire supports around them.

The wet weather has been favorable, therefore they have received little check from the transplanting and are continuing to bloom. This same procedure in the case of Genevieve Lord gave good results last season.

The young plants at this establishment are already being benched. This early benching gives long stems, and blooms of fine quality early in the Autumn, when such blooms bring a good price.

One house is used for growing Princess of Wales Violet in solid beds. The Violet plants are set in August.

Sweet Peas are grown in one house in solid beds. Christmas Pink and White, are planted about Aug. 15, and between these are planted Blanche Ferry. Cutting of blooms began last year in October, and has continued until the present time. They have proved very profitable.

A few Summer Stocks are being tried. Mr. Barrett has a substantial dwelling house of concrete blocks in the process of erection.

E. C. Lounsbury (G. N. Lounsbury, Manager), Tenafly

Five well built greenhouses with concrete side walls, and in the Violet houses concrete solid beds, make up Mr. Lounsbury's substantial and well located range. Carnations, mostly Winsor, are grown on benches in two houses, and in the other three houses Princess of Wales Violets are grown in solid beds. The Carnations are still giving a good cut of blooms. The products of this range are sold direct to retailers.

IN PENNSYLVANIA

Alphonse Pericat, Collingdale, Pa.

The well built range of Mr. Pericat, consisting of six greenhouses with 15,000 ft. of glass is entirely devoted to growing Orchids, about 25,000 plants. Of these about 15,000 are Cattleya Trianae, which is considered the most profitable variety. Other Cattleyas also are grown, such as labiata, Mossiae, gigas and Gaskelliana.

Of the Dendrobiums, Phalenopsis and Wardenium are worthily grown, also Phalenopsis amabilis and Schilleriana. Vanda cœrulea are grown in considerable numbers, and are considered a paying proposition.

Other varieties also are grown in smaller numbers. Mr. Pericat is now erecting a new house, with material furnished by Lord & Burnham Co., 71 by 20 ft. in which, among other Orchids, he will try a collection of Cyripediums. A large invoice of Orchids has already been received for new plantings. Everything about Mr. Pericat's range shows great care and good culture. Some fine blooms are now being cut, especially of Cattleyas gigas and Gaskelliana. The blooms from this range are sent into the Philadelphia market.

Godfrey Aschmann, Philadelphia, Pa.

In the nine houses of Mr. Aschmann's range is grown a large variety of stock; he has very recently received an importation of Arancarias excelsa, glauca and compacta, to the number of 5000 plants, which he is now potting and arranging in three of his houses. Three houses are devoted to Ferns, in which he is growing Whitmanii, Scottii, Scholzei, compacta and Boston, which are growing on for the Fall trade. One house is used for Palms, such as Cocos, Kentias Belmoreana and Forsteriana, and Cycas revoluta.

Cannas, Coleus, Geraniums, Salvias, Primulas, etc., are also grown. Mr. Aschmann reports a great sale of Moon Vines, to the number of 25,000. An importation of about 6000 Azaleas is expected later.

C. Eisele, Philadelphia, Pa.

Mr. Eisele's five greenhouses were mostly rebuilt by Hitchings & Co. last year. A general line of plants is grown of many kinds, among which may be mentioned Hydrangea Otaksa and Thomas Hogg, Dracena indivisa, Coleus in variety, Alternanthera, Ferns in variety, small Palms, and English Ivy. He has had a very large sale of Clematis paniculata and Ampelopsis Veitchii. A new street has recently been opened alongside of one end of the range.

Ericas Prime Favorites

Another great market flower is the Erica, and probably our largest growers are H. Evans & Son of Sidecup, Kent.

Early in the year Ericas make an appearance in the market, and for months the supply is kept up. Different varieties following on each other. The Evans' raise about half a million plants, but this season the number is considerably exceeded, for when I visited this place a number of 200-ft. houses were packed with thumb pots, pot thick, each pot containing a small cutting. Not all this vast number is grown on into 4½-in. pots, for there is an abnormal demand for miniature flowering plants, in tiny pots. These tiny plants are about 3 in. or 4 in. high, and are covered with flowers in the Spring, and for decoration work they are charming. These little plants are placed in special flat boxes, similar to a seed

Yacht Decoration by Gude Bros. & Co., Washington, D. C.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE
RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for Steamer Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will state that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyres
ALBANY, N. Y.
11 North Pearl Street
Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Hatcher
Leading Florist
AMSTERDAM, N. Y.
Estab. 1877
SCHENECTADY, N. Y.

Atlanta Floral Co.
ATLANTA, GEORGIA
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin
BOSTON, MASS.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons
Corporation
BOSTON, MASS.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities. Established 1870.

Zinn the Florist
BOSTON, MASS.
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of NEW ENGLAND. Also special delivery to any outgoing steamship without extra charge.

Robt. S. Wilson
BROOKLYN, N. Y.
Fullon St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of the country and delivered at Theatre, Hotel, Steamer or Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Friedman Flowers
CHICAGO ILL.
185 Michigan Avenue
Courtesies extended to all Florists

JULIUS BAER,
CINCINNATI, O.
Fourth St.

Frank F. Crump
COLORADO SPRINGS, COLO.
Retail Florist
Every facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

J. N. Champion & Co
NEW HAVEN, CONN.
1026 Chapel St., Opposite Yale College
Every facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

W. S. Matthews
Florist, 16 West Third Street
DAYTON, OHIO
Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Bride's Bouquet of White Killarney Roses and Lily of the Valley, bordered with Adiantum Farleyense, and tied with white ribbon.
By W. J. Palmer & Son, Buffalo, N. Y.

flat, the lid being cut to allow 12 little pots to stand in it without rocking. Thousands of these boxes are sent to the northern markets weekly.

Another item grown on an enormous scale at Evans' for Spring decorating, is Rhodanthe. The two varieties, white and pink, are very popular over here, owing to the pretty composite flowers, and their lasting qualities. The Rhodanthe is really an everlasting flower, for the flowers may be treated to keep like Immortelles.

This dainty little annual is easy to grow and for market work the plants are grown thickly in 4 1/2-in. pots, each plants producing a truss of bloom. For London markets most of the plants are shipped as grown, but for the northern markets they have to be treated so as to reduce the bulk. Evans & Son send enormous quantities away, and before doing so each potful is turned out, and the ball cut in half, horizontally. The knife is then run right round the remaining ball, as if peeling a Potato, the ball by this time being reduced sufficiently to go into a Primula pot, viz.: a special shallow pot two inches across. These pots are the same as used for the baby Ericas, and when the Rhodanthes are set into them, the pots are placed in boxes holding one dozen. Being of an everlasting nature, the Rhodanthe does not suffer from this rude treatment.

T. A. W., Eng.

For "Supply" Advertisements see page 1080

Advertisers in this Directory are provided with Arnold's Florists' Telegraph Code No. 16.

John Brattmeyer & Sons
DETROIT, MICH.
Broadway and Gratiot Ave.
We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros. Co.
INDIANAPOLIS, IND.
241 Massachusetts Ave.
Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co.
JACKSONVILLE, FLA.

Your Money is well spent when you advertise in

THE FLORISTS' EXCHANGE

Newport, R. I.

The Brown Tail Moth caterpillar has made its appearance here on stock received from Massachusetts, but a close watch is being kept to prevent its spread. Newport in the past has been fortunate in escaping the ravages of both the Gypsy and Brown Tail moths, but with both of these enemies on the northern border of the State it behooves all interested to be on the outlook.

With the florists the plant trade is opening up in good shape; there is as yet, however, little doing in the flower line outside of funeral work.

Ralph Armstrong of Wadley & Smyth leaves here on Saturday for New York to assist with the decorations for the marriage of Theodore Roosevelt, Jr.

Robert Hunnick, who was for over 20 years head gardener for Fred W. Vanderbilt at Rough Point, has accepted a similar position with one of the Maxwell Brothers in Connecticut and has already gone there.

Murmurings are heard against the rule adopted by the school committee last year barring the presentation of flowers as a part of the exercises at the school commencements, but it is understood that the rule is again to be enforced.

ALEX. MACL.

Kalamazoo, Mich.

The first week in June found but little stock in the way of cut flowers going to waste, and prices maintained fairly high as the nights continued cold and the days rainy so that stock came along slowly. Now, however, the weather is more sensible and so plenty of stock is on hand, but business remains very good. What with social events and the Memorial Sundays of the Friendly Associations things are moving quite lively. School and college commencements will also use up quite a lot of flowers during the next two weeks, so the cut flower trade may be expected to average up well.

The effect of the cold, rainy weather was bad for the bedding plant trade and I think quite a bit of business will be lost entirely for this reason. However the growers had a fairly good season and most of them feel satisfied with the business done. Thrift gardeners and small fruit men are perhaps the hardest hit of all, as they have lost much stock in the way of early fruit and vegetables from the late frosts and wet weather, for this Spring has certainly been a record breaker.

The planting in of Roses is now going on busily and a nice healthy lot of stock is being set out by our growers here; at present it looks as if this part of the work will soon be completed. The practice of carrying over the old plants seems to be increasing and the results appear to justify this plan.

Carnations in the field have not made their usual progress and unless we get a lot more favorable weather small plants will be the rule in this neighborhood.

Van Bochove & Bro. have the frames up of a 40,000 ft. extension of their Rose Hill plant and expect to have it completed early in the season in ample time to plant for Carnations. They report another successful year of business.

S. B.

Rochester, N. Y.

Trade for the past week was not very satisfactory and "very little doing" has been the cry. In consequence, the market is pretty well loaded with all kinds of cut flowers, with the single exception of good pink Roses, and Sweet Peas. The demand for Peas, however, has been rather spasmodic, some days no demand for them whatever; then, when wanted, could not be got hold of easily. White Roses and American Beauty are altogether too much in evidence. Am. Beauty is coming in better quality than at any time this season.

The coming week will, no doubt, see the wind-up of the bedding season. Although orders still come in for stock, the season is much later, due to the continued wet weather, which up to the present shows no signs of abating.

The regular monthly meeting of the Rochester Florists' Association was held on Monday, June 13, President F. W. Vick presiding and about forty members being present. The principal business transacted was the hearing of the reports of committees in connection with the convention, which showed that satisfactory progress was being made. All are entering into the spirit of the thing and when the plans are complete they will, no doubt, be very satisfactory.

A. H. Secker added much to making the evening an enjoyable and interesting one, by reading a paper giving a brief account of his travels as representative of The Florists' Exchange. His observations and vivid descriptions of some of the establishments visited by him were much appreciated by all present and the members were unanimous in hoping that Mr. Secker would favor us again with a few remarks in the near future.

H. B. STRINGER.

Catalogs Received

JOHN S. WEAVER, Kinzers, Pa.—Retail Price List of Selected and High-grade Aster and Lettuce Plants.

THE UNION NURSERY, Oudensbosch, Holland.—Wholesale Trade List of Forest and Ornamental Trees, Spring Flowering, Forcing and American Plants, Conifers and Evergreens. American agents: McHutchison & Co., 17 Murray St., New York.

VAN HEININGEN BROS. & CO., Roskoop, Holland.—General Trade Catalog of Choice Forest and Ornamental Nursery Stock, Standard and Low Budded Roses, Azaleas, Clematis, Rhododendrons and Pot Grown Forcing Plants. Van Heiningen Bros. & Co. give notice that, having secured the entire collection of the, at one time well known, Klassen Nursery (Parsons & Sons Co., Ltd., Flushing, L. I., N. Y.) containing many very rare hardy varieties, the majority of which have never been placed in commercial trade, they have continued to grow these, and are propagating them as fast as they can, feeling that when this collection is again introduced, it will be of great benefit to the list of varieties already in the trade.

THE UNITED STATES NURSERY CO., Roseacres, Coahoma Co., Miss.—Advanced List of Herbaceous Peonies for Autumn, 1910.

M. FROMOW & SONS, Windlesham, Surrey, England. (A. Rolker & Sons, New York, American Agents).—Special Offer of Nursery Stock to American and Canadian Buyers.

PETER HENDERSON & CO., New York.—Henderson's Midsummer Catalog offering Pot-Grown Strawberry and Vegetable Plants, Millet for Summer sowing, Vetch and other grains, together with a list of Perennial Flower Seeds for Summer Sowing.

SCHLEGEL & FOTTLER CO., Boston, Mass.—Wholesale Price List of Bulbs, including Hyacinths, Tulips, Narcissus, Lilies and Miscellaneous Bulbs, also Flower Seeds for Summer Planting, Garden Requisites, Fertilizers, Insecticides and Fungicides.

HENRY A. DREER, Philadelphia, Pa.—Dreer's Midsummer Catalog, 1910. A 24-page book of Pot Grown Strawberry Plants, Miscellaneous Vegetable Plants, Decorative and Flowering Plants, Palm, Flower Seeds, Vegetable Seeds, Farm Seeds for Summer Sowing, Requisites, Fertilizers, Insecticides and Fungicides. With illustrated front cover showing a section of Dreer's Cactus Dahlia exhibit at the Alaska-Yukon Exposition.

Greenhouses Building

WAVERLY, MASS.—Edgar Bros. are building a new greenhouse.

DAYTON, IND.—S. P. Lentz is to build a large greenhouse here.

FOND DU LAC, Wis.—A. L. Bush & Co., are erecting four greenhouses, 16 by 100 ft., on Oak ave.

MAYNARD, MASS.—A. Batley & Son are to build an additional greenhouse.

ASHLAND, MASS.—Ernst Warren is building a large addition to his greenhouse establishment.

WEBSTER CITY, IA.—James Follett is building an additional greenhouse, 30 by 60 ft., and will shortly erect another, which is to be larger.

MONONGAHELA, PA.—The J. Shelby Crall Co. has contracted with the Lord & Burnham Co. for the erection of a new semi-iron greenhouse 40 by 100 ft.

Weed Killers

The following are among some of the formulas in vogue for such preparations:

1.—Alum 1
Ferrous Sulphate 1
Water 10

In use dilute the solution with 5 times its volume of water, and apply during dry weather.

2.—Sodium Hydroxide 5
Sodium Carbonate 15
Crude Carbolic Acid 2 1/2
Water 100

For use dilute the solution with 20 times its volume of water.

3.—Slaked Lime (recent) 1 lb.
Sublimed Sulphur 4 oz.
Water 3 gal.

Boil for some time, replacing the water from time to time as it evaporates. For use mix with an equal volume of water.—Merck's Report.

Seasonable Plants

ASPARAGUS Sprenger, 3-in. pots, \$4.00 per 100.

GERANIUMS, assorted, 3 1/2-in. pots, \$6.00 per 100.

Notes

CLEVELAND, O.—The Ohio Floral Co. has reduced its capital from \$50,000 to \$10,000.

GREENFORD, O.—M. C. Clay, florist, has taken his son, Carl, into his business as a partner.

SOUTHAMPTON, CONN.—Olson & Landon have sold their Buckland st. greenhouse to Wm. Fischer.

NEW KENSINGTON, PA.—McCrey, Jenkinson & Co., florists, suffered a \$1500 loss by fire on June 7.

WASHINGTON, D. C.—The Washington Florists' Company has decreased its capital stock from \$100,000 to \$75,000.

BRYANTVILLE, MASS.—During a severe storm on Tuesday, June 7, the greenhouses of the Halifax Garden Co. were damaged.

SHAWANO, WIS.—Ed. Lenger, an expert horticulturist, has purchased a greenhouse here and will start in the florist business.

SOUTH DUBURY, MASS.—Howard C. Burr has sold his greenhouses to Fred N. Eaton who will remove them to his own establishment.

WELLINGTON, O.—Albert Richter, florist, of Spurgis, has been succeeded in his business there by J. W. Dunn, who was for many years foreman in the Chicago Greenhouses of the J. A. Budlong est. Mr. Richter has taken over the Yale property here, and will continue the business.

Grow Mushrooms

If you do not know how, procure that simple but complete and practical book called "How to Grow Mushrooms." The price is ten cents and it can be secured from this office.

Retail Notes

GREENFIELD, MASS.—F. J. Yettes, flor-
ist, will occupy the store now being re-
modelled in the Sheldon Block.

MINNEAPOLIS, MINN.—Miss Whitted,
the florist of 34 Fifth st. S., has opened a
new store at Tenth st. and Nicollet ave.,
in the new Meyers Arcade, and will con-
duct same in connection with her origi-
nal store. The new store has been taste-
fully decorated, the motif of the decora-
tions being the Easter Lily. The bronze
hanging electroliers bear lamps in Lily
cups of exquisite tints and in the floor
the conventionalized Lily is carried out
in mosaic. All of the most up-to-date
conveniences have been installed, and the
largest floral refrigerator in the North-
west is hers to boast of; the entire rear
of the store being devoted to it. The
earth brown of the Oak finishings of the
shop harmonizes artistically with the
idea of the woodland home for the flow-
ers.

Philadelphia Retail Notes

M. J. Callahan of 3804 Market st. has
opened a branch store at 2924 Market,
near the 40th st. station of elevated car
line.

Geo. Craig, 211 So. 11th st., is enjoying
a good share of commencement work, and
reports Memorial Day trade as being as
good as over.

Roht. Crawford, Jr., 235 So. 11th st.,
is about finishing up his 33d year in his
present location. His place is now one
of the most attractive and convenient
of the downtown stores, and is arranged
so that the conservatory is on the roof
of the packing and storage shed, with
steps running from rear of store toward
the back, and allowing of easy access to
conservatory.

Robert A. Stewart, 212 So. 13th st.,
reports some good funeral work and, for
a short time, has been busy on com-
mencement decorations.

P. Joseph Schembs, 629 No. 17th, is
having special sales with Roses at 35c.
per dozen as a leader and finds this in-
creases his business considerably. Fun-
eral work here has been exceedingly
good of late.

Geo. J. Hoene has been located at
28th and Poplar sts. for about two years
and reports business as increasing all
along. Mr. Hoene spent several years
with some of our well-known florists and
his teachings all help in keeping his own
trade up to standard. Memorial Day
business was very fair and large quan-
tities of potted stock was disposed of on
that day.

Henry Meyn, 2045 Germantown ave.,
has enjoyed a good season.

Chas. N. Niemann, 2757 Germantown
ave., has recently installed a Hill ice-
box, which is finished in white enamel;
this, with his large show window, which
was built during the past Winter, make
the store very attractive.

C. Eisele, 11th and Westmoreland sts.,
reports some good orders for potted stock,
and better trade than the previous year,
especially in the shipping line. Window
box trade is much more brisk than for-
merly.

M. A. Garrett, 2636 Germantown ave.,
reports the present season as "Big," es-
pecially in plant stock, which went ex-
ceedingly well before and on Memorial
Day.

Robert A. Gilmore, Haines and Chew
sts., Germantown, has been here for the
past eighteen years; he has some 7000
sq. ft. of glass devoted to bedding stock.
He reports trade as very brisk in both
wholesale and retail.

Samuel V. Smith, 3323 Goodman st.,
is a large breeder of Paradise goldfish, as
well as a grower of potted stock. He
reports a splendid lot of young fish this
year and carries about all varieties ob-
tainable in this country.

Chas. H. Campbell, 3601 Germantown
ave., had to stop selling at wholesale and
kept it for his own retail trade Memorial
Day, owing to the comparatively small
quantity of good blooming stock obtain-
able.

E. Reynolds of 19th and Girard ave.
enjoyed a good trade Memorial Day,
most of which was in cut flowers for
hospital trade.

Chas. Schuch & Bro., 2456 No. 5th
st., have been hard at work all during
past Spring and report trade as being
ahead of previous years. A good stunt
here is corner pieces made of small

Prices Advertised in these Columns are for THE TRADE ONLY

The treasurer being absent, his report was read by the secretary, and showed the Society was in a satisfactory condition financially.

The following report of the nomenclature committee was then presented by President Farr:

Report of the Nomenclature Committee

As Professor Craig, chairman of the nomenclature committee, cannot be present at this meeting, I have been requested to make a brief report of the work accomplished. Part of this ground I have already covered. The two bulletins now published describe three hundred and forty varieties. In the second bulletin, also, a number of corrections have been made to the first list.

It was realized last year that the season of study was altogether too short for any one locality to carry on the work without extending it over a number of years, and Mr. Jos. Dauphin of the Cottage Gardens Co., and myself, were appointed a special committee to assist Professor Batchelor, and the season was greatly prolonged by beginning the work at Wyomissing, following it up at the Cottage Gardens Co., where the meeting was held, and finally at Ithaca. The immediate results of this course are shown in the large number of varieties added to our list in the new bulletin.

This year, the same plan has been followed. In addition to the work this season at the nurseries mentioned in my address, the committee has since visited the collection of Mr. Shaylor here in Boston, and it is the intention, if possible, to visit other collections in the vicinity of Boston before leaving for Ithaca, where the work will be continued until the close of the season there.

It is expected that by the close of the season there practically everything will be done in the old plot that it will be possible to do. There are still hundreds of names existing in the plot, which it will never be possible to trace to any distinct origin, but the vast number of names originally existing there has been reduced to a very large degree by the great number of synonyms found, all of which have been noted. As examples of this I might mention *Edulis superba*, Dr. Bretonneau, Queen Victoria, and others which have been duplicated under twenty-five or thirty different names each, to say nothing of the host of red varieties, most of them of inferior quality, which are to be found. It would seem as if everyone who has a red of any kind calls it *Delachei* or *Francis Ortegat*, or *Louis Van Houtte*, so that, strange as it may seem, these, our most common varieties, have been the hardest to determine as to which is the true variety. And of the many *Delacheis* it is a question if any of us are positively sure just which one is the true variety, unless it is the variety sent us by Desert, which, as is usually the case, when we are able to fix upon the true variety, proves to be clearly one of its imitators.

There is a common pink Peony which among its many other names passes for *Eduard Andre*, but the true *Eduard Andre* is different in every way, being an immense very double flower, very late.

These are merely examples of some of the difficulties that the committee has had to contend with. Of the varieties left in the original plot, it is doubtful if there will be many remaining which will be worth giving any further consideration. Doubtless the larger part of these have been unnamed seedlings sold in mixtures, to which names have been given in order to distinguish them where they have been grown in nurseries.

It is not expected that no mistakes have been made, but the committee has had unusual facilities in making a wide range of comparison in every case, and has every reason to believe that in most instances it has reached conclusions, and that the errors existing will be detected and corrected before the final publication is complete. The decision of the committee may not in every way agree with individual opinion, but it will at least establish a basis upon which the work for the future may be done, and if it is adopted as a standard eventually it fulfils the object sought.

I wish to reiterate the splendid services Mr. Batchelor has rendered the Society in carrying out this work. I also wish to make mention of the fortunate selection of Mr. Jos. Dauphin, who by his remarkable memory and ability to retain his impression of distinctions in color and form of flowers, and the long years of study he has given to this subject, has been able to render us invaluable services.

The Peony plot at Cornell now comprises a number of acres, a large addition having been made for the new planting last Fall, which will eventually be the permanent planting belonging to the University, in accordance with the original agreement. The second planting donated for the purpose of selecting the "best hundred" varieties will be in prime condition and will doubtless be of great assistance.

A motion was made and carried that the Society pay one-half of the expense of the last bulletin issued by Cornell University, which was thought to be the best piece of work ever done in the direction of attaining the objects of the Society.

Mr. Fewkes moved that a committee be appointed to consider the best way in which seedlings of value could be looked after all over the country. The motion was

carried and the chair appointed as such committee G. H. Peterson, R. T. Brown, and A. H. Fewkes.

Considerable discussion ensued in regard to the place of next meeting, and it was finally agreed that the meeting should be held at Philadelphia. A committee was appointed by the chair to make the necessary arrangements for the meeting there, as follows: Andorra Nurseries and Henry A. Dreer of Philadelphia, and J. J. Syer, Concordville, Pa.

The next business was the election of officers, and the present officers were all re-elected, viz.: President, B. H. Farr, Wyomissing, Reading, Pa.; vice-president, C. J. Maloy, Rochester, N. Y.; secretary, A. H. Fewkes, Newton Highlands, Mass.; treasurer, J. Howes Humphreys, Chestnut Hill, Philadelphia.

Five new members were elected. It was reported to the meeting that one of the members, George Hollis of South Weymouth, Mass., was very sick.

A few men only are doing most creditable work on behalf of this Society in straightening out the names of the varieties. Outside of this, there seems to be very little life or enthusiasm in the Society. To keep an organization of this character alive requires not only active, energetic officers, but a goodly number of tradesmen and amateurs from every section throughout the country who will be active in forwarding its interests, for the Peony is a flower for the masses, one of the oldest of garden plants, needing no protection or special care, and there are very few large, or even small gardens, but cultivate them for their beauty in the early Summer. We sincere trust that, along with the good work of nomenclature, it will be possible within the near future to largely increase the membership.

The judges were those of the Mass. Hort. Soc., T. D. Hatfield, chairman, Peter Fisher, Thomas Roland, William Thatcher, assisted by Prof. A. P. Saunders, Hamilton College, Clinton, N. Y.

ROBERT CAMERON.

The Exhibition

The Peony exhibition of the Massachusetts Horticultural Society, and the annual exhibition of the American Peony Society were held jointly in Horticultural Hall. The dates for the show had been changed from June 9 and 10 to June 11 and 15, owing to the lateness of the blooming season in New England this year. The deferred dates did not prove satisfactory to growers from distant States, therefore there was a poor showing made from growers at a distance. A week later, with good weather, would have suited every one in the vicinity of Boston much better, and there would have been a much better exhibition. The heavy rains of Saturday and Sunday played havoc with the flowers and those shown, with the exception of a few, were not up to the standard. But, on the whole, the showing made was quite good, considering the unfavorable weather.

The upper hall or lecture room was devoted almost entirely to the exhibits of the American Peony Society, and they made quite a good display. The most imposing exhibit was that of R. & J. Farquhar & Co., which was entered for the best display of Peonies arranged for decorative effect. James Farquhar's good taste was shown in this exhibit, as usual, and the result was very fine. It was the only exhibit in its class and was worthily awarded first prize.

At the farther end of the room, E. J. Shaylor of Wellesley Hills, Mass., made a splendid exhibit, filling one large table right across the room and showing some of his very finest varieties. This exhibit was of great interest, not only for its showiness but for educational purposes, each variety being legibly labeled, correctly. The Mass. Hort. Soc. awarded it a silver medal.

Walter Hunnewell of Wellesley (T. D. Hatfield, *gdr.*) showed in the alcoves of this room some remarkably fine *Rhododendrons* and was also awarded a silver medal.

The large, or main hall was very pleasingly arranged in garden fashion. Along the middle of the hall were very pleasingly arranged three large oval beds of Peonies from R. & J. Farquhar & Co. the flowers set in vases on the floor and the beds margined with green grass. The Peonies looked as natural as if they were grown outdoors. The front bed was made up of white; the second bed of pink; and the third bed of dark varieties. It was admitted by all that this was the most pleasing and best way to exhibit Peonies.

The exhibits for the Mass. Hort. Soc. prizes were mostly all in this room and were arranged on tables on the left hand side. In the first alcove, on the right, R. & J. Farquhar & Co. put up a grand display of hardy herbaceous plants, arranged artistically, and the whole display was margined by a large border of Foxgloves which were dug up and planted just as if they were in a border. They were much admired in this way. The exhibit won the silver medal of the Mass. Hort. Soc.

In the second alcove, William Whitman (Martin Sullivan, *gdr.*) exhibited very fine *Delphiniums*, Foxgloves and Irises, making a handsome display; and in front of this Mrs. Frederick Ayer (George Page, *gdr.*) exhibited a collection of well-grown young plants of Fuchsias in quite a number of varieties, which was awarded a silver medal.

At the rear of the hall the Eastern Nurseries of Jamaica Plain, had a lot of well-grown herbaceous plants which were tastefully arranged. The Blue Hill Nurseries

of So. Braintree, Mass., made a capital display of double *Pyrethrums* which was much admired and ought to be of special interest to the trade, as there were many fine varieties that would make grand, good things for cutting. Mrs. E. M. Gill of Medford, who will be 80 years old on the 28th of this month, made a very creditable exhibit of miscellaneous seasonable flowers, and she arranged them, as usual, very pleasingly. George Page, *gdr.* to Mrs. Frederick Ayer, exhibited some wonderfully well-grown plants of *Rex Begonias*; there were six plants and each plant measured four feet in diameter.

T. C. Thurlow's Sons Co. of W. Newbury, Mass., made a display of single Peonies, which was quite interesting. The Old Town Nurseries of So. Natick, Mass., showed a fine vase of *Iris Sibirica* Snow Queen, which is a capital thing.

Awards of the American Peony Society

The awards of prizes offered by the American Peony Society in the commercial classes, were as follows:

Largest and best collection of named varieties, one flower of each—1, T. C. Thurlow's Sons Co.

Best fifty blooms, one variety, named, white—1, B. H. Farr with a good vase of *Couronne d'Or*; 2, Cottage Gardens for a vase of the same variety.

Best fifty blooms, dark pink or rose—1, George H. Peterson with Louise Renaut; 2, Cottage Gardens with Muysart.

Best fifty blooms, one variety, flesh or salmon pink—1, Cottage Gardens with Albert Crousse; 2, G. H. Peterson with Mme. de Galhau.

Best fifty blooms, one variety, named, crimson—1, S. G. Harris, Tarrytown, N. Y., with Prince Talmidke; 2, Cottage Gardens with Marechal Vaillant.

Awards by the Mass. Hort. Society

The best Peonies in the exhibition came from George H. Peterson of Fair Lawn, N. J. Some of his large vases were exquisite.

Best specimen bloom came from G. H. Peterson. It was a beauty and the color was a pleasing pink shade. The name of the variety is *Mme. de Galhau*.

Vase of twenty-five blooms, white or blush—1, S. G. Harris with Marie Lemoine; 2, Mrs. E. M. Gill with Festiva maxima; 3, B. H. Farr.

Vase of twenty-five blooms, double pink or rose—1, G. H. Peterson with Mme. de Galhau; Peterson was also second with Mathilde de Resenek; 3, William H. Whitman with Magnifica.

Vase of twenty-five blooms, double red or crimson—1, G. H. Peterson with Rubra superba; 2, G. H. Peterson with Constant Devered; 3, T. C. Thurlow's Sons Co. with Comte de Diesbach.

Vase of twenty-five blooms, double, any other color—1, T. C. Thurlow's Sons Co. with Mme. Costi. This was the most beautiful vase in the exhibition. 2, W. Whitman.

Collection of thirty or more varieties, double, one flower of each—1, Mrs. James McKissock; 2, T. C. Thurlow's Sons Co.

Collection of twelve named varieties, double, three flowers of each—1, G. H. Peterson; 2, Wm. Whitman; 3, Mrs. J. L. Gardner.

Vase of blooms on long stems, arranged for effect in the Society's large china vases—2, Mrs. J. L. Gardner.

Collection of six named double varieties, white, one flower of each—3, T. C. Thurlow's Sons Co. Rose pink, 2, T. C. Thurlow's Sons Co.; red or crimson, 2, T. C. Thurlow's Sons Co.

Best display of Peonies, arranged for decorative effect, to occupy a space not exceeding 100 sq. ft.—1, R. & J. Farquhar & Co.

Silver Medals—R. & J. Farquhar & Co., display of Peonies and Foxgloves; E. J. Shaylor, a display of Peonies.

ROBERT CAMERON.

American Rose Society and Midsummer Meeting

The time fixed by the by-laws, for the annual change of officers of the American Rose Society is July 1, but, in practice, it has been found advisable to make the formal change during the annual convention of the Society of American Florists; this year it will be held in Rochester at which time a regular meeting of the American Rose Society will be held.

We, at that time, desire to start a list of special prizes for the coming great National Show at Boston.

Every special prize has been distributed. The man who carried off the largest number of prizes at the New York Show, held in the American Museum of Natural History, was H. C. Steinhoff of West Hoboken, N. J.; among others he took Mayor Breitmeier's prize.

The Dorrance prize has been won only three times in ten years; first by Robert Simpson of Clifton, N. J.; second by Poehlmann Bros. Co. of Morton Grove, Ill., and third by Benjamin Dorrance of Dorranceton, Pa.

Among the school children who visited the last exhibition, after viewing the splendid showing of blooms in the vases, a group of lads came to the writer and asked this question, "Don't Roses have roots?" "Why, yes," was the reply. "Well, none of these have any!" This was from a child born in New York City who asked the solution of what to his mind was a puzzle.

A few days ago, two small girls had a bunch of Sweet Briars and, being asked where they got them, gave answer, "Over in your lot; don't they smell sweet! Why don't tame Roses smell as nice?" This is simply a bit of child life history, along the line of a—

"Rose for every Home,
And a Bush for every Garden."

BENJAMIN HAMMOND, Sec'y.

A PUBLIC HEARING

Will be held before the
Board of Aldermen's Committee on Streets, Highways and Sewers,
in the Aldermanic Chamber, City Hall, New York City, on

Monday, June 20, 1910,
AT 2 P. M.

ON THE RESOLUTION TO ESTABLISH A

PLANT and FLOWER MARKET

Under the Queensboro Bridge at 59th Street and First Avenue, New York City.

It is the duty of all Florists and Other Persons connected with the Trade, who favor the establishment of said market, to attend this hearing and bring as many others with them as possible. This is a matter of great importance to all Florists, and they are all urged to attend in person, if possible; and if not, then to write to the above named Committee and to their Alderman endorsing the resolution.

WILLIAM H. SIEBRECHT, JR.

Secretary of the Joint Committees of the New York Florists' Club, New York and New Jersey Association of Plant Growers, Cut Flower Exchange, Growers' Cut Flower Company, and the New York and New Jersey Market Florists' Association.

Please mention the Exchange when writing.

Auburn, N. Y.

All the florists here are very satisfied with their Spring trade. The long continued wet weather has seriously interfered with their work outside; the nights, too, are very cold, in fact a heavy frost on June 1 hurt tender stock in exposed places. Some Carnations are yet to be planted, and those who have them out are much worried as to the future, fearing stem rot later on.

Memorial Day trade was remarkably good, every one agreeing it was the best ever had, despite the fact that cut flowers were scarce, and consequently high. I regret to say Joh Elletson is confined to his house by illness, and hope he will soon be out again.

W. J. Edmonds has made some extensive improvements on his grounds in front of the greenhouses which will be a splendid advertisement for him, as a great many cars pass daily. As soon as the bedding season is over he intends pulling down some of the houses and remodeling them. His bedding stock was all good, Geraniums, Petunias and Centaureas especially so.

Mrs. Morgan's place has wonderfully improved since my last visit. Her son Howard is a hard working, enterprising young man, and is bound to succeed. He is making great improvements, both inside and outside the houses. The stock was all looking good, and neatly arranged. Sweet Peas have done remarkably well. Some old plants of Perle Roses were covered with wonderfully fine flowers, which have been a great help in design work.

Geo. Clark's men are busy tearing down two old houses, 150 ft. long, which will be replaced by one house built on modern lines. Next year he intends to do the same with other houses. Tomatoes are a specialty with him and he grows them by the hundreds of thousands. Smilax and Asparagus are largely grown and were looking good.

Herbert Hills was just going in to dinner when I called, and had only time to tell me that trade was good, especially funeral work. I noticed a good block of Boston Ferns in his houses that will make nice stock for Fall sales.

Friend Patrick as usual is a very busy man, and regrets the bedding out season has been so protracted, as he is very anxious to get his Chrysanthemums out, of which he plants 10,000, all of which are looking good, and will be glad of more root room. A very large business in window boxes is done here, and I noticed some remarkably well filled ones, ready to go out. There has been a marked increase in the number handled the past two years. His Roses are looking good and he is cutting a grand lot. A house of Sweet Peas is a sight; so far they have cut nearly 20,000 blooms.

I put in some hard missionary work for the Convention at Rochester, and there will be a large delegation from Auburn. I believe every florist will take his wife and family along.

Dobbs & Son have a very compact up-to-date place. A new house, 150 ft. long by 50 ft. wide, King construction, was completed last year, and it certainly is a beauty, with all the latest improvements and with walls of concrete; in front is a very fine office built with concrete blocks.

In the office I saw an innovation, the like of which I cannot recall seeing before, and that is a splendid pool table, which the foreman told me the help were at liberty to use after hours. If more firms would follow this plan I honestly believe we should not hear of so much intemperance among the help. Were I to let my pen run I could write a chapter on this very serious question, which affects both employer and employees.

Messrs. Dobbs make a specialty of Carnations. Their stock is in fine shape and they are cutting some very good blooms. All the bedding stock is in good shape. Hothouse Grapes are quite a feature, a lean-to house, 100 ft. long, being devoted to their cultivation. It will not be many years before this industry will become quite a feature.

H. Y.

Albany, N. Y.

Morris Cohen of Wertheimer Bros., New York, was in town on his wedding tour, accompanied, of course, by his bride, who is a charming lady. The Ros-

WE beg to announce that on and after July 1st, 1910, the premises on the first floor of the Coogan Building will be under the management of A. Moltz & Company, who will sell, at wholesale only, all Flowers in Season in addition to Roses.

A. MOLTZ & COMPANY, Wholesale Florists

NEW YORK CITY**

Open from 5 a. m. to 6 p. m.

Please mention the Exchange when writing.

ary Flower Shop was very busy last week. It had six large wedding decorations and orders for bouquets. One wedding was very large, using up large amounts of white Peonies, Lilies, white Roses, etc. Eyres had the decoration for the wedding of Miss Mabel Brady, daughter of Mr. and Mrs. Anthony M. Brady, at the Cathedral of the Immaculate Conception, which was about the largest event held in Albany. The church was decorated with a profusion of Easter Lilies on pews and white Killarney Roses, white Peonies, Laurel and Palms on altar. The house was elaborately decorated with Cattleyas, Lilies, Adiantum Farleyense on mantels, and Peonies, Richmond Roses, Palms, Ferns, etc., elsewhere. A wedding breakfast followed, the table being decorated with Cattleyas and Adiantum Farleyense. W. C. K.

New Orleans

Jules Fonta, who recently retired from the superintendency of Audubon Park,

will leave shortly, accompanied by Mrs. Fonta, for a three months' tour of Colorado and California and points of interest on the Pacific Coast. Although this is not the first visit of Mr. Fonta to the Golden State he is looking forward to this one with a great deal of pleasure as he will have the leisure to take in many sights not heretofore seen.

Mrs. Gruaz has purchased the Francoise Gruaz establishment, corner of Carondelet and Washington sts., and will make some improvements and conduct an up-to-date floral establishment there.

Chas. Eble has lately installed the Wittbold system of watering at his garden. He recently imported several cases of Cattleyas to supply flowers for his Baronne st. store.

After a protracted drought of ten weeks when, in spite of all the watering, vegetation was almost at a standstill, we are getting copious showers two or three times a week and the gardens put on a more cheerful look. CRESCENT CITY.

American Beauty
Bride
Killarney
Carnations

A REVIEW
OF THE
MARKET

Violets
Chrysanthemums
Brides
Lilies

NEW YORK, June 15.—The "good old summertime" is here and Summer conditions, qualities and prices exist in the cut flower market. One thing, however, should not be ignored, namely, that present conditions are not abnormal but are fully as good as they were in the corresponding season of other years.

There is a plentiful supply of American Beauty Roses, but only a moderate demand. The quality is fairly good, and specials bring 20c. each downward.

Killarney and My Maryland are plentiful, more so than necessary to supply every demand, and though they are the favorites now the price is down, no more than 5c. being realized for best grades, many sales on a much lower basis, and moving slowly at that. There is only a fair supply of Richmond but outside Jacqueminot takes its place for many purposes, with sales slow at 5c. each for the very finest blooms, in small transactions; but really very few flowers change hands at a price above the 5c. mark for best grades. Bride and Bridesmaid are mostly of poor quality and the former suffers in comparison with white Killarney and Kaiserin, and the latter with pink Killarney and My Maryland; both, therefore, move slowly, and no more than 5c. each is obtained for the best grades, and from that down.

The supply of Carnations is only normal, but the quality is for the most part rather indifferent, and the demand slack. About 2c. is the highest price obtained for the best grade.

The present supply of Orchids is quite sufficient to satisfy every demand. These flowers are not moving very fast, and there is a tendency to "bear" the price. Cattleyas such as Trilana, gigas, Mossiae, and Mendell, top grade, are selling for 50c. each and under. Few Gardenias are arriving, but there is almost no demand for them, consequently the price has fallen to \$1 per dozen and under for the best grade.

The supply of Callas is not large, but there is enough, and 75c. per dozen is the highest price realized for the best. There is a very abundant supply of Lilies and a very slow sale; 5c. and under is the top notch price for the best grade, with most sales on even a lower basis. The supply of Lily of the Valley is very plentiful and it is no longer moving well; \$3 per 100 is the highest price obtained for fancy stock, with most sales around the \$2 per 100 mark.

Sweet Peas are coming in very plentifully indeed, and the quality is good, but the demand does not use up the supply, and the best grade is selling at 75c. per doz. bunches and under.

This week will finish the Peonies. There are still moderate arrivals of blooms of only fair quality, for which there is a slow demand at 5c. each for the very best, with most sales around the 3c. figure. Gladioli, for best grade brings about 75c. per doz., and from that down to 2c. each. The demand for greens is no longer brisk, and the supply is plentiful. Miscellaneous stock, such as Delphiniums, Ten-week Stocks, Centaureas, etc., moves fairly well at low prices.

PHILADELPHIA, June 13.—Arrivals now are mostly of staples very little, if anything, new appearing, and most all of the Spring flowers dropping out of sight.

There is a plentiful supply of good American Beauty Roses now coming in, with a fair demand, especially for shipment. Some few choice specials bring 25c. each, but 20c. and under is the ruling price. Killarney, and My Maryland are arriving in sufficient number to meet all demands; the quality holds up well, and sales are satisfactory, especially of the better grades. The best grades are bringing, in small quantities, as high as 10c. for the choicest blooms, but most

sales are around the 6c. mark. The supply of Richmond is not so large, and the demand is fair, the prices realized being about the same as for Killarney. The supply of Kaiserin is a little shy; the quality is good, and some choice blooms realize 10c. each, but most sales are at about the 6c. figure. Some Bride and Bridesmaid of good quality are arriving, but for the most part the quality is medium to poor, and other varieties take precedence. Such specials of these as are received sell for 10c., but the supply is limited, and most sales of the best grades obtainable are made at 6c. and under.

There is a plentiful supply of Carnations, and for the season some blooms of very good quality are arriving, but the demand is slack, and they are moving slowly at 3c. each for top grade, with 2c. the ruling price for good blooms.

There is an abundant supply of Gardenias, and a small demand, with falling prices; the best grade changes hands at about \$1.50 per dozen, with the bulk of sales at much lower figures. The supply of Orchids is not so great, and arrivals move better. Cattleyas are selling at 60c. each for some of the choicest varieties, but the ruling figure is 50c. and under.

Lily of the Valley is moving well. The supply is somewhat short, and some fancy blooms reach the \$5 per 100 mark. There are few Callas at present arriving, but there is no special demand for them. Lilies are coming in in only moderate supply, but sufficient to meet the demand. The best grade, both of Callas and Lilies, sell at \$1.50 per dozen.

Peonies are no longer arriving, but there is still in cold storage a good supply of choice blooms in fine condition. Sweet Peas are damaged somewhat by the continued rains, but there is a good demand, and they are cleaning up well at \$1 per 100 for the top grade, though most sales are made at around 75c.

BOSTON, June 15.—The market has been exceedingly dull this week; most of the wholesalers and retailers say the bad weather is the cause, and all are hoping for an improvement this week. One thing we are certain of—that it is not the fault of the goods that are sent to the market, all kinds being in the very best condition. A slight improvement in the way of sales was noticed on Saturday, probably brought about by large quantities of flowers being bought for the Firemen's Memorial on Sunday. The boys in the street are making great raids on flowers at this time and are a great help to keep stock from accumulating.

Roses of all kinds are of good quality and the supply is somewhat lessened with the planting of new stock in the houses. The Killarneys are still good sellers. Carnot is of excellent quality and realizes fairly good prices. Bride and Bridesmaid are selling poorly at low prices.

Carnations are quite plentiful and of good quality, owing to the cool moist weather. Good flowers are selling well, but it is hard to dispose of the poorer grades.

Peonies are quite plentiful now and prices are lower. The quality is not as good as we have seen it often. Sweet Peas are selling well and meet quite a good demand. Gladioli of the large types are more plentiful. Lilies are in good supply and in good demand. Lily of the Valley is in good demand, much of it being used for bridal bouquets. Orchids seem quite plentiful and move fairly well. Antirrhinums are poor and like Stocks and Candytuft, slow sellers.

There is quite a lot of miscellaneous material, such as Iris, Pyrethrum, Feverfew and the like. There is a better supply of Asparagus now and prices hold well.

CHICAGO, June 14.—Since last writing the market has materially changed, and the settled warm weather is responsible for present conditions. The week opened with very little demand for flowers, and shipping orders not nearly so numerous. While prices have not changed, they only hold good for shipping orders, as ordinary stock is disposed of at almost any price. This is the first time this season that the supply of anything has approached the glut point.

Long and medium American Beauty Roses are still scarce, and are selling up to \$3 per dozen. Other Roses are coming in considerably softer and in quantity greater than there is any use for. Carnations have become almost a drug on the market, and many find their way to the garbage barrels.

Peonies, perhaps, are the most sought for flowers at present, and are still bringing \$1 per dozen for fancy stock, of which there is but little, although the past day or two has seen some better stock than heretofore this season.

Few Lilies or Callas are seen, and such as are available are hardly in demand.

There is only a mild assortment of stock in the small flower line. Cornflowers come in fine shape. Daisies are beginning to dwindle in quantity and are of poor quality. Orchids are in fair demand, as nearly every wedding is using them in some form. The new Ferns are in fine shape and are being used extensively.

INDIANAPOLIS, June 12.—A profitable outlet for the vast amount of flowers was the question which confronted the growers throughout the week. Perhaps at no other time in the year is there such an accumulation of varieties. Counter trade was enlisted on several days, only to again fall behind last year's record on others. June weddings are numerous enough, but those which run into the hundreds of dollars for decorations are conspicuous by their absence. Funeral work is most acceptable and profitable right now, but bright warm weather seldom brings much of that line. Local producers of Peonies say the season was not so bad after all, as the main portion of the supply brought an average of \$1.50 per 100. Spanish Iris, in different colors, are a feature at \$2 to \$3 per 100 and find most retail patronage at 60c. to 75c. a dozen. Callas are about out of this market, such as come moving at \$10 per 100; but Har-

rish Lilies are still being cut in large quantities and go at the same price. Lilium rubrum, album and auratum have made their appearance, but the quantity is too small for quotations.

Commencements consume a liberal quantity of Roses, but the amount is small in proportion to the heavy supply. The best Richmond and Killarney are shipped in at \$5 to \$8 per 100. Bride and Bridesmaid are sold in surrounding markets at \$3 to \$6 per 100. American Beauty is moving slowly at \$5 to \$25 per 100. Dorothy Perkins, Ramblers and the various beautiful kinds of field Roses are available for all who would be artistic in their window trim. A recent window display of Syringas and pink Ramblers proved a decided novel success.

The quality of Carnations is good for so late a date, but it is altogether impossible to do justice to the number sent in; wholesale prices range from \$1 to \$3 per 100; retail from 35c. to 75c. a dozen.

Coreopsis and Yellow Daisies are a relief for customers at \$1.50 per 100 wholesale, and 25c. per doz. retail. A few Cattleyas are offered but warm weather seldom improves the taste for them; prices are according to Eastern quotations on same.

I. B.
ST. LOUIS, June 13.—Business with the local florists last week was extra good in weddings, school work and funerals. The weather is beginning to become hot and Summer-like and, as this is the last week for school work, the season will practically be at an end, as society is leaving the city for its summer homes.

The commission houses had a large amount of stock consigned last week and they cleaned up pretty well each day with only the low grades left over.

Carnations, fancy, are still up to \$3, firsts \$2, and commons \$1. Roses, American Beauty, \$3 per dozen for long fancy and others ranging down from \$10 to \$3 per 100. Sweet Peas are most plentiful and sell well at from 35c. to 50c. per 100. Lily of the Valley, \$3 to \$4. Gladioli, \$6 to \$8 per 100. Fancy Ferns sell well, as do all other greens.

BLOOMINGTON, IA.—J. A. Delaney, formerly employed by the firm of Saddler Bros., nurserymen of this place, was arrested in Chicago, Ill., on June 7, on a warrant charging him with forging orders to the extent of \$198.

New York

F. R. Pierson, Tarrytown, president of the S. A. F. & O. H., recently spent four days in Boston, arranging for the National Flower Show in March, 1911. The committee in charge, of which Mr. Pierson is the chairman, has secured the Mechanics Building, Huntington ave., Back Bay, for the Show. This is considered the best building in Boston for this purpose. The Show will be held in the last week of March.

Wm. Elliott & Sons will hold their fifth annual trade auction sale of foliage plants next Tuesday, June 21, commencing, as usual, promptly at 12 o'clock. They will offer many fine stocks of decorative and foliage plants from growers with national reputations, and no florist should overlook this opportunity for stocking up, as it will be the last sale for the season. Among the plants offered will be Kentias, Latauias, Araucarias, Dracaenas, Oranges, Ferns, Adisias, Sagos, etc., all well grown and high class in every respect. Messrs. Elliott have for years, at the end of every Spring plant auction sale season, made a special offer for their last sale and this one will be no exception to former seasons, and it will afford capital opportunity to supply plant needs in quantity at the lowest market rates.

The Fruit Auction Co. will, next Tuesday, June 21, at 10.30 a.m., hold a special sale of Palms, Ferns, Rubbers, Bay trees and also a large and varied assortment of bedding plants, at their rooms, 202-204 Franklin st. A very large attendance is expected at this sale as all the plants will be of especially fine quality, having been supplied by many of the best growers. The sales which this company have held throughout the season, every Tuesday and Friday, have been remarkably well attended and now, as the season for plants commences to draw to a close, the last sales are attracting large numbers of buyers. The Bay trees which this company offer at their sales deserve more than passing mention. They are clean and well grown, in all desirable sizes, both standards, pyramids and Kaiser Kron shapes.

C. Platzeck, Black Stump, Flushing, L. I., has been assigned a stand at the N. Y. Cut Flower Exchange.

John N. Hauser, son of L. A. Hauser, Freeport, L. I., and a West Point cadet, is home on a ten-weeks' furlough. He stands seventh in a class of 130.

The Aphine Mfg. Co. of Madison, N. J., expects to give a demonstration of the merits of Aphine at the S. A. F. convention at Rochester.

Charles F. Meyer, 99 Warren st., New York, sailed June 12 on the steamship Fatherland for Antwerp, for a three months' visit. His daughter accompanied him on his trip.

John H. Taylor, Bayside, L. I., sailed for Europe on June 11, for a sojourn of several months.

M. A. Bowe, 1294 Broadway, had a record breaker recently, in furnishing the decorations for seven weddings in two days. This, in addition to the regular work, made everyone hustle. Among these weddings may be mentioned the Rodewald-Livingstone wedding at the Church of the Heavenly Rest; the Rosenfield-Hollander wedding, and also the Rowland-Wilson wedding at the Church of the Incarnation. At the last named wedding Kalmia latifolia was used in profusion, giving a beautiful effect. The Roman canopies used at these weddings were furnished by the Forster-Mausfield Mfg. Co., 143 West 28th st.

One of the most interesting displays at present in New York is to be seen in the corner show windows at Myer's, 609-611 Madison ave., where a rural scene is very skillfully depicted. In the background is a hillside with Kalmia latifolia growing among the decaying trunks of fallen trees, over which trail English Ivy vines. On a clearing on the hillside stands a thatched cottage. At the foot of the hill is a pond, bordered with stones, decayed logs and Ferns, in which fish are swimming around rocky islands;

and in the valley around there is a bush growth of Aralias, Ferns and vines, amid which can be seen some shy land terrapins. The work is by Henry Luhrs, Mr. Myer's right hand man. Within the store the icebox is well supplied with a variety of Orchids and other choice flowers.

John W. Hauser, 571 Madison ave., corner of 56th st., reports that he is kept reasonably busy with steamer orders and considerable funeral work.

The A. T. Bunyard Floral Co., corner of Madison ave. and 48th st., is displaying in its window an unusually large and fine Phoenix Roebelenii and some tastefully filled commencement baskets. Within the store there is a fine display of Phoenix reclinata and Kentias in large sizes. The company is busy with steamer orders, and commencement bouquets. The bouquets for the graduation exercises at the Carnegie Lyceum, recently, were furnished by this house.

Miss Florence Fenrich, sister of Joseph S. Fenrich of Henshaw & Fenrich, 51 W. 28th st., was married on Wednesday evening, June 15, at the home of her mother, 263 Tremont ave., to Charles Witbeck. The house was handsomely decorated for the occasion by Herman Warendorff. There was a large number of guests, and the wedding presents were numerous.

The floral decorations for the Wheeler-Stubbs wedding, which recently took place at the Hotel Chelsea, were furnished by Harry Lewy, 784 Sixth ave. The rooms were trimmed with Oak leaves and field Daisies, and the bride carried a bouquet of Bride Roses showered with Lily of the Valley, while her attendants wore corsage bouquets of Orchids. Mr. Lewy reports that he has been quite busy with steamer orders and dinner decorations.

J. K. Duer, 644 Madison ave., reports a fairly good business along the regular lines.

Warendorff, at the Tuxedo, 637 Madison ave., finds that business is keeping up well. Among other work he recently furnished a casket cover of Orchids and Lily of the Valley, and ten other large floral pieces for the funeral of Mr. Michel of West 28th st.

Charles A. Dards, 341 Madison ave., is very busy with steamer orders, weddings, funerals and commencements. Mr. Dards has a very large window box business, furnishing these decorations for close on to 100 hotels.

J. G. Panos, Fifth ave. and 125th st., reports a fairly good business, both in cut flowers and plants.

Tryforos Bros., 56 1-2 East 125th st., are handling a nice line of plants and cut flowers and find both business and prices much better than at this season last year.

Cable, Florist, is now in temporary quarters at 178 East 125th st., awaiting the finishing of the new building in September, when he will return to his old quarters at 188 West 125th st.

N. Fleasas, "Nick the Florist," 54 Manhattan st., is making a display of Ficus elastica from his greenhouse at Rutherford, N. J. He reports a reasonably good business, both here and at his other stores.

John Newall, 322 West 125th st., who has been more than thirty years in the florist business, is putting in a new store front. He feels that he is getting his share of business, and has no reason to complain.

The decorations for the Alexander-Roosevelt wedding, Monday, June 20, will be furnished by Wadley & Smythe. This will be one of the most notable events of the season. These florists are now displaying some very nice specimens of that odd, old, but little seen plant, Crassula, with its fleshy leaves and brilliant scarlet blooms. Their recent window display, consisting of a background of five specimens of Cibotium Schiedei Ferns, and some white baskets filled with the choicest blooms of white Peonies, with a bowl of Spanish Iris, in blue, white and yellow, to give a touch of color, was simple and chaste, but very effective.

A partnership has recently been formed between R. Gretsich, 52 West 28th st. and Ordenez Bros., the Orchid growers at Madison, N. J. Mr. Gretsich and Manuel Ordenez will take care of the store part of the proposition at Mr. Gretsich's old stand, where he has been engaged in business for some time, and Miguel Ordenez will manage the Orchid houses at Madison, N. J. Ordenez Bros. grow a variety of Orchids, but give most attention to the Cattleyas, such as Mossia, Trianae, gigas, and labiata.

THE PRICES ADVERTISED IN THESE COLUMNS
ARE FOR THE TRADE ONLY

Vandas, Laelias and Dendrobiums also grown. They are also importers well as growers of Orchids.

Mr. and Mrs. E. C. Lounsbury of Taft, N. J., have recently gone on a 3 months' trip to California.

Michael Barker, editor of The American Florist, Chicago, was lately in town calling on his friends.

Boston

The weather for June is almost unprecedented in this part of the country. The early days of the month in some districts there was a severe frost, injuring many crops, such as Tomatoes, Bean Egg Plants and many other tender crops which has caused a severe loss. Very strangely, in some places right near those injured some of the same kind were unharmed.

For the greatest part of this week we have had tremendous rainstorms with cold easterly winds which has damaged outdoor flowers considerably. People have suffered considerably from the wind and rain and, although the exhibit was put back a week, they are still in poor shape and the show won't be what we expected.

All this has caused a serious stagnation and affairs have, indeed, been very discouraging; there are complaints from all departments of the trade.

For the next two weeks there are great many weddings scheduled and we are all hoping that the weather man will give us some seasonable sunshine and make things more pleasant.

The Carnations from W. D. Howard of Milford, Mass., are of exceptionally fine quality at this time. His Harry Fear Beacon, Fair Maid and variegated Lawson have excellent stout strong stems and the flowers are of good size and substance.

There is some very good Feverfew in the market now, but that shipped by I. R. Jackson of Woburn will compare well with any we have seen. It has good long stems and the flowers are white than usual.

The first Sweet William seen in the market came from Paul E. Richwagen of Needham. The strain seems poor and anyone growing this plant should try some of Sutton's strain. Their pink and white are very good.

The longiflorum Lilies from the Worcester Rose Conservatories are as good as any we see around and there is quite a demand for this particular article at this time as they are used in church decorations.

H. Vose of Hyde Park is sending to market some good consignments of Peonies.

The baseball team of the market at Park st. is to play Thomas Rowland's men at Nahant on June 25.

Charles E. Evans of Watertown is going to dispose of his horses and is to purchase a Stanley automobile.

Arthur Griffin, late of Newport, has purchased a place at Woburn, Mass. There are two greenhouses now; more are to be erected at once to be devoted wholly to Carnations. Mr. Griffin is a good plantsman and we have no doubt but he will turn out some fine goods. We wish him much success and welcome him to the ranks of the trade.

James Wheeler of Natick has the construction of his large greenhouses far enough along to do glazing and painting; Robert M. Davis of West Somerville has the contract. With the hard work on his new place Mr. Wheeler's shadow has lessened somewhat, but he says he will be in good condition for some of the big events at the G. and F. picnic.

William S. Grassie of Waverly has trenched about two acres of land on his new place and has it all under crops now. He began on his new greenhouse this week. William is quite a good deal lighter in weight from hard work but feels in excellent trim to carry away the important prizes at the coming picnic. He holds a gold medal as the champion amateur ten mile runner of New England, and he won it without much training.

Joseph S. Chase of Malden has been shipping heavily to market early Peonies of which he has had a good supply.

Club meeting of the G. and F. will take place at Hort. Hall, on Tuesday evening, June 21, at the usual hour. It is ladies' night and there is a special entertainment prepared; it is hoped all members will be present with their ladies. The executive committee has decided to hold the picnic of the Club this year on July 27 at Pine Ranks, Malden. It is hoped that all athletic members will at once go into training.

To show the keeping qualities of Or-

EARLY CLOSING!

Commencing June the 20th, we will close at 6 p. m.

opportunities in the Middle West and we can safely say that E. O. Orpet will make a valuable addition to the gardeners' ranks in that part of the country or, in fact, to any part wherever he may go. He leaves South Lancaster after 20 years of faithful service. In his early days in that place we were much interested in the work he was doing among hardy plants and read many of his brilliant and instructive articles. Later, he became one of America's greatest Orchid growers and has done more valuable work in that line than any other man in the States. He has been a steady writer on horticultural subjects and is always right up to date with his articles. He leaves on July 1 to take charge of the estate of Cyrus H. McCormick, Lake Forest, Ill., and his friends wish him the greatest success.

Philadelphia

Wm. F. Guide of Washington, D. C. and two sons were recently visitors in town.

John F. Clements, Pittsburgh, Pa., with his bride, were recently stopping at the Bellevue-Stratford, en route to Atlantic City. Mr. Clements is receiving the hearty congratulations of his many friends.

Our usual quality (the best)

1526 Ranstead St., Philadelphia, Pa.

Please mention the Exchange when writing.

Stephen Mortimer, Southampton, Pa., recently sailed for Europe, accompanied by his wife.

Emile Gescheck, of the Pelham Greenhouses, Germantown, has recently added to his establishment a nice adjoining lot which will give him some needed room.

Morris Hoffman, who is with Alexander Campbell, the florist, was recently made happy by the arrival of a nice boy baby. Congratulations are in order.

Charles Porzyce, corner 15th and Chestnut sts., and Louis Polites, corner 13th and Chestnut sts., are spending their Summer in Greece.

Louis A. Couche, 72d st. and Haverford ave., died Thursday, June 9, and was buried the following Saturday. Mr. Couche was one of the largest Violet growers in this section.

Charles Henry Fox has been confined for three weeks in the Medico Chi Hospital, with typhoid fever. His recovery is hoped for, but he is not yet able to leave his bed.

Edward Reid, 1526 Ranstead st., is receiving some nice Ethel Crocker Carnation blooms. Heavy shipments of Roses continue. Mr. Reid may be seen on pleasant days auting to and from Lansdowne.

The case of the Pennsylvania Horticultural Society came up in court on Thursday, June 9. A decision was reserved.

The Leo Niessen Co. is continuing to receive a choice cut of Sweet Peas. This company reports business as reasonably good, especially shipping orders.

The S. S. Pennock-Meehan Co. is receiving a very choice and large cut of American Beauty Roses. It also has a good supply, still, of the choicest varieties of Peonies, in excellent condition.

The Robert Craig Co. has on file 100 recently received orders for Begonia

Gloire de Lorraine, 50,000 of which they have in stock, in marvellously fine condition. Of their 40,000 Cyclamens some even now are in 6-in. pots and pans, and are the largest and best for this season of the year ever seen anywhere. There can be noticed at this establishment 100,000 Nephrolepis of different varieties, in 2-in. to 4-in. pots. The 7-in. Areca lutescens are in fine condition, and a block of about 2000 Dracena Massangeana in large sizes are worth going a day's journey to see.

The friends of Samuel Lit, of the firm of Lit Bros., gave him, before sailing, a unique send-off in the way of a dinner at the "bottom of the sea," at the famous old Child's residence. The decorations were by J. J. Habermehl's Sons, the Bellevue-Stratford florists. The sides and ceilings of the rooms were covered with canvas, which in turn was covered with shells and seaweeds. There was a great tank of water, with aquatic plants, sand, life preservers and anchors lying about, and port and starboard ship lamps were used, instead of the usual candelabra, to light up the scene. Thunder roared and lightning flashed to represent a storm at sea, and old Neptune at the door received the guests. This was probably one of the most unique decorations ever furnished by a florist.

Chicago

The past few days of warm, clear and sunny weather has had a decided effect on market conditions, inasmuch as stock has increased, and there is a tendency to oversupply, creating practically a glut in some lines, especially in the case of Carnations. On Saturday last the Greeks bought Carnations by the thousands, and the wholesalers were glad to find even this outlet for them. Peonies, while not seen in such quantity as is usual at this season, are in sufficient supply. To the end of last week business was most satisfactory, to nearly all in the trade, but in the past three or four days there has been a decided change. Of course, this is not unexpected, and no one is showing any signs of discouragement owing to the reverse.

A visit to the Rose garden at Jackson Park proves that the weather experienced in March has had a most undesirable effect on the Roses, and many visitors will be disappointed this year through the poor quality of the flowers, as they are not coming on in anything like the usual grand showing for years back.

A photograph of Miss Lillie Tonner, of the A. L. Randall Co., in a daily paper last Saturday, depicting her as the discoverer of the "Straw Flower" was a dream of the reporter, and a scoop for the editor, to put one over New York, eclipsing the report that that city had something new, by the inference that we had had the same thing for some years in Chicago. It followed an item in a contemporary that a new Straw Flower had been discovered in New York City.

A novel feature in window advertising has been seen at A. Lange's store for two weeks. A bridal shower bouquet of white Sweet Peas and Maidenhair Fern, with ribbon attached, has been a great drawing card, and many orders for bridal

VAUGHAN & SPERRY

bouquets of this order has been the result.

A unique finish for a wreath seen at J. Mangels was a bow knot made of Pansies and Asparagus, in place of the usual ribbon.

Friedman has had his usual share of weddings and commencement orders for the season, and the business has kept all hands busy in keeping up with the work. The decoration of the windows of this store is ever an attraction to the mass of people who throng Michigan ave.

The decorations for the Harris wedding, that takes place at Lake Geneva, Ill., June 23, and which is to be one of the most elaborate of the season, have fallen to the lot of C. A. Samuelson. The color scheme will be green and white. Peony Festiva maxima and Ferns are to be used. The bouquets for the entire bridal party will be of white Orchids.

G. E. Serviss of Batavia, Ill., had over 1000 blooms of Golden Glow Chrysanthemums for Memorial Day. The plants, it is stated, are all showing crown buds again, and he expects to have another crop in two or three weeks.

Every man interested in the Chicago Florists' Club should make it a point to have no other engagement for the evening of July 7, the date of the dinner given by the Club.

The many Chicago friends of Joe Pollworth, of the C. C. Pollworth Co., Milwaukee, Wis., were pleased to hear of his good fortune. Mr. Pollworth and his wife have fallen heirs to \$350,000 through the death of Mrs. Pollworth's father.

Vaughan's greenhouse are now shipping Peonies; the flowers are consigned to the J. B. Deamud Co.

Winter's Seed Store reports a very remarkable day's business last Saturday in the sale of all sorts of bedding plants.

Charles Stewart, of W. W. Barnard Co.'s Fifth ave. store, says the sales of Tomato plants are running away ahead of those of last year. The only difficulty they experience is in finding good plants. The Tomato plants in general have been very poor. He also says that the sales on all small bedding plants have far exceeded last year's.

Vaughan & Sperry are getting in a fine crop of American Beauty Roses. They are also handling quantities of Peonies, which as yet have held their

own regarding price. Mr. Sperry says that in the Gladiolus line he finds that Augusta, while not bringing quite as high prices as Frances King, is a steady seller, being used considerably for sprays for funeral work.

That the Peonies were not damaged in the locality of Naperville, Ill., is evident, by the quality of stock shipped from there to Kennicott Brothers on Monday morning. These were exceptionally fine flowers, and far beyond the average seen on the market this season.

Hoerber Brothers are progressing nicely with their greenhouses at Des Plaines, but no such favorable report can be made regarding the water question. They have now drilled to the depth of over 900 ft. without striking water.

H. C. Blewitt of Des Plaines says he had hoped to have his new greenhouse well under way by this time, but he has been so busy with indoor stock that he has found it impossible to start.

Mr. Burke, of Clifford & Burke, says that up to last week they have been exceptionally busy with funeral work.

The Chicago Carnation Co. of Joliet, Ill., is cutting its Peony crop. The entire cut has been sold to Schiller the Florist. They loaded a large refrigerator car which was shipped the first of the week. Manager Pyfer says the late frosts did a great deal of damage, especially to the late varieties, of which they will have but half a crop. The company is building two new houses, 300 ft. long and is also replacing the wooden posts in the other houses with modern concrete ones, and nauting and repairing the houses generally.

Cincinnati

The Queen City is now very busy with conventions. Last week the traveling men were here with their wives and sweethearts, and as they are pretty good money spenders they helped the business to a certain extent.

This week, the celebrated Glidden tour starts from Government sq. on June 14, at 9 a.m. At this writing the cars are all lined up on the square and their experts are busy getting their horses in good trim for the race. Automobiles are to be seen on every street corner, in the middle of the streets, and every place else, and in order to cross the streets one almost has to have a policeman to help, to keep from getting killed. What aid this will be to the flower business remains to be seen. Tonight they have a "bouquet fest" at Coney Island, the place where the S. A. F. was entertained last year—possibly some of you have a vivid remembrance.

There will be quite a number of florists attending the convention at Rochester, and we are in hopes of having a bowling team to go in competition with other cities at this meet.

General business during the past week was only fair. We have had much rain, and it put a damper to a certain extent upon business; but weddings, funerals, and commencements keep the florists from complaining. The dry goods people are about the only class in a legitimate position; they claim that the five cent theaters, and people mortgaging their homes to buy automobiles, are causes for a financial stringency.

A Lord & Burnham Co. representative was here last week, and sold two houses to Oliver Murphy. Sidney Murphy is also re-erecting his house.

E. G. GILLET.

Indianapolis

The death of Charles Vollrath, although expected, was a sad blow for his many friends in this community. The end came Wednesday evening, June 8, Charlie, as he was familiarly called, had been connected with the trade in this city for nearly twenty years, after coming to this city from Conocoquessing Valley, Pa. He was laid to rest on Saturday, June 12, amid the many beautiful flowers he loved so well. He is survived by a wife, to whom the trade wishes to extend its sympathy.

Mr. and Mrs. Thomas Knipe of Kokomo, Ind., spent Sunday in visiting the local establishments. Tom is a hard worker and reports a good business in his city.

F. Smith, of Smith & Fetters, Cleveland, O., spent last Tuesday in Indianapolis, visiting the retail shops.

Wm. Craig of St. Louis was a recent visitor.

The State Florists' Association of Indiana, at its last monthly meeting, decided to hold a Chrysanthemum show this coming Autumn. The executive committee, composed of Messrs. Stuart, Junge, Wiegand and Baur, have the affair in charge. Premium lists are to be sent out immediately and preparations made for giving a successful exhibition. The details are all to be arranged and reported on at the next meeting, in July.

Henry C. Ruppel, representing D. U. Angspurger & Sons Co., of Peoria, Ill., is booking plant orders in this section.

Mr. and Mrs. Edward Bertermann are visiting in Detroit.

Alfred Brandt and The Palm Floral Co. are sporting fancy new delivery horses.

Messrs. Stuart and Haugh of Anderson, Ind., attended the State Florists' meeting on Tuesday.

I. B.

MUSKOGEE, OKLA.—The finishing touches in the building of the big greenhouse at Hyde Park were completed May 25 and the structure turned over to painters and decorators. The new greenhouse is one of the largest in Eastern Oklahoma and has a vast space under glass. W. H. Mitchell, formerly a superintendent of gardens in Shaw's Gardens, St. Louis, is in charge of the greenhouse.

The Week's Work

BY
FRITZ BAHR

A Suggestion

Of Interest to the Man Who Fills Vases and Windowboxes

As to the success your customer has with a window box or lawn vase, it depends whether you will do more or less business in this line another year. It is certain that if a window or veranda box has given satisfaction, and has been enjoyed through the summer months by the owner, the order will most likely be duplicated another year, perhaps increased; while, on the other hand, if failure, most likely due to neglect, has been the case, the boxes will remain either empty next year or, what is often the next thing, they will be filled by someone else. It is for these reasons, and to see stock which is sold out well, that we make it a practice after the rush of the bedding season is over to have a good man go over as many window boxes and vases, as well as hanging baskets, we have at our customers' grounds, within a reasonable distance from the greenhouses, and inspect them. A little good soil, as well as a few flats full of such plants as Vincas, Ives, Lobelia, Cuphea, Geraniums, etc., are taken along. Quite frequently, we find that the soil along the edges of a box has settled and refilling is necessary. The boxes may be found too wet or, what is more likely, too dry. Attention is called to this, and in almost every case such care is appreciated by the owner. With the wire hanging baskets we often find that a few pieces of sheet moss are necessary along the rim of a basket, and a little soil, so as to allow proper watering. Here and there a plant is needed to replace a stunted or dead one. In most cases it takes just a few minutes to go to or look over a place, and I am sure that it pays in more than one way to do so.

The Stock Plants

Select a Good Number for Propagating Next Winter.

It is high time now to remind you of the necessity for taking proper care of the plants which are to be used next Winter to furnish cuttings for another bedding season. Don't allow these plants to be scattered about on the benches. Select a few good Heliotropes, Ageratums, Cupheas, Petunias, Sweet Alyssums, and such other varieties as you may make use of, give them a shift and remove them to a proper place, where they will get the care they need and deserve. There are certain plants, such as Lobelias, Begonia Schmidt and others, which are as well, if not better off planted right out, if wanted for stock—and they will lift in Fall without losing a leaf, while a Heliotrope or Petunia would severely suffer when lifted from the field in September. But what is of the greatest importance at the present time is to select what is wanted for the stock, until nothing but a few dried up plants are left is wrong; and while a few of each will furnish a great number of cuttings, if taken care of, it is always better to set aside enough of them. Also shift a few Forget-me-nots and Sweet Alyssums from 2's into 3½'s—you will want them later on to plant along some Carnation bench. While there isn't a great deal of money in them, they come in most handy and we can't afford to be without them during the Winter months. When giving the Alyssums a shift pinch them back close to the pots.

Cinerarias

Sow Now for the Early Plants

If you wish to get some extra strong plants, to bloom around Christmas, it is time to sow out seed now. One can have Cinerarias in bloom three weeks before Christmas. About seven years ago Mr. Chas. Gebhard, of Lake Geneva, showed some magnificent specimens, in 8 in. and 10 in. pots, in full bloom at the Chicago Fall show, and while they were greatly admired by many, such plants are of but little use to the florist at so early a date, for we have so many other show flowers at that time of the year, and the Cinerarias would be almost out of place. We hardly ever sell a plant to a customer who wishes to purchase something to bloom for the house. Here and there we get a call, but not often. But as plants for the show house, the Cinerarias will always be grown by the retail florist. When purchasing your seed don't fail to get a packet of C. stellata. This is a great sort, and the lighter shades of it adapt themselves for cut flowers, and can be used for many purposes. Now, about the seed, every one will grow and germinate in about five days. Sow thinly—a trade pkt. goes

Take our Advice on Boilers

WE MAKE EVERY KIND OF BOILER KNOWN, FROM THE SMALLEST TO THE LARGEST, BOTH STEAM AND HOT WATER.

THE
KROESCHELL
GREEN HOUSE
BOILER

BEST OF ALL FOR HOT WATER HEATING

There is no boiler in the world today that can compare with our 1910 Model Greenhouse Boiler for hot water heating. The Kroeschell Greenhouse Boiler was installed to heat over 9,000,000 square feet of glass during the past four years, and it replaced over 1500 cast iron boilers in the short period of six years.

We have no agents; all boilers sold direct to the user—you save the dealer's profit.

Dracaena Indivisa

Time to Sow Seed of this Valuable Vase Plant

Among the seeds to be sown this month you had better include some Dracaena indivisa, that is, if you have a call for the filling of vases or rustic tubs for lawn decorations or cemeteries. While there is a demand occasionally for a Phoenix, Latania or some other decorative foliage plant suitable for the cen-

ter, there isn't anything quite as graceful as the old Dracaena indivisa, and more plants of it than ever are used for that purpose. Years ago, we sold quite a few of them for house plants, but the number of useful Palms and other foliage plants grown for house use caused the Dracaenas, at least the indivisa type, to take a back seat. But for an ideal vase plant, whether expensive or cheap filling is desired, they will head the list. You will not be able to use any of the plants grown from seed now now next Spring, they will be too small. The seedlings may either be grown on in pot during the second Summer, or

For The Man Who

Counts the Pennies Saved
And The Dollars Made

If a boiler saves you money then it makes you money. Here is a boiler that was especially constructed to meet the needs of greenhouse heating. Particular attention was given to not alone its economy in coal, but also to the rapidity of circulation it would induce in the coils—and it's circulation that counts. Being cast in sections it is easy to erect, easy to enlarge.

Send for catalog.

GIBLIN & CO., Utica, N. Y.

Please mention the Exchange when writing.

planted out in the field and potted up in September. Kept over Winter in a cold house they will be ready for use the following Spring. The best plants are those grown entirely in pots; while they don't grow as rank as field plants, and on that account do not make such large plants, they grow more graceful in shape, which is a point to be considered, especially where moderate sized vases are a rule. Sow now, and pot the little grass-like seedlings into 2's as soon as large enough to handle, using a light sandy soil.

Marguerites

Preparing for Next Season's Stock

The flowers we get from the plants from now on until Fall don't amount to very much, they are usually short stemmed and small and on that account of little value when there are so many other things to be had. But we must not forget to prepare a stock, not alone to furnish flowers next Winter, but also a few plants for cuttings. For both these purposes field culture during Summer may be made use of to advantage. Plant any left over stock out, allowing plenty of space between the plants so as to keep them short and bushy. They will make excellent stock by next October, when they can be lifted and potted up. Some prefer pot culture, and for that purpose small stock, in 2½'s, giving a shift now into 4's, and properly attending to the plants so that they want for nothing, especially water, will make good stock, ready to furnish long stemmed flowers by October. The Daisies are what we are liable to term a cheap flower, and yet a good many dollars worth of them can be cut from a small batch during the Winter months. They are useful for almost any occasion where flowers are wanted, customers never seem to grow tired of them. Every retail grower should have a few plants of both the white and yellow varieties at hand. The time to get ready for next Winter is now—don't overlook the Marguerites.

Dahlias

Good Results from Late Planting

We are getting the last of the dormant Dahlias to the field. A few years ago we would have considered it wrong to plant out so late in the season. It was customary to look up the Dahlias and Gladiolus the first chance offering and plant them out, and while we do so with a small portion of the stock yet the bulk goes out later. It is too bad that the men located in the middle West, who grow for the Chicago market, have not more success with Dahlias as a whole. I inspected a field of them last September, belonging to one of our large growers, and while not all, yet most of the varieties planted out were never sorts, such as planted in the East, and again near Denver, Col., where they had proved to be great bloomers, no sign of flowers could be noticed in that field. The stock was healthy, not over-grown, but plants which appeared to be in first-class condition in every respect. This same trouble is yearly experienced by many of us, whether we plant in clayey or light soil, or grow the plants from the old tubers or from cuttings—it doesn't seem to make a bit of difference. It is always better to have a label on each new sort, so one may know where to find it. One thing, however, we found by experience and that is that the late planting gives us better plants for blooming than the others, for such plants don't make their heavy growth before the cool nights of August come, while the others which make a good start during May and June get a set back during the hot weeks of July and early August.

Washington, D.C.

The past week marked one of the most disagreeable in the history of June weather, with low thermometer and heavy rains. This being the height of the commencement season, trade was brisk accordingly, and, additionally, there were quite a few good wedding orders sent out by the various stores. The unseasonable weather has hurt a good many bedding plants, and at this date there is a good demand for such stock, but, so far as can be learned, the local supply is exhausted. One local grower stated he had never seen such a scarcity at this season, nor greenhouses so thoroughly emptied. There has also been an unusually good demand for young Roses this season, and while many continue to buy the cheap Holland grown Roses from the department stores, there are wiser ones who have learned by sore experience, the greater advantages of the home grown Roses, hence the yearly increasing demand for same.

W. R. Grey, the enterprising grower of Oakton, Va., is sending in some very fine Valley, which is eagerly sought. This is a slight departure from the usual mail order business conducted by Mr. Grey, but, like all else he has undertaken, is proving a success.

JAS. L. CARBERY.

Detroit

Locally, we have just finished a very busy week, which produced some astonishing effects in wedding decorations and commencement bouquets. There was nothing especially large or boastful but it was mostly medium priced work done very neatly.

During the last few days Carnations have been accumulating to an alarming extent. Iris and Gladioli are not appreciated enough to be considered as a marketable flower at this time. Peonies are yet of great scarcity and many an order is lost because of it; on the other hand Cape flowers seem to take better than in former years and sell well as corsage bouquets, either alone or combined with Mignonette or Sweet Peas. At some funerals very pretty wreaths of Galax, Cape flowers and red Roses could be seen.

The annual excursion of the local Board of Commerce caused a regular florists' convention at the dock before the boat sailed. Sullivan's, Breitmeyer's and Remb's all had a share in decorating the boat or certain staterooms, and several hundred Beauties and many choice Palms went along on the trip.

Fred Bertermann of Indianapolis is in the city attending the Skat Players' Convention.

B. Schroder is the proud possessor of a new auto delivery wagon, very neatly painted in brown colors.

G. Paul, formerly with Chas. Plumb, who has just recently bought the greenhouse plant of the late Andrew Ferguson, reported a surprisingly good Memorial Day trade.

Wm. Gowanlock, formerly a bookkeeper in a local lumber yard, has returned home to take up his father's business, who died a short time ago as a consequence of a street car accident.

KING CONSTRUCTION CO., NORTH TONAWANDA, N. Y.

A HOUSE 72 FEET WIDE

Last week we showed you a house 60 feet wide, having but two columns, and now, true to our promise made then, here is a 72 "footer" with only four columns. Two of these are of angle iron, joined back to back, making a support that is much lighter in appearance than a pipe column its equal in strength. The side columns are 2 inch pipe.

The steel truss stiffens the long span of the frame between the angle iron columns. No net work of trussing, however, is necessary between the iron rafters.

The side posts are Guaranteed Wrought Bar Iron which are bolted to the iron rafters at the eaves by a double gusset plate.

There are twelve four foot benches.

If it is a wide house you want, give its construction the very careful consideration it deserves. The proper supporting of these wide roof spans demands a skilful greenhouse engineering knowledge, combined with long building experience. What does the guarantee of a firm having but little experience amount to, if your house coves in and your labor and crop are lost? Let's get together and talk these matters over.

FERTILIZERS

Nitrate of Soda 5 lbs. 25c., 50 lbs. \$2.25, 100 lbs. \$4.00, ton (2000 lbs.) \$65.00.
Blood Fertilizer Fourteen per cent. ammonia. Excellent for carnations. 10 lbs. 60c., 50 lbs. \$2.50, 100 lbs. \$4.00.

Clay's Celebrated Fertilizer On account of the high reputation which this fertilizer has in England, and as we have had many inquiries for it by gardeners here, we have imported some from Messrs. Clay & Son, which we offer at the following prices. It is undoubtedly one of the best manures for all horticultural purposes, either in greenhouse or garden, and we believe its high reputation is well deserved. It is productive and lasting, and notwithstanding its apparently high price, it is quite economical. Prices, in bags, 1 cwt. (112 lbs.) \$5.50, ½ cwt. (56 lbs.) \$3.25, ¼ cwt. (28 lbs.) \$1.75, ⅛ cwt. (14 lbs.) \$1.00.
General Use Bone This bone is ground to about pinhead size, with a fair percentage of flour bone, and, where a high grade bone for immediate and continuous use is wanted, would advise using this grade. 50 lbs. \$1.50, 100 lbs. \$2.50, ton \$40.00.

AMERICAN SEED TRADE ASSOCIATION

President, J. C. Robinson, Waterloo, Neb.; first vice-pres., M. H. Durvee, New York; second vice-pres., F. W. Bolgiano, Washington, D. C.; sec.-treas., C. E. Kendall, Cleveland, O.; asst.-sec., Leonard H. Vaughan, Chicago. 28th Annual Convention at Atlantic City, N. J., June 21, 22 and 23.

American Seed Trade Association

This week, at Atlantic City, N. J., was held the 28th Annual Convention of the American Seed Trade Association.

This meeting, from all reports, has been a very successful and interesting one and included the presentation of some remarkable papers on various subjects appealing closely to seed trade interests.

On Friday, the delegates were entertained by W. Atlee Burpee & Co. at their Fordhook Farms, Doylestown, Pa. A very full report of the meeting of the Association will be found in these columns up to the time of going to press.

IMPORTS, ETC.—June 13.—C. A. Haynes & Co., 7 cases plants; Maltus & Ware, 30 cases live plants; J. M. Thorburn & Co., 5 bags garden seed.

SALT LAKE CITY, UTAH.—The Great Western Seed and Produce Co. has been incorporated with a capital of \$3000. The officers of the company are: Peter Frost, president; Alvin Johnson, vice-president; Avern R. Poulton, secretary and treasurer.

KINZERS, PA.—John S. Weaver of the Glen Mawr Seed Farms will leave early in July on a southern trip. He expects to purchase several thousand acres of land along the Patuxent River, southern Maryland, where his concern will engage in bulb, vegetable and flower seed growing on a large scale. It is also under prospect that large areas in Peaches and other fruits will be planted.

European Notes

Everything appears to be upside down this year, and one hardly knows how to summarize the situation in any other way. Generally speaking, the districts upon which we rely the least are those which at present appear to be the most promising; while, in spite of every care, in the quarters upon which we have always relied for the best results failure only is found.

The inevitable result of the persistent northeast winds during May is already in evidence in the alarming development of sickness and vermin in our growing crops. Take Beet and Mangel as illustrations of this. Readers of these notes have learned already how badly the roots suffered during the Winter and of the consequent limited acreage planted. Ig-

All successful men are optimistic.

They are diplomats, and real diplomacy is just plain, good, horse sense.

In buying your bulbs, reason, use your common sense. Whether you buy from us or not, buy the best and insist upon getting it.

If you want, write us for prices before ordering.

noring that which has since been destroyed by renewed floods and which cannot possibly revive, we find the best plants are simply smothered with the "Pousseron" which is sucking the life blood out of the plants and destroying all possibility of the production of well developed seed. Washing with Nicotine will perhaps minimize the mischief, but the low prices now paid for these articles do not admit of the necessary outlay. Some of the richer growers will do this to retain their clients, but the majority cannot afford it and simply bow to the inevitable.

Contracts for these articles will not be accepted except at a great advance in price, and in face of the complete exhaustion of the stock, and the natural desire to grow sufficient to carry over a year's supply, it may safely be affirmed that not more than one half of the quantity ordered can possibly be arranged for. This is a gloomy outlook; the reality is

much worse and it is as well to face it as to bury our heads in the sand.

In Onion we are faced with a double disaster. First of all, the bulbs rotted immediately they began to grow, and now the mildew has attacked the stems in a terrible fashion and much of the seed that may eventually be produced will be worthless.

The Southern growers report that, all things considered, Cabbage is the most promising of their crops, but this is counterbalanced by failures in the North.

Of Carrot it is too early to speak with confidence, as the moist advanced fields are already attacked by the worm. It is possible that crops growing in the outside districts may make up part of the deficiency.

C. P. Braslan is one of the earliest arrivals from your side.

Theodore Roosevelt, having instructed Europeans in the way they should go, has packed up his big stick and departed.

EUROPEAN SEEDS.

American Notes

The June Business

In no year has the seed trade, taking every line of goods handled as a whole, experienced a more satisfactory general business than this season, when everything is considered. In some sections of the country the continued cool and rainy weather has, of course, more or less retarded vegetation but, on the other hand, such adverse growing conditions have resulted in the retail sales of seeds lasting very much longer than is usual. In fact, counter sales in a retail way, for everything sold by the seedsmen, have held well right up to the present time and consequently, the wholesale seedsmen have been busy with many filling-in orders much later this season than is customary, which, taken altogether, has rounded up a most satisfactory June for all.

June may be called the last month of the seedsmen's seed selling Spring, and it is the time when the seedsmen sell a little of everything. It is not so very many years ago when the Spring seed selling season was supposed to end at Memorial Day. Gradually, this condition has changed until now June is one of the best months we have for retail sales and it does much toward rounding out the large totals of business which of late years have been accomplished. It is always a difficult matter to compare corresponding months from one year to another when speaking of the seed sales of any particular locality or section, as the local conditions are always varying; but for the whole country, the reports are from every section that the entire Spring seed selling season now closing has been the best in years. At the closing of the season last year, the writer made a careful investigation of the stocks of seed remaining on hand and the result of such investigation was that not in over a decade had the general line of seed stocks been sold out so closely. This same condition applies to the present situation. Good seed stocks are very low, and, of course, this will affect prices for the future in continuing their present high level of values.

There is one feature of the ending month of the Spring season that is especially worthy of note, and that is the perfectly enormous quantities of both decorative, flowering and vegetable plants that the seed trade has disposed of. It was thought last year that the seedsmen had made wonderful gains in this direction but the business of a year ago does not compare with the quantities that have been handled this season, and this branch of the trade is certainly most pleasing to all concerned. There may not in many cases be as large a profit as would seem right in this line, but it does bring many customers for seeds proper. We are now entering the period of Summer dullness, and certainly with a most satisfied feeling regarding what has been accomplished. Employer and employee alike have worked hard, and on the whole the seed trade has every reason to congratulate itself on the result.

Peony Window Displays

It is well worthy of note that during the last two or three weeks many of our seedsmen, in the larger cities especially, have taken advantage of the Peony flowering season to decorate their show windows with these cut flowers. There have been many very elaborate displays made, in connection with which the enterprising firms making them have been

F. E.—Best Advertising Medium

booking a large number of orders for both Fall and next Spring's deliveries of the roots. Advantage should be taken by the trade of the blooming of the various flowers during the Summer season, as nothing will tend better to increase sales, not only in the particular line of the flowers displayed but in the general line of plants and nursery stock as well. The buying public is fast being educated to purchase everything from the seedsmen in the line, not only of seeds but plants and nursery stock as well, and the more this state of things can be encouraged the more satisfactory will be the general totals of business in every direction. Too much care and attention cannot be given to the window displays during the Summer.

V.

New York Seed Trade

At last the advent of Summer heat has put an end to most of the counter trade. Of course, it is now time to expect quiet business. Bedding plants are still selling, and so are some vegetable plants, but as with this week the auction sales for these begin to end, it will not be long now before sales in this direction are quiet also. Our seedsmen will next be taking stock and getting ready for the annual vacations.

From present indications there will be a very small percentage of large sized Calla bulbs in the contract deliveries this season.

Leonard Sutton of Sutton & Sons, London, Eng., while here a couple of weeks ago visiting A. T. Boddington (Mr. Boddington is the New York representative for Messrs. Sutton & Sons' seeds), was taken by Mr. Boddington to inspect several of the representative estates in this vicinity. Mr. Sutton was very much impressed with what he saw.

The Stump & Walter Co., in connection with their recent displays of Peonies, have been distributing a special list of Peony roots and taking many orders for future deliveries.

Much interest is being manifested in the coming exhibition of the National Sweet Pea Society of America, to be held early in July in this city. Our seedsmen feel that the meetings and exhibitions of this new Society will give great impetus to the sales of Sweet Pea seed. Speaking of the exhibition of this Society, the special prizes recently offered by J. M. Thorburn & Co., Stump & Walter Co., John Lewis Childs and Sutton & Sons of London, Eng., have been very much appreciated.

Vaughan's Seed Store has issued its

special Import List of French and Dutch bulbs.

The F. O. Pierce Co., manufacturers of Mastic, have decorated their store at 121 West Broadway with a gorgeous window box, running the whole length of the building. This window box, which is some thirty feet in length is filled in the best manner and attracts much favorable comment.

With every day that passes more enthusiasm is manifest among the seed trade in the New York Florists' Club's Outing, and surely many of the craft will attend this annual bean feast and games on June 28.

The Aphine Manufacturing Co. of Madison, N. J., report that it is having excellent success with the small size cans of Aphine, recently put upon the market.

Our seedsmen, without exception, report that advance inquiries and orders for potted Strawberry plants are larger this year than for many seasons.

J. M. Thorburn & Co. are making special offers of their new crop of French-grown Pansy seed.

Wm. Elliott & Sons have experienced an unusually active demand for rustic work and hanging baskets this season.

Henri Beaulieu, seedsman, of Woodhaven, N. Y., sailed for France per S. S. La Lorraine on Thursday, June 23. Mr. Beaulieu expects to be gone for four or five weeks, and is visiting France for the purpose of cementing acquaintances with his growers there, his trip being essentially a business one. Mr. Beaulieu's address while abroad will be, Beaulieu, seedsman, a Creteil, Seine, Paris.

Philadelphia Seed Trade

The seedsmen now are busy taking inventory of stock. A few seeds are going out, such as Spinach for late planting; also Turnip and Millet, Cow Peas and Crimson Clover; and Stowell's Evergreen Corn still moves well. Cow Peas, which in some years have sold from \$1 to \$1.50 per bushel, are now selling at from \$3.50 to \$4 per bushel, and are moving fairly well at those seemingly prohibitive prices; even Crimson Clover, which is soaring around the \$10 mark, meets with some sales.

Frederick J. Michell, Sr. has returned from a business trip among the seedsmen of Wilmington, Washington, Baltimore, Richmond, etc. He reports good sales, and an enjoyable trip. He is just now featuring, at 518 Market st., garden hose and sprinklers and all appliances for garden and lawn, and is offering the first potted Dahlias observed.

Prices Advertised in these Columns are for THE TRADE ONLY

Co., 1018 Market st., may be seen the handsome silver loving cup offered by this company as a prize in the "Sneak Box" class in the races of the Sea Side Yacht Club, to be sailed July 4. The company is featuring Araucarias, Ferns and Aster plants this week.

Henry A. Dreer is showing this week some blooms of Rambler Roses, namely, Lady Gay, Dorothy Perkins, Hiawatha, and Newport Fairy.

Philadelphia is this week full of out of town seedsmen, on their way to the convention at Atlantic City. Among these may be mentioned Burnett Landreth, Jr. of D. Landreth Seed Co., Bristol, Pa.; Harry Holmes of the Holmes Seed Co., Harrisburg, Pa.; Francis Brill, Hempstead, L. I., N. Y.; and James Hoyt of Jerome B. Rice Seed Co., Cambridge, N. Y.

The Philadelphia seed companies will be represented at the Seed Convention as follows: Henry F. Michell Co., by Henry F. Michell; the Michell Seed House by Frederick J. Michell, Sr.; Henry A. Dreer, by J. O. Thilow, John Ruppert and J. S. Hay; The Johnson Seed Co., by Mr. Johnson; the Moore Seed Co., by Mr. Moore and three of his employees; and the Stokes Seed Store by Geo. A. Atkinson.

The Johnson Seed Co. will offer this year a fine line of Celery plants, such as Myers' White Plume and Johnson's Paris Blanching for early, and Columbia and Manhattan for late.

David Rust is representing the D. Landreth Seed Co. in and about Philadelphia.

W. Atlee Burpee & Co. have sent out invitations for a visit to Fordhook, by special train on Friday, June 24. This was so arranged as to accommodate guests from New York as well as Pennsylvania, New Jersey, etc.

Fraud Charges Dismissed

In our issue of April 23 mention was made that Jacs Smits, florist of Naarden, Holland, was under arrest in New York charged with presenting false consular invoices on importations of Blue Spruce, Japan Maples and Rhododendrons, the customs authorities contending that the invoice value was too low. We are pleased to say that the charges have been dismissed, and Mr. Smits fully exonerated.

A New Eschscholtzia

Another promising variety of Luther Burbank's being grown on trial at Floradale (Lompoc, Cal.), is a selection from the native E. Californica, and possesses combinations of coloring quite difficult to describe, says Mr. Lonsdale. "As nearly as I can put it it is a very rich orange brown and should prove as popular as the new Poppy."

A New Oenothera

Oenothera Burbanki, purchased by W. Atlee Burpee & Co. from Luther Burbank in 1909, is another new plant on trial at Floradale (Lompoc, Cal.). It is said to be the largest and most magnificent white Oenothera ever seen, and if introduced in 1911, as seems now to be quite possible, it will doubtless create quite a sensation.

A New Poppy

The new Poppy which was purchased in 1909 from Luther Burbank by W. Atlee Burpee & Co., and which is now be-

ing grown at the Floradale (Lompoc) ranch in California is a combination of the Shirley, the Tulip Poppy and a species found in the mountains of North Africa. It is described by Edwin Lonsdale, resident manager at Floradale, as a very promising variety, being a vast improvement over the very best Shirleys he has ever seen. The color combinations are most beautiful, consisting of all the gradations of cherry crimsons and pinks with no conflicting shades whatever, imparting a most charming color effect. Another distinctive feature in this new Poppy is the reversal of markings of the parti-colored flowers, in that instead of the white margins on the petals which is one of the principal characteristics of the Shirley selections, the base of the petals is white and the edges of same are pink colored, these details, with the crimped effect, giving them a grace which, so far as his knowledge goes, no other flower possesses. It should prove a valuable acquisition.

If this new Poppy does as well in the Burpee Eastern trial grounds it will be introduced in 1911.

To Stop Free Seed Distribution

An effectual way to put a stop to free seed distribution as at present conducted: Return all packages of seeds received by you to the Senator or Congressman sending same, with the simple statement that if he repeats the offense he will lose your vote in the future.

If even a small percentage of these re-

TRADE LIST

ceiving these packages of common garden seed would pursue this policy, Congressmen and Senators generally would quickly awaken to the fact that their favors (?) were not appreciated. We know of no course to pursue that would bring about the desired results half as quickly as here indicated.

Seedsmen and the agricultural press could do much toward the conducting of an active campaign along these lines, with results that the public, coming to an understanding of the pettiness and ineffectiveness of the distribution would, through their action in returning the packets, quickly convince our lawmakers of the undesirability of their gifts.

Advertising Matter Received

BENJ. HAMMOND'S PAINT & SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y. Blotters, with the information printed thereon that Currant or Gooseberry bushes affected with Currant worms should be dusted with Slug Shot at the base just as soon as the early leaves show nicely; even if one waits until the bush is full-leaved and the Currant worm is active on the bush, Slug Shot will be found the most effective, economical and safe article to use.

SPECIAL OFFER

We will give one copy Plant Culture and The Florist's Exchange two years, all for \$3.00.

Plant Culture

NEW, THOROUGHLY REVISED EDITION. JUST PUBLISHED

By Geo. W. Oliver, Propagator to the Bureau of Plant Industry, U. S. Department of Agriculture

Printed on enamelled paper and illustrated with one hundred plates and engravings. Strongly bound, 12 mo., cloth. By mail postpaid, \$1.50

A WORKING handbook of every day practice for the Florist and Gardener, and those who intend to grow plants and flowers, in the greenhouse or garden, as a means of obtaining a livelihood. Each and every article is written in concise, simple language, and embodies wholly and solely the experience of the writer.

The plants dealt with comprise those which are commercially handled by Florists, Gardeners and Nurserymen, and include Florists' Flowers, Store and Greenhouse Plants, Hardy Herbaceous Plants, Annuals, Shrubs, Hardy and Tender Vines and a chapter of General Directions, covering Propagation, Seeds, Grafting, Hybridization, etc.

This reliable cultural work has been gotten up for use, not ornament; therefore the price has been fixed at a figure within the reach of all. It contains more real practical information for those for whom it is intended than is found in much more pretentious works.

Send for sample pages, free.

THE FLORISTS' EXCHANGE

Destroying Ants and Wireworms

These pests can be cleared out by the aid of carbon bisulphide. It is dangerous on account of its fumes, and should not be allowed near a fire. The way to use this liquid, says a writer in an English journal is as follows:—Make a hole with an iron bar, for instance, about a foot deep or a foot and a half. Then pour into each hole a third of a cupful of it. Fill up the hole. Firm the earth over it, and get away from it, leaving the fumes to rise and clear out the pests by destroying them. Wherever these pests abound they may be got rid of in this way. It has been found an improvement to cover wet sacking or similar material over the earth after it has been filled in, as in this way the fumes are kept longer in the soil. The holes can be made from 1 ft. to 3 ft. apart, depending upon the nature of the infestation. It will not injuriously affect vegetable life or roots.

Indianapolis

Henry Davidson has accepted a position with Bertermann Bros. Co. Robert Ellis is passing around two cigars to each of his friends. Mr. and Mrs. Ellis are the happy parents of a fine boy and girl.

Mr. Brenner, of the Brenner Floral Co., Shawnee, Okla., was a recent visitor.

Tomlinson Hall Market is receiving a full share of business these days. Much good material is sold early each day to the shop men through this generally accepted clearing house.

W. H. Elverson reports a good business in Indianapolis.

Alfred Brandt is sporting a new auto. Bertermann Bros. Co. have begun the erection of a new green house at Cumberland which is to be of the same type as the others.

Homer Wiegand is busy obtaining money for the Fall flower show, to be held Nov. 7-11. The various committees have been selected by the executive staff of the State Florists' Association, and all effort is to be put forth to have a successful exhibition.

Mrs. E. A. Nelson is to leave shortly for Denver, Col., to spend the Summer. Mrs. Edward Bertermann is spending several weeks in Detroit, Mich.

Vacations are being planned everywhere among the fraternity, and it will be but a short time until the exodus begins. I. B.

Unheard of Prices

The stock given below is all first-class in every respect. We need room to plant out our large stock of Ferns. Send your orders in and we know you will be satisfied with the plants we send you.

AGERATUM, exceptionally fine, beautiful tall and dwarf varieties, 3 in., \$1.50 per 100, \$12.50 per 1000.
NASTURTIUMS, 3 in., \$1.25 per 100, \$10.00 per 1000.
CANNAS, Mme. Crozy, Florence Vaughan, Queen Charlotte, Mme. Berat, Pillar of Fire, A. Bouvier, Pres. McKinley, Chas. Henderson, 4 in., strong, 12 in. to 18 in., \$4.00 per 100, \$40.00 per 1000.
COLEUS, Golden Bedder, Queen Victoria, Fire Brand, Butterfly, etc., 2 1/2 in., fine strong stock, \$1.25 per 100, \$10.00 per 1000.

AMERICAN ASSOCIATION OF NURSERYMEN

W. P. Stark, Louisiana, Mo., President; E. S. Welch, Shennandoah, Ia., Vice-President; John Hall, Rochester, N. Y., Secretary; C. L. Yates, Rochester, N. Y., Treasurer. 26th Annual Convention at St. Louis, Mo., 1911.

WILMINGTON, O.—G. H. Moores has resumed charge of his nursery on West Locust st., which has been operated for a year by H. E. Mitling.

DALLAS, TEX.—The Lang Floral and Nursery Co. of this city has been incorporated with a capital of \$46,000. The incorporators are Otto Lang, W. W. Robinson, and A. B. Mayhew.

PIQUA, O.—Ira Carpenter has purchased an interest in the Frisch nursery on Washington ave., and hereafter the business will be conducted under the firm name of Frisch & Carpenter.

RODENBOSCH, HOLLAND.—The Alma Nurseries are now represented in America by Leonard Oortbuys of Poughkeepsie, N. Y., except in the States of California, Oregon and Washington, where J. Meerkamp Van Embden will represent the firm, with address at Thornton, San Joaquin Co., Cal.

Pæonia Moutan Tree Pæonies, as the Pæonia Moutan is called, have long been favorite shrubs in collections, but their number is as nothing compared to those of the herbaceous type. The reason is that their propagation is slowly effected, having to be done by layering, grafting or division of the plant. All the growth of a season is made in early Spring, at the same time as when it produces its flowers. It is, however, a much admired shrub, and those who propagate it for sale always dispose of all they raise.

In some catalogs this Peony is listed as Pæonia arborea, a name fitting its common one, Tree Peony, very well, but it will not do to pass it as its proper one, P. moutan.

Our Summers are very favorable to its flowering in its season, May, as it ripens its wood well, preventing the injury to its shoots in Winter, which occurs in cooler climates.

To increase it by grafting, pieces of root of the herbaceous varieties are used on which to set the cions. When well united and the plants established, they should be planted a little below the point of union, in order to permit of roots forming from the cion itself, as the shrub does better later on when it has rooted from its own wood. When under cover, grafting is successful if done toward the close of Summer.

Pruning Retinisporas When growing freely, as they are in the early part of Summer, it is a good time to prune evergreens to make them bushy. By pinching off a small portion of the lengthening growth the side shoots burst forth, perhaps a half-dozen in place of one only which would have been the case but for the process.

Retinisporas are among the most useful of evergreens, but as they vary in character greatly no one general system of pruning can be followed. The greater number of them, allowed to grow at will, get much too thin for beauty and effectiveness. When of a height of 20 ft. or so, if unpruned growth has been allowed them, such sorts as pisifera, obtusa, and the most of their varieties, are not as thickly foliaged as could be desired, and as most other evergreens would be. This denotes that a pruning in previous years would have been of much benefit to them. Unless height is desired, such evergreens as these would be better topped when of a height of about 6 ft., and a Summer pruning given them before the growth for the season had ceased. A moderate pruning every year or two would add enough to their bushiness to make them of good appearance when they had attained a more lofty height.

Care must be taken, when pruning them, not to prune so close as to take away the growth bearing the live foliage; for to do this to a serious extent would greatly check the vigor of a plant.

There are two Retinisporas often ruined by too much pruning, the R. plumosa aurea and R. squarrosa. These naturally make foliage clustered together, and when pruned it adds so to the quantity of the leaves that it is impossible for all to live, and it is then that is formed the mass of dead foliage which so disfigures these trees when from any cause there is a break in the outside layer of green shoots. So thick is the mass of dead foliage that air can hardly pass through the branches, and when this dead mass is exposed to view, as it often is, it is such a blemish as to make the tree unfit for a position on a lawn. These two varieties mentioned, particularly the squarrosa, should have little or no pruning at any time.

Budding June and July are usually good months in which to do budding successfully. The sap is running freely then, and with care the operation is usually successful. In olden times, gardeners made it a point to bud rather more towards the close of the budding season than at its beginning, believing that as the cambium, the perfected sap, was more abundant then than earlier, it was more to the advantage of the operation, the bud taking its new position better than any earlier period. This seems reasonable. The sap has to be perfected by the sun and light when it reaches the leaves of a plant, and it is only after this that cambium is formed and distributed to all parts of the tree, cementing the bud in its new position as it reaches it, and unless so cemented the bud cannot live. This would prove the wisdom of the old gardeners who taught that budding should be done while the bark lifted readily, but not in the earliest stages of the sap flow.

Amateurs will sometimes make the mistake of budding a vigorous shoot near its base and then topping the shoot several feet above it, leaving no foliage, or next to none, on it. No success can be looked for in this case, because the absence of foliage prevents the formation of cambium, to cement the union of the bud; and unless some is already stored up in the shoot the bud must fail.

Root Pruning Trees in Summer Every nurseryman is aware, as also are his customers, how much more care is taken to deliver trees, on orders, in good condition than was the case some years ago. This improved condition does not indicate that the nurseryman was much at fault before in not taking this care. In former days the prices for stock were so low that the proper care could not be given to the shipping of plants, whether by railroad or by wagon.

planting, cutting asunder all roots met with in the digging. The hole is then filled up with the same soil, or with better if it is not good, and then the tree given a year's rest before being dug out and transplanted.

Some Random Notes Under the heading "Some Random Notes," in the EXCHANGE of June 4, p. 991, there are several things mentioned by Prof. Massey I wish to refer to.

The pink Horse-Chestnut he refers to is Oaulus rubicunda. It is comparatively scarce, and yet quite a few specimens are to be seen on old estates hereabouts, and of late years many small trees have been planted. In England, where all Horse-Chestnuts flourish better than here, there are many of the rubicunda to be seen, and they are a grand sight when in flower. The origin of this tree is obscure. It is supposed to be a hybrid between the European and the dwarf Pavia rubra—so I have read; anyway, no one seems to know its origin.

Yes, we all know what a pretty hedge the Euonymus Japonicus makes, and we know, too, that it flourishes well by the shore in New Jersey; and likely, too, it makes a prettier hedge than the Privet, but in these cases it is not which is the prettier hedge, but which will thrive in certain localities. The Euonymus will not do in exposed positions, even in Pennsylvania; California Privet will, and nothing is as good about Philadelphia. But here again one has to draw the line farther north of us, for right before me is a letter from E. Y. Teas of Centerville, Ind., in which, speaking of this Privet, he says: "I have not seen a hedge of California Privet of one to five years growth, that was not absolutely ruined by the cold, in all central Indiana."

The evergreen Privet, Japonicum, Prof. Massey speaks of, can be used as a hedge plant at Philadelphia and

Pæonia Moutan. Double Pink Tree Peony

It is very different today. The purchaser has come to know that it is to his interest to pay for proper care in digging and delivering stock as well as the price of the trees. This education of the purchaser has worked great benefit to the nursery trade, as well as to himself. It is now well understood all around that a tree must be dug well, the roots in good condition, and delivered and planted with care, all of which should be properly paid for; hence, it is that the business of the nurseryman is a much more satisfactory one now than it ever was before. One thing that has greatly helped along this generally satisfactory business is the system of root pruning in Summer, which many nurseries make a part of the season's operations. There is nothing like it to make transplanting safe. For every root cut off in early Summer perhaps a half-dozen smaller ones will form, making a well-rooted tree in place of one that would have been in no way sure to live. Even with good roots the life of a tree cannot be insured, but its chances are then infinitely better than before.

Early Summer is perhaps the best time to root prune a tree. Growth is still active then, and the foliage perfects the crude sap and it is stored partly in the remaining roots and used in the formation of new ones, so that by the time Autumn comes the tree has greater chances of surviving a transplanting than it ever had before.

The plan of root pruning has often been described. A trench is dug around a tree at a distance from the trunk such as would be the case if for immediate trans-

planting, cutting asunder all roots met with in the digging. The hole is then filled up with the same soil, or with better if it is not good, and then the tree given a year's rest before being dug out and transplanted.

Following his notes, let me say that Cerasus Caroliniana, the beautiful evergreen of the South, stood without the loss of a leaf last Winter, abeltered from the sun alongside my dwelling, and it, too, but a small plant, less than a foot high. I am much pleased with it.

Lex cassine I have never tried for hardiness, but would like to have a small plant for trial. Our florists use it at Christmas time to some extent, its red berries are so pretty.

The best success with Figs, hereabouts, is had by my sister-in-law, Mrs. Thomas Meehan. She has a row of a half-dozen or so of different sorts, planted many years ago, and some of them now big bushes, 10 to 12 ft. high. On the approach of Winter these bushes are dug out on the one side, the branches tied together, plants thrown over to the opposite side, and then covered with leaves, soil, etc., to keep out frost. In Spring they are thrown back in place, and the Figs they produce and ripen are a sight to see. The cutting of the roots from the one side acts as a check to rank growth, and aids fruitfulness.

Special Auction Sale—To Make Room

We will offer, At Auction, Without Reserve, the following assortment of high class, well grown, seasonable stock; in perfect condition, suitable for immediate use, or for growing on.

THE PROPERTY OF (AND TO BE SOLD ON THE PREMISES OF) F. H. Dressel, Gregory Avenue, Weehawken Heights, N. J.

Men We Meet

C. S. Harrison, York, Neb.

C. S. Harrison of York, Neb., has had a somewhat remarkable career. He was born in Otsego County, New York, in 1832. When a lad of 11 years he moved with his parents, in 1844, to Illinois. He remembers one time when his father being sick, he hunted over the dirty little village of Chicago for a peck of Potatoes. He has seen the mighty West grow up from babyhood. In 1857, he commenced preaching, as a Congregational Church home missionary, on the frontiers of Minnesota. The country was very new, there were no roads or bridges. Often he was nearly frozen. Once a horse sank with him three times in deep water. He had the care of a country 100 miles in extent, preaching the first sermon in many places now prosperous. Sometimes, in the night journeys, the great wolves would howl along his track, almost broken hearted because they could not have missionary raw and warm for supper. He was 42 years in active ministry, building 16 churches, and receiving several hundreds into membership on confession of faith.

When about 40 years old, having a suburban home, his attention was called to horticulture. He made this a fad in connection with his profession. When 66 years old, on account of his strenuous work, his nerves gave out and he had to stop. All know the condition of the wornout minister—no place for him. In vain he looks for ads. calling for defunct preachers to act as clerks or to aid in business. He is as rubbish, ready for the brush pile—a sucked orange, juice all gone.

Mr. Harrison had been too busy to make money. He did not have enough to build a modest home, and the "wolf" was at the door; but he made up his mind that he was not dead yet and perhaps his best years were before him. He declared Osler a humbug. His church nerves were worn out, but he had another set he could use.

He believed in the educated hand as well as the educated brain. Park was his model. That mighty man was an empire in himself, a home and foreign missionary society, teacher, theological professor, all done up in one and, backed by a kit of tentmakers' tools, the devil was more afraid of his shears and needles than of all the armies of Rome.

In the early days, Mr. Harrison worked with his parishioners, helped them in haying and harvesting, and aided them in building their log houses, and they helped him in return. Incidentally, he had made a practical study of horticulture. Having charge of the Franklin Academy in western Nebraska, he had the "Academy Nursery" where he furnished work for quite a number of students. At the same time he kept a State experiment station. Called to Boston as one of the field secretaries of the Educational Society, he became a member of the Mass. Horticultural Society and got acquainted with the leading men of the profession. The late and lamented T. C. Thurlow, one of the sweetest souled men that ever lived, was an intimate friend. So, when health failed, he was sure he had a good nursery in his head and hands. With only \$200 he began on a couple of town lots. He was strong and quick, and, knowing how, he could do the work of two men.

At first he did all the work himself. He commenced writing for papers having a circulation of half a million, advocating the "home beautiful." Since 70 years of age, he has published "The Gold Mine in the Front Yard," and "The Peony Manual," which has gone through two editions. So also has his "Phlox Manual." Last Fall, he issued the "Iris Manual." These are the only works of their kind, and have received the highest commendation from leading men. He boasts that though he had a pleasant time in the ministry, he has now the

C. S. Harrison, York, Neb.

finest parish he ever had. His delightful parishioners never grumble. They take the best care of him and in 12 years the little nursery has grown from a value of \$200 to an incorporated company of \$25,000, with a paid up capital of \$15,000.

Mr. Harrison has given special attention to the propagation of perennials. Out of thousands of Peonies he has selected 30 of rare merit.

There was need of a hardier race of Phloxes for the trying climate of the West, and he has secured a very robust family of these glorious flowers. He has collected 150 kinds of Irises, and is all the while adding to them, and is now commencing to raise new sorts by the hundred.

Nearing the border land, he is more and more impressed with the thought of making the bither shore prophetic of the glory to be revealed. Those beautiful lines often

come to him of the land "Where everlasting Spring abides and never withering flowers."

While on the frontiers, a dear little girl, a particular friend of his, only five years old, lay dying. Hers had always been a humble home. She never saw a flower garden, but to her there came a vision of indescribable loveliness. "Oh! Such a great, great farm all covered with such beautiful and lovely blooms." She was in an ecstasy of delight, and died in a rapture, trying to tell of the beauties "of the land that is fairer than day."

Once, he himself lay very sick, on the verge of the borderland. To him there came visions of matchless splendor. Roses were growing on trees which rivalled the giants of Yosemite avenues, overarched with all the colors and tints of Heaven reaching out in all directions. Flowers new and strange, and of marvelous and alluring loveliness, were beckoning everywhere. Intoxicated with delight, he hurried from place to place overwhelmed with astonishment of such splendor. When he awoke he was completely exhausted by his explorations in the land of enchantment. What wonder he is drawn to his flowers and that they love him.

He has nearly ready for the press "Adorning Beulah Land and How to Become an 'Extinguished' Minister."

He is often called to address horticultural and other gatherings. The press will often give tributes like this: "Mr. Harrison gave one of his characteristic addresses. It was a marvelous uplift. He joined the two worlds, making this the porch of heaven. He takes up the subject where others leave off. He has a clear voice, modulated to the different phases of his subject. He seems at times to hold his audience in the mid-heaven, while he pours in upon them the sweet evangel of beauty. When he has finished ovations and congratulations follow. His work is unique in the annals of horticulture. It is just what is needed. He awakens and thrills the people with a great subject."

The Edelweiss Industry

Some interesting facts regarding the Edelweiss industry, as discussed in a book recently published in Vienna, are quoted in the Handelsgaertner. At Breth, a small town on the Predil Pass in the Julian Alps, there are extensive establishments for the culture of Edelweiss, which market large quantities every year, sending them all over the world. Flowers of prime quality bring about 20c. a thousand, and even 25c. if especially fine. These establishments are at an altitude of from 1500 to 3000 ft., which has been demonstrated by experience to be required for the perfect development of the flower, for those grown on trial fields in lower altitudes lack the fine shape and lovely color of the former.

The cultivated Edelweiss, however, cannot compare with that growing wild in the high mountains, which bring, at their best, \$4 to \$5 per 1000. But it grows in such steep, inaccessible places that the picking is exceedingly dangerous, and many a hardy climber has lost his life in the attempt. Still, there is no lack of men willing to take the risk, many of whom are in the employ of foreign firms. Some of these firms have warehouses in Salzburg and the Tyrol, with millions of flowers in storage. There are some Edelweiss establishments in Germany, at Quedlinburg, Erfurt, and Berlin, but the flowers raised there are very inferior to the flowers growing wild on the heights of the Alps. The increasing industry of the Edelweiss has also given rise to much substitution.

HEADQUARTERS FOR

BEST MARKET VARIETIES

PEONIES AND IRIS

ORDER NOW FOR SEPTEMBER DELIVERY

Our stock is guaranteed true to description and will replace with three any that prove not true. We can make this unparalleled guarantee because of the extreme care we have always used in growing our stock, and never have the trouble that some dealers complain of about their stock not proving true, because we never ship a Peony plant that has not already bloomed on our place. Any Peony is much surer to bloom, and will be twenty per cent. stronger, if moved in September, so that new rootlets may form before freezing down. This gives a great advantage to home-grown stock over imported plants, which invariably come too late.

SEND FOR ILLUSTRATED DESCRIPTIVE LIST

The prices in this list are for stock packed for shipment. We begin filling orders early in September. On Peony and Iris orders amounting to \$100.00 or more, we will make a special discount of ten per cent. The sizes given are: **Divided**—Strong divided plants of two to four eyes. **Small**—Are plants of one or two stalks of this year's growth, one year since divided. **Medium**—Plants of three to five stalks, two years since divided. **Large**—Plants of six or more stalks, three years since divided.

Will supply six at dozen rate and twenty-five at hundred rate.

WHITE PEONIES

New York Florists' Club Outing, Tuesday, June 28

Without a doubt the outing of the New York Florists' Club, which takes place next Tuesday, June 28, will, if the day is fine, eclipse, in point of attendance, all previous outings of the Club. With accommodations such as exist at the famous Witzel's Point View Grove even unfavorable weather should not diminish the attendance, for with slight modifications in the program most, if not all the sports could be pulled off under cover. But it is to be hoped that the day will be one of bright skies, and the chances are certainly more in favor of this condition than the reverse.

This annual "frolycke" includes, beside a breakfast and dinner, upward of 35 sporting events and games, with prizes galore, and substantial ones at that.

A prompt appearance is called for at the wharf, as the boat is scheduled to sail at 10 a.m. sharp, and as arrangements have been made this year to obviate the necessity for ticket censors at the gang plank—for those who have complied with the committee's requirements in regard to vouching of tickets—there is no reason why the boat should not leave sharply on time.

Secretary Bunyard has issued the following invitation to all members of the Club, their families and friends:

WELCOME!

Once again we join together to gambol on the green. Thrice welcome to the annual frolycke! "Let joy be unconfined."

Every member of our Club should be present with his family and extend the glad hand of fellowship and comradeship; let us forget our differences and business for the day and meet upon a common ground for a common cause, and mutual friendship and entertainment.

Let employer and employee mingle and exchange friendly greetings, remembering that we all have souls, are dependent one upon the other and are not "mere tools to make things"; let us all be children on this glorious day, aye, men and women too, but with the heart of a child, guileless and with the smile and happiness of youth, eager for the game and the sport of the hour and the gladness of it all.

And so we repeat—Thrice welcome, come one and all! Leave dull care behind and enter into the spirit of this joyous occasion. Let the members of The New York Florists' Club be proud of their committee and the committee be proud of the members, and the whole trade be proud of one of the greatest organizations for the advancement of horticulture and good fellowship.

All hail, and again thrice welcome!

H. A. B.

Pittsburgh, Pa.

The cut flower and bedding plant market has been slow this week.

Transient trade is very quiet; school commencements and weddings seem to be the only means of disposing of the stock. Everything has been plentiful and of good quality.

Carnations are holding up fine. Killarney Roses are in splendid shape. Bride and Bridesmaid very poor. Lilies are plentiful and the quality up to the standard. Short Roses are coming in in large quantities, of good quality, and the supply is beyond sufficiency; they can be had at the buyers' price. The sudden warm weather has brought on this crop. American Beauty Roses are in demand and the stock is in pretty good shape. Lily of the Valley is selling steadily owing to so many weddings.

The demand for bedding plants is very slow at present.

Outdoor stock has been kept back by the constant rains and cool weather; but conditions have been changed the last few days by the hot sunshine and now everything is in the pink of condition.

D. W. L.

St. Louis

Mr. and Mrs. Fred J. Meinhardt spent the last week at their cottage at Chautauqua. Fred says the fishing was fine. They will make several trips there this Summer.

J. F. Windt is making preparations for a trip to his old home in Germany this Summer. It will be hard for grandpa to leave his grandchild that long, and he might change his mind.

Mrs. Wm. Ellison of the Ellison Floral Co., will start early this year for her vacation up North, near Grand Rapids, Mich., where she and her daughter have a cottage for the Summer.

Mrs. J. Austin Shaw of New York spent the last two days in the city visiting her daughter, Mrs. E. P. Noel of 5672 Van Verson ave.

H. G. Berning is receiving some good consignments of Roses from Heller Bros., consisting of American Beauty and all other varieties.

All four of our commission men will, from now on until September 1, close at 5 p.m., each day excepting Saturday, when the hour will be 12 m. The start was made June 18.

Fred Aloes of Angermueller's, who was hurt quite badly recently by falling from a street car, is out again attending to business. Al. Gunns of the same place will take his vacation soon and go on a ten-day fishing trip.

The Ladies' Home Circle will hold its meeting on July 13 at Mrs. John Steidel's at Central, Mo. All ladies are requested to bring their better halves with them for this meeting.

At Kuehn's we find some nice consignments of Carnations and Roses of which the best meet a fairly good demand. Some of the best Valley is found at this place, a kind which was in good demand all during the month.

The Bentzen and Sanders ball teams are practicing every afternoon for the big game at the Florists' Club picnic, July 21.

Ernest Strehle has at last been appointed Superintendent of Public Parks by Commissioner Scanlan. Mr. Strehle has been acting since the death of George W. Ostertag. His term will run until next March when new appointments will be made.

The W. C. Smith Wholesale Floral Co. announced in the last week that they had leased the whole building of their present quarters and will start alterations at once. The lower floor will be for cut flowers exclusively, the second floor for wire work and the other three floors for florists' supplies. All alterations are to be complete by September 1.

Do not forget the Florists' Picnic, July 21, at Romona Park. All florists invited. ST. PATRICK.

PORTLAND, ORE.—Estimates made by the local Rose Society, through commercial bodies of the State, indicate that more than 5,000,000 Rose trees have been planted in Oregon since the movement was started three years ago by the Rose Festival Association.

SOUTH BETHLEHEM, PA.—At the annual flower show here, on June 14, the professional florists had notably fine exhibits, including John E. Haines, whose beautiful display of Palms, Ferns, Petunias, Sweet Williams, Cornflowers, etc., was grouped about the fountain. Franz Weiskopf and other West Side florists had pretty Roses, Petunias, Lilies and other cut flowers on view; and Fries had Palms, Rubbers and flowers.

Catalogs Received

JOHN S. WEAVER, Glen Mawr Seed Farms, Kinzers, Pa. Retail Price List of High-grade Lettuce and Aster Plants.

D'ALCORN, Washington, D. C.—Wholesale Blub Catalog, of both domestic and imported varieties in all the leading named sorts.

Growing Nephrolepis and Other Ferns Outdoors

"Will you kindly let us hear from you as to the best method of growing Nephrolepis Ferns and other varieties outside? Would it be best to construct frames and how much shade is required? Could they be grown under laths or must they be placed under glass?"—Y., Pa.

One method of growing Nephrolepis outdoors in the Summer is that of plunging the pots or pans in a bed of spent Hops. The latter being procurable from any brewery, and sold at a moderate price for fertilizing purposes. A bed of coal ashes will also answer for plunging material, keeping the roots cool and moist, but the Ferns will make more growth when plunged in Hops.

Some slight protection from the full sunshine and strong winds is best for the plants, and it is, therefore, advisable to grow them in frames and to cover them with either lath shade or thin muslin. The shading material being raised above the frame high enough to permit a good circulation of air.

The Ferns could be grown without any covering if they were placed in such a position as would shade them from the full sun for part of the day, but this plan does not give them any protection from strong wind and heating rain by which the fronds of the Nephrolepis may be battered or broken down.

Small Ferns should be placed in frames, and covered with shaded sash, the latter being raised on a light framework about one foot above the sides of the frame, so that the plants get an abundance of ventilation. W.

N. ABINGTON, MASS.—The Boston Evening Globe's correspondent in this town, in the issue of June 18 of that paper says, "There will be a meeting of leading citizens this evening to discuss the question of calling a public mass meeting for the purpose of seeing what can be done about acts of vandalism in town the past few months. The recent depredations at the Bay State Nurseries, whereby many trees and shrubs were destroyed, to the value of several hundred dollars, has aroused the ire of the citizens. Mr. Wyman, the proprietor of the nurseries, is the object of the hoodlumism. He was formerly pastor of the Baptist Church, was prominent in the agitation against the selling of liquor in town some years ago, and he served one year as chief of police. Since then he has been made the object of various attacks. One of his packing houses has been burned, a bomb was discovered in the cellar of one of his buildings, and repeatedly he has suffered by having his nursery stock destroyed. The men interested in calling a public mass meeting are in favor of offering a reward for the arrest of those who have committed the depredations."

Coming Exhibitions

Minneapolis, Minn., Nov. 10-16, 1910.—Flower Show of the Minnesota State Florists' Association. Secretary, J. P. Jorgenson, 3501 Portland ave., Minneapolis.

Morristown, N. J., Nov. 2-4, 1910.—Exhibition of the Morris Ch. (N. J.) Gdrs. & Florists' Soc., in conjunction with the exhibition of the Chrysanthemum Soc. of America. Secretary Edward Reagan, Box 334, Morristown, N. J.

New Bedford, Mass., Sept. 15-17, 1910.—Annual exhibition of the New Bedford Hort. Soc.

Newport, R. I., June 23 and 24.—June exhibition of the Newport Horticultural Society at Masonic Hall. Secretary, Daniel J. Coughlin.

Orange, N. J., October 1, 1910.—Fifth Annual Dahlia Show of the New Jersey Floricultural Society, from 4 to 10 p.m. Schedules on application to William Reid, secretary.

For The New York Florists' Club Outing, Bean Feast and Games

TUESDAY, JUNE 28th, 1910

Witzel's Point View Grove, College Point, Long Island

Steamboat Isabel Leaves Foot East 31st Street, New York City, 10 A. M. Sharp

The Outing will be bigger and better than ever, and the Outing Committee cordially invites all members of the Trade to be present; including Nurserymen, Seedsmen, Florists, Private Gardeners, Employees, etc. Let us all get together on this glorious day! For further particulars write to

HARRY A. BUNYARD, Chairman

342 West 14th Street, New York City

PROGRAMME OF YE FROLYCKE

PRESIDENT MILLER'S CONSOLATION PRIZES

For members and members' families only who have not won or competed for any prizes during the day. President Miller will provide the games, which will be a novelty at this outing—and are a profound secret. That they will be exciting, exhilarating and amusing goes without saying, for President Miller says so and will award prizes as follows: For men—1st prize, \$5.00 in gold; 2d prize, \$3.00; 3d prize, \$2.00. For ladies—1st prize, \$5.00 in gold; 2d prize, \$3.00; 3d prize, \$2.00. Contests will take place after the games and races are completed—about 5 p.m.

Class 1. 12.30 p. m.—Baseball Game, for Boys under 14 years, five innings. 1st prize, Regulation Ball to each boy of winning team, by the Outing Committee.

Class 2. 12.30 p. m.—Ladies' Individual Bowling Match, three full frames. 1st prize, \$10.00 in gold, by Samuel Thorne; 2d prize, \$5.00 in gold, by Arthur T. Boddington; 3d prize, \$5.00 in gold, by Philip Kessler; 4th prize, \$3.00, by Alfred Zeller; 5th prize, \$2.00, by Henry Hornecker.

Class 3. 12.30 p. m.—Baseball Game, Benedicts vs. Bachelors, five innings. 9 bottles of wine to winners, 1 box of cigars to losers, given by our Host, Mr. Joseph Witzel.

Class 4. 12.30 p. m.—Girls' Race, 4 years and under, 25 yards. 1st prize, \$2.50; 2d prize, \$1.50; 3d prize, \$1.00; by John Coan.

Class 5. 12.45 p. m.—Girls' Race, 5 to 6 years, 35 yards. 1st prize, \$2.50; 2d prize, \$1.50; 3d prize, \$1.00; by Robert Simpson.

Class 6. 1.15 p. m.—Girls' Race, 7 to 9 years, 75 yards. 1st prize, \$2.50; 2d prize, \$1.50; 3d prize, \$1.00; by William Hageman Co.

Class 7. 1.30 p. m.—Girls' Race, 10 to 12 years, 90 yards. 1st prize, \$2.50; 2d prize, \$1.50; 3d prize, \$1.00; by Charles Schenck.

Class 8. 1.45 p. m.—Young Ladies' Race, 13 to 15 years, 100 yards. 1st prize, \$3.00; 2d prize, \$2.00; by J. A. Rassbach.

Class 9. 2 p. m.—Young Ladies' Race, 16 to 19 years, 100 yards. 1st prize, \$5.00, by Harry Turner; 2d prize, \$3.00; 3d prize, \$2.00; by E. C. Horan.

Class 10. 2.15 p. m.—Ladies' Race, 20 to 25 years, 100 yards. 1st prize, \$10.00, by Patrick O'Mara; 2d prize, \$5.00, by J. L. Jones.

Class 11. 2.30 p. m.—Race for Members' Wives and Daughters only, 100 yards. 1st prize, a handsome embroidered centerpiece, 23 inches in diameter, by Mrs. J. H. Pepper, (value \$10.00); 2d prize, \$5.00 in gold, by Anton Schultheis.

Class 12. 2.30 p. m.—Exhibition Dancing. 1st prize, \$3.00, by Chas. E. Weathered; 2d prize, \$2.00; 3d prize, \$1.00; by C. Lenker.

Class 13. 2.30 p. m.—Married Ladies' Race, 75 yards. 1st prize, \$10.00, by President (S. A. F.) F. R. Pierson; 2d prize, \$5.00, by J. Austin Shaw; 3d prize, \$3.00; 4th prize, \$2.00, by Alfred Langjahr.

Class 14. 2.45 p. m.—Ladies' Race, over 40 years, 25 yards. 1st prize, Bolt Ribbon, value \$5.00, by Schloss Bros.; 2d prize, \$3.00; 3d prize, \$2.00; by W. G. Badgley.

Class 15. 2.55 p. m.—Ladies' Walking Match, 150 yards. 1st prize, Silver loving cup, value \$10.00, by M. A. Bowe.

Class 16. 3.00 p. m.—Ladies' Race, weight 175 pounds or over, 35 yards. 1st prize, \$3.00; 2d prize, \$2.00; by Austin Franklin Faulkner.

Class 17. 3.00 p. m.—Tug of War, best two in three. Seedsmen vs. Florists, 10 men a side. \$10.00 in gold to winning team. Prize given by Henry & Lee.

Past, Present and Prospective of the Seed Trade of America

A paper by Francis Brill, Hempstead, N. Y., read before the convention of the American Seed Trade Association, at Atlantic City, June 21-23, 1910.

Some five years ago, when nearing the time of life allotted to the human race, I began to realize that after an experience of half a century in the seed business I knew but very little thereof as compared with the younger generation in the trade, and the thought suggested itself that what little I did know of "The Past, Present, and Future of the Seed Business of America" might interest the members of our Association and perchance some non-members.

Some Pioneer Seedsmen

As to the past, my memory goes back fully sixty years, when, as a boy, I knew personally several of the pioneer seedsmen of America, among them: Grant Thorburn, Sr., his sons George C. and William, and later on the sons of George C. of the well-known firm of James M. Thorburn & Co.; Thomas Bridgeman, and later his son Alfred, for whom I clerked in the early fifties at the old seed store, Broadway and 18th st., which locality was in those days considered "away up town," and was, in fact, in close proximity to many small market gardens, where today stand great hotels and theaters, grand residences and lofty skyscrapers, monuments to the wonderful advance of civilization and progress of the new world, and the rapid and substantial growth of the city of New York practically within three-quarters of a century; Alexander Smith, Thomas Dunlap, and Young & Elliott of New York; Robert Buist, Sr., later Robert Buist, Jr.; David Landreth, and Pascal Morris & Co. (by whom I was employed as clerk in 1857) all of Philadelphia; John Stair of Cleveland, founder of the present house of Kendel; and James Vick of Rochester. I remember well when, in 1847, Peter Henderson and his brother James came to Jersey City and bought out my uncle's establishment—market gardening and two or three small greenhouses, on rented land immediately adjoining my father's patch on the Van Vorst property. They were young men without much capital but with plenty of grit. James died early, and the business was continued by Peter, who later on was associated with one Fleming in the seed trade in Nassau st., New York, and later was the head of the well-known firm of Peter Henderson & Co.

I am writing from memory and may have overlooked some of the solid "old timers," but they will not feel slighted, for undoubtedly they have passed away, and, in company with those above named who have gone before, are now enjoying the reward promised to all who sell honest seeds, in that beautiful land "where neither moth nor rust doth corrupt nor thieves break through and steal," (Matt. 6:20), nor over-zealous Congressmen and State legislators meddle with the seedsmen's business.

Futility of Seed Legislation

In this connection, I desire to say that seedsmen who deal in vegetable and flower seeds, and who handle only stocks of undoubted purity, need have no fear of any laws hatched out by members of Congress or members of State legislatures, which are absurd, uncalled for, and unnecessary, as to get rid of dishonest dealers, who sell "any old thing" that can be bought for "any old price"; just give them rope enough and they will hang themselves.

I do not handle grass seeds, but it seems to me it must be very difficult to detect foul seeds in most varieties thereof, and, undoubtedly, some of the laws enacted or proposed are very unjust.

Old Time Legitimate Prices

In my boyhood days, and even up to thirty years ago, prices were higher and profits much greater than now. Seedsmen turn their money, practically, but once a year, and in former days seeds were sold at the seedsmen's legitimate profit and not, as now too often the case, on the grocer's or dry goods merchant's margins, or along other lines where capital is turned monthly or weekly; and why have conditions changed? Simply because some of our craft, not satisfied to do a legitimate competitive business have adopted a system of cut-throat opposition. I endeavored to procure several old-time catalogs to help me out, but have been disappointed, some claiming that such had not been preserved, and a few failing to respond, although in each case I complied with the usual custom demanded. My thanks are due and hereby tendered to Mr. Fred'k W. Bruggerhof, of J. M. Thorburn & Co., for a copy of the catalog of G. Thorburn & Son—1827, 4x7 in., 96 pages—in large part a treatise on the cultivation of vegetables and flowers; also catalog of seeds by James M. Thorburn & Co.—1847—and a bound volume of their catalogs from 1864 to 1877. Mr. S. F. Willard has also kindly loaned me a "Wholesale Price Sheet" of seeds for sale by Comstock, Ferre & Co.—1849.

It is interesting to compare these with the catalogs and price lists of the present day. For instance, to take a few leaders: Comstock, Ferre & Co., wholesale—Beet, per pound, including Mangels and Sugar, 50c.; and the "Bassano" (now scarcely known) 75c.; Cabbage, mostly imported varieties, \$1.25 to \$1.50; Carrot, 75c.

to \$1; Cucumber, 75c.; Lettuce, \$1.25 to \$2; Melon, about 75c.; Onion, 75c. to \$1; Pepper, \$2.50; Radish, 50c.; Spinach, 40c. to 50c.; Squash, 50c.; Tomato, \$1.50; Turnip, 50c. to 60c. In the catalog of G. Thorburn & Son—1827—there are enumerated a line of seeds, some names of varieties still familiar, while others, having served their day and generation, are no longer in vogue; for instance, the list of Cabbage seeds, mainly imported, comprises more than twenty varieties, fifteen of which cannot now be found in any American seed catalog. The various articles are not priced as now, but are prefaced by characters such as the ellipsis, or star, dagger, double dagger, parallel sign, section mark, etc., and letters (a), (b), (c) and (d), which refer to "A Key to the Prices of Esculent Vegetable Seeds" on the fly leaf at the front of the book. No pictures, no point in those days. Prices were 12½c., 25c., 37½c. and \$1 an ounce, and 12½c., 25c., 37½c., and 50c. per quart; nothing said about packets, pecks or bushels.

The subsidiary coins of those days, and up to 1857, were largely Spanish: sixpence, 6¼c., and shilling, 12½c., which accounts for the fractions. By an Act of Congress passed in 1857, the value of these foreign coins was fixed at 5c., 10c., 20c. and 40c., which soon drove them out of the country.

Flower seeds were sold at 6c. per paper, 100 papers for \$5. In the 1847 catalog of James M. Thorburn & Co., we find prices quoted: Beans, per quart, Dwarf or Bush, 25c.; Pole varieties, 25c., 37½c. and 50c.; Indian Corn, seven varieties, including but one of Sweet or Sugar, 25c. per quart, 6c. per ear; Peas, fourteen varieties at 25c., twelve varieties at 50c. per quart, and seven new varieties at 25c. per packet. Very few of the names of varieties are now familiar. Beet, seven varieties, including Swiss Chard, Mangels, and two of Sugar Beet, 12½c.; Yellow Turnip and Bassano, classed as new, 25c. per ounce; Cabbage, twenty-six varieties, including Kohl-Rahi and Savoy, two-thirds of which are now unlisted, 25c. per ounce; Carrot, two varieties for table use, 12½c. per ounce, two varieties for cattle, 75c. per pound; Celery, 25c.; Cucumber, Early Frame and Early White Spine, 12½c.; Long Green Southgate, Long Green and Long White Turkey, 50c. per ounce; Lettuce, twelve varieties, six at 25c. and six at 50c. per ounce; Egg Plant, \$1 per ounce; Melon, 25c.; Onion, 25c. and 50c.; Parsley and Parsnip, 12½c.; Pepper, four varieties, 50c.; Sweet Spanish and Sweet Mountain, \$1 per ounce; Radish, twelve varieties, 12½c.; Spinach, 12½c.; Squash, 12½c., 25c. and 50c. per ounce; Tomato, Large Red, Large Yellow, Cherry and Pear, only four varieties, probably enough for those days, as I have heard my father say that he could well remember when there was not a half peck of Tomatoes sold in New York City—he was born in New York City in 1800, and as a market gardener dated back to 1828 at Jersey City, N. J.—Turnips, sixteen varieties, including two Ruta-Baga, are listed at 12½c. per ounce; Flower Seeds, 6¼c., and a very few at 25c. per packet. There are too many kinds of flower seeds to enumerate, but I must note, by way of comparison, the universal favorite Sweet Peas, of which hardly a dozen varieties, including everything under the head of "Lathyrus" are mentioned, while today there are varieties and sub-varieties, types and strains, running into the hundreds.

I have a daughter married to a member of an extensive seed growing firm in California. A few years ago in writing home she said: "The soil of this section does not admit of our having such magnificent lawns as are common in the East, but we have one hundred and forty acres of Sweet Peas in our back yard." The next year three hundred and sixty acres were grown, last year five hundred acres, and still a greater acreage soon to be harvested in 1910. This is only on one ranch, and probably not one-fifth of the annual output of Sweet Peas in the wonderful State of California, where thousands upon thousands, yea, hundreds of thousands of acres are cultivated for seeds of every description, from Beans and all sorts of vegetable to the very finest in flowers.

By chance I have found a copy of my 1860 List—a one-sided sheet, 5x9 inches—with prices to market gardeners: Asparagus, 75c.; Beet, 75c.; Cabbage, \$5 to \$6; Carrot, \$1.25; Cucumber, \$2; Celery, \$4; Leek, \$2.50; Lettuce, \$4; Melon, \$1.50 to \$2; Onion, \$1.50 to \$2; Parsley, \$1; Parsnip, 75c.; Pumpkin, \$1.50; Radish, 75c. to \$1; Spinach, 63c.; Squash, \$1.50; Tomato, \$3 and Turnip, 75c. per pound; Egg Plant and Pepper, 50c. per ounce.

All figures are by way of comparison with prices ruling at the present day. It is true that conditions have changed, and very materially so within the past twenty-five or thirty years.

Sources of Seed Supply in the Fifties

Seventy-five years back there were very few regular seedsmen in America, and they depended mainly upon Europe for their supplies. Sixty, and even up to fifty years ago market gardeners, to a great extent, grew seeds for their own sowing and aimed to have a plenty, hence frequently they had a surplus which was eagerly sought for by the few seed dealers, who were willing to pay good round prices, and did not "kick," as is sometimes the case in these days, if a few pounds were sold here and there to neighbors who chanced to be short. I well remember, sixty years ago, how the five market gardeners

on the VanVorst property at Jersey City interchanged seeds, each one growing one or more kinds and selling surplus to seedsmen. Dr. Tracy of the Department of Agriculture, whom all of you know, writing of "Vegetable Seed Growing as a Business" asserts: "Records of only about forty-five firms that were in business in this country as distinctly seed merchants previous to 1862 can be found, while a list of American seedsmen published in 1908 includes the names of over eight hundred American firms whose sole business is the growing and handling of seeds; with more than six hundred and fifty other firms making seeds an important part of their business."

Were it not for making my paper too lengthy, I would like, to quote further from Dr. Tracy, whose article is full of information, and as a whole very interesting. I must, however, beg to differ with him, wherein he says: "Fifty years ago there was little general appreciation, even among experienced gardeners, of the importance of the quality of the seed used (provided it only would grow) as a factor in determining the real profit in growing a crop." My observations were quite to the contrary. I will cite just one instance: My father and my uncle were the first to grow the Early Wakefield Cabbage in this country, having received it from Europe about 65 or 70 years ago, and it remained in the hands of the five Jersey City market gardeners for a number of years. Among those who were eventually attracted to its good qualities was one John Lundergan of Watervliet, near Albany, N. Y., whose custom it was for several years to come down to my father every Fall and buy seeds of various kinds, especially Early Wakefield Cabbage. Upon one occasion my father's crop thereof was almost a total failure, so when Mr. Lundergan came there was no seed of that variety for him. My father had explained to him that his entire crop was but a single pound, which he must retain for his own sowing for market and for growing seed in subsequent years. After trying all sorts of persuasive argument, Mr. Lundergan drew from his wallet a \$50 bill which he offered my father for that one pound of seed, but without avail.

That was a matter of confidence, the corner-stone upon which the seed business, more than almost any other, must rest for a successful upbuilding.

I am writing hurriedly and somewhat disconnectedly. I am very busy, and my health none too good; so you will kindly pardon any imperfections.

The Government Free Seed Distribution

In regard to the Government free seed distribution: If such must exist, why not confine it to seeds of American production, the best of their kind that can be procured, ignoring entirely all commonplace stocks, and importing, if at all, only new and rare things, not yet introduced into this country? But "Uncle Sam" will have to get around early to get ahead of the enterprising, hustling seedsmen.

A Policy of "Live and Let Live" Desirable

Now, in conclusion, why is it that while almost every other business is protected in some manner, working along in perfect harmony, so many of our craft are at sword's points, cutting and slashing? I am utterly and unalterably opposed to trusts and combinations organized for the purpose of greed and robbery, but as "self-preservation is the first law of nature" why should not we work together for our mutual benefit? If I am correctly informed, the members of the Wholesale Seedsmen's League have an understanding among themselves as to prices at which seeds shall be sold, not exorbitant, but giving legitimate profits. Why should not our Association formulate some plan whereby every branch of our business can be honestly protected? Ridiculously low prices are not an incentive to gardeners and farmers to buy large quantities—each one knows for himself just how much seed he must have to produce a certain number of plants, or to seed a given acreage, and whether the seed costs \$1 or \$10 per pound he buys the necessary quantity, entirely unlike living commodities, meats, for instance. If beef sells for ten cents per pound the laborer will buy more beef for his family than he will at twenty cents per pound. The same argument applies in the purchase of wearing apparel and other necessities of life.

I have given you an idea of prices prevailing half a century and more ago. You know what they are in these days. Of course Europe with its cheap labor, and California with its even climate and many other superior advantages, are important factors in making prices with which other sections have to compete; still, I am of the opinion that it is up to our Association to take action whereby all may live and let live.

At the age of seventy-four, I can hardly expect to attend many more conventions. My relations with my fellow seedsmen, as a whole, have been pleasant. I thank you for your patience in listening to such a dry and "seedy" subject. If I never again meet with you in convention, I trust that we may one and all meet in the Good Seedsmen's Paradise. I shall endeavor to at least be entitled to a rear seat.

Article IV—Continued

Material and Construction

The sections, Fig. 28, show another type of sash roof house supported on wooden rafters, the whole construction being of wood, but a little farther advanced than the house shown in Fig. 27. The inner section shows the complete outline of the house, and the larger broken section illustrates the details of the various parts. The house shown in the drawing is 14 ft. wide outside of the posts, and is intended for the use of one hotbed sash and the special vent sash at ridge, but the dimensions given are such that it is possible, by the use of a longer sash at ridge, to extend this house to a width of 20 ft.

The general construction of the sides of the house, from the eaves to the grade, is the same as that described for the house shown in Fig. 27; that is, the posts are placed in the ground, and to them is secured the siding, covered with asphalt felt paper, but in this instance the eaves of the house are raised up 4 ft. above the grade so that the house may be used for raised benches, if desired, without sinking a walk.

The posts, "A," shown are 3 in. x 3 in., placed 6 ft. apart, but midway between these it is well to place a 3 in. x 2 in. post so as to stiffen the siding. These posts may be either of Locust, Chestnut, Cedar or Cypress, to which is secured the matched sheathing "G," with the asphalt paper "H," from the top of the sheathing to the grade line. A Cedar or Cypress outside siding would make a much better finish, as before mentioned, but would increase the cost; and as our object in connection with the cheaper grade of houses now being considered is to present the lowest priced house that can be constructed, the felt paper only is employed, owing to its cheapness, and it will be found to give fairly satisfactory results.

The rafters shown at "C" should be of 2 in. x 4 in. Cypress and be placed 6 ft. centers and secured to the top of the posts "A." These rafters are cut away at the eaves line as shown, to receive the 2 in. x 3 in. eaves plate "B," which extends the entire length of the house. These plates should be spliced with a long splice over a post, the splice being painted with white lead before being put together. The rafters are also cut at the top, as shown, so as to receive the 2 in. x 5 in. Cypress ridge, which also extends the full length of the house. These members being all nailed together form a wooden framework which will stand alone.

The Cypress purlins, "F," are made from 2 in. x 3 in. material and extend between the rafters, to which they should be securely nailed. These purlins are used to support the roof sash as shown on section. On top of the ridge is placed a 1 in. x 3 in. Cypress cap, which is securely nailed in place, and to which the top sash are hinged for ventilating purposes, galvanized steel butts with brass centers being used, and two butts being allowed to each 3 ft. wide sash. As before stated, the roof of the house is constructed completely of sash, supported on the rafters and purlins as shown in the drawing.

The lower sash, marked "J," is an ordinary 3 in. x 6 in. Cypress hotbed sash, which should be constructed with not over three lights in width, if possible, and each sash should be firmly secured to the eaves plate, "B," and purlin, "F."

"K" shows a shorter sash reaching between the top rail of sash "J" to the ridge. Each alternate sash on both sides of the ridge is used for ventilation. The other alternate sash should be firmly secured to the top rail of sash, "J," and to the ridge.

These ventilating sash can be secured from the manufacturers who furnish hotbed sash; or, of course, if it is desired to use regular bed sash instead of these special ventilating sash, this can be done by increasing the width of the house; but it would be advisable, if the width of the house is increased to admit of using two hotbed sash on each side of the house, to place a pipe support beneath the center of each of the 2 in. x 4 in. rafters, "C," about midway between the ridge and the eaves.

The top sash could be operated with push rods, which should be drilled with several holes so as to admit of opening the sash the required amount. This, of course, is the cheapest means of opening the ventilating sash; but if the house is of considerable length, it consumes a good deal of time to operate these singly by hand, and, if it is desired, the sash may be operated with a line of pipe shafting and the regular ventilation machinery which, while they add a little to the cost of the house, save considerable in the matter of labor in the opening and closing of the sash.

Drip channels, "L," are formed by placing the bottom rail of the sash a short distance below the top edge of

eaves plate, "B," and by placing the top edge of the bottom rail of sash "K" below the edge of the top rail of sash "J," thus forming two channels in which the water of condensation will collect; and by grooving at intervals the under side of the bottom rail of sash "J," and of "K," this water is allowed to pass directly outside, thus the house, in a very simple manner, is made absolutely free from drip.

Each of the rafters should be tied together with a flat iron $1\frac{1}{4}$ in. x $\frac{1}{4}$ in. tie rod, "T," as shown, each one of the tie rods being secured to the rafter by means of a lag screw at both ends. In placing these in position it is well to force the rafters up a little in the center, so that when the lag screws are screwed up and the support is removed from the rafters the pull will come on the tie rod.

Ideal Bench Construction Reported Not Solved Readers, Please Note!

Having received a communication from a correspondent bringing before us the fact that improvements in bench construction had not kept pace with the improvements in the construction of the greenhouse itself, and

If some of our readers, having used any one or more than one style of bench of those enumerated above, would send us in whatever information possible regarding each of the constructions (bearing in mind points 1, 2 and 3), their material will be collated and published in such shape so as to be available for reference, and we feel sure that in this way we will be able to get at considerable information which will be of benefit to all growers, and no doubt some information will be elicited to assist in solving the bench problem, so as to bring this part of the construction up to the present day standard of the balance of greenhouse construction work.

[Bench Construction is one of the most important details in connection with greenhouse building. We ask you, reader, to write us your experience; no names will be mentioned but from the mass of information received Mr. Payne will undoubtedly be enabled to reach conclusions that will be of dollars and cents value in his summary of the most advisable forms of bench erection. For your own benefit and that of your brother florists let us have your experience.—ED.]

The American Gladiolus Society

The officers of the American Gladiolus Society are extremely busy these days. The large volume of inquiries and requests for membership application blanks demonstrates the great popularity of the Gladiolus today, and the importance and necessity for such a society. The interest in this movement is not confined to America, for two of the great specialists of Europe are among our charter members, and our first meeting at Boston developed a strong sentiment for an international society.

There is much encouragement in the fact that the amateurs have taken hold of this movement so enthusiastically. This was evidenced by the large enrollment of amateurs on the charter list at the Boston meeting. Since I sent in the list of prizes for the Rochester ex-

stating that at the present time he did not know of any form of bench construction which was thoroughly coming up to the requirements, and with the object of securing an expression of opinion from those who have built benches and who can furnish the necessary data, we have formulated the following questions:

- 1—Cost of the materials
- 2—Cost of erection
- 3—Durability

and so as to get this information in as concise a form as possible we have divided the various makes of benches into classes as follows:

Wood	{ Cypress Hemlock Pecky Cypress
Iron	{ Pipe or angle iron frames, wood sides and bottoms Pipe or angle iron frames, tile bottoms, wood sides Pipe or angle iron frames, cast iron bottoms and sides
Concrete	{ Solid poured in forms Built up with blocks
Brick	
Tile	

hibition, contributed last week, the following have been received:

Stump & Walter Co., New York.—\$10 in gold for the best 12 shades in any varieties.

Weber & Don, New York.—\$10 in gold for the best 10 varieties to include Baron Hulot, Princess and Contrast, 3 spikes each.

A. L. Miller, Brooklyn, N. Y.—\$5 in gold for the best display of pink and white varieties, 3 spikes each of at least 6 varieties.

F. B. Pierson Co., Tarrytown, N. Y.—\$10 in gold, class to be decided later.

E. H. Cushman, Sylvania, O.—\$5 in gold for the best vase of 25 spikes white, any variety.

Arthur T. Boddington, New York.—\$10 in gold, class to be decided.

John Lewis Childs, Floral Park, N. Y.—\$10 in gold for the best collection of Gladioli, Childs' varieties, 3 spikes each, to include Attraction, Blanche, Cardinal and Wild Rose; and \$5 in gold for the best vase of America, not less than 12 spikes.

I. S. Hendrickson, Floral Park, N. Y.—\$5 in gold for the best vase of Contrast, not less than 12 spikes.

J. M. Thorburn & Co., New York.—Silver cup for the best collection of Gladioli Primulinus, type and hybrids, exhibit to be made by an amateur.

L. MERTON GAGE, Cor. Sec.
Orange, Mass.

FOUNDED IN 1888

A Weekly Medium of Interchange for Florists, Nurserymen, Seedsmen and the Trade in General.

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president and managing editor; Jas. H. Griffith, secretary; David Touzeau, treasurer. The address of the officers is the address of this paper. Short address: P. O. Box 1697, New York.

Telephone 3765-6 Beekman

PRINCIPAL OFFICES

Chicago: Margaret T. Flint, room 614, No. 60 Wabash Avenue; tel. Randolph 2000. Office hours: 9:30 to 12.

Boston: Robert Cameron, Cambridge, Mass.

Philadelphia: Appointments can be made or letters addressed to Jos. H. Sperry, our representative, care of Keystone Hotel, Market st., near 16th, for Mondays and Tuesdays.

Yearly Subscriptions.—United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by Draft on New York, Post Office or Express Money Orders; if paid in cash please register letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

Registered Cable Address: Florez, New York.

Telegrams.—Telegrams received in this office up to 3 p.m. Wednesday, containing changes in advertising, will receive attention for the issue of the Saturday following; likewise, telegrams having informative matter intended for our news columns will be received up to Thursday 9 a.m. News telegrams should be forwarded after 5 p.m. Wednesday and marked "Night Press Message, Collect." These will be forwarded by the Telegraph companies at their newspaper rate, providing the material so forwarded contains news for the paper.

The Florists' Exchange is a trade paper, and its advts. quote wholesale prices. For that reason it should be treated with care. Copies should not be left lying where they will be seen by outsiders, nor should they on any account be used as wrapping or packing material. Further, the fact that a purchaser not in the trade may seek to obtain goods at trade prices by no means compels you to sell him at wholesale.

The American Carnation Society Registrations

The following Carnations have been registered by F. Dörner & Sons Co., Lafayette, Ind.:

Gloriosa (No. 42 '06).—Parentage, cross between seedlings under number. The color is a magnificent shade of pure light pink; growth is a true commercial type; early and continuous flowering; excellent stem and calyx; has a working habit that produces quantities of bloom without a break; size 3 1/4 ins. and over.

White Wonder.—Parentage, White Perfection X Seedling under number. Color pure white; size 3 1/4 ins. and over; has all the White Perfection qualities improved, larger flower, stronger stem, stronger growth; makes nearly double the sized plant in the same length of time, thereby largely increasing its productivity.

A. F. J. BAUR, Secretary.
Indianapolis, June 18, 1910.

Publications Received

CHRYSANTHEMUM SOCIETY OF AMERICA: Proceedings of the Eighth Annual Meeting held at the American Institute, New York, Nov. 10-12, 1909. This publication, in addition to the full report of the proceedings and papers read at the time of that meeting, gives a list of American and foreign varieties of Chrysanthemums disseminated in the year 1909. This list seems to have been carefully prepared. Foreign varieties named as having been disseminated in 1909 comprise only those varieties which have been disseminated in America.

EVANS' ANNUAL FOR 1910: Plant Diseases and Insect Pests.—This is a very interesting and attractive brochure which has been prepared and printed by R. E. Evans, F. R. H. S., Stratford-on-Avon, England. Mr. Evans is a chemist of considerable reputation and an extensive manufacturer of sprays and preparations wherewith to combat insects and fungous diseases; therefore, the information reported in the pages of this little book can be looked upon as authoritative. Condensed information is supplied as to the various ills of which the advertised preparations are preventives or cures; the diseases and insect pests are described and in many cases illustrated, rendering it a simple matter to ascertain how to locate the source of the trouble and then apply the remedy. The publication is unique in that it admits the advertisements of many other concerns manufacturing a similar line of goods, as well as those of specialists in sprayers, etc., making of this book quite a handy reference.

S. A. F. Bowling

A. F. Vick, chairman of the bowling and sports committee wishes to get in touch with the various bowling clubs who contemplate taking part in the contests in August. It is therefore desired that the captains of teams will communicate with Mr. Vick at once, to enable him to have some idea as to how many will attend.

Rochester, N. Y.

H. B. STRINGER, Sec. R. F. A.

Wholesale Grass Seed Dealers' Association

The Wholesale Grass Seed Dealers' Association held its second annual meeting at Atlantic City, N. J., at the Hotel Strand, on June 21 and 22. Albert McCullough of Cincinnati is the president; C. F. Wood, Louisville, Ky., secretary.

Reports of the officers and the proceedings of the Executive Committee during the year passed showed much work done of substantial benefit to the entire seed trade in the way of enlightening our law-givers as to the needs of the trade generally, and an earnest desire was manifested to carry on the good work in the future so auspiciously commenced. The following directors were elected on June 22 to serve for three years: Chas. D. Boyles, Chicago; John A. Smith, Toledo, O.; A. E. Reynolds, Crawfordsville, Ind.

The National Spring Flower Show

To Be Held in Boston Last Week in March, 1911, Under the Auspices of the S. A. F. & O. H.

Acting as chairman of the Board of Control, which will have an active supervision of all matters in connection with the approaching great show, Mr. Frank R. Pierson has appointed the following gentlemen as members thereof: J. K. L. M. Farquhar, Patrick Welch, Thos. Roland, E. Allan Peirce. The above are all local men, thus able to get together at short notice and guarantee quick dispatch of any and all pressing business.

The gentleman who has been appointed as manager and secretary of the Flower Show, Chester J. Campbell, has been eminently successful in handling automobile and other large shows, and thus has the experience necessary for success in this direction. This gentleman's principal duties will be to obtain a publicity for the exhibition that will draw visitors in paying numbers and to look after the thousand and one little things which make for a successful outcome. He is to receive no salary, but for his work will be paid one-third of the profits after all expenses have been settled; as a further inducement to create and bring about a large trade exhibition, the manager will receive one-third of the rentals paid by exhibitors.

Mechanics' Building, in which the exhibition is to be held, is extremely well fitted for the purpose selected. Its first floor is sufficiently lofty to allow of liberal decorative treatment, and the structure itself is sufficiently large to hold the entire exhibition under one roof almost without regard to the size the said exhibition may assume. There are also several separate halls so that four or five separate meetings or functions can be going on at the same time.

The American Rose Society and the American Carnation Society will formulate schedules for their own exhibition at this show.

Mr. Pierson is a very busy man these days and has been worked to the limit. He considers that the preliminaries of the National Spring Flower Show are now well in hand and his mind is somewhat relieved on that point. In addition to this onerous duty, Mr. Pierson is, as the majority of our readers know, mayor of Tarrytown. Just now he is as well chairman of a committee that is endeavoring to raise a fund of \$75,000 for a hospital in Tarrytown, and is also chairman of the Y. M. C. A. of Tarrytown fund which is endeavoring to raise \$100,000, John D. Rockefeller promising to give \$35,000 of this providing the remaining \$65,000 is raised by July 1.

The Proposed New York Plant and Flower Market

There was a public hearing before the Board of Aldermen's committee on streets, highways and sewers, at City Hall, New York, on Monday afternoon, June 20, on the resolution to establish a plant and flower market under the Queensboro Bridge at 59th st. and First ave. About forty growers, and many other interested persons were in attendance.

The chief opposition came from the growers of Staten Island. Borough-president Cromwell of Richmond opened the proceedings for the opposition, stating that he had been requested by the florists of his borough to object to the location of the market, owing to the distance of their establishments, the haul to the Canal st. market being now as much as their horses could stand. Queens and Brooklyn florists were, he said, just as well served by the Canal st. market, and to make the proposed change would present an unnecessary hardship to the Staten Islanders.

Chas. Hunt, florist, of Port Richmond, made a lengthy

address endorsing Mr. Cromwell's remarks. He and his neighbors wanted a market, but wanted one they could get to. Staten Island itself, he said, had many disadvantages in comparison with the other boroughs. He went into mileages and other particulars in support of his contention that the haul to Canal st. was the limit of the draught horses' possibilities; but later, upon cross examination he admitted that deliveries of stock were continuously made around the 25th st. district.

Alderman Cole of Richmond also supported the opposition.

The venerable John D. Crimmins opened the case for the market supporters with a long address which was largely of a historical character, tending to show that the new location was, geographically, a correct one, and had been a recognized horticultural center from the earliest days of the city. In his opinion the market would enable poor people to purchase flowers much more cheaply than they could now.

Alderman John F. Walsh, of the Borough of Manhattan, spoke strongly in favor of the new market. Relief of congestion, easy transportation and centralization were his main arguments. Centralization he said, was particularly important, especially to dealers, who necessarily largely outnumbered the producers. There was hardly a phase of the question, he declared, which could be taken up where the evidence was not in favor of the 59th st. location as against Canal st.

A. L. Miller, president of the N. Y. Florists' Club, appealed strongly for the new market. Such a market, he said, should be in the most convenient neighborhood. If a permanent market was established at Canal st. he believed very few florists would go there, as conditions would not be improved.

Alderman Ebtholt of Queens also made an address favoring the 59th st. location.

John Birnie pointed out the need in New York for a plant market, something the city had never had. The plant and flower markets of European cities were show places. Plants and flowers should not be luxuries, he thought; they should come to the public with the least possible expense. Staten Island's difficulty could hardly be helped. Long Island florists, many of them, were equally handicapped in regard to distance. A proper plant market would not be for the growers' use alone, but also for the people of the city. The establishment of the market would bring with it not only the flower trade, but kindred interests would be represented in the neighborhood, and the value of property all around would be enhanced.

W. H. Siebrecht, Jr. pointed out that many more growers would be benefited by the shorter haul than would suffer by the longer one, as the growers on Staten Island were exceedingly few in number.

A Mr. Schorz, a business man in the neighborhood of the bridge, supported the market project on account of the increased value of property around the market which would result, and which would offset, in a degree, the loss of business which had been sustained through residents moving over to Long Island.

Another resident of the neighborhood favored the market proposition through the influence it would have on the children of the neighborhood who, he said, "hardly knew a flower from a bull's head." Have the flower market there and a great educational influence would be at work. It would be a blessing to the children, and to their parents and others as well. There could be nothing more beautiful than flowers and music.

Anton Schultheis said it seemed to him that it was "in the air" that the market would be established. There had not been a real flower show in New York City for a number of years. At the proposed site a grand show could be held and the children could see the flowers. It would elevate their characters and ennoble them. The market would embrace an area of 32,000 sq. ft. and more, and every grower, no matter how small, could add his little mite to the stock offered, and show what he could do. There would be shows there that would beat the park shows.

A. L. Miller, speaking of the movement to use the property in request for playground purposes pointed out that the market proper would be over early in the mornings, and there would be lots of room for the children to play in the open in the afternoons.

Park Commissioner Stover was present, and stated the position of his commission in the matter.

After the hearing the committee went into executive session, and decided to report the proposition favorably to the full board.

The influence of different colors of light on the growth of plants has been made the subject of experiment in the Botanical Garden of Dresden, Germany. The Mimosa was selected, as being peculiarly sensitive, and plants of the same were exposed to various colored panes in the hothouses. The tests, as summed up, showed that the several parts of the plant stood up under white light; carmine exerted a similar influence, although the formation of the leaves was diminished; orange stimulated the growth of the plant, especially that of the flowers, while the leaves developed insufficiently under green light. Violet, blue and brownish tints exerted a very unfavorable influence, for under all these colors the plants deteriorated and remained dwarf.—*Der Handeltsgartner*.

Florists' Hail Association

Reports continue to reach Secretary John G. Esler of damages to greenhouse glass through the heavy hailstorm of last Saturday. In addition to our report headed "Hail-storms," printed on page 1135, losses resulted at Mount Pleasant and Tamaqua, Pa. and Marlboro, N. Y.

A. N. Pierson's New Roses

It has already been noted in these columns that A. N. Pierson, Inc., has registered a sport of Killarney, originating with him in 1908, which has been named "Red Killarney." This sport is identical with Killarney, except in color, which is of a much brighter tone and shows a strong tendency toward red; in fact, some blooms have been cut as dark as Richmond, while the average for the entire year has been somewhat lighter than that of Richmond. This variety will probably not be disseminated until after 1911.

Mr. Pierson has still another Rose which he will register and which he describes as a Dark Pink Killarney, to be disseminated in 1911. This Rose was purchased from the Montrose Greenhouse, Montrose, Mass., and it is understood to be a great improvement over Killarney in color all through the year, being especially bright throughout the winter. This is an entirely distinct sport from the Red Killarney which originated at Crownell.

Mr. Pierson also has a very valuable light pink sport of My Maryland which he is getting out for 1912 dissemination and which will be registered later.

Among the Growers

NYACK, N. Y.—Continued

R. C. Pye

Fourteen houses, with about 35,000 ft. of glass, make up Mr. Pye's range, which is divided into two sections, one of east and west houses, and another of north and south houses, by his working and packing shed. In one house of the north and south section is grown yellow and white Antirrhinum, obtained first from planting seed one season, and then after the bloom and habit of plant is observed the same Summer cuttings are taken which give the stock from which to grow the following year, because Antirrhinum cannot be depended upon to come exactly true from the seed. About four houses are used for growing Carnations, about 10,000 plants, white and pink Enchantress only, in solid beds. This season some Dorothy Gordon and Alma Ward will be tried. Some Beauty of Nice Stocks and some Christmas pink and white Sweet Peas are grown. A sash house of Beauty of Nice and Queen Alexandra Stocks, grown as cool as possible, are now looking very fine. Some bedding plants are also grown.

In the east and west section of the range Roses are grown. The varieties are My Maryland, mostly own root plants, pink and white Killarney, and Kaiserin. The third crop of Kaiserin is now on and the plants are in excellent condition, but white Killarney is such a strong rival of Kaiserin in the earlier crops that Mr. Pye raises the question whether Kaiserin will pay.

A house of My Maryland, mostly own root stock, but with enough grafted stock so that a comparison can be made, is in very nice condition and is giving a good cut of fine blooms. On some plants five to seven fancy blooms are coming from one break. It is noted that the own root plants are giving better results than the grafted plants, and furthermore that where some My Maryland and Killarney are in the same house the former is entirely free from mildew, while it is very difficult to keep mildew off the Killarney. A house of white Killarney is looking particularly good and giving fine blooms.

The side walls of these Rose houses have been torn away and the space between them—they are three-quarter span houses—has been glassed over, making, practically, lean-to houses in which Asparagus plumosus is successfully grown. Mr. Pye is beginning to grow some Water Lilies, mostly of the hardy varieties, and also has taken up some landscape work.

One of the attractive features of this establishment is a handsome bungalow made out of field stone. Mr. Pye constructed it with his own force of men, from his own plans. A substantial arched cellar extends under the whole bungalow. The inside arrangement of rooms is very convenient, and they are nicely finished, including a neat fireplace built of stone taken from the Hudson.

A substantial luncheon spread in the dining room of this new bungalow by Mrs. Pye was partaken of with that relish that comes to an EXCHANGE representative when out on a tramp among the growers, and a drive afterwards with Mr. Pye to some other growers, and through some parts of beautiful Nyack, added still further to his pleasure.

The Florists' Exchange is exclusively a Trade Paper. Prices at which stock is offered in these columns are intended for the Trade only.

E. H. Pye

The establishment of E. H. Pye, brother of R. C. Pye, in whose company the place was visited, is beautifully situated right at the foot of Hook Mountain and above the Hudson, in Upper Nyack. Mr. Pye's range consists of seven houses, with 20,000 ft. of glass. Four houses are used for growing Sweet Peas. The varieties used are Christmas Pink, Florence Deozer, which is found to be a week earlier than Christmas Pink, and Watchung, which is found to be earlier than any other, and a few Mrs. Alexander Wallace. The Sweet Peas are grown directly in the soil of the greenhouse. The seeds are sown in August, and some of the earlier varieties bloom in the last of October. Asparagus plumosus nauns is growing in one house, and is in very fine condition, in fact it is some of the best observed.

One house, with solid beds on a stone foundation, affording good drainage, is used for Roses; one bed to My Maryland, and the rest to Kaiserin, part grafted and part own root stock. The Kaiserins are carried over stock. The Roses show good culture and are looking well.

Adiantum Crowneum grown in one lean-to house is now producing some good fronds. Some Stocks also are grown.

English Plant Notes

Arabis albidula fl. pl.

A hardy plant I have not seen referred to in the EXCHANGE is *Arabis albidula* fl. pl. It is only a few years since this double form was introduced, but owing to its rapid growth and easy rooting qualities, there is scarcely a garden in this country that does not possess it. I remember, when first it appeared, a friend purchased one plant, and in three years he was throwing away barrow loads of it. Although as free as the old single form, commonly called "Snow on the Mountain," the variety referred to is infinitely superior, for the flowers are carried on longer stems, and at a short distance might easily be mistaken for Lily of the Valley. Planted on banks or rockeries, *Arabis albidula* fl. pl. becomes a thing of beauty; but it lends itself to pot culture, and is also extensively used for covering beds planted to Tulips. In many English parks one may see this *Arabis* covering such beds, the snow-white flowers making a charming groundwork for the Tulips. The flowers are largely used for florists' work, being only a little inferior to good double Stocks. *Arabis* is perfectly hardy and after flowering every shoot will root in the open ground, if kept shaded and watered.

I might add that a new form recently introduced is *Arabis albidula* fl. pl. variegata, this novelty having beautifully variegated foliage.

Strangely enough, when propagating my own plants recently, I found a plant with one variegated shoot, but unfortunately for me it has appeared a bit too late.

Mulleins

The term "Mullein" is used by many to define the popular hardy plant botanically known as *Verbascum*. One of the natural species is frequently found in our hedgerows, but although pretty it is not comparable with some of the wonderful varieties now being evolved. The most striking of these is *Caledonia*, which carries 4 ft. spikes of deep amber, or coffee colored flowers. It is a most striking garden plant, perfectly hardy, and therefore worthy of notice. Up to date the nearest to a white Mullein has been *V. phlomidoides*. Harkness & Sons of Bedale, Yorks., are shortly to introduce a new white, believed to be a hybrid between *V. phlomidoides* and *V. longifolium*. It grows 6 ft. to 8 ft. high, and makes a noble border plant. The best yellow Mullein is *V. densiflorum*, which produces giant spikes of glowing yellow.

Two New Rambler Roses

It appears somewhat strange that the Rambler Roses introduced in America should be overlooked, somewhat, until their value is made known in this country. Numerous varieties, especially those raised by the one and only Walsh have conquered the British growers, not only in private circles, but in the market establishments also. Few of the great growers in the United States appear to specialize in the growing of these wonderful Ramblers, and those who do, apparently do not keep up with the novelties being introduced. That wonderful variety, American Pillar, ought to have caught on, immediately, yet until it reached this side, and was shown by H. Cannell & Sons, no one, save the raisers, Conard & Jones Co., seemed to handle it.

In the same way *Coquina* has been overlooked; but it is a certain fact that after consideration of the wonderful plants shown by Paul & Son, at the Temple Show, this variety is going to be a winner. Nothing like it has ever been seen, and if your Rose forcers want something in pink shades that will cause a commotion, let them grow *Coquina*. As shown by Messrs. Paul it is a sheer mass of bloom, and, being single, it makes a fine companion to *Hiawatha*. The color is variously termed porcelain pink, salmon pink, buff pink, etc. Certainly, it is the loveliest pink Rambler I have seen; and although I

am enthralled by the charms of *Lyon Rambler* as a double variety, *Coquina* is too lovely to be alighted.

Speaking of *Lyon Rambler*, I might add that this variety has a worthy companion in *Excelsa*, a new crimson pink double, raised by Paul & Son. The fact that it secured an award of merit proves it to be a worthy novelty.

New Introductions in Trollius

Among the May-flowering hardy plants nothing fiercer than the *Trollius* can be found, and it is worth recording that several firms, both here and on the Continent, are busily working upon this brilliant yellow *Buttercup*. A few of the very latest and most striking novelties were recently shown by James Cocker & Sons of Aberdeen, and their names are: *Bronze Queen*, vivid orange; *King George*, Golden Sun, and *Golden Crown*, each a shade paler than the other; *Springbill Beauty*, deep rich yellow; and *Yellow Prince* and *Lemon Queen*, paler shades. Hitherto *Orange Globe* has been my favorite, but I must confess that the novelties named captivate me.

Incarvillea Growing in Popularity

Another hardy plant that has won many friends since its introduction is *Incarvillea Delavayi*. It has, however, a great rival in the new *I. grandiflora brevipes*, the color of which is richer and brighter. The *Incarvillea* is not entirely hardy in very cold or wet situations, but with a little care it can easily be kept alive through the winter. A simple but definite description of this plant is "hardy *Gloxinia*," the flowers bearing some resemblance to the *Gloxinia*.

T. A. WESTON.

PETUNIA HYBRIDA FL. PL. CONCORDIA.—The *Concordia* Petunias introduced three years ago by the firm of F. Roemer of Quedlinburg, Germany, have been improved within this time, by careful selection, to a notable degree. This year the firm is introducing two further improvements, *C. fimbriata kermesina* and *C. fimbriata inimitable*. Like the parent plant, these two varieties are worthy of especial notice, as all the good qualities of the former have been transmitted to them. At least 60%, and sometimes as much as 75%, come true from the seed. The double varieties of Petunias formerly on the market developed no seed on account of the form of the pistil and, in order to obtain seed from them, their pollen had to be transferred to the ripe stigma of single flowers of which the stamens had been previously removed. But even then only 25 to 30% of double plants were obtained in this way. The *Concordia* Petunias, however, have a well-developed pistil, so that the different double varieties can be cross-fertilized without the aid of single-flowering varieties.—*Der Handelsgaertner*.

Charles Eissner

Charles Eissner, aged 56, a well-known confectioner and florist of the East End, Pittsburgh, Pa., died recently at his home, 224 Emerson st. He conducted stores at 6103 Penn ave., Pittsburgh, and at 827 Wood st., Wilkensburg. He was a member of the Knights of the Macca-bees and of the Pittsburgh Board of Trade. He never was married and leaves one sister and a brother.

Alfred Tilton

Alfred Tilton, for seventy years a resident of Cleveland, O., died June 8 at his home, 3329 Walton ave., S. W., Mr. Tilton was born in 1834, and came to Cleveland when he was but six years old. For many years, and until a few months ago, Mr. Tilton had been engaged in the seed business. He was well known in Cleveland, and from 1886 to 1890, was a member of the Board of Education. Two daughters and three sons survive.

Dr. Levi Lesslie Lamborn

Dr. Levi Lesslie Lamborn, 83 years old, died at his home in Alliance, O., on June 14. He was born in Chester County, Pa., in 1827, and had resided in Alliance over fifty years. At one time he was a prominent banker there and laid out the first allotment of land there for real estate speculation. In 1876 he ran against the late President McKinley for Congress, lacking 200 votes of winning. As an orator and writer he ranked among the best in the State and in latter years wrote extensively for magazines and newspapers. He became well known as the author of "American Carnation Culture."

The late President McKinley's love for the Carnation was developed by Dr. Lamborn, who, while campaigning against the late President in the Congressional fight, distributed boutonnières of Carnations. Dr. Lamborn and President McKinley were warm personal friends. Dr. Lamborn's wife, who died five years ago, was a niece of General Grant.

THAT subscription to F. E. you have been thinking of taking out for a brother florist! Why not send it in now?

Dimorphothea aurantiaca at Burpee's Seed Farm at Floradale, Lompoc, Cal.

Photographed expressly for The Florists' Exchange

200 ft. high and these are the sides of the channel through which the sea breezes flow in volume, and with a velocity not met with elsewhere in southern California. Consequently, the atmosphere is more humid and the average annual temperature lower than elsewhere south of San Francisco, and because of these favorable climatic conditions Sweet Peas grow here to perfection.

The size of the farm at Floradale is forty acres. Not large, to be sure, as compared with other seed growing establishments on this coast, but kept in such perfect order that the managers of some others we know of could pattern after it greatly to the improvement of their places. Twenty-five acres are in Sweet Peas, which are in beds 900 ft. long and 6 to 12 ft. wide. They are separated from each other by beds of Onions, Beans, *Centaurea moschata*, crimson-flowering California Poppies and a strain of Shirleys, reference to which will be made later on.

He who looks upon that field covered as it is with ribbons of red, crimson, scarlet, pink, white, primrose, mauve and maroon, without a spot upon them to mar their beauty, must be a dullard indeed if his heart is not enraptured with the scene and the word "beautiful" does not escape his lips. The seed sown seems to have been so pure and the types so fixed and reversions are so few that the work of "roguing" was a very small part of the bill of expense in connection with growing the crop to the present time.

A strange reversion occurred in the George Herbert lot of seed, a beautiful brilliant carmine pink flowering variety. From some unaccountable cause, it had a few pure white flowering plants among them. The seeds of a few of these are to be saved for future experiments.

The majority of the varieties grown are of the Spencer type, and Countess Spencer, the original, is there in quantity in all its glory and is hard to beat.

To describe the different shades of different colors which distinguish the different varieties one from the other is a difficult thing to do. I shall leave that part of the work which has been assigned me by the editor of The Florists' Exchange, to the man or woman who shall make up Burpee's catalog for 1911. I shall only give the predominating color of the twenty varieties of which I made note, and what more could be desired by the most fastidious florist who grows Sweet Peas. No pen is capable of conveying to the mind of any reader an intelligent idea of the exquisite shadings of the flowers of the Sweet Pea; they must be seen to be appreciated, and understood.

COUNTRESS SPENCER. A soft rose pink.
AURORA SPENCER. Variegated white and pink.
APPLE BLOSSOM SPENCER. Deep pink and soft rose on silvery white.
ASTA OHN. Soft lavender; this is a wonderfully beautiful colored variety.
TENNANT SPENCER. Light purple of peculiar shade.
FLORENCE MORSE SPENCER. A light pink-edged Countess Spencer.
PRIMROSE SPENCER. A pronounced primrose or creamy-yellow throughout, both standard and wings.
MRS. RUTZAHN SPENCER. Apricot, suffused with delicate pink.
ELSIE HERBERT. White ground, picotee edging.
OTHELLO SPENCER. Rich deep maroon.
WHITE SPENCER.
GEORGE HERBERT SPENCER. Bright rosy carmine.
KING EDWARD. Deep carmine scarlet.
ROSE DU BARRE. Red.
ST. GEORGE. Standard pure orange; wings orange carmine.
BEATRICE SPENCER. White ground tinted with pink and buff.
HELEN LEWIS. Rosy pink.
MRS. A. IRELAND. Standard rosy pink; wings of a lighter shade. For a soft colored Sweet Pea, this is a beauty.
EVELYN HEMUS. Which is probably even superior to Mrs. Ireland.
JAMES GRIEVE. White shaded cream color.

A strain of Shirley Poppies is grown here with the intent of eliminating the white margins from the edges of the petals. The crimson-flowering California Poppy occupies two beds, 6 ft. wide by 900 ft. long, and is very true to the type. To be sure, there are varying shades in so many plants, yet not a reversion to the original type is seen. As a novelty this is promising and

desirable. Personally, the only shade in our *Eschscholtzia* which appeals to me is the dark orange color which makes our landscape, when they are in bloom on sunny days, appear as though it were covered with fire without smoke.

A native *Phacelia* with indigo colored limb and white throat, the flowers twice the size of *P. Whitlavia*, is being grown and will be heard from in the future. Here, for the first time, have I seen *Physalis Peruviana* grown for sale. It is of more than ordinary merit as an economic plant where the temperature does not go below 28° nor the humidity above 50 per cent. when the temperature is low. It is one of the few plants which bloom and bears fruit continually—and the fruit is delicious. It is a perennial and drought resistant to a remarkable degree. If Mr. Burpee shall succeed in inducing horticulturists who live in countries having climatic conditions such as I have described to plant this fruit he will be a public benefactor.

Work was not begun on this farm until late in last December (1909) and, considering the short space of time, the achievements are marvelous, and I venture to say that within five years the acreage will be quadrupled, and the production of high-grade seeds in great variety will be the result, for it is a well established fact that nowhere else in the world can certain lines of seeds be produced with as high germinating power as are grown in the matchless soil and climate of California.

This thought of germinating power had a singular illustration of the vicissitudes of plant growing on this place this season in the case of the crimson California Poppies. Three rows were sown on the same day, from the same seed, one hundred ft. away from the two beds previously referred to and here illustrated, and not over ten per cent. of it grew. The cause of the failure is what the superintendent is trying to figure out. So also with a number of Sweet Pea trials, seeds of which were sent here for testing.

Three thousand acres of Kentucky Wonder Beans are growing in this valley this season, and probably as much mustard. The height of this crop is about six feet and the tops are so dense that it would be difficult for a bird to penetrate them; it will soon be ready to harvest.

Cherries grow here to perfection. Whether Currants and Gooseberries, for which we pay fabulous prices in Los Angeles, would do well I have not learned; I have reason to believe that they would.

Begonias, Bougainvilleas and Fuchsias are not seen about the town, and I was reliably informed that Lima Beans will not ripen seed in this valley, yet 96 miles farther South is located the great Lima Bean section of the State—Ventura and the country surrounding—another instance which may be cited as illuminating this thought of the varied climate of the State.

Clematis Jackmanni does better at Lompoc than in any other section in which I have seen it tried. The temperature at 7 a.m. has not been above 51° to the present time this season, and at noon June 13 it was but ten degrees higher.

And now about the superintendent, Edwin Lonsdale. Some men never grow old and he is one of the number. The right man in the right place with the enthusiasm of youth, the wisdom of manhood, and endowed with the ability to carry out to perfection, large plans with all the details essential to the production of good seed, true to name. Handicapped by a late beginning, a new and strange climate, which had to be studied, inexperienced help and lack of equipment, he showed his ability to overcome difficulties. If his life is prolonged and his health remains good, here is a combination: Lonsdale, California soil and climate of superior excellence for producing seeds of the hardy and half-hardy class of plants, which will furnish the seed trade of the United States with certain kinds of stock of the greatest excellence.

Two native plants of more than ordinary merit, the one a member of the family Papaveraceae, an annual, seeds of which I shall furnish; the other, one of the Caryophyllaceae, a perennial, of wonderful beauty, seeds of which Mr. Lonsdale will collect from the plants grow-

Comprehensive View of Burpee's Sweet Pea Field at Floradale, Lompoc, Cal.

Photographed expressly for The Florists' Exchange

In order that our readers might be kept informed of the work going on and progress made on one of the latest established seed farms in California by an Eastern house, and, too, that the many friends of Edwin Lonsdale might be given an idea as to how he was succeeding in his new surroundings, we recently had our Los Angeles representative, P. D. Barnhart, editor of the Pacific Garden, visit Floradale, and the results of his investigation follows:

This recent acquisition of the W. Atlee Burpee & Co. of Philadelphia is located in the Lompoc Valley three miles west of Lompoc. To any one not familiar with this State and its peculiar climates—I use the plural of the word for the sake of accuracy—the mere statement of fact regarding the location would not be of much importance, therefore I shall be specific as to the locality and some of its peculiar climatic conditions. David Starr Jordan, president of our university is reported to have said that in forty miles of territory of California as many varieties of climate could be found. Approximately, the statement is true.

The Lompoc Valley is ten miles long and about half as wide. It is located on the Coast, 172 miles north of Los Angeles, 303 miles south of San Francisco. At that particular point on this coast the word Pacific is a misnomer. The contour of the land is such that the wind is more incessant and more violent than at any other place between the two cities named of which I have any knowledge. As an evidence of the correctness of that statement, the bench at the entrance of the valley is piled high with driftwood, Lompoc is 93 ft. above sea level. The valley is enclosed by hills which are probably

ing in the hills near by, will be grown the coming season, and if Burpee's catalog for 1912 contains two novelties, natives of California, don't be surprised.

The photo showing a bed of *Dimorphotheca aurantiaca* was taken for the express purpose of illustrating a feature of plant growing in this State. This subject, like *Calendula*, is of no good in the southern part of this State if the seeds are sown after December, but when planted in September, both are gorgeous during our Winter months. At Lompoc, with its lower temperature and no hot winds to interfere with its development, the plant is all that could be desired, in a yellow flower, at this season of the year. It, like our *Bescholtzia*, does not open during dark cloudy days.

The C. C. Morse Seed Co. of San Francisco has 60 acres of Sweet Peas growing in this valley. A representative of the firm was there to inspect the crop and, to my question as to which of the two places showed the best results, he said the Lompoc Valley was superior to the Santa Clara Valley this season. Certainly the same is true in regard to the great acreage devoted to this crop near my own city of Los Angeles.

P. D. BARNHART.

Bone Meal as a Fertilizer

The advantages of bone meal as a fertilizer are set forth in an article in a recent number of the *Revue Horticole*, from which we quote the following paragraphs.

1. It is an economic fertilizer. It is cheap as compared with horse manure, for instance, and taken quantity for quantity has a much greater fertilizing power than the very best stable manure; the latter should be kept as a luxury for hotbeds or for forcing.

2. It is convenient. Every gardener knows what trouble it takes to get good stable manure. But there is no such difficulty with bone meal, nor with chemical fertilizers. Bone meal will keep indefinitely in a dry cellar, in a barn, under a wagon shed, or in any other protected place, the only thing to be guarded against being dampness.

3. The decomposition is slow and lasting; the effects extending over three, four or five years, at least. This has been proved under the most unfavorable conditions; for instance, in a nursery there is nothing more ruinous to the soil than the raising of young trees. Yet plots receiving a single treatment of bone meal (50 kilos per acre=1100 pounds to the acre) remained extraordinarily fertile for a period of five or six years without the application of any other fertilizer, and at the end of that time they still produced fine vegetables.

4. Bone meal is a perfect fertilizer, especially to be recommended for clayey soils, but also good and complete for any other kind. Considered scientifically, it is rich in mineral salts of all kinds, limestone, phosphates, fluorides, manganese, etc. This chemical composition will become clear, if we consider the way in which bones are made. On being born, the animal whose skeleton will some day furnish the bone meal, has a flabby, mucous, cartilaginous or fibro-cartilaginous body; little by little, this skeleton absorbs mineral elements, which are introduced into the body by food and becomes more and more solid, substantial and hard, as the animal's growth continues. While the food consumed may be either flesh or vegetable, the vegetable elements will sooner or later appear as the elements constituting the skeleton. For the carnivorous animals eat the substances which the herbivorous animals have assimilated from their vegetable food. And this is the important point to note: the mineral elements of the bones are furnished exclusively by the vegetables. The elements found in the bones are therefore identical with those found in the vegetables, and consequently bones are the best and most perfect fertilizer for vegetables.

5. Bone meal is a slow but very easily assimilable fertilizer. Unlike animals, which take only salt and water directly from the mineral kingdom, depending on vegetables to assimilate for them the mineral matter they need for their sustenance, vegetables can take their nourishment direct from the mineral kingdom, out of the rock and the soil; but they must expend an enormous amount of energy in order to combine the elements in the proportion needed, and they must labor to send out roots, often many and far away, to find what they want; and it is this demand on their strength which hampers the free growth of the plants. But this work of finding their living is greatly lessened for them if they are provided with those same elements in a form already combined, organized, and vitalized, namely as bone meal. Moreover, this meal being in the form of a fine powder, mixes easily with the soil and is at once accessible to the roots.

Bone meal has abundantly proved its value in practice. Aside from the results in a nursery, as stated above, it has given excellent results in the culture of Asparagus and other vegetables, small fruits and flowers. In orchards it must be applied a little more carefully. Being largely calcareous in its constitution, it must be fed only sparingly to trees like the Pear, Apple or Chestnut, which do not thrive well with limestone. But it is excellent for fruit with pits, like the Peach, or the Grape, and the Fig, promoting a vigorous growth and abundant crops. Gardeners of experience say unhesitatingly that nut trees and Cherry trees, planted in soil enriched with bone meal, are good for twenty years, instead of the ordinary twelve.

ingly that nut trees and Cherry trees, planted in soil enriched with bone meal, are good for twenty years, instead of the ordinary twelve.

Taken all in all, bone meal is a fertilizer that has stood the test, and it should recommend itself even to the most skeptical.

English Horticultural Notes

Plant Novelties

Among the numerous plants certificated at the R. H. S. meeting on June 7, none are likely to fill much of a place on your side. Your American *Robinia Kelsey*, making a new tree with rosy purple flowers, received an award of merit. It is doing well at Kew. A pale yellow Persian *Ranunculus* (from Clark, Dover), called *Evening Star*, won a card; also Veitch's dwarf zonal *Germium White Queen*, with pure white flowering, freely produced. An improved pot *Heliotrope* called *Favorite*, from the King's Acre Nurseries, Hereford, will find a place, and some new Sweet Peas, Autumn sown seeds, from Hemus, Upton-on-Severn, German Irises, from Wallace, Colchester, and a Carnation or two, were each good in their way.

A collection of 180 large paintings of Orchid flowers, from a lady artist, got a gold medal. These paintings were representations of certificated varieties, and were lent on show by the various owners thereof. It may interest some of your Orchid people to know that the Royal Horticultural Society pays for and keeps carefully executed paintings of many of the distinct and good Orchids which obtain certificates. The full record of percentage, etc., is put upon the back of the painting, and is there in case of any query arising in the future. * * * In my former notes I said that Rochford's Orchids were to be sold. The plants went at a very cheap rate, possibly because so many were put on the market at one time. Mrs. Cookson's duplicates of famous varieties were also recently put to auction, and the rich collection of the late Baron Schroeder may also be disposed of. Enormous progress is being made in hybridization here and in France and Belgium. * * * A book on Orchids is now being written by Mr. Charles H. Curtis (who is secretary also of the Sweet Pea Society). The publishers are Messrs. Dent & Co., who have also connections in America, and the price will be one guinea (\$5). There will be a goodly number of colored plates, but the publication cannot take place for some months.

An English publishing firm, Stothard, Piccadilly, London, also announces a great work on "Roses of the Old and New World," sumptuously prepared, with drawings and colored plates, the output limited to 1000 (subscribed) copies.

J. HARRISON DICK.

Purchasers of stock from advts. in these columns will confer a favor by making this statement in their order: "Saw your advt. in F. E."

W. P. Stark

Elected President American Association of Nurserymen at Denver, June 9, 1910

We present herewith a portrait of W. P. Stark, who was elected president of the American Association of Nurserymen at its recent convention at Denver. Mr. Stark is treasurer of Stark Bro's Nurseries and Orchards Co. of Louisiana, Mo., which firm was established in 1825 and is now under management of the third and fourth generations of the Stark family. Mr. W. P. Stark is well known throughout the country as a progressive nurseryman, and the company of which he is an officer is one of the largest, if not the largest nursery concern, in the world. Mr. Stark was formerly president of the Missouri State Board of Horticulture and last year was vice-president and chairman of the Traffic Committee of the American Association of Nurserymen. He has all his life been connected with Stark Bro's Nurseries & Orchards Co., and is the leading spirit in that institution.

The Rock Garden

Perhaps the most popular feature in gardens of any pretension is the rock garden, and the specialists who deal with this phase of gardening are very numerous on this side, and include ladies. Rock gardens are always to be seen at R. H. S. Spring meetings and at the Temple Show they are done on a large scale.

American Seed Trade Association

TWENTY-EIGHTH ANNUAL CONVENTION

Hotel Strand, Atlantic City, N. J., June 21, 22, 23, 1910

THE AMERICAN SEED TRADE ASSOCIATION closed a successful meeting at Atlantic City on Thursday, June 23. Seven years ago they held a meeting at Atlantic City, at which time Walter P. Stokes of Philadelphia was the president, Hon. S. F. Willard secretary. They then elected Mr. Willard to the presidency and he was highly commended by Mr. Stokes when installing him into that office. Both these gentlemen are now away in Europe, it being perhaps the first meeting that Mr. Willard has ever failed to attend.

The weather throughout the dates of the meeting was delightful and all other conditions favorable. There was a representative attendance and, under the leadership of Mr. J. C. Robinson, and prompted by his genial personality, every feature of the three meetings moved along smoothly and harmoniously. His address at the opening was sound and wholesome and thoroughly practical, and of itself confirmed the good judgment displayed in his election a year ago. Reports by the secretary and treasurer, C. E. Kendel of Cleveland, showed that the membership was holding its own, and that the finances were in an encouraging condition.

Election of New Members

The following new members were duly elected: Herman Simmers of J. A. Simmers, Toronto; J. Edward Schultz, Washington, D. C.; Diggs & Beadies Co., Inc., Richmond, Va.; J. F. Noll & Co., Newark, N. J.; H. G. Hastings, Atlanta, Ga.; Frank W. Howard, Pittsfield, Mass.

President Robinson proposed for honorary membership F. W. Bruggerhof of New York City, who was unanimously elected; that gentleman was informed by telegram and returned his acknowledgements and regret at inability to be present at convention and banquet.

Membership Fee in Future, \$15

In order to carry out certain proposed good works it was proposed to raise the membership fee to twenty dollars (double the former dues); this was amended to fifteen dollars and in such amended form unanimously adopted.

Report of Delegates to National Board of Trade

Albert McCullough, one of the delegates to the National Board of Trade, the other being W. Atlee Burpee of Philadelphia, presented their report, in part as follows: It is the aim of the National Board of Trade, of which the American Seed Trade Association is a constituent member, to keep all of the trade bodies supporting the Washington headquarters informed of what is going on. This will enable every commercial organization in the United States to come in direct contact with the various committees of Congress to arrange for hearings before committees of the House of Representatives and the Senate and to co-operate with a representative committee of the National Board of Trade, so that opinions and the influence of the business men of the country may be exerted during the entire session of Congress. The transportation interests, conservation of national resources, diplomatic and consular service, banking and currency, renewal of trade treaties, and postal affairs were among the important questions and subjects taken up at the last meeting. Mr. Frank D. La Lanne, president of the National Board of Trade, has been appointed by Secretary of State Knox as delegate to represent the United States at the Fourth International Congress of Chambers of Commerce and Commercial and Industrial Associations, to be held in London, England, June 21, 22 and 23, 1911.

The questions to be taken up by the Congress are many and all of national interest. W. Atlee Burpee has been appointed a member of the council, and Albert McCullough one of the managers of the National Board of Trade. Under the presidency of Mr. La Lanne the Board has taken on new life and, through its commissioner, Mr. Anderson, its work will be felt this coming year more than ever before. The American Seed Trade Association is at liberty, at all times, to call upon the commissioners for information as to what is going on in Congress and in this way can keep posted and properly advised when there is any bill introduced in which it is directly interested.

Miscellaneous Business and Committee Reports

Chas. H. Breck, C. H. Coy and W. F. Jones were appointed as an Obituary Committee.

Chas. H. Breck, E. L. Page and C. F. Wood were named as Committee on Recommendations in president's address.

The Committee on Customs and Tariffs, J. C. Vaughan, chairman, reported they had received no complaints as to the workings of the present Payne law, although the average advance in duties is probably from thirty to

thirty-five per cent. over what was paid on an ad valorem basis. The customs operations, as to seed importations, are being handled with less friction than ever before.

The next proceeding was the reading of Francis Brill's paper; this will be found in full on page 1110.

No report was presented from the Committee on Irrigation of old Eastern sections nor from that appointed to confer with the national organizations of nurserymen and florists.

The Auditing Committee, Simon F. Leonard, John W. May and Harvey Nixon reported the Association's books to be O. K.

The delegates to the National Council of Horticulture presented their report through Secretary Kendel, showing continued good work and progress, and the usual sum was voted for use of the Press Bureau of the Council in the interests of the seed trade.

President Robinson announced that Prof. Chas. D. Woods of Orono, Me., was unable to be present to deliver an address on "State Legislation, Present and Future," and expressed his regret, in which the convention joined.

Reports of Committees on Seed Legislation

George E. Green, chairman of the Committee on Seed Legislation, submitted a comprehensive report showing the condition of present and probable future legislation and the work done in enlightening Legislatures and Congressmen as to the true conditions of supply. He recounted the work done in Boston last December through the conference of representatives of various seed organizations and the National Association of Official Seed Analysts. At that meeting it was the unanimous conclusion that when seed legislation was enacted by the various States it should be reasonably uniform in character, so that interstate transactions shall be restricted as little as possible. It was quite generally conceded that if reference to germination can be kept out of seed laws it will tend to unify efforts all along the line to protect the public and the trade as well. The committee believes that quality restrictions should be only such as are necessary to protect against fraud, but should leave commerce free. A bill was prepared and is being considered that will include these views and which, it is hoped, will tend to uniformity in legislation on seed subjects.

Correspondence was read showing a liberal attitude on the part of Congressmen and a desire to inform themselves fully before enacting laws which otherwise, without due consideration and information, could not help but be hurtful to all interests and futile to safeguard the public. Representative Mann expressed his determination to refrain from hasty and ill-considered action and is willing to receive views of seedsmen and others. No legislation should include, under the same provisions, the widely different classes in production and use, such as garden seeds and bulbs on the one hand as opposed to Grass and Clover seeds on the other. Arbitrary standards are declared against for the reasons given that the best methods of testing seeds for purity and germination now in use are not sufficiently uniform and accurate, and the vitality of seeds is not sufficiently staple to warrant imposing heavy penalties for sale of seeds falling below a certain arbitrary standard. While purity and germination constitute the only basis available for arbitrary standards, they are by no means a complete or accurate measure of the actual value of seeds to the user thereof. Many other qualities enter into the value of seeds, such as color, size, locality of production, trueness to type, excellence of strain, etc. These considerations make it manifestly unjust to allow the terms "United States Standard" to be applied indiscriminately to all classes of seeds of certain varieties which might reach certain standards of purity and germination. This is but reasonable under conditions where the apparatus and methods for making tests are only now in process of evolution and not by any means perfect. No legislation should restrict or prohibit exportation of any class of seeds having commercial value in any foreign country; for example, there are climates and countries where Dodder does not thrive and there is no sound reason, either commercial or moral, for absolutely prohibiting exportation of such seeds. On the contrary, such prohibition would tend to cause such seed to be re-sown within our own country. If the original Mann Bill had become a law it would have absolutely disorganized all existing methods of handling the seed business. If any large proportion of many proposed State laws had passed it would have had the same result. But the prospects are that future State laws will be guided by wisdom; this is ardently hoped for.

Chas. N. Page, vice-chairman in charge of State seed legislation, in his report dealt with the State aspect. He declared that seed dealers have never seriously objected, as a class, to reasonable legislation which was intended

to serve a good purpose, but most of the earlier bills introduced were unjust, ill considered and unfair and therefore merited condemnation at the hands of legislators, as the purpose of such bills showed an ignorance of the conditions under which the seed trade is conducted, and it would be absolutely impossible in many cases for seed dealers to carry out the projected provisions. The seed trade protests against any legislation which would make law-breakers or criminals of honest men who are engaged in a reputable and useful calling and who are willing at all times to assist in the preparation of reasonable legislation.

A paper by Curtis Nye Smith of Boston, counsel for the American Seed Trade Association, entitled "The Relation of State Seed Laws to Interstate Commerce" was read. This is printed in full on page 1119. The essayist received a vote of thanks from the Association and Mr. Smith was re-employed as its counsel for the ensuing year.

W. Atlee Burpee's paper entitled "The Spencer Type of Sweet Peas" was then read and is here given.

The Spencer Type of Sweet Peas

Last month, on the very day that we were leaving for California, I received the program for this convention and regretted to find that your president had put me down for a paper on "The Spencer Type of Sweet Peas." I felt then that the proper preparation of a paper would be impossible, as I could only return from California a few days before your convention. However, in taking a walk in the early morning of May 31, around the village of Lompoc, I was so impressed with the fact that while there were acres of the finest Spencers grown in that beautiful valley, both upon our own and other seed farms, yet nearly all the Sweet Peas in the village gardens were of the old grandiflora type. I determined then that if time would possibly allow before your convention I would certainly try to say something that might help increase the enthusiasm for this wonderful new race of gigantic Orchid-flowered Sweet Peas.

Returning yesterday, I was pleased to find that, despite the unfavorable and backward season, most varieties of Spencers in our trials at Fordhook are now sufficiently in bloom to illustrate to all of you who may favor us with a visit on Friday the wonderful distinction of this unique type.

Last evening, in considering how I could best say anything to still further advance the growing interest in Sweet Peas of the Spencer type, I picked up the book about Sweet Peas published this year by my friend Walter P. Wright of England, and upon reading his introductory remarks felt that no words of mine could so well express, as he has done, the wondrous beauty of the seedlings of Contess Spencer. With your permission, therefore, I shall first quote from Mr. Wright:

"It was Henry Eckford who made the Sweet Pea the great flower that it is. It was he who gave it its huge public. He delighted amateurs with new and beautiful colors and with improved form. He enlarged the flower, and added grace, substance and symmetry to it. It was loose—he gave it regularity. It was flimsy—he made it solid. It was ragged—he knit it together. The standard was badly notched—he went a great way to filling the gap up. But, mark you, he did all this without robbing the flower of its fragrance. If he had done that—but why speculate? He did not; he kept it as sweet as he found it.

"Eckford did so much that there really seemed little more to do when he drew towards the close of his busy and beneficent life. But the Sweet Pea was ever a secretive flower, and at long last, when the secret of her loves, so long held inviolable, had been wrested from her, when all about her seemed known, and when a hundred beautiful daughters surrounded her—then she laid down another card.

"Something came with a vengeance, but it was not the Buttercup yellow, nor yet the Gentian blue. It was not the development of color at all, but of form. We gasped in sheer amazement. This astonishing flower had made an absolutely new, revolutionary, cataclysmic, prestidigitary, thaumaturgic change in the form of its standard. Left comfortably smooth and flat by Eckford, it suddenly threw a variety with a standard that was heavily waved or crinkled.

"A waved standard! And with it increased size of flower! A crinkled standard in itself might not have vanquished us, for it might have meant a flower of shrivelled and meagre appearance; but Nature seemed to have resolved to carry her new Sweet Pea scheme through thoroughly, and increased the material in the petal to allow for the folds.

"The waved flower reigns. While my pen flows along the paper in shaping these words, the thought crosses my mind: Has the Sweet Pea other revolutionary secrets in her keeping? Shall I have to modify the first sentence of this paragraph when I write an introduction to the twenty-fifth edition of the present work? I know not. All I know is that in this, the tenth year of the twentieth century, the waved Sweet Pea reigns.

"It reigns supreme, unchallenged. It has taken the Sweet Pea world by storm, and by the appeal of its wonderful beauty has brought thousands of new devotees

into the fold. All the world yields to its beauty and grace."

The original Sweet Pea of this new Giant Waved type was found in 1900 at Althorp Park, Northampton, England, by Mr. Silas Cole, gardener to Countess Spencer—after whom it was named. Mr. Cole seems to think it was the result of a cross of Prima Donna with another seedling, made in 1899. The fact, however, that the same waved form of flower, although of smaller size (Gladys Unwin) was found by W. J. Unwin of Histon, Cambridgeshire, England, and also identically the same variety as Cole's Spencer was found in a row of Prima Donna in the gardens of Henry Eckford, would seem to prove that this new type has been entirely "created" by Nature without any immediate aid from man—a sort of natural, or rather ought I to say unnatural and most remarkable evolution?

My friend, Mr. Robert Sydenham of Birmingham, England, purchased the original stock of Countess Spencer from Mr. Cole and sent the seed to us, in 1902, to grow for him. He introduced this variety in England in 1904. With his kind permission we first offered it the following year (1905) in America, and at the same time introduced also Mrs. Sydenham or Orange Countess (which is now known as Helen Lewis) and Florence Spencer, a selected strain of which is now known as Florence Morse Spencer. In this same season of 1905 we introduced a mixture which we called "The New Race of Gigantic Orchid-flowered Sweet Pea Seedlings of Countess Spencer." At the same time we had, of course, advised our friend, Mr. Sydenham, of the remarkable "break" in Countess Spencer, and told him that in a few years, from separate selections being made, we hoped to have many different colors. We did not realize then how difficult it would be to fix these sports of Countess Spencer, nor in fact how much careful selection and re-selection would be necessary to really establish even the original Countess Spencer and the other two varieties introduced that year (1905) on a basis of fixity where they could be depended upon to come true from seed.

The tendency of the original Countess, and all her children, to sport has been, however, really a blessing in disguise, for now by careful work on the part of American and English growers not less than forty or fifty varieties have been fixed so that they come practically true from seed. None but the grower, or those in close touch with the growing of Sweet Peas, can have any idea, however, of the amount of patience and time involved in this selecting and re-selecting.

In the grandiflora type of Sweet Peas it was rarely that the same sport, or seedling of the same character, occurred in more than one place. The same year that Henry Eckford introduced the Duchess of Sutherland we introduced Modesty, and both proved identical. The same year Messrs. House & Son introduced Lord Nelson we introduced Burpee's Brilliant Blue, and both proved identical. The only other case of identity in new varieties of the grandiflora type which I can now recall is that after introducing Aurora, the next season in visiting my friend, the late Henry Eckford, at his home in Wem, he showed me where he had the same variety but had not up to that time introduced it.

The fact that frequently the same colors in Spencers have occurred simultaneously with different growers in England and in America shows almost conclusively that these were all "creations" of Nature, or sports, rather than the result of cross-breeding by man, although, of course, such new varieties were only made possible by the breaking up into different colors and advancing of the grandiflora type by the late Henry Eckford who well deserves his imperishable fame as the "Father of Sweet Peas."

In most cases the new varieties of the Spencer type have retained the same coloring as the grandiflora varieties. For this reason and to prevent confusion we adopted the plan of giving descriptive names with the word "Spencer" added, as in the case of Burpee's White and Primrose Spencer, Apple Blossom Spencer, Aurora Spencer and King Edward Spencer. One illustration of the occurrence of practically the same new Spencers in England and America it might be worth while to give. In 1908, at the luncheon given by Mr. Leonard Sutton, at Reading, England, to the visiting members of The National Sweet Pea Society of England, in his introductory remarks he said that while the Spencer type of Sweet Peas was making wonderful progress, he thought it would be a long while before any Sweet Pea could become more popular, or more beautiful than that named for His Majesty King Edward VII. In replying, I told Mr. Sutton and his guests that the vice-president of the Society, Mr. Cuthbertson, whose gardens I had just visited in Essex, and ourselves each had a Spencer form of King Edward VII ready for introduction in 1909, but that I would gladly agree to call it King Edward Spencer. After further consultation with Mr. Cuthbertson he thought, however, that his was a little different from ours, therefore, his firm (Messrs. Dobbie & Co. of Scotland) introduced theirs the same year as "The King."

It is worthy of note that the varieties of Spencer Sweet Peas, which are of the same color as existing varieties of the grandiflora type, generally come more readily true to color than do those which combine with the distinctive large waved form of the Spencers, also new colorings. While King Edward Spencer and The King both came

quite true from seed, yet Mrs. Rontzahn, which we introduced the same year, being of an entirely new combination of colors (light apricot and straw) sported so badly that an entirely new re-selection was necessary. Similar coloring introduced in England (Mrs. Henry Bell) behaved in like manner. We have had a similar experience, much to our regret, the past season. Of the four varieties introduced this season by Messrs. Morse and ourselves, Senator Spencer, Marie Corelli and W. T. Hutchins come quite true, while the beautiful Miriam Beaver (deep apricot and straw) has broken so completely that we shall have to withdraw this variety from sale, probably for several years at least.

Our trials show that new English varieties, possessing new combinations of coloring, sent out this season with equally good faith, have also behaved in a similar manner, so that it will require considerable courage and patience to persist in re-selection and establishment of these new colors.

One word more about the curious sportive character of the Spencer type. We were very pleased with the truestness to type of the selected stocks of Spencers this season on our own farm and the farms of several other growers in Santa Barbara and Santa Clara counties, but noticed one of the most remarkable examples of sporting that we have ever seen. The best re-selected stock of George Herbert, in fact, a stock that originated with our friends, Messrs. C. C. Morse & Co. (and to which their Chinese gardener, Henry Chu, in his enthusiasm had given the name of James Lick) we found both growing on their grounds and on our own, came absolutely true except for one sport and that was a white-seeded white Spencer of which there was fully 5 to 8 per cent. Examination of the seed left over from planting showed that there was not a single white seed in the lot. We have allowed a few plants of this white to stand, marking same to see whether we should have to lose all faith in being able to tell, when in bloom, a white-seeded white from a black-seeded white!

With the splendid work now being done by the National Sweet Pea Society of England, seconded by our own new American Sweet Pea Society, growers, generally, are awakening to the fact that the fair fame of new introductions in the Spencer type rests largely with them in being able to restrain their enthusiasm for at least a year after they consider they have sufficiently established a new color ready for introduction.

The seed of Sweet Peas of the true Spencer type can never be produced nearly so cheaply as the grandiflora type. The roguing that is necessary is not merely to remove off colors, but also to see that the type be not allowed to deteriorate to the grandiflora form. While most free blooming, the true Spencers have the unfortunate characteristic of dropping the majority of their blooms without setting pods. So noticeable is this that the Gardeners' Chronicle, of London, last September said: "It would not be an exaggeration to say that some of the choicest Spencers do not yield a tenth of what the old varieties do, and this in a favorable season."

If the Spencer type of Sweet Pea is to maintain and extend its present popularity, growers, generally, must aim at quality and be satisfied with a much smaller quantity of seed from a given area than has ever been recognized as a good crop of the older types.

This paper is already longer than intended and I shall not attempt, therefore, to enter into any description as to the different varieties of Spencers, but shall have a number of assistants with "Finders" in our trials at Fordhook, when we have the pleasure of your visit on Friday, and I shall have there, also, several hundred copies of our little book "Sweet Peas Up to Date," in which all those who are interested can check the varieties that appeal most pleasingly to each.

Dr. W. W. Tracey, of the Department of Agriculture, Washington, D. C., in commenting on W. Atlee Burpee's paper, said: "It was especially interesting because it brought out some principles of seed growing which are not generally recognized, namely that there is a gradual development in a species as a result of which we have a sudden break in varietal character. Such breaks may occur in a number of different locations, yet be identically in each case the same variation and, when occurring, it is comparatively easy to establish an entire new race based on such variation. The same principle is illustrated as developed in the case of Beans where there was an occurrence of the dwarf form of Lima Beans which was previously unknown and, in a single year, developed in a number of different places and from a number of different varieties the same dwarf habits."

This paper was further discussed by Messrs. Vaughan, Tracy, Keeney and Leonard. On request, Mr. Burpee made a report on the California crop conditions as observed by him in his recent travels through that State. Other crop reports were made by Messrs. Keeney, E. B. Clark, S. F. Leonard and J. C. Robinson. This was a much appreciated feature and will be enlarged upon in future conventions.

Assistant Secretary of Agriculture Hon. W. M. Hays referred to the new departure in statistics adopted by the International Institute at Rome, as being similar to reports in this country by the Department of Agriculture. It will be valuable as to crops such as Cow Peas, he said, which are widely shipped across international borders of

different countries, and dissemination of prices will tend to increased employment of some crops as fertilizers.

Report of Committee on Postal Laws

The report of the Committee on Postal Laws was presented by Leonard Vaughan. An interesting feature of the report, and the discussion following, was the matter of the recent more stringent enforcement, somewhat extensively, of an old regulation regarding the requirement of enclosing seeds in transparent coverings. Messrs. Allen, Burpee, Robinson, Ford, Maule, Hastings, Bolgiano and Page took part in the discussion. The regulation, it was pointed out, only applied to sealed packages or packets. Paper manufacturers, it was learned, are taking interest in the finding of proper materials for envelopes and covers to meet the regulation. Postmasters of the larger cities were liberally disposed, but unable to do away with the regulation, while postmasters of small places at destinations rigidly and literally enforce the regulation oftentimes. Some general remedy was necessary and in the absence of modification by the postal department it seemed that seedsmen must find practicable means to comply with the law, which they were endeavoring to do as speedily as possible, but in many cases large stocks of packing material on hand would entail loss in compliance.

The Canadian Seed Commissioner's Paper

An interesting paper on "Methods and Apparatus for Seed Testing by Seed Merchants," by George H. Clark, Canadian Seed Commissioner, was read. In an interview with our reporter, Mr. Clark said: "The attitude of the American Seed Trade Association, both at the Boston conference with the National Association of Official Seed Analysts and at this convention, seems a clear indication of a desire on its part to deal fairly with the question of seed trade legislation. It is my opinion that, after a few years, the present difficulties will clarify themselves and with a thorough education on seed matters will resolve themselves favorably to all concerned through a better understanding of the conditions of supply. I am informed that the quality of seeds now demanded throughout the United States, as in Canada, is markedly superior to that of five years ago. Our Canadian experience has been that we are not able to make good farmers by legislation; the principal benefits derived from the Canadian seed legislation have arisen in the protection of the legitimate trade against careless or unscrupulous and designing vendors. Today there is a wider range of prices paid to farmers, as between high-class seeds and lower grades, which has had a marked effect in discouraging production of seeds in lands that are foul with noxious weeds."

Mr. Clark's paper was discussed by Messrs. Page, Robinson, Kendel and others, and many interesting points were brought out with reference to the effect of stratification on germination of hard-shelled seeds and the difference in percentage of germination in seeds of varying ages, those of greatest age sometimes showing greatest percentage of germination. Replying to a query by Asst. Sec. of Agriculture Hays, the speaker said sweating, if not too prolonged, favored germination, otherwise it depleted the vitality of seeds.

The Banquet

The banquet was held on Wednesday night at the Strand Hotel. Covers were laid for 175 persons. Albert McCullough was toastmaster. Responses were made by Pres. J. C. Robinson, Frank C. Woodruff, C. F. Wood, Kirby White and Herbert Quick, editor Farm and Fireside. The menu was interspersed with monologues on Irish humor and satire by Lawrence Sharkey; vocal music by La Favorita Concert Quartette. The function was not concluded until after midnight.

The credit for the banquet arrangements is due to Leonard Vaughan and Chas. D. Boyles of Chicago.

On Wednesday afternoon a number of members and their ladies enjoyed sailing trips on the yachts Princeton and Viking, while others went to Philadelphia to visit the establishment of Wm. H. Maule and Floracraft.

Thursday's Business

The Obituary Committee will report at Thursday morning session, on the deaths of William Eber, Quincy, Ill.; James J. H. Gregory, Marblehead, Mass.; John H. Allan, Picton, Ont.; Isaac Funk, Bloomington, Ill.

The paper by Assistant Secretary of Agriculture Hon. W. M. Hays, Washington, D. C., entitled "Recent Science in Plant and Animal Breeding," was read at the Thursday morning session. It will be found in full on page 1118.

The report of the meeting of the National Association of Official Seed Analysts and the report of the committee on the president's address were then taken up.

Result of the Election

President, E. L. Page, Greene, N. Y.
1st Vice-Pres., Leonard Vaughan, Chicago, Ill.
2d Vice-Pres., M. H. Duryea, New York, N. Y.
Sec.-Treas., C. E. Kendel, Cleveland, O.
Asst.-Sec., Leonard Vaughan, Chicago, Ill.

Executive Committee: J. C. Robinson, Waterloo, Neb.; S. F. Willard, Wethersfield, Conn.; C. N. Page, Des Moines, Ia.; S. F. Leonard, Chicago, Ill.; Keeby B. White, Detroit, Mich.

Membership Committee: Albert McCullough, Cincinnati, O.; Frank C. Woodruff, Orange, Conn.; S. A. Wilson, Madison, Wis.

Recent Science in Plant and Animal Breeding

A paper prepared by Hon. Willet M. Hays, Assistant Secretary of Agriculture, Washington, D. C., and read before the Convention of the American Seed Trade Association at Atlantic City, N. J., June 21 to 23, 1910.

To give values to the various scientific facts and theories in relation to their use in the actual work of improving plants is no easy task. Practical breeders have their not too clearly defined theories but poorly co-ordinated with their main lines of efforts in breeding. Scientists, on the other hand, often assume to apply their facts and theories to breeding in the practice of which many of them have not had experience. We have few men who combine a thorough knowledge of existing science of heredity and breeding with the best practice. The public agricultural service is developing a class of men who, under public auspices and in private interests, are rapidly learning the application of science to the creative breeding of both plants and animals.

Civilized countries are discovering that, by breeding, the annual product of domesticated plants and animals may be increased several billions of dollars in value, thus lessening to some extent the inevitable increase in the cost of food and clothing to the consumer, while not decreasing the return per acre of the producer. This economic concern, and the interest men take in delving into science, are uniting to impel men to develop the science of breeding and to utilize this new knowledge on a scale commensurate with the interests of the nearly two billions of people which the world must feed.

Modern facilities for the transportation of thought, of men, and of materials, will soon have obliterated the partitions between the countries of the earth, throwing all of mankind into one community. Already science knows no national lines. Commerce is constantly increasing the fluidity of trade between nations as well as between States. Men not only bring the ideas of all countries to one new country, but they mingle the blood of many races of men into a common stream. Domesticated and wild plants and animals are being transferred from their original habitats to all other regions where they may respectively prove of value, either in their purity or when recombined into new types. Under modern science the Mendelian unit characters are being sought out, transported and, by breeding, assembled into newly fashioned varieties, breeds, and even species with enlarged economic values for each given locality and purpose. And science is not only organizing the vocational education, even of all the productive classes, but it has begun to study heredity in man and to at least dream of the possibility of recombining the virtues of the different families in graver races of people.

For the most part, variety and breed improvement is and probably ever must be a relatively slow and tedious process. In most lines there has been discovered no method of making rapid improvements. None better knows the falsity of claims of marvelous and rapid changes by breeding than those who make these claims.

Exaggeration is the most dangerous enemy to plant and animal improvement and to the sane consideration of eugenics. On the other hand, modest increases in plant and animal products, when applied to hundreds of millions of farms, give increased billions of products. The day is rapidly coming when public authorities and private interests will be justified, by achieved results in breeding, in making all needed investments of money and time in creative breeding along lines of economic improvement.

The breeding of living things cannot be wrought out under the rigid application of scientific facts and formulas as can the construction of a drainage system, a railroad or a manufacturing plant. Under the guiding hand of science, art in breeding must also have scope. In fact, in no other line is there such large and complete union of science and art. Along with the broad scientific conceptions of Darwin, the mathematical precision of Mendel, and the statistical records of performance of the modern plant breeder, there must be the art of the sculptor, of the painter, and even of the musician, all put into operation with somewhat of the genius of a Burbank.

Breeding is becoming so much of a technical profession that a close division of labor is rapidly becoming important. It may be expedient for a few men to work with a large number of species and genera that they may perform the special service of giving a broad scope to the general subject of breeding; but, for the most part, more rapid and larger results will be achieved by each worker concentrating on a given species or on a group of related species. Many men have already fully demonstrated that scattering, discontinuous efforts, using small numbers of each of a number of unrelated species, is the way to get nowhere in creating improved forms of plants and animals. No doubt that even as great a genius as Burbank would have to his credit a far larger economic addition to America's plant products had he confined his efforts to a dozen important species. Your humble servant worked for twenty years with about twenty species, the purpose being in part to gain a broad view of the subject of breeding, and to prove the large economic value of plant and animal improvement. The creation of new forms of the great staple crops was rather a secondary consideration. But even in this case better

scientific as well as far larger immediate economic results would have accrued if the work had been confined to not more than one-third of the species used.

The creative breeder who works with one or a few species can compass the collection of all needed basic materials from all parts of the world. He can not only learn the unit characters of each acquired variety, but he can, with a fair degree of success, follow these unit characters in the recombined forms which he produces by hybridizing. In other words, without a too extended variety of basal materials, he can gain an intimate knowledge of the basal unit characters, as does the painter of the primary colors which he blends to represent on the canvas the desired forms and tones. It is true there are some species, as Wheat and Barley, yeast and bacteria, the breeding of which can be done in larger part under scientific performance, where it may be that mere art takes second place. On the other hand, in the breeding of Strawberries, Peaches, Chrysanthemums and Orchids, the eye of the sculptor and painter and the taste and smell of the epicure are at least of equal importance with scientific records. The art-expression of a people is said to be the highest means of expressing civilization. Once the breeding of living things reaches that development of which it is capable, it may be that those most brilliant in creative breeding will have the highest place at the head of the class of artists. Certain it is that the molding of living things which express the greatest beauty of form, color, and fragrance, will give to him who can apply science and art to living protoplasm a scope for scientific knowledge, prophetic vision and artistic skill far beyond that possible to apply through the chisel or through the brush alone. We need so to organize our work of creative breeding that the nations can command the talents of men with the greatest genius for all the phases of the betterment of plants and animals by breeding.

During the past decade or so science and practice have begun a re-statement of the principles underlying heredity and breeding. The analysis of the subject, the nomenclature and the philosophy of Miles' Stock Breeding, which for the third of a century was the accepted textbook along this line, are now being rapidly reorganized. Mendel's laws of segregation, dominance, and recombination; DeVries' mutation theory and its corollary amply proven in practice; the need of using very large numbers in breeding; the possibility of organizing large and efficient breeding establishments; the introduction of the subject of practical breeding into agricultural colleges and schools; and the development of men trained in the science and art of breeding; also the beginnings of a usable literature based on the technique developed in scientific plant and animal breeding, are all combining to make a new world for human efforts. And the facts should not be lost to sight that men of many nations are beginning to seek the truth concerning the breeding of the human family. All along the line, modern science and art have finally begun to attack in a systematic way the reorganization of unit characters in living forms into more useful types; and, if possible, to create new unit characters not before existent.

Mendel's discoveries, and the discoveries of his disciples following his methods of research, have given us some valuable principles which have use at least in a narrow range of breeding operations. But in addition to this, these investigations have most profoundly aroused science to the possibilities of investigating operations of heredity, both concerning natural evolution and artificial evolution or breeding. DeVries' investigations, with possibly even a larger immediate value than Mendel's, have also done much to attract men with a scientific bent to delve into the secrets of those elusive somethings which carry units of heredity from one generation to the next, and often lie dormant, to appear possibly in their original purity after two or even many generations of recessive somnolence. While Darwin developed the fact of the evolution of species, these men have sharply turned attention both as to how Nature's evolution may be studied, and also as to how man may rapidly recombine and evolve Nature's forms into types of higher economic value.

The work of Bateson, Tschermak, C. B. Davenport, Castle, Webber, and many others who are making a specialty of the science of heredity, the work of Neilson, Zavitz, Galton, Burbank, Swingle, Williams, Gentry, Eekels, Craig, and many other breeders of plants and animals, is rapidly expressing the possibilities of science and art in the terms both of beautiful forms and of dollars. And here and there we find a man who may be laying the foundation for a reputation for large public service in the pedagogics of breeding.

The aggregate efforts in the breeding of plants of the United States Department of Agriculture and of the State Experiment Stations, and of similar institutions in other countries, are year by year increasing into a public work of large magnitude. These institutions are by no means usurping the field. They are in fact rapidly increasing the field for private efforts in plant breeding. As yet much less is being done in a public way for animal breeding; and theory and technical practice of plant breeding has within a decade far outstripped the theory and practice of animal breeding. It would seem easy to predict that public institutions concerned with animal improvement will rapidly take the new and inspirational point of view from the brilliant investigations in plant breeding and will lead to a rapid development of the

science and art of improvement of domestic animals. It is of interest to note that a dozen years ago the plant breeders received their best inspiration from animal breeders, and that now the tables are turned and that breeders of animals need the inspiration from the accelerated work of the breeders of plants.

Probably the most important recent development in relation to plant and animal breeding is the revision of methods of teaching this subject which is now going on, and we may hope ere another decade passes that our colleges of agriculture and universities will have supplied a group of young men well grounded in all that is known regarding research in heredity and in method of breeding plants and animals. Certainly, this field offers a most enticing prospect to young men with a liking for and with a genius for either research in heredity or for the work of creative breeding in public institutions or on private plant and animal breeding farms. And the field for amateurs who desire an interesting avocation is most enticing not only in relation to pet animals and ornamental plants but in relation to many minor staple crops, fowls, and smaller animals, and even with beneficial insects.

I was asked specifically to say a word regarding the utility of the Mendelian theories as applied to economic breeding. The range of the use of Mendelian philosophy in recombining in new types the most desirable of the unit characters found in available types, forms a much less portion of the field of economic breeding than Mendelian enthusiasts at first claimed. On the other hand, there is no doubt that formal recombination of desired characters in the hybrid breeding of Wheats, Barleys, and many other crops can be carried out to large economic results. Spillman's work in the State of Washington clearly demonstrates this fact in a large commercial way.

Swingle has made many most promising recombinations of Citrus fruits, and Hansen and other daring compounders of radically different species and types within species, are recording results which promise new forms in which the recombinations of characters will give new values, and the recombinations made by those engaged in theoretical research give both direction and inspiration to the radical Mendelian breeder.

It is proper to recognize, however, that the largest value growing out of these discoveries, lies in clarifying our plans for effecting the informal recombination of characters. At first, the then astounding facts concerning the segregation of definite characters and the possibilities of their formal recombination, almost as chemical atoms recombine into new compounds, served to blind us from the larger concept of the very complex network of descent which makes up most of our economic types of plants and animals. We have now gotten back to the fact that only under peculiar circumstances and in particular cases, can hybridizing be worked out with definite unit characters. In the great bulk of recombining first and second generation hybrids, in uniting the blood of three or more original forms, and especially in blending related forms, and forms recently and much hybridized, and in the vast amount of necessary selection work, the art of breeding must be carried out without adhering closely to formal recombinations.

Often the network of descent which happens to most happily produce the most valuable combination does not always appear like the formula which represented the ideal toward which we started. Very often the new acquisition breaks in upon us with an unexpected combination of forms which resist our attempts at analysis. The wise breeder chooses that which has the largest economic value, somewhat regardless of whether he can trace all the threads of both woof and warp in the new network of descent. And, as the years go by, the newly bred materials, many of which are highly complex compounds, increase in numbers, the breeder will have at his command larger and larger supplies of basic materials. In some cases the breeder will work down or back or up to pure-bred homozygotic basic materials along the lines pointed out by Shull's work with Corn, and here formal Mendelian breeding can be practiced most effectively. But it would appear that the larger part of the plan, and of the humdrum details of the work of making over America's plant and animal forces, would be outside the practical work of formal Mendelian recombination. And I reiterate that the larger value of Mendel's discoveries and of DeVries' mutation theory will be to clarify our plans of doing the bulk of this less systematic work.

The new philosophy will be expressed in a new nomenclature and, as the years go by, breeding will be taught with more of the simplicity with which arithmetic is taught. It will always be an abstruse subject, and while the Mendelian philosophy may seem to simplify the recombination of Nature's original types, DeVries' mutation theory will continue to relate in a larger and larger way to the importance of using immense numbers, both in Mendelian hybridizing and in the extensive less formal breeding, that occasional superior foundation-plants of exceedingly great variety-producing-potencies may be secured.

We need not be surprised if the researches of Mendel, DeVries, and others lead to other discoveries of still wider practical application in the improvement of plants and animals. Enough is already known to enable the world to add 10 per cent. to its food products at very little cost, thus materially reducing the expense of living,

and the need of the hour is that we work out methods of utilizing the new knowledge already existing, and that which promises rapidly to come, and that we apply these methods on hundreds of thousands of breeding farms throughout the world. A project which has as its goal increasing of the world's farm products by some billions of dollars, at very little cost, thus preventing the rise in the cost of living in all countries, is of world-wide and permanent economic and political interest. The conservation of half a billion of wasted American resources of heredity forms no small portion of our conservation problem. Laws and methods of breeding, once they are worked out, will help increase production in other countries that they need not draw so heavily on the supplies of foods our soils should supply cheaply to our own people.

Taking all these statements at their face value, it is clear that there is good reason for finding ways of promoting the mode of creative breeding and of distributing all established and new forms of plants and animals to all growers in whose hands they will produce increased values of the products. Never before did public and non-public agencies, engaged in securing and disseminating the best seeds, plants and animals, appear so important as now. The Seed and Plant Introduction Division of the U. S. Department of Agriculture, assisted by the Federal and State and private plant testing stations, has now been well organized, and its work unfolds larger and larger in scope with every year. The breeding work of the Federal department, of the State experiment stations, and of those private breeders who do creative work, is rapidly gaining a large status based on substantial achievements. To realize the rapidity of the development of scientific plant breeding one needs only to learn that, two decades ago, the botanists of the U. S. Department of Agriculture were debating amongst themselves as to whether it was proper to use the term plant breeding in their bulletins, and it was only a few years earlier when such an intrepid horticulturist as Prof. J. S. Budd of Iowa was giving inspiration to the first classes taught plant breeding in our State Colleges of Agriculture. Now there is no more highly accredited scientific subject in our universities than the subject of heredity, and special practice courses in plant breeding are being offered in some of our State Colleges of Agriculture. Legislative bodies are ready to appropriate public money for use by men who can show that they can improve the producing potencies of our crops and of live stock. Even the conservatism of our older school men, often still in charge of State Colleges and universities, has been overcome. The farmers are learning that even everyday crops, like Alfalfa and Clover, as well as Wheat and Apples, can be so bred that they will produce larger yields, preponderate in certain nutritive elements, show higher color, form, keeping quality and resistance to disease than do the common types which were dumbly supposed to be all efficient. The breeders of yeasts are making beers and wines of staple flavor. The breeders of bacteria are giving cheesemakers pure cultures of new varieties of bacteria which produce cleanly cheese of the soft types which run uniform and can be safely purchased on sample. Men are laying hold of the Pecan tree—the Chestnut, and are putting Nut growing on a new basis. Others are devising ways of breeding Curly Walnut and Curly Maple, that the artistic merit of furniture made therefrom be enhanced even if that be for the future generation.

Foresters have learned that heredity works in making forest products along the same line that it works in producing the 200 egg hen and the 400 pounds of butter cow. They are not only devising ways of utilizing cuttings from only the most rapidly growing Cottonwood parent tree, but they are finding relatively rapid methods of breeding up rapidly growing races of Catalpas, Pines and other trees which are planted for profit. It is worthy of passing notice that much of the effective earlier breeding of plants was with less important, mainly ornamental species, fruits and vegetables. The greenhouse man and the horticulturist who dealt with individual plants earliest took to following up variations and propagating those from which the seeds came true to the type of the parent.

But now the grower, economist, scientist, and the breeder all see that the large problems concern the improvement of the great staple crops which feed the nations and which give us our balance of trade. By improving the heredity of our Cotton seed ten per cent. more Cotton is grown and we have an increase worth fifty to seventy-five millions of dollars, and the world has cheaper clothing. By adding ten per cent. to the yielding power of the heredity of our Corn seed the crop is increased by more than a hundred million dollars. Therefore the breeding, both of plants and of animals, is taking a place in national economics. Our State Experiment Stations, and the legislatures of the States, are focal centers in this scientific economic project. Organizations like this American Seed Trade Association, and other National, State and local organizations, made up of men who clearly see in detail as well as in a national way the meaning of improved varieties of plants and improved breeds of animals, are responsible for pushing the work of introducing, breeding, testing, and distributing seeds and plants which will produce larger crops and eventually will supply cheaper foods to all people. If our experiment station men do not clearly see the magnitude of their opportunity let them be shown. If our legisla-

tors do not see the large profits to the State from the use of public funds in breeding better crops for the State, who can better show them than the men interested in growing and selling pure bred seed and plants.

The Relation of State Seed Laws to Interstate Commerce

Paper prepared by Curtis Nye Smith of Boston, Counsel for the American Seed Trade Association, and read before that body in convention assembled at Atlantic City, N. J., June 21 to 23, 1910.

It is perhaps unnecessary to call the attention of seedsmen to the new order of things caused by the so-called "pure seed legislation" in many of the States. It is a good sign to see the very recently awakened and effective interest of the members of this and of kindred associations in these matters. This interest will be of as much benefit to the public as to seedsmen for it is no good advertisement to a State to enact unwise or unconstitutional laws. From the reports of your officers you have noticed that their perfectly legitimate efforts to discount and avoid meaningless and unwise restrictions on a most honorable business have met with considerable success from the outset, and that, as the new work unfolds, further advancement and protection of the trade will be forthcoming. But the unfortunate circumstance is, that many States, in the last two or three years have already placed on the statute books so called pure seed laws, furthermore providing the machinery for the execution of these laws, and the State officers have exhibited due zeal (sometimes misapplied), in requiring conformity to the statutes.

Inasmuch as most seedsmen transact business in States other than their own, why is it not of practical use to them to understand the relationship of the laws of those foreign States to their interstate transactions? Indeed, the mere statement of the question indicates an affirmative answer. To appreciate a few legal principles defining the essential differences between the powers of a State and of the Federal Government over commerce, must obviously be of advantage to the merchant, giving him assurance in new ventures, or protection in his former lines of business, or eliminating the expense and friction of contests with State officers. Another reason for the propriety of considering the subject before us is that the question is a novel one to the seed trade. Up to a brief time ago, merchants brought and sold in any part of the country "ad libitum," with no necessary consideration of a regulative statute in the foreign State. Now, the merchant suddenly finds himself called upon to pay a license fee in one State or buy some tax stamps in another, or an ex-State debtor refuses to pay his account, setting up a defense of non-compliance with the State law, or, if the seedsmen be caught traveling in the foreign State, to prosecution and imprisonment, and so forth. With these problems in mind, and fortified by the knowledge of the great number of queries on this subject sent to the Association's counsel, I submit the following observations.

One of the most interesting and, in some ways, perplexing questions is to state the legal relationship of the laws of a State to Federal laws. Under our republican form of government the scheme of our forefathers was to separate the duties and privileges of the Federal Government from those of the several States, limiting and defining such duties under the Constitution, and intending that such written constitution should be the authority to be consulted in cases of dispute or misunderstanding between these two great elements in our political scheme. It was the object of the framers of our Government to permit the States full authority to govern their local affairs, but in the relations between the States and foreign countries, the Federal Government was to be supreme. This scheme fitted quite easily into the simple conditions of that time when there was little intercommunication between States and the States were few in number. However, as the country expanded in territory, in business activities and inter-dependence, the problem of separation of powers became difficult. The laws of the State were found to conflict or interfere with the higher authority of Congress to regulate interstate and foreign commerce. The Supreme Court of the United States, the final arbiter of all these questions, was called upon to decide the questions, and, in many cases reversing the Supreme Courts of the several States, laid down the doctrine that the Congress alone has the right to impose regulations on the commerce between States and with foreign countries, and that, in the absence of such Federal legislation, it was to be inferred that Congress intended that such commerce should be unrestricted. This judicial interpretation of the superiority of Federal over State powers in the matter of interstate commerce is very well illustrated by the decisions of the Federal Supreme Court on the question of the right of States to interfere in interstate commerce in liquors. Some States determined not to have liquors sold in their States. To this end sales, solicitation of orders, delivery and so forth, were prohibited. The State courts upheld the laws. The Federal Supreme Court reversed all these decisions and held all those laws unconstitutional in so far as they interfered with interstate commerce. How, then, is there any doubt about the

monopoly of the Congress to control interstate commerce in seeds as in all other merchantable articles?

We all know that the Congress has not, so far, prescribed regulations for interstate commerce in seeds and, under the rule just above stated, such traffic should be entirely free from direct or indirect restrictions under State seed laws. I say indirect restriction advisedly, for it is held that the right to sell in the original package in which the article is imported into the State is as much an inherent and necessary part of interstate commerce as is the actual transportation of the article between the States. The answer to our query is, that States have the power to enact and execute regulative laws affecting even interstate commerce under its inherent power, called the Police Power, which has been judicially and wittily defined as the power to pass unconstitutional laws. (ex Rel. Jones-v-Froelich 115 Wis. 32, 42).

To make a long story short, the Federal Supreme Court has gradually enunciated the doctrine, which is practically judicial legislation, that the States, in the exercise of this inherent Police Power, can pass laws for the safety, order, morals, and to prevent fraud, even if such laws indirectly interfere with interstate commerce, but with the very important provisos, however, that these laws must be reasonable, they must not discriminate against interstate commerce, and they must not violate any express enactment of Congress on the same subject, or the provisions of the Constitution of the United States.

To my mind the briefest and clearest illustrations of this doctrine are three cases decided by the Federal Supreme Court. Pennsylvania absolutely prohibited the manufacture and sale of oleomargarine in Pennsylvania. The Federal Supreme Court sustained the Pennsylvania courts in prohibiting a Pennsylvania manufacturer of oleomargarine from making and selling this article. (Powell-v-Penn. 127 U. S. 678.) The Federal Supreme Court reversed the local courts in another case, holding that this State law could not prevent the importation and sale in original packages of oleomargarine in Pennsylvania because oleomargarine was a legitimate article of interstate commerce. (Schollenberger-v-Penn. 171 U. S. 1.) On the other hand, a Massachusetts law prohibiting the sale of oleomargarine when colored to resemble butter, even though this law interfered with interstate commerce, was upheld by the Supreme Court of the United States. (Plumley-v-Mass. 155 Mass. 461).

Is it not fairly clear then that the Federal Supreme Court will allow the States to enact regulations to provide purity, or genuineness of articles carried in interstate trade, in the absence of conflicting Federal legislation, but will condemn any State laws as unconstitutional which restrain or prohibit interstate commerce in well-recognized merchantable goods which are genuine and pure or as pure as reasonable care can secure?

The obvious conclusions from this brief discussion is that States, in the absence of prohibitory enactments by Congress, may pass and enforce reasonable laws regulating commerce in seeds even if incidentally such laws may affect interstate commerce. Mark the importance of the word "reasonable," for most of the present seed laws would not fall within the class denoted by that adjective.

If I am not taxing the patience of my listeners too much, perhaps a few practical, general suggestions to seedsmen regarding this interstate commerce in seeds may be of some interest.

It is profitable, briefly to note what these State seed laws pretend to regulate.

Most of these laws regulate "the sale" or "offer or exposing for sale" to which some State laws add restrictions to the mere "distribution" or "giving away" of seeds, and some States go so far as to attempt to regulate the "delivery" or importation of seeds in or into the State. One State even prevents having possession of specified seeds. Then some States specifically limit the operation of the law to those "sales" or "offers" "within the State" while some State laws narrow this limitation even more by adding the further restriction, "for seeding purposes within this State."

It almost seems too simple even to state that a seedsmen of one State receiving an order for seeds from a customer in another State and completing the sale by delivery F. O. B., is not selling or offering for sale in the other State and consequently has no interest in that State's law. Yet during the last year we were amazed to note that a high official of a State expected to reach such a transaction under the law of his State. It is needless to add that such claims are not tenable. A fortiori, if the statute limits the offers or sales "within the State," and for "seeding purposes within the State," the ex-State seedsmen is more distinctly uninterested in the seed statute. Indeed there can be no ex-State statute which can affect him in a sale of this nature. Of course, the purchaser must protect himself from the law, which, as noted in some States, restricts "importation" or "possession" of seeds. Such law, in my opinion, is so harsh that there may be grave doubts of its constitutionality.

If, on the other hand, the facts of the foregoing illustration are changed so that the seller pays the transportation charges, there being no other agreement about point of delivery, the seller has committed an offense under the law.

Questions have been asked, under the above statement of facts, whether payment for the seeds is an issue.

We will endeavor to answer all questions submitted to us by subscribers; stock cannot recognize anonymous communications.

IDENTIFICATION OF PLANTS

When sending specimens for names correspondents should send some lower leaves of herbaceous plants as well as upper ones, and of all plants, flowers and seed vessels if possible. In addition to this, it stated whether it be shrubby tree, herbaceous, wild or cultivated, location where growing. It would often enable identification of specimens difficult to determine otherwise.

(141) **Questionable Chrysanthemum Stock.**—The first of the month I received from a large grower of Chrysanthemums 2500 plants. Over half of them were 12 to 18 ins. high; they were out of 2 1/2-in. pots, the varieties Dean, Appleton, Yanoma, Bonaffon, Robinson and Nonin. The lower leaves were yellow. I cut them back to 3 or 4 leaves from the pot. Will they start and come along all right? Have taken cuttings from the tops. Which will produce the best flowers? I wish to grow most of them to single stem. An early reply will ease my mind.—W. H. F. R. I.

With the exception of Appleton, Bonaffon and Robinson, I would just as soon have the rooted cuttings as the cut down, stunted 2 1/2" pot plants. The wood of them, however, will no doubt break in a short time. Select the strongest shoot, or if not too particular as to size of flowers, allow two shoots to grow. To send out stock for growing on 12 to 15" in height out of 2 1/2" pots is wrong, and you did the right thing in cutting them back. The varieties Dean, Yanoma, and Nonin, being late ones, will have plenty of time yet to make good stock from rooted cuttings, planted around the 20th of the month. Bonaffon, Robinson, and Appleton, and especially Appleton, do best when planted early, that is, if large flowers are wanted, and I should expect better results from the cut down stock than the cuttings now in the sand. The one objection I have against stock which was for some reason or another cut back is the unevenness of growth, which is not the case with the others; but the largest 'Mums I ever had were Appletons grown from pinched back stock. They were planted out late in May, in a heavy fibrous loam, and had no other feeding than several mulchings of well-rotted cow manure, and also four or five applications of liquid cow manure.

(142) **Pulverized Sheep Manure for Carnations, etc.**—A subscriber informs us that he has noticed that some of his friends in the same line of business have had very good success with pulverized sheep manure in growing Carnations and Roses, especially the former, and he wants to know what we think of it for Carnations, and also wishes complete directions for mixing it. He further wants to know if this pulverized sheep manure is as good on all bench crops as it is for Carnations.—Troy, N. Y.

Pulverized sheep manure is a valuable fertilizer for greenhouse crops, and according to investigations made at the Cornell Experiment Station, several years ago, this manure is about one third more valuable than horse or cow manure, the value being estimated by the relative proportions of nitrogen, potash and phosphoric acid contained in these various manures. In Carnation growing, there are two chief methods by which the sheep manure may be applied, the first being in a liquid form and used in the proportion of half a bushel of the manure to a barrel of water; and the second as a topdressing on the benches, the manure being mixed with soil in the proportion of one part of manure to two parts of soil, and applied to the surface of the bench thickly enough to cover the soil. But in either case it is not applied until the plants are well established, the liquid being given at intervals of a week or ten days, and the topdressing being renewed at longer intervals, according to the growth of the plants and the condition of the soil. So much depends upon the quality and condition of the soil in the benches that it is practically impossible to lay down positive rules for the application of these additional fertilizers, and with our imperfect knowledge of the contents of the soils we use it becomes necessary for each grower to experiment for himself, bearing in mind that an excess of feeding is likely to produce soft flower in Carnations, and also excessively brittle stems. W. H. T.

Own Root Rose Plants

Pink Kilmarnock, 3-in., \$60.00 per 1000.

American Beauty, 3-in., \$50.00 per 1000.

All fine stock.

American Beauty, 3 1/2-in., \$10.00 per 100.

Bridesmaid, 3-in., \$40.00 per 1000.

(143) **Fertilizer for Gladioli.**—I would like to have you name a fertilizer for Gladioli which will produce the best blooms.—J. B. H., N. J.

We have not had any satisfactory results from the use of commercial fertilizer on Gladioli bulbs. Our experience has been that good, rich soil, with plenty of manure, produces the best blooms. JOHN LEWIS CHILDS.

To Obtain Seeds from Double German Stocks

I have noticed your reply to Question No. 125. Allow me to say that it is not quite correct. Examine a flower of a Ten-Weeks Stock or of any other Stock and you will notice that the double blooms have no pollen and, as well, no pistil; therefore they are of no use for the production of seed. They have no influence at all on the single flowering or seed-producing plants. The seed grower must select the seedling plants and choose only those from which he is sure to receive a good percentage of double flowering plants. It takes years of experience to become an adept at this selection. Errors and disappointments will be the result if your questioner does grow his Ten-Weeks Stocks in the manner reported in your issue of May 21. It is understood, of course, that all Stocks revert to singles if the seedling plants are not selected most carefully, therefore your questioner will have a pretty high percentage of singles in the coming season if he does not carefully select his seedling plants.—FREDERICK ROEMER, Quedlinburg, Germany.

Elberon (N. J.) Hort. Society

The annual Rose and Strawberry show of the Elberon Horticultural Society was held in Elberon on June 16. There was a fine display of Roses, Orchids and vegetables, but few Strawberries, due to the wet weather we have been having this past week.

The awards were as follows: Collection of Hybrid Perpetual Roses—1, Charles O. Duncan; 2, Anthony Bauer. Twenty-four Roses, distinct vars., 6 of each—1, C. O. Duncan; 2, A. Bauer. Twelve Roses, 3 vars., 4 of each—1, James Kennedy; 2, A. Bauer. Six Roses, 2 vars., 4 of each—1, Edward O'Rourke. Six white Roses, distinct—1, Ed. O'Rourke.

Six pink Roses, distinct—1, A. Bauer; 2, C. O. Duncan. Six any other color—1, A. Bauer; 2, C. O. Duncan. Best bunch of Sweet Peas—C. O. Duncan.

Vase of Roses for effect—1, C. O. Duncan; 2, J. Kennedy.

Henry A. Dreer of Philadelphia was awarded a certificate of merit for a display of 52 vars. of Roses, all novelties, which was very fine.

Julius Roehrs Co. of Rutherford, N. J., was awarded a certificate of merit for a very fine collection of cut Orchids.

Peter Murray gained a certificate of culture for a display of Gloxinias; and James Kennedy the same for a collection of Rambler Roses, also for a vase of Agrostemma coronaria.

ALEX. FLEMING, Rec. Sec.

Alternanthera Jewel

We can still supply first class plants of this magnificent new bedding plant. If you buy now, you will be able to have stock for another year. To clean out, we will make a special price of \$1.50 per dozen, \$10.00 per hundred.

Gardenias

We can quote you in any quantity, 3 inch, \$18.00 per hundred, 2 1/2 inch, \$12.00 per hundred.

Fall River Florists' Association

A meeting of the florists of this city was held on the evening of June 17, in the store of Chatterton Warburton on North Main st., Fall River, Mass., for the purpose of forming a new organization. About 25 florists were in attendance and it was decided to call the association the Fall River Florists' Association, and weekly meetings will be held. At the meeting officers were elected for the ensuing year as follows: President, C. W. Warburton; vice-president, Edward Lawton; secretary, John R. Pee; treasurer, John Cross. It was intimated that certain conditions exist in Fall River which are not to the liking of the florists, and it is with the object of removing these that the organization was formed.

Prices Advertised in these Columns are for THE TRADE ONLY

Among the Growers

ENGLEWOOD AND TENAFLY, N. J.

Edward G. Burrows, Tenafly and Englewood

Mr. Burrows' range of five greenhouses, 20,000 ft. of glass, is at Tenafly. Two houses are devoted to growing pink and white Enchantress, Winsor, Queen and Victory Carnations. Mr. Burrows is also trying some Kaiserin Roses this Summer. Three houses are used for growing Sweet Peas, which are planted directly in the soil of the greenhouse. The varieties used are Christmas, pink and white, for Winter, and Snow Bird for Spring, and these are now followed by Katherine Tracey.

About 15,000 assorted bulbs will be tried next Winter. Mr. Burrows has a very neat florists' store in Englewood, just across the street from the station, which he opened in November, 1909. To this store he will soon add a conservatory. He has an excellent retail trade at Englewood, and markets his own surplus. The recent school commencements, especially the one of the Dwight School for Girls, have kept him busy.

T. W. Lydecker & Co., Englewood

The Lydeckers were among the first settlers of Englewood, when the now beautiful Grand ave., on which they are located, was only an Indian trail. The well-preserved dwelling house, now between one and two hundred years old, and the twelve hot water heated greenhouses, with 40,000 ft. of glass are on a part of the original estate.

The range of greenhouses is a substantial one, built some years ago by Lord & Burnham, and is being made now still more so by the substitution of concrete side walls in place of the original wooden sides. This range used to be devoted to Roses only, but now six houses only are used for Roses, Richmond, and white and pink Killarney varieties, and the remaining six houses are devoted to Carnations, of the varieties white, pink and rose pink Enchantress, Beacon and Winsor. It would be very difficult to find, anywhere, Carnation plants in such fine condition as those seen in the six houses, or any giving a crop of blooms so large or of such superior quality. Tankage and horse manure were incorporated with the soil before the plants were benched, and they are now regularly treated to liquid sheep manure. It is expected that good blooms will be cut until August. This company has a good retail trade, and they also consign to Dutcher & Son, Coogan Building, 50 West 26th st., New York City.

August L. Hanke, Tenafly

Mr. Hanke is renting, for the present, three greenhouses of Garrett De Matt. Winsor, O. P. Bassett, and white Enchantress Carnations are grown in one house. La France and Princess of Wales Violets, the latter being preferred, are grown in two houses in solid beds. Mr. Hanke began his work here in February, 1910. He markets his own products.

NYACK, N. Y.

In towns of even 10,000 population it is noted that where there are a number of growers frequently no retail florist store is found, and that a good local business is divided among such growers as care to give some attention to a retail trade. Such is the case in the beautiful residential town of Nyack, which is only about an hour's ride from New York City and which on one side is overlooked by Hook Mountain, and itself overlooking the historic Hudson River. It is a town of well kept, attractive homes, of fine estates, and picturesque natural scenery.

Jacob Kuhn

Mr. Kuhn is a Swiss florist, born in Rossbach, on "Blue Lake Constance," Switzerland. Beginning at the age of thirteen he learned the florist business under the well-known William Pfäfer of Stuttgart, Württemberg. After being engaged in the florist business twenty-eight years in this country, he visited his fatherland last year for the first time. In his six greenhouses, with 6000 ft. of glass, he grows a general line of stock for the local retail trade only. Queen, Lawson and Enchantress Carnations are grown in considerable numbers; also Major Bonaffon, Glory of Pacific, Polly Rose, and Halliday Mums. Ricard, S. A. Nutt, Beauté Poitevine and Mme. Buchner Geraniums, to the number of 8000, are produced, also Coleus, Alternantheras, Echeverias, and Begonia Vernon in considerable numbers, and a general collection of plants such as a local trade demands.

Frank Grant

Mr. Grant's range consists of two greenhouses, in which he used to grow Violets. He is now growing, in one house, Mignonette. He plants the seed in August, and begins to cut blooms in October, and continues to cut until about June 1. In his other house he grows

Freesias. He saves his bulbs, digging about July 1, after the tops have dried off. He then dries off the bulbs and replants these old bulbs and the larger sized new bulbs the last of August. These usually begin to bloom in January and blooms are cut until about April 1. The same bulb is used two years.

Depew Brothers

The Depews came to Nyack way back in 1790, and the father and grandfather of the Depew brothers were engaged in the greenhouse business, beginning back in 1860, when they grew Grapes under glass. The nine houses of their range are used as follows: Two houses of Lawson, Enchantress, Queen and Victory Carnations; two houses of Asparagus plumosus, and two of Asparagus Sprengeri, the former of which is found to be the more profitable; one house to Smilax, which is looking very well at this time. The Smilax, which is grown in solid beds, is sometimes carried through the second year, but when grown on benches, new plants are used each year. Seed is usually sown in February in flats; the young plants are then pricked out into pots, and from the pots, in June and July, it is transplanted to the benches. About 15,000 Aster plants now growing on the benches are in first-class condition. Vick's Early Upright, pink and white, are the varieties used. After the Asters are over Sweet Peas are planted. In one house Antirrhinum is grown and is considered a profitable crop. Some bedding plants are also grown. Depew Bros., consign to several New York wholesalers, and also have a good local trade.

August Sauter

Mr. Sauter recently had seven greenhouses, with 16,000 ft. of glass, but now he has only six, because he has torn down two houses, and is building a new house, from material furnished by Lord & Burnham Co., to cover the same ground occupied by the two old ones. One house is used for growing Antirrhinum. The procedure is as follows: First plant seeds, then select for color and type, and take cuttings from these plants. After a few years it is necessary to go over the same process again, as there is, from continual propagation by cuttings, a tendency toward deterioration of the stock.

Mignonette is grown in the five remaining houses, and this is Mr. Sauter's specialty. He started with seeds of Allen's Defiance and crossed this with another variety obtained from a seedsman named McMillan, then saved his own seed making careful selection each year. The seed is planted from July to September, so as to have it give a crop of blooms at different seasons, and blooms are cut from October till June. The flowers from this range are consigned to Andrew Sauter, Coogan Building, New York City.

The Florists' Exchange is exclusively a Trade Paper. Prices at which stock is offered in these columns are intended for the Trade only.

The Alexander-Roosevelt Wedding

There was an elaborate and gorgeous decoration in the Fifth ave. Presbyterian Church on the marriage of Miss Eleanor Alexander to Theo. Roosevelt, Jr., son of ex-Pres. Roosevelt. The floral decorations were carried out by Wadley & Smythe of 491 Fifth ave., New York City, and were entirely of pink and white flowers.

Beginning at the entrance to the church with large Palms and tropical plants and continuing up the center aisle with masses of white Roses and Lily of the Valley was an avenue of white flowers for the bridal party to walk through. Large bunches of white Roses, tied with bows of white satin ribbon, were placed on the pews on either side of the aisle. The white decoration reached to the altar, both altar and chancel being garlanded with Bride Roses. Garlands of white Roses on the altar rail reached to the step, which was massed with Bride Roses, leaving a space only large enough for the white satin cushions upon which the bridal couple knelt.

Above this prie-dieu an arch was festooned with white Peonies, this white decoration being carried up as far as the organ loft, where it gradually faded away into the pale pink tint of Rambler Roses, favorites of the bride, and far which Messrs. Wadley & Smythe scoured the whole of the South, in order to obtain sufficient quantities for the occasion. There were large bushes of this beautiful Rambler, filled with masses of bloom, at the rear of the organ loft, forming a most effective background, then trailing around the back of the arches down into groups of large tree Palms on each side. The numerous large columns throughout the church were garlanded with pink Ramblers. At the bases of the windows were banks of soft plumes of Farleyense Fern, with bunches of the pink Roses. At the rails of the gallery were festooned with pink Roses.

THE BOOK OF WATER GARDENING. BY

Peter Bisset. The only recognized authority on aquatics. Profusely illustrated. Price, postpaid, \$2.50. A. T. DELAMARE PRG. & PUB. CO., 2 Duane St., N. Y.

Church Decoration by Gude Bros. Co., Washington, D. C.

Florists in good standing throughout the country can avail themselves of the advertisers' offers in this Department and accept, without hesitation, orders from their local customers, transmit same to an advertiser in these columns, and thus avail themselves of the opportunities for extension of trade which are open to all. Let your customers know you fill orders by telegraph to any part of the country.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail firms advertising under this heading are all considered by the publishers of The Florists' Exchange as being responsible, and will accept and fill orders for Flowers, Plants and Floral Designs for team Orders, departing Trains, or any given point within their reach, forwarded them by mail, telegraph or telephone, in the respective districts to which their trade extends, the usual commission being allowed. While no guarantee is expressed or implied by this paper as to the satisfactory fulfillment of orders sent to parties whose names appear in this Directory, we will take that only concerns of known good standing will be admitted in this Department. The use of Arnold's Telegraph Code No. 16, a copy of which is placed in the hands of every advertiser, will greatly facilitate this interchange of business.

Eyes
ALBANY, N. Y.
11 North Pearl Street
Cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Hatcher
Leading Florist
AMSTERDAM, N. Y.
Etab. 1877 SCHENECTADY, N. Y.

Atlanta Floral Co.
ATLANTA, GEORGIA
41 Peachtree Street
We cover all of Georgia and are within easy reach of New Orleans, Jacksonville, Birmingham, Chattanooga and Charleston. Retail orders placed with us will receive careful attention.

Thos. F. Galvin
BOSTON, MASS.
124 Tremont Street
We cover all New England points. Retail orders placed with us receive careful attention. The delivery of flowers and plants to Boston sailing steamers a specialty.

J. Newman & Sons
BOSTON, MASS.
24 Tremont Street
Orders by wire receive prompt and careful execution. We can refer to leading florists in all principal cities, established 1870.

Zinn the Florist
BOSTON, MASS.
No. 1, Park St. No. 2 Beacon St.
Equipped with best facilities for quick delivery to any part of NEW ENGLAND. Also special delivery to any outgoing steamship without extra charge.

Robt. S. Wilson
BROOKLYN, N. Y.
Fullon St. and Greene Ave
Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders cared for from all parts of country and delivered at Theatre, Hotel, Steamer Residence. Tel.: Prospect 2840 and 4065.

Palmer's Flowers of Quality
BUFFALO, N. Y.
W. J. PALMER & SON, 304 Main St.

Friedman Flowers
CHICAGO, ILL.
185 Michigan Avenue
Courtesies extended to all Florists

JULIUS BAER, CINCINNATI, O.
Fourth St.

Frank F. Crump
COLORADO SPRINGS, COLO.
Retail Florist
Telegraphic orders will be carefully and promptly filled; personal attention given. Usual discounts allowed.

J. N. Champion & Co.
NEW HAVEN, CONN.
1026 Chapel St., Opposite Yale College
Very facility for prompt deliveries in all parts of Connecticut. Cut Flower and Funeral work solicited.

W. S. Matthews
DAYTON, OHIO
Florist, 16 West Third Street
Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Standing Wreath of White Killarney Roses and Lily of the Valley. Base of Bronze Galax and Gladiolus

The entire effect of the color scheme of the upper part of the sanctuary was of this pale tint of pink, carried down gradually to where the pink merged into the pure white decorations of the entire lower part.

The bride carried a bouquet of rare white Orchids showered with Orange blossoms. The five bridesmaids carried large bunches of the pink Rambler Rose, tied with the palest shade of blue ribbon to match their gowns, and the maid of honor carried a large bouquet of Forget-me-not against a gown of old rose.

The floral decorations of the house were almost entirely of pink; in fact, "a study in pink," with the exception of a white Rose canopy, under which the bridal couple received their friends, and the decorations of the bride's table in the breakfast room, which was beautifully decorated with Bride Roses and Lily of the Valley. All the other tables were decorated with pink Roses of the same variety as those at the church. Large vases of pink Roses were in all the effective places throughout the house. The mantels were banked with pink Roses, and mirrors and arches were gaudied and festooned with pink Ramblers. The fireplaces in the different rooms were banked with plumes of Farleyense Fern and sprays of pink Roses. The stair rails were twined and festooned with pink Peonies and sprays of pink Rambler Roses. In the entrance halls were groups of large Palms and tropical plants and pink Roses trailed from large Oriental vases.

For "Supply" Advertisements see page 1127

Advertisers in this Directory are provided with Arnold's Florists' Telegraph Code No. 16.

John Breitmeyer's Sons
DETROIT, MICH.
Broadway and Gratiot Ave.

We cover all MICHIGAN points and large sections of OHIO, INDIANA and CANADA. Retail orders placed with us will receive careful attention.

Bertermann Bros. Co.
INDIANAPOLIS, IND.
241 Massachusetts Ave.

Prompt and efficient service rendered points in Illinois, Ohio and Indiana. Bertermann's flowers excel.

Jacksonville Floral Co.
JACKSONVILLE, FLA.
20 Laura St.

We cover all Florida—St. Augustine, Palm Beach, Miami, Tampa, etc.; also lower Georgia. Choice seasonable flowers always on hand.

Samuel Murray
KANSAS CITY, MO.
1017 Broadway
I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers on hand. Wire me your orders.

(Concluded from page 1119)

It is not. A sale on credit creates simply the relationship of debtor and creditor. An interesting side issue on this question is how does a C. O. D. sale affect the responsibility of the seedsmen under the seed law of the foreign State? As above suggested, F. O. B. means the delivery to the transportation company. Such delivery passes the title to the goods and further risk and ownership (except stoppage in transitu for insolvency of buyer) is in the buyer. Delivery, therefore, is the keynote of the question. In C. O. D. sales does the vendor still retain title, risk and responsibility, on the ground that the carrier is his agent, or does the buyer assume such rights and responsibility? The courts of the several States have been in irreconcilable conflict on this question, but the weight of authority favors the proposition that the buyer assumes all those risks and that the carrier is simply the agent of the seller to collect the purchase price. Because of the decisions of the State Supreme Courts it is inadvisable for seedsmen to sell C. O. D. to customers in the States of Iowa, Missouri, Georgia and Vermont and, possibly, Colorado. C. O. D. sales are safe in Alabama, Arkansas, Illinois, Kansas, Kentucky, Maine, Massachusetts, Nebraska, New Hampshire, New York, North Carolina, Pennsylvania, Texas and West Virginia. The Supreme Court of the United States in effect follows the decisions of the latter States. (Caldwell-v-No. Car. 187 U. S. 622.)

The arrangement of attaching sight or time draft to bill of lading in consignor's name obviously discloses the situation where the seller postpones the time and place of delivery, consequently the title to the goods until within the boundaries of the foreign State, and the seedsmen naturally falls within the purview of the statute for there is no such thing as a sale unless there be a "delivery." An arrangement securing the protection of these methods of collecting the purchase price without assuming the risks is not under discussion.

The practice of shipping seeds to the foreign State to abide the purchaser's right of inspection and acceptance also postpones the time and place of delivery to the foreign State.

Is the general advertising of an ex-State dealer in another State an "offer" within the meaning of the seed statute of the foreign State? No.

Is the solicitation of orders by an agent under above stated laws, which are sent to the home office by the customer or by the agent where they are accepted or rejected according to discretion, an "offer" by the ex-State seed dealer in the foreign State? No.

Can the seed merchant himself solicit orders in another State having seed laws of the above stated character without offending said laws? Yes and no, depending on the facts of the case and the jurisdiction. The decisions in various jurisdictions are conflicting on this point. It often happens that the merchant himself takes orders in other States which orders he sends to the home office for execution. These orders are taken subject to examination of credit or of a supply of article on hand and so forth. Under the advisable conditions of delivery above indicated there is no sale or offer of sale in the foreign State. Solicitation of orders, whether by principal or agent, is not a "sale" or an agreement to sell, or an offer or exposing for sale.

The foregoing remarks and suggestions, which I have perhaps mislabeled "practical," are not intended to cover every situation, for perhaps the most important thing in deciding a legal point is to have all the facts. Slight variation of facts may swing the decision from one result to another. Then, again, your Counsel, if he covered every situation, would not have the pleasure of hearing from seedsmen.

It seems to be an appropriate way to close this discussion is to call attention to the simplest way of avoiding the many difficulties, legal and otherwise, of this interstate commerce in seeds when this commerce is annoyed by a miscellaneous lot of good, bad or indifferent State laws. When there is an irresistible demand for seed legislation, pass a law which can be, with necessary minor adaptations to local needs, uniform in all the States. Repeal or amend the present laws which are admittedly unpracticable or unconstitutional and substitute laws which the State officers can enforce. Then the seedsmen, who is in thought and action an honorable, law abiding citizen, can carry on his business at home or abroad safely, sanely and at less expense. He can then fill an order without consulting a lawyer or a compilation of State laws. This Association and the Association of Official Seed Analysts are to be congratulated upon their cordial co-operation along these lines.

A beginning is always necessary and what a remarkable step in advance was taken last December at the conference between these two Associations is as yet hardly appreciated. My opinion is that this Association is perfectly capable of taking a leading part in the rational adjustment of good laws for wrong conditions, and your efforts will merit and receive the hearty approval and praise of the present and future generations of seedsmen.

THE ADVTs. IN THE FLORISTS' EXCHANGE are ALWAYS read.

The circular generally goes into the waste basket WITHOUT BEING READ.

The Attendance

Among the houses represented were:

Adams, T. Lee, Kansas City, Mo.—E. C. Luck and wife.
Allen, C. L., Floral Park, N. Y.
Ayer, N. W., & Son, Philadelphia, Pa.—Frank B. White.
Beckley, O. P., Harrisburg, Pa.
Boligiano, F. W. & Co., Washington, D. C.—F. W. Boligiano.
Boligiano & Sons, J., Baltimore, Md.—Chas. Boligiano.
Breck, Joseph & Son, Boston, Mass.—C. H. Breck.
Briggs Bros. & Co., Rochester, N. Y.—C. S. Briggs and wife.
Brill, Francis, Hempstead, N. Y.
Brown Bag Filling Machine Co., Fitchburg, Mass.—B. F. Brown, Jos. C. Brown.
Brown, Douglas A., Cincinnati, O.
Brunjes, M. H. & Son, Brooklyn, N. Y.—Geo. R. Brunjes and daughter, M. H. Brunjes.
Buffington, J. J. & Co., Baltimore, Md.—J. J. Buffington.
Burpee, W. Atlee, & Co., Philadelphia, Pa.—W. Atlee Burpee, A. E. Brown, Howard M. Earl.
Cadwell & Jones, Hartford, Conn.—W. Frank Cadwell.
Carson & Son, G. W., Philadelphia, Pa.—J. Carson.
Childs, J. L., Floral Park, N. Y.—Arthur H. Goldsmith.
Clark, George H., Commissioner Dept. of Agriculture, Ottawa, Ont.
Clark Co., The E. B., Milford, Conn.—Herbert Clark and Fred M. Clark.
Chilton Co., Philadelphia, Pa.—A. L. Ball.
Coy, C. Herbert, Seed Co., Valley, Neb.—C. H. Coy and wife.
Crabbs-Reynolds-Taylor Co., Crawfordsville, Ind.—A. E. Reynolds.
De La Mare, Ptg. & Pub. Co., A. T., New York.—E. W. Dorey.
Dickinson, Chas., Chicago, Ill.
Dickinson, The Albert Co., Chicago, Ill.—E. F. Squires.
A. W. Schaefer, Frank Lukes, Chas. D. Boyles.
Diggs & Beadles, Richmond, Va.—Albert C. Diggs.
Dunham Co., Berea, O.—A. J. Kennedy.

Candytuft White Empress

Eherle, F. W., Albany, N. Y.
Farm & Fireside, New York.—G. Herbert Potter.
Faulkner, A. F., New York.
Ferry & Co., D. M., Detroit, Mich.—C. B. Coe.
Florists' Exchange, New York.—M. B. Faxon.
Flower, S. W. & Co., Toledo, O.—John A. Smith.
Ford Seed Co., Ravenna, O.—J. H. Ford.
Grenell, W. H., Pierrepont Manor, N. Y.
Griffith & Turner Co., Baltimore, Md.—Melvin S. Griffith and wife.
Gurney Seed Co., Yankton, S. D.—Geo. W. Gurney, D. E. Gurney.
Hastings, H. G. & Co., Atlanta, Ga.—H. G. Hastings.
Henderson, Peter & Co., New York.—Alexander Forbes.
Hogg & Lytle, Toronto, Can.—A. O. Hogg.
Holmes Seed Co., Harrisburg, Pa.—H. Holmes.
Illinois Seed Co., Chicago, Ill.—George S. Green.
Isbell, S. M. & Co., Jackson, Mich.—F. G. Johnson.
Jefferson, J. Will, Louisville, Ky.
Jefferson, Thomas, Harrisburg, Pa.

Zahn, J. F., & Co., Toledo, O.—F. W. Jaeger.

Stray Notes from Abroad

BY T. A. WESTON

A New White Candytuft

Last season I was trying a fine white Candytuft, called White Empress, and the accompanying photograph shows what a fine garden annual it is. I am sure this flower deserves pushing, for it is vastly different from the old Candytuft of our grandmothers. Messrs. Dobbie & Co. of Rothsay have a strain named White Spiral, which resembles the Empress, and for cut blooms it equals a good Stock.

Vaporite

I observe that our leading soil fumigant, Vaporite has reached your side. There is no doubt as to its efficiency, providing it is used according to the makers directions. It must be fully understood, however, that all these powders, be it Vaporite, Apterite, Kilogrub, or any of a like nature, must be dug into the soil prior to planting, and well ahead of the latter if possible. If merely strewn upon the surface, the only pest likely to suffer is the slug. The gases emitted by these fumigants only become active when material is well mixed in the soil, and unless it is well beneath the surface, pests such as wireworms, cut worms, etc., will get below the fumes.

Origin of the Peony Dahlia

One of your correspondents expresses a conviction that the Peony Dahlia is not really of Dutch origin, and in this he is substantially correct. It is impossible to say who raised the first Peony Dahlia, for the majority of Dahlia breeders found such types among their seedlings long before the Dutch varieties were heard of. Hobbies Ltd., of Norfolk, always threw out these gaunt looking flowers, never anticipating a demand for them. Even the great Richard Dean never suggested any commercial value for them, although he was personally fond of them, and used to make a point of selecting a few of the best that appeared at the Norfolk Nurseries, where they were known as "Dean's Mongrels." Baker's, of Wolverhampton, have also identified themselves with the Peony Dahlia, and may perhaps claim to have sent out many of the best sorts.

Prices published in The Florists' Exchange are for the Trade only

Scottii Ferns

2 1/4-inch pots, \$5.00 per 100, \$45.00 per 1000;
8-inch pots, \$1.00 each.

GARDENIAS

SCOTT'S FAMOUS VEITCHII STRAIN

Strong, established plants from 3-inch pots, ready for a shift into 5's, or for planting in the bench.

Prices on Application

BEDDING PLANTS

Alternanthera Brilliantissima

Strong bushy plants, from 2 1/4-inch pots, price \$3.00 per 100, or \$25.00 per 1000.
Yellow and Pink, \$20.00 per 1000.

Coleus Verschaffeltii and Golden Bedder; also Assorted Varieties, price \$2.50 per 100, or \$20.00 per 1000.

Dracaena Indivisa Strong plants, 7-inch at 75c. each, 8-inch at \$1.00 each. Smaller sizes at 35c. and 50c. each.

JOHN SCOTT

Rutland Road and East 45th Street, BROOKLYN, N. Y.

Providence, R. I.

J. F. Wood has a fine display of Boxwood which are being sold to take the place of Hydrangeas which have been supplied for many years past.

Geo. Johnson & Son have been busy with funeral and outside work.

The trade in general is quiet; without the decorations and orders for graduations there would be little doing.

On Saturday last Providence was visited with a severe hailstorm which resulted in severe loss to many tender plants and greenhouses. C. H. Hunt of Oxford st. received more than his share of broken glass. Some of the hailstones were as large as a quarter dollar, others ranging in size from peas to marbles. The rain flooded the streets and many cellars had considerable water in them; it came so fast the sewers were unable to take the water.

Market quotations, May 21, were: My Maryland, Richmond, Bride, Bridesmaid and Killarney Roses, firsts, \$5 to \$8 per 100; seconds, \$3 to \$5 per 100; thirds, \$1 to \$2 per 100. Carnations: firsts, \$2 per 100; seconds, \$1 per 100; thirds, 75c. Lily of the Valley, \$3 to \$4 per 100. Cut Ferns, \$1.50 to \$1.75 per 1000. Adiantum Ferns, \$1. Lilies, 5c. to 8c. each. Mignonette, \$1 to \$1.50 per 100. Marguerites, \$1.50 per 100; getting scarce. Sweet Peas, 50c. Stocks, \$2. Digitalis, \$3 to \$5. H. C. N.

CYCLAMEN

PERSICUM GIGANTEUM

Fine bushy plants, from 3-inch pots, \$5.00 per 100, 4-inch pots, \$10.00 per 100. Cash please.

Give us a trial; we can please you!

J. W. MILLER
Shiremanstown, Pa.

SPRINGFIELD, ILL.—The store of A. C. Brown at 217 South Fifth st., is being improved with a new front.

MARYSVILLE, CAL.—The business of the Marysville Flower and Seed Store has been removed to Sacramento.

SHAWNEE, OKLA.—The Brenner Floral Co. has opened a salesroom at 224 North Broadway st.; and in September will open a large display room in Oklahoma City.

FAIRMONT, W. VA.—Large numbers of Carnations were distributed at Daffin's new confectionery and floral store on the afternoon of June 4, as souvenirs of the opening of the store.

CLUBS AND SOCIETIES

Tarrytown Horticultural Society

The annual Rose and Strawberry exhibition of the Tarrytown Horticultural Society was held in the Young Men's Lyceum, Tarrytown, on Tuesday afternoon and evening, June 14.

The exhibition was the finest the Society has ever held. On account of the unusual amount of wet weather, there was available a remarkably fine lot of Roses, fruits, and vegetables. Frau Karl Druschki Rose was in elegant shape.

F. R. Pierson Co. made a very fine exhibit, consisting of Palms, Peonies, Climbing Roses and sprays of Mountain Laurel. Scott Brothers had a fine exhibit of Peonies and Roses. Miss Blanche Potter and Mrs. J. B. Trevor had fine exhibits of Sweet Peas.

A certificate of merit was awarded Mrs. Trevor for new seedling climbing Rose, Glen View. A certificate of merit was awarded the Park Department of White Plains for a collection of Rugosa Roses. A certificate of merit was awarded H. Darlington for Chrysanthemum Pride of Seven Oaks. A variegated Rose, exhibited by Blanche Potter, attracted considerable attention. The awards were quite numerous, and the classes well filled.

Connecticut Horticultural Society

June 10, the night for our regular meeting, proved to be too early for the exhibition of hardy Roses; and hence the time was largely given up to the subject of Peonies. Treasurer W. W. Hunt brought a splendid collection of blooms of twenty-four varieties, mostly of the Chinese type in the following varieties: Triomphe du Nord, Francois Ortegat, Mathilde, Queen Perfection, Louis Van Houtte, Rivitor, Albert Crousse, Marquis de Lory, Onivera, Victor Modeste, Deloies, Plutarch, Grandiflora carnea plena, Artemise, Ruhicanda, Caroline Mathieu, Queen Victoria, Canary Yellow, Madame Breon, Festiva maxima, Single Pink Emma, Lilliania, Perfection, and Humel.

Mr. Hunt cultivates about a hundred varieties, and the above, he said, are among the best. He has produced many seedlings but none that he has thought worthy of propagation.

Much valuable information was elicited from Mr. Hunt and President Huss regarding this popular and valuable flower. The latter spoke of its growing favor with the public, its great freedom from disease and insects, and the usefulness of the leaves, after blooming time, in making up bouquets. It takes four or five years to obtain a flowering plant from seed. Propagation is chiefly by division, usually in September and October. Mr. Hunt was asked to name the best twelve varieties of Peonies for a succession for home use, and he replied that it is difficult to do so, because there are so many good varieties; but he promised to consider the subject, and to furnish such a list at a later date. The judges, Messrs. T. B. Brown of Windsor, John Gerard of New Britain and Carl Peterson of West

Hartford, awarded Mr. Hunt a diploma for his grand collection of blooms.

Our plans are rapidly being made for the two Fall exhibitions at Hartford, one in September for Dahlias, and one in early November for Chrysanthemums. Our premium lists are expected to be much enlarged, and to contain many more advertisements than we have ever sought before, and possibly photographs of the officers.

President Huss expects to leave us on July 7, for a visit of several months at his old home in Switzerland.

Our next meeting, which will fall on the 24th instant, will be "Hardy Rose Night," and an address is expected from our former efficient secretary, and now superintendent of Elizabeth Park, Hartford, Mr. Alex. Cumming, Jr.

GEORGE W. SMITH, Secretary.
Melrose, Conn., June 14, 1910.

SALT LAKE CITY, UTAH.—D. R. Larson has been appointed florist for Liberty Park.

DENVER, COL.—J. E. Goemmel, an attorney of Rockford, Ill., has written the Denver police asking that search be made for Whitman C. Rowley, a florist, who left Fort D. A. Russell, Wyo., March 31, and who is supposed to be in this city. He appeared to be mentally deranged when he left Fort Russell. His mother, a widow, living in Rockford, is anxious to have him located.

REVIEW OF THE MARKET

NEW YORK, June 22.—On Monday, during the earlier hours of the day, the market was moderately active, but not to the extent of advancing the price of any stock. Tuesday and Wednesday sales were slower, even in the morning hours, and in the afternoon each day the market was "asleep." The rise in temperature, combined with the humidity, causes flowers to arrive in poor condition, and makes it impossible to hold them. No single item shows an advance in price, and several show a downward tendency. Let it be noted that these conditions of the market are not abnormal, but what may be expected at this season of the year.

There is a rather short supply of American Beauty Roses, specials, but not so marked as to advance the price which remains at 20c. each in the larger transactions, and 25c. each for selected blooms in small lots. The specials are moving well. In the poorer grades the supply is abundant, and the demand is not as strong. There is a plentiful supply of Killarney, My Maryland and Richmond, with My Maryland the favorite among pink Roses. The abundance of outdoor Jacqueminot still has its effect upon Richmond by diminishing the demand for it. The best grade of these Roses is selling for 5c. each, Killarney and Maryland moving more freely than Richmond, and all three varieties in the lower grades selling for a song. Bride and Bridesmaid for the most part are arriving in wretched condition, suffering by comparison with White Killarney, Kaiserin and My Maryland, and moving very slowly at 4c. each for best grade, with a cent better price in small sales for selected blooms, with unmentionable prices for lower grades. There is only a moderate supply of Kaiserin, but enough to balance with all demands, and arrivals moving fairly well, as the quality is good, at 5c. each for best grade.

There is a small supply of the best grade of Carnations and an abundant supply of poorer grades; the former meeting with a fair demand at \$1.50 per 100, and the latter meeting with a slow sale at very low figures. In fact, the major part of the sales of Carnations today are at 75c. to \$1 per 100.

While several prominent dealers in Gardenias are not receiving any blooms at the present time, others are receiving heavy shipments, and there exists a most active demand at the best price obtainable under these conditions is \$1 per dozen for top grade.

Practically, Cattleyas are now the only Orchids in the market, and of these the varieties gigas and Gaskelliana chiefly. The supply is plentiful, and the demand only moderate. 50c. each is the top notch price for the very choicest blooms, with most of sales of good blooms from that figure down to 25c. each.

The supply of Lily of the Valley meets all demands; the quality is good, and it is moving well at \$3 per 100 for best grade. Lilies are arriving in numbers much out of proportion to the demand that the only way a demand can be created is by throwing down the price so low that it strikes a chill through all parties concerned, except the buyer. In all large sales \$15 to \$20 per 1000 is the best price, while a few, in fifty or one hundred lots, realize 3c. each.

Sweet Peas, so far this week, are arriving in miserable condition, on account of the heavy rainfall followed by extreme heat. There is a good demand for the best grade blooms at 75c. per 100. The poorer grades are "done up" in a few hours after arrival and go to the barrel.

The quality of the Smilax and Asparagus now arriving is very satisfactory, and the supply and demand balance. The quantities of miscellaneous outdoor stocks now coming in, such as Wallflowers, Delphiniums, Feverfew, Larkspur, Garden Pinks, Rambler and Jacqueminot Roses, are moved only by making the prices very low.

PHILADELPHIA, June 20.—The market cleaned up fairly well on Saturday last, but at considerable sacrifice in price. There is now a brisk business during the morning hours, which is fol-

lowed by a lull which usually continues during the remainder of the day, as far as local business is concerned. Nevertheless, the books show a better business now than at this season one year ago.

There is a fair supply of American Beauty Roses arriving, with a quality medium to poor. They are moving very well, with a tendency to firmer prices; the specials are selling at 25c. each for the choicest blooms; the lower grades also are bringing a little better prices. There is a good supply of Killarney and My Maryland and they are holding up well, both in quality, in general, and also in color. They are moving well, and the choicest blooms in some sales fetch as high as 10c. each, but 8c. and under is the basis of most transactions. Shipments of Bride and Bridesmaid, with few exceptions, are coming in poor condition, and are moving slowly. A few fancy specials realize 10c. each, but most sales are on a much lower basis; 6c. and under being the prevailing figures. Kaiserin now is off crop with many growers, and the supply short, although there is a good demand. The quality is good and the best grade is selling for 10c. each and under. In fact, the supply of good white Roses of all varieties is now somewhat short. The supply of Richmond is about equal to the demand, with firmer prices, possibly on account of the moderate supply of Am. Beauty. The best grade in some sales is bringing as high as 12c., but most of sales are made at from 10c. down.

There is only a fair supply of Carnations, and for the season the quality is good, and they are moving moderately well. The best grade is selling for 3c. and under. The supply of Gardenias is not at all plentiful, but there is very little demand. The best flowers realize about \$1.50 per dozen, with most sales on a lower basis. The supply of Orchids has shortened, but not enough to advance the prices. Cattleyas gigas and Gaskelliana are chiefly in evidence, and, for top grade, are selling at 50c. each. There is a good supply of Lily of the Valley and it is moving well, some special fancy realizing \$5 per 100, but \$4 down is the figure in most transactions. Few Callas are arriving, and there is very little demand for them. The selling price for the best is \$1.50 per dozen. There is a good demand for Sweet Peas, but just now they are arriving in damaged condition, because of the recent heavy rainfall; \$1 per 100 is the price for the best grade, which sells well. Gladioli are in moderate supply, and moving well; the best grade bring from \$1.50 per dozen down. The supply of greens is abundant, and all greens are moving slowly, except adiantum, for which just now there is a good demand. The supply of miscellaneous outdoor stock now coming in is over-abundant and is moving slowly at low prices.

BOSTON, June 21.—The market this week, so far, is slightly better than it was a week ago, and although there is quite a little surplus, things clean up fairly well. There are some weddings, but nothing of the business we have seen in that direction in previous years. The weather has changed, bright sunshine and the thermometer at 90° so we expect business will improve.

Roses have been quite plentiful and the only outlet for relief of the situation has been through the boys on the street, who purchase large quantities at very much reduced prices. The boys are becoming used to many when flowers are so plentiful. Carnots and the Killarneys are the best sellers.

Carnations are abundant and of good quality, and large quantities have to be disposed of at much reduced prices.

Sweet Peas are in good demand, and there are very few left unsold each day. The Spencers are showing up well now and are of good quality.

Gladioli are selling quite well now, more especially the large flowered kinds, such as America, and are realizing good prices. Peonies are becoming abundant, but there isn't an enormous surplus so far. Rain has injured many of them. Stocks are plentiful and the finest white forms realize handsome prices. Lily of the Valley is in good demand and not over-plentiful. Asters grown under glass are coming to market in small quantities. Orchids are plentiful, asparagus and Adiantum are in good demand, and the supply has improved somewhat. R. C.

CHICAGO, June 21.—As in all other years at this season, the market is in anything but a settled state and the

prices on all stocks are not really quotable. At times there is a demand for certain flowers, and fair prices can be realized.

American Beauty Roses have the preference over any flower at present, being used extensively for graduations. Good Killarneys are also coming into prominence for these occasions, as well as for weddings. Other Roses are not in much demand, except for funeral work. American Beauty is holding at \$2 per doz. for best. Killarney, for extra fancy, soar to \$8 per 100 at times. Many Roses are affected with mildew and ultimately find repose in the garbage barrel, and others suffer for what can be obtained for them. Carnations are overwhelming in quantity and the quality is from good stock down to decidedly bad; and as all come in a more or less soft condition it is almost impossible to find enough good hard flowers to fill shipping orders. The price varies \$2 per 100 obtainable for shipping stock down to where they are sold by bulk instead of count. The Greeks are buying flowers by the load and peddling them at the corners of the busy district.

Sweet Peas have diminished in supply to a marked degree since last writing. The warm weather has about finished the supply. Such as are on the market are not of as good quality as previously. Peonies are at a standstill, so much so that they are being rushed to cold storage. Even with the best at \$2 per 100 they are not popular.

Some good Cattleyas are to be had, especially C. gigas, which is coming in excellent shape; the demand is steady for Orchids. Cape Jasmine is about over, and Gardenias, unless ordered specially, are not to be obtained.

Some fine Delphiniums, Snapdragons, Stocks, and Candytuft are arriving, but are only in demand for window show purposes. Green stock is in demand at times when decorations call for its use, and there is plenty of good greens for all purposes.

INDIANAPOLIS, June 20.—The last month in the florists' calendar is rounding up nicely with a number of decorations and a satisfactory amount of counter trade. Flower receipts are not nearly so heavy as a week ago, and about everything not desirable for direct sales is used in funeral work, which has been arriving regularly.

Garden flowers have been smiled upon by Nature this season and many varieties are finding a profitable sale; in fact, one grower stated recently that he believed

that production without greenhouses might be profitable. Lilium candidum are among the choicest of them at \$5 per 100 flowers. Coreopsis and Shasta Daisies at \$1.50 per 100 are also good sellers.

Some of the growers have begun emptying their Carnation houses, so that the cut has been reduced, and prices are about what they should be, 1 c., \$2 to \$3 per 100; 60c. to 75c. per doz. is the usual retail figure.

Chicago Roses are best in quality right now; \$6 to \$7 per 100 is being paid for the best Killarneys, Richmond and Kaiserins. American Beauty is selling better at \$5 to \$25 per 100. Home grown Bridesmaid and Bride sell well at \$3 to \$8 per 100. The customary counter-price for Tea Roses is \$1 to \$2 per doz. Callas are out of the market; Harrisii Lilies are selling readily at \$12.50 per 100, as are Lilium auratum at \$15 per 100. Indoor Sweet Peas are plentiful and of unusual quality, at 75c. per 100.

A few specimen Hydrangeas are about all that keeps the plant department from being void of desirable blooming plants, with the exception of bedding stock.

I. B.

ST. LOUIS, June 20.—The market at present is well stocked with everything in season, and business is fairly good, with school work and late weddings. Now that the season has ended, not much of anything is being looked for except funeral work. Cut stock will be plentiful for a while yet until the growers begin to pull out the old stock, when a scarcity will exist for a while.

Sweet Peas are in abundance in all colors and sell for \$3 in thousand lots for extra choice; others from \$1.50 to \$2 per 100. Roses show the effect of the hot weather and come in wide open and ship poorly. American Beauty bring \$3 per dozen for long fancy; Bride and Bridesmaid sell best now at \$5 for choice. Carnations, too, are more than the trade can use up, and are selling at \$2 per 100 for extra choice and in big lots as low as \$1 per 1000. Lily of the Valley had a big call last week, but now that the wedding season is over will sell slow. The best go for \$3 per 100. A few Asters are coming in, and these will soon take the place of Carnations. Gladioli stalks sell well at \$5 per 100 for choice. Outdoor stock, such as field Daisies, Cornflowers, Candytuft, Feverfew, and Hollyhocks are in plenty, but very slow in demand at present. There are plenty of Ferns and other greens to be had.

New York
One of the most important decorative plant auction sales of the season will be held next Monday, June 27, at 1 o'clock p.m., by The Fruit Auction Co., John P. Cleary, auctioneer, covering the stock of decorative plants of F. H. Dressel, Gregory ave., Weehawken Heights, N. J. The sale will take place at the greenhouses at this address. The plants are in the best possible condition, suitable for immediate use or for growing on, and are sold with the object of making more room in the greenhouses. The assortment includes Boston Ferns in 5 1/2, 6, 7, 9 and 10-inch pots, Dracena Massangeana from one to two feet in height, Hydrangeas with from 12 to 30 flowers. Tradescantias, Dracena Godseffiana in various sizes, Aspidistra variegated, 15 to 30 leaves, and many other fine plants. Further information can be obtained from the auctioneers or from F. H. Dressel, Weehawken, N. J. No better chance will be offered this season to stock up on the items named. The quantities are large and will be sold in lots to suit purchasers. It may be well to mention here that to reach the place of sale from New York, take the W. 23d st. ferry to 14th st., Hoboken, then the Boulevard car to Sunnyside ave.; or from Hoboken take Union Hill car to car stables, then walk three blocks to the east.

C. Ph. Freriks, representing F. R. Pierson Co., Tarrytown, will sail for Rotterdam on June 28, expecting to return about September.
The Wilson Hort. Co., Metropolitan Building, 1 Madison ave., is sending out circulars showing the application of new patents recently issued to it, which will simplify the erection of mounds, thereby facilitating the matter of growers erecting their own concrete benches. The company has a large number of contracts for future work. It is erecting concrete benches in the greenhouse ranges of D. Y. Mellis of Snyder ave., Flatbush, of John Condon, and W. H. Hall, both of Brooklyn, N. Y., and of Herbert Fletcher, of Middlebrook, N. Y. In addition to work previously done the company is installing more benches at Henry Darlington's, Flushing, L. I., and Fred Marquard's, Middle Village, N. Y. Andrew Wilson, formerly of the Wilson Plant Oil Co., is representing the firm among the private growers, and Elliott Creighton, a new salesman, is working in Pennsylvania.
Mrs. John Birnie of West Hoboken, and two daughters are at Stroudsburg, Pa., on an extended visit. They will come to New York to attend the Club outing on June 28, but will return to Stroudsburg afterward.

The storm of Saturday last demolished the tents at the Canal st. market. One was completely destroyed; the other has been patched up to meet the present small requirements of the trade.

The N. Y. and N. J. Association of Plant Growers will hold its annual picnic at Lake Hopatcong, N. J., on July 7. Special cars will be attached to the 8.15 a.m. train on the D. L. & W. R. R. leaving the Hoboken depot. The committee in charge of the affair has arranged an interesting program of sports for both gentlemen and ladies, including bowling, shooting, boating, dancing, bathing, tennis, etc. Luncheon and dinner will be provided and the tickets cover everything, including transportation. The committee comprises Herman C. Steinhoff, Julius Roehrs, Jr., and Herman Schoelzel. The rendezvous is to be Mountain View House.

The Astoria Bowling Club members gave a theatre party, on Saturday last, to their wives and lady friends. They escorted them to the theatre district and attended a matinee performance of "The Summer Widowers," after which they sat down to an excellent dinner at Shanley's. In the evening they attended a performance of "The Merry Whirl." The Club never does things by halves. Nothing but the fact that there are no morning performances at the theatres prevented a triple bill.

Knight & Struck, Metropolitan Building, 1 Madison ave., have recently received importations of Cattleya Schroederiana, Laelia anceps, and the somewhat rare Laelia anceps alba. They report that Cattleya labiata is becoming scarce and that already the price has advanced \$25 per case, and a further shortage and advance is looked for. An invoice of Vanda cornelia is expected soon. George F. Struck of this firm was married at Toronto, June 15, to Miss S. D. Ritchie of Toronto. They will spend their honeymoon in Virginia, returning in about two weeks.

At the store of the Rosary Flower Co., 24 East 34th st., whose rustic store front of white birch bark and poles makes one feel that he is standing in front of a Summer cottage in the Adirondacks instead of a flower store in bustling New York City, is observed some of the largest and finest tub specimens of Japanese Maples seen anywhere. Some of the dissecta varieties, with Fern-like foliage, are relatively rare and very beautiful. Of all the small trees offered for sale, Japanese Maples, in their varied forms and colors, are most beautiful, and best adapted to lawn planting. These Maples came from the company's Mt. Hissarick nursery at New Rochelle. Some 6-in. pot specimens of the not new, but little seen Phyllanthus, with its exquisitely colored pinnate foliage, are noted. This plant bears the sun well and improves in beauty under the strong light. The Rosary Flower Co. report a large window box business and a good general trade in plants and cut flowers.

Mackintosh, 1539 Broadway, who has occupied this store for two years past, reports that he is receiving many good steamer orders, and a decided increase in business over last year.

Frank Pollatchek, Lenox Hill Florist, 1177 Third ave., reports a good business in wedding and general floral work this June, and a good year with increasing business.

A. T. Buoyard Floral Co., corner of 48th st. and Madison ave., furnished the decorations for the Stevens-Bowen wedding at St. Mark's Church on Thursday, June 23. A Dutch garden effect was produced by the use of Bay trees and Boxwoods. The bride carried a bouquet of Gardenias and Lily of the Valley and the bridesmaids bouquets of pink Sweet Peas. This company also furnished the decorations, both at church and house, for the Hardenbergh-Chisholm wedding at Bernardsville, N. J., Saturday, June 25. The church was decorated with Lily of the Valley and white Sweet Peas and Cibotium Schiedei Ferns.

A. Radice, with Moore, Hentz & Nash, has just returned from his vacation at Lordsville, Pa.; and Edward Hauff, who is with the same company, is taking a vacation at Lordsville.

Sidney B. Nash, son of Jonathan Nash of Moore, Hentz & Nash, was married to Miss Helen B. Ferry on June 15.

The youngest daughter of A. J. Thorpe, of Bedford Station, N. Y., was married on Wednesday, June 22.

Henshaw & Fenrich, 51 West 28th st., are receiving some Carnations of remarkably good quality for June cutting.

Keitchers Bros., florists at 2 East 23d st., are taking a two weeks' vacation in Virginia.

Andrew Santer and his wife and three sons, of Nyack, N. Y., will sail for Europe in the early part of July for a three months' visit in Germany, Switzerland, France and Holland.

Carl Marx, and daughter, of Adrian, Mich., were in the city on June 18, and sailed on the same day on the S. S. Lapland for Antwerp. They will spend some time in Bonn, Germany.

Frank Valentine, 158 East 110th st., gives a June walk to the children this Saturday. Last year 500 children were in the party; this year he hopes to have as many.

Greenhouses Building

LANCASTER, PA.—Fred W. Ritchey is building two new houses.

MANCHESTER, CONN.—John H. Cheney is building a new house, 25 by 61 ft.

LAWRENCE, MASS.—E. W. Blair is erecting an additional greenhouse on Lowell st.

LENEX, MASS.—A 73 by 28 ft. greenhouse is being erected for Mrs. John E. Parsons at Interlaken.

HUNTSVILLE, ALA.—John Scott, successor to the John T. Fish establishment is to erect several new houses.

COLUMBUS, O.—The trustees of the Ohio State School for the Blind have awarded a contract to the J. C. Moninger Co., Chicago, for a greenhouse.

Boston

Business is, on the whole, rather better than it was during the past week, although it is not what it should be. For wet weather in June we have had nothing in several decades to equal the present month. There are some weddings but there is not the business from these there should be, no doubt owing to the rainy season.

Flowers from under glass are all in good condition. Many of the outdoor flowers have been spoiled quite a good deal by the continued rains. Peonies have suffered more than any and the last severe frost we had injured many of the buds, and many of them will not open.

There is quite a good demand for Sweet Peas and they seem to be the favorite flowers this year for college and school exercises.

William Sim of Cliftondale is cutting a splendid crop of Sweet Peas with extra long stems, from his new house. He has them in eleven different shades of color and is shipping 10,000 per day, which are sold readily. His Tomato crop is doing quite well considering the weather we have had. He is shipping now about 20 bushels daily. His early Corn is doing well, and was not injured by the June frost.

Mr. Johnson of Neilson & Johnson, Framingham, is making the first visit to his home in Denmark in 21 years. He will visit several other countries while in Europe and will be on the lookout for novelties.

Elijah A. Wood of Newton Highlands is going to have a sale of all his plants on June 29. This is one of the old establishments in this part of the country, and there is a fine stock of Palms, Ferns, Orchids, Chrysanthemums, and many other good things. Mr. Wood is not certain yet where he will locate. He has had some experience in the West and may locate there somewhere. We all hope he may continue near the Hub, where he is a general favorite with the boys.

Eber Holmes of the Montrose Greenhouses is quite busy planting and replanting some of his houses. Bride and Bridesmaid Roses are to be discontinued this season; in fact, most of the growers are doing the same thing. Killarneys, Richmond and all the leading varieties are being planted instead.

Charles Robinson of the Robinson firm is wearing a happy smile this week. It's a healthy, bouncing boy this time.

Sam Goddard of South Framingham sailed, on the Oceanic, on June 15 for an extended European trip. We all wish him a pleasant time. From his establishment there is being shipped a splendid lot of Gladiolus America, and his White Column Stocks are the finest we have seen in the market.

The Spanish Iris from Mann Brothers of Randolph that is seen in the market is of excellent quality, and there are no neater or cleaner looking flowers than these at the present time.

Robert Puffer, who has been 12 years with the Thomas Grey Co., and also many years with the Ames Implement Co., died on June 12. The funeral was on June 14 and was largely attended by seedsmen.

and others in the trade. He was especially well posted in all kinds of farm and garden implements, and probably knew them better than any man in the city.

A. Leuthy of Roslindale sails for Europe on July 16, on the Lapland of the Red Star Line. He is to make a very long trip this time and is going to visit Germany, Holland, Switzerland, Denmark and Sweden, and probably Egypt and Morocco. Mr. Leuthy is an expert plant grower and his keen and trained eye are always on the alert for new things. We have no doubt that on this

extended trip he will bring back some new things of merit.

William McGillivray of West Roxbury is to start on a visit to his home in Scotland on August 1, and from there he is to visit England and Germany.

Miss Mary Florence Pettigrew, daughter of our much respected superintendent of Boston parks, was married, June 18, to George Wright Hinckley of New York. The wedding reception was held at Mr. Pettigrew's house in Franklin Park, and was largely attended by prominent Boston people.

Miss Lillie Mary Neil, daughter of

CARNATIONS

In making up the June and Early Summer Campaign, several of our growers planned to have a better grade of Carnations than other years. Never have we at this time of the year received such magnificent blooms. Almost Winter Quality, and in such quantities, enabling us to fill orders of any size.

Special\$3.00 per 100
Fancy 2.00 per 100
First 1.00 per 100

Carnation Specials

Carnations in lots of 600 or more, good quality, our selection, \$1.50 per 100.

PEONIES

Still have some choice Peonies to offer, mostly Whites and Pinks (the lighter shades), a few crimson too, \$40.00 per thousand (1000).

RIBBONS

Some of our choicest novelties, exclusive patterns, an endless variety to choose from.

Samuel Neil, the well-known Dorchester florist, is to be married on Wednesday, June 22, to William Thornton Decker of New Jersey.

William J. Bean, assistant curator of the Royal Botanic Gardens, Kew, England, arrived here on June 16. He is sent here by the English government to make an inspection of all botanic gardens, arboreta, nurseries and other large establishments in this country. Mr. Bean is well posted in all branches of horticulture and is the author of several books on this subject. We were much pleased to meet our old colleague and there are many other Kewites on this side of the water who will give him a warm welcome. We wish him much pleasure while he is in this country. We haven't met any officials from that world renowned institution since the late George Nicholson visited us several years ago.

Mrs. William Edgar of Waverley, it is pleasing to report, is doing nicely since her return from the Waltham Hospital, where she had been for an operation for appendicitis.

The R. & J. Farquhar Co.'s nursery at Dedham is worthy of a visit at this time. The tract of land, which is 50 acres in extent, is admirably suited for this purpose, it being perfectly level and the soil of excellent quality. Quite a number

of small greenhouses for nursery work are to be built shortly, also a very large work room, and storage and packing sheds. The shipping facilities from this place are excellent, as the railway has a side track at one end of the land. There is a fine collection of herbaceous plants. The evergreens are looking especially well. Large plantations of Abies concolor and Picea pungens are especially fine.

Hugh Cody, who has been with Edgar Bros. of Waverley for some time, has resigned his position.

The friends of George Gordon of Beverly, Mass., extend to him their sincere sympathy in his very sad bereavement. His daughter, who was a graduate of Wellesley College, was drowned last week in Jamaica Pond. Mr. Gordon is a very quiet, unassuming man, liked by every person, and the death of this bright young lady under such sad circumstances touches the tenderest chords in our hearts and we cannot express in words the sorrow we feel.

"Coming events throw their shadows before them." The genial, kind and obliging manager of the market at 1 Park st., who is unmarried, has had several visits from furniture men lately, and the salesmen at the market are surmising that something serious is to take place soon. The young lady who will get Mr. Thurston will be mighty lucky, as there is no brighter and more obliging man connected with the trade than he is.

The Milton Education Society and Home Garden Society had an exhibition of flowers and small fruits, on June 18, at the High School, Milton. There was a fine display of hardy perennials, and outdoor Roses were also well shown. The judges were John K. M. L. Farquhar and William N. Craig of North Easton.

215 E. Duane Street, New York.

Cincinnati

Good old Summer time has finally arrived and, with it, a temperature ranging from 90° in the shade to 104° in the sun.

Flowers of all kind are popping open, shipments—that come in fine order are wide open by the next morning, if not all sold, consequently the best customer we have now is the "ash barrel." Tourists are beginning to leave the city, weddings are nearly finished, consequently we can make our arrangements to go fishing before many days.

Mrs. Anna Garges and daughter, of Central ave., have moved to their Summer home on College Hill; Mrs. Garges has erected a very handsome St. Louis flat; she is one of the progressive lady florists of this city.

Trade in general is very quiet with the exception of funeral work and a few straggling weddings. Our park department has been handicapped by the veto of the park bond issue by the Governor, consequently park work laid out for this Summer will have to go undone, as the department has not the money to push it forward, much to the regret of the better class of citizens of Cincinnati.

The Business Men's Club of Hyde Park is offering prizes to those citizens who keep their lawns in the best condition; a committee has been appointed to view these lawns three times during the season, and to award the prizes in the Fall. The committee is composed of Mr. Salway, superintendent of Spring Grove Cemetery, Benjamin George and E. G. Gillett.

The annual outing of the Cincinnati Florists' Society was discussed at its last meeting, and it was practically decided that the next outing would be held at Woodsdale Island, the place where the best picnics we have ever had been held.

The annual election of officers will take place at the next meeting, which will be held at the residence of Gus. Adrian of Clifton.

Miss White of Lexington was a caller on the 18th; she had been to Lockland to purchase lumber for another greenhouse, and reports business very good in Lexington.

The landscape work of the Fall Festival Association or Exposition, which is to be held here in Cincinnati this Fall, is in charge of B. P. Critchell, former park superintendent. The banks of the canal are to be used for this exposition, and, when completed, the designing will be most artistic and beautiful. This exposition will draw thousands of people to Cincinnati from all points North, South, East and West, and while it will cost the business men a large sum of money, they will reap their reward in the near future.

Music Hall, where the meeting of the trade exhibits were held last year, will also be used for this exposition; they will occupy the entire building where we only used one hall.

Miss Alma Sterling, the young lady who presided at the organ during the S. A. F. meeting in 1909 will be married June 29 to John Findlay.

Myer Heller of Heller Bros., the Rose growers of New Castle, Ind., was a caller on June 20. Chas. Weltz of Wilmington, O., was a caller on the 17th.

E. G. GILLET.

The oldest person in Cincinnati recently died in his 108th year. Gottlieb Graul, who had been for long years florist and chief gardener of the Longworth estate. He was a close friend of Nicholas Longworth of Newark, N. J., grandfather of the present Congressman, who married Miss Alice Roosevelt, who persuaded him to remove to Ohio. Not until five years ago did Graul retire from service.

GRAND RAPIDS, MICH.—N. B. Stover, who has been superintendent of the floral department of the Grand Rapids Greenhouse Co., has resigned his position to engage in business on his own account.

GERANIUMS

The Market

If business continues to the end of the month as it has been doing for the past two weeks, June should go on record as one of the busiest months we have had this year, so far. Since the latter part of May one of the most noticeable features in the market has been the high quality of the flowers brought in by the growers. Of course, Roses might have been better, but there is some excuse for them at this time of the year. June weddings and graduation ceremonies have combined to make the present month a busy one for grower and florist alike, and all indications point to a continuation of those good conditions for some time to come.

Carnations have advanced in price in the last few days; good blooms fetch at the present time, 50c. per doz. wholesale, and in some cases as high as 75c. per doz. has been paid. Roses continue to be very poor in quality and prices remain about the same. Gladioli are still to be had in small quantities, while Marguerites, both yellow and white, are abundant and sell well. Lilies are offered in quantity, although the quality of the blooms is not quite up to that of a week ago. Sweet Peas are still to the fore, and have been very much in demand during the past week. Other flowers noticed in quantity are Gaillardias, Cornflowers, Poppies, Coreopsis, Stocks and outdoor Roses. Orchids of any description are scarce, although some nice blooms of *Cattleya gigas* and *Gaskelliana* are to be seen in the stores. Some beautiful prays of *Phalenopsis amabilis* have been coming in from the San Mateo growers in the past week, and there are few flowers which sell better than this beautiful Orchid. There are abundant supplies of green goods of all descriptions. *Asparagus Sprengeri* and *A. plumosus* is plentiful, as also is Maidenhair. *Smilax* is fairly abundant and brings good prices.

Pacific Coast Hort. Soc.'s Field Day

The monthly field day of the Pacific Coast Horticultural Society was held on June 12, when various estates in the vicinity of Burlingame were visited by a large turnout of members of the Society and their friends. The new Crocker estate at Hillsborough was first visited, and after having partaken of a light lunch, kindly furnished by Mr. Eldridge, he superintendent of the estate, we proceeded to inspect what is undoubtedly one of the most up-to-date, and most beautiful estates in America. The Rhododendrons were first inspected and one could not fail to notice the splendid condition they were in; thousands of the leading varieties have been planted on the slopes at the rear of the residence, under the partial shade of the Oaks, and there are few places in California where they do better. *Kalmia latifolia* was also seen in grand shape; while some fine *Dicksonias*, and other Tree Ferns seemed to be at home.

The famous Italian garden was next inspected, and this alone was worth going a long way to see.

The Tevis estate was next inspected, under the guidance of Mr. Mair, the genial head gardener. The Tevis estate is one of the oldest of the noted Californian estates, and members of the Society were well repaid for their journey. At the conclusion of the outing, ex-President Plath, in a short speech referred to the kindness and courtesy of their hosts. Mr. Mair and Mr. Eldridge, and called upon the members of the Society to give them both a hearty vote of thanks. Mr. Eldridge and Mr. Mair suitably replied. The outing was one of the most successful the Society has ever held, and it is to

Various Notes

Adolph Spreckels, the "Sugar King," is making extensive alterations on his Nappa estate. The MacRorie-McLaren Co. has charge of the landscape part of the work.

Charles McNaughton, a gardener employed at San Rafael, Marin County, met with a serious accident last week, when he was run over by an electric car. He was removed to the county hospital, where he now lies in a critical condition. Robert Kerr has taken charge of the J. H. Spring estate in Marin County.

The Huntington estate at San Gabel is rapidly being put into shape, under the guidance of Wm. Hertrigh, the superintendent. Probably the finest collection of Palms in the world, outside of the famous Kew collection, is to be seen on this estate.

The extensive system of carpet bedding at Holy Cross Cemetery is at present attracting considerable attention, many of the beds are masterpieces of the gardener's art and are well worth seeing.

Daniel MacRorie has returned to town from an extended business trip through southern California.

C. Kooymann has left on a trip to Europe. He expects to be gone for three months.

The E. W. McLellen Co. are bringing in some fine blooms of My Maryland Roses at present. They are busy filling up their houses with young stock at present.

P. Mataria, of the Art Floral Co., reports having had an enormous call for flowers by all descriptions this past week.

Frank Pellicano, of Pellicano & Rossi, claims that they have done more business this month than ever before. Mr. Pellicano says there is no such thing as hard times with them.

The MacRorie-McLaren Co. received a large consignment of *Phalenopsis* and other Philippine Orchids from Manila this week. A large consignment from India also arrived in grand shape. The Garden City Pottery Co. has been shipping some very large orders of late. It reports a largely increasing business.

Wm. McM. Brown.

New Bedford, Mass.

Things are rather quiet here, with the exception of funeral work which has been very good of late. Last Monday all the uptown florists were busy with orders for the funeral of a prominent local man.

Flowers are plentiful just now, with the demand light. Carnations are in good crop, but are getting rather small; they retail at 35 and 50c. per doz. Roses bring \$1 and \$1.50 per doz.; Sweet Peas, \$1 per 100 blooms. Indoor Peas are about played out, and outdoor ones are just beginning to bloom. Snapdragons are getting poor and there is not much sale just now for them. Lilies retail at \$2 per doz. Some good Ten-week Stocks

Imported Scotch Soot

100 lbs. in double lined bags at \$2.50 per bag; 5 bags for \$11.25; 10 bags for \$20.00.

are coming in.

June weddings help out a little, but the usual Summer dullness prevails.

Wm. P. Peirce, J. H. Cleary, Wm. H. Davenport and R. E. Nofftz report funeral work as good.

S. S. Peckham is sending in some nice Ten-week Stocks and Geraniums. There is still a fairly good demand for Geraniums, *Salvia* and other bedding plants, also for Asters, Zinnias, Marigolds, Cosmos and a host of other flowering annuals.

Gardening and bedding out is about all over for the season. This has been a good one for the sale of these plants.

Young Carnation stock is looking fine, the recent heavy rains starting the plants off fine. 'Mum stock is now being planted.

Peter Murray of Fairhaven, Mass., has just received a large importation of Palms, etc., from the other side.

The street fakir is still here selling Roses and Carnations at extremely low prices.

Wm. Livesey has some nice *Smilax* seedlings, which he is shipping to the trade.

Lawns and shrubs are looking nice and green. Outdoor Roses are in full bloom and make a fine appearance.

At the funeral of a local man, J. H. Cleary had an automobile to deliver orders, making two or three trips.

Dahlias are about all planted out. HORTICO.

Hailstorms

On Saturday, June 18, hailstorms were quite prevalent in the immediate vicinity of New York City, and were also reported in Caldwell, Hackensack and Verona, N. J.; Cold Spring (Steenhals Co.), N. Y.; Berwick, Collegeville, Parkside, Sunbury and Greenville, Pa.; and Bettsville, Ohio. J. G. E.

English Traveling Greenhouses

The principal use for traveling greenhouses, of which many are used in Great Britain, is for the purpose of working two crops—say, Tomatoes and Chrysanthemums. The latter are planted early in the Spring in the open ground between the walls. Tomatoes, or a similar crop, are planted early in the houses, and this latter crop is cleared in time to allow the houses to be run over to Chrysanthemums in September or early in October. —T. A. W., Eng.

A New Pipe Hook For Columns

Two of the three pieces that make up the new clamp pipe hook.

Just to show how it grips around the columns.

THE hooks and half of the clamp are cast in the one piece—You can see, at a glance what very easy hooks they are to put up, and that once up there would be no slipping. On the other hand, if you wanted to change the grade of your pipes, it's as easy as rolling off a log to loosen up a little on the clamp bolts and slide the hooks up or down the columns. So much for the column hooks, and nothing said yet about those for wooden posts, iron posts or with spools, but we have them all, and along with them some very ingenious pipe hangers for taking care of expansion in steam systems. We make every one of them in our own foundry so that we can know exactly the quality of hooks you are buying. Send for circular and prices.

The Week's Work

BY FRITZ BAHR

The Chrysanthemums

Care of the Newly Planted Stock.

One can set forth in very few words the rules which must be followed in order to be successful with the "Mums," and yet there are so many, many details attached to their culture, the neglect of which, if not attended to, is bound to show by the time the flowers are ready to be cut. There are times when a beginner, with little experience, raises good flowers, and perhaps laughs at the troubles and trials some old time neighbor of his may have with his plants, one who, perchance, has grown Chrysanthemums for many years. There are but few of us who haven't had a chance to meet such men; but the time is bound to come, if they stay in business long enough, when problems will arise which need the head of the experienced grower to solve them. New houses, which include new benches, fresh sweet soil, and most likely, with the beginner, well grown healthy stock to start with, afford every advantage possible over the older man. Fair stock with but little care can be grown under such conditions. I claim that the greatest advantage one gets out of the latest and best constructed house is in the fact that it is new. In such a case, with a right beginning and proper attention as to the requirements of the plants, the very best results can be expected. While the Chrysanthemums are considered easy plants to grow, there are quite a number of diseases and insects which are troublesome. However, most of these can be avoided, and it depends to a large extent on the grower as to the amount of the damage done. If the stock is not over watered, overfed and kept clean, you are not likely to be troubled much with disease. The benched stock doesn't require any feed-

ing at this time—there is all the nourishment the plants require in the soil. As regards watering, on which much depends, don't allow the soil to get dry before using the hose; on the other hand, examine the bench thoroughly before applying water; keep the soil moderately moist at all times from now on—the little plants are sending out roots and the growth of the plants should go on uninterrupted, which is not possible when the soil is too dry or too wet, either condition affecting the growth. Cultivate well; nothing does more good. Never allow a weed to appear. Keep the surface stirred up. Give the soil a chance to breathe, nothing will do more towards keeping it sweet. Don't wait until the tops of the plants are chock full of aphids before you ask Billy if there is any more tobacco dust left on the place.

A Novelty Worthy of Mention

Begonia gracilis Prima Donna (Senary)

What can there be more interesting to the gardener than experimenting with novelties? No matter how disappointing the results may be with most of them, the minute an advertisement of something new is discovered there is simply no way to resist the temptation of ordering. When I called attention to the above mentioned new seedling Begonia last January, I only did so because the description given in the advertisement I read sounded good. Anything which might prove an addition to our list of bedding plants is of great interest to many retail growers, and that class constitutes the majority of florists in the country. Strange! but whenever we give a novelty a trial, if it is one to be grown from seed, it matters little how careful we may be in sowing the seed or what attention we pay to the seed pan afterward, there are only a few seeds which will germinate and grow, and Begonia Prima Donna was no exception to the rule. We sowed out two dollars worth of seed and today have about 200 plants—cheap enough, surely, because it is a good thing, but at this rate only 10 per cent of the seed produced plants. This Begonia, grown from seed sown last January is now in 4-in. pots, bushy plants, about 7 in. in height, and while it started somewhat later to come into bloom than Begonia Vernon, Erford and luminosa, the plants are now covered with flowers larger in size than any of the gracilis of semper florens types. The individual flowers measure 1½, and over in diameter and are of a beautiful light pink color. The plants have been exposed to the full sunlight up to this date, and while we cannot say anything as to their qualifications as bedders, there is no doubt but what they will make good. I filled several wire hanging baskets with them for a customer about 4 weeks ago, using English Ivy for vines; these plants are a mass of bloom today and their brown tinted foliage only adds to the color of the flowers. If this Begonia keeps on blooming as it has, it should certainly prove not alone a good bedder but a valuable pot plant, on ac-

count of the size and color of the flowers. There are yet many small growers who have neither the facilities nor the room to do Lorraines properly, and anything that will be near in color and size of bloom of the Lorraines will be welcomed; not to take its place, by any means, but it will help out considerably. There is room for new Begonias and I, for one, am so well impressed with this one that I predict it will become a great favorite.

Nymphaeas

Not Too Late to Plant Some of the Tender Varieties.

In order to be successful with either the ordinary or the more tender Nymphaeas, you must have a sunny spot to grow them in. There isn't a retail grower who hasn't use for these beautiful flowers, and more and more of them are seen and made use of during the Summer months; and I look forward to the time when every florist who has the room will provide facilities for growing his Water Lilies. Among the tender day blooming varieties, Nymphæa gracilis is of the greatest value to the average florist, as it is a white sort. It is no use planting either this one or any of the other tender varieties out before the middle, or even toward the end of June—at least not through the Middle West—for the temperature of the water should at all times be kept over 70°. Wherever a pond is made use of, plant in boxes of about 2 ft. in diameter by 15 in. deep, using a stiff loam, mixed liberally with cow manure. Place the boxes so as to bring the plants about one foot below the level of the water, allowing about 7 ft. or so between the plants. There is no secret about planting. If dormant rhizomes are made use of, cover the surface surrounding them with about 3 in. of fine gravel. The greatest danger with the culture of Nymphæas lies in planting them too deep where the water is cold. Another splendid variety among the day bloomers of the tender Nymphæas I might mention that grand blue sort, N. pulcherrima. Among the tender night blooming Nymphæas of special interest we have that beautiful pink, N. Deaniana, and that grand white one, N. dentata superba, which gives us magnificent flowers and the nearest to a red color we get from N. rubra; however, this sort while a splendid one to have in a collection is not of as great value to the average florist as the others are. Here, as with many other things we grow, a great variety of colors is not of much use, when we have only room for a few plants. White and light pink are always our colors; they form our standbys, and when growing Nymphæas plant sufficient of either of them, so as to give enough flowers of one color to fill an order of one or two dozen at a time.

Carnation Soil

Loss no Time in Getting Your Supply Ready

We are including in the week's work the handling of soil for the Carnation benches. This soil comes from a pasture, which was plowed over deeply last Fall and cross-plowed again this Spring and now forms ideal material for both Roses and Carnations. The soil is a rather stiff loam, and the sod which was on it last Fall is by this time sufficiently rotted to fall to pieces when handling it. Soil of this kind, with little manure, will grow almost a crop. It may be a little more expensive to handle, but there is more life in it than any other soil one can prepare. Even at this date it isn't by any means too late, if short on soil, to plow u

deeply, say 6 in. to 7 in. of sod soil, and pile it up properly, in order to get it ready for binding by the end of July. By piling up properly I mean that I would lay the sod face down in layers, with as much loose soil between the layers as possible; in this way, and especially if the soil was in a moist condition when piled up, the sod will be found rotted to a great extent inside of three weeks, at least to such an extent as to make it possible to chop it up, so as to make it fit material for the benches. But don't lose any time in getting at this work at once. Don't mind the extra expense which you might be put to in making use of such material for Carnations. It may take longer to get into shape for benching, and for the planting itself, but fibrous soil of that kind is so far ahead of any that isn't fibrous, especially for Carnations, that if it can be had at all I should never use any other. We know it isn't the soil alone which will tell the tale; the good grower will get fair results quite often with soil which isn't extra good, but it is certain that good soil to begin with will make the rest of the work easier. If it is possible to get good soil, get it, and try to have it in shape when ready for housing the Carnations—only a few more days and this work will begin again.

Perennials

Good Time Now to Do a Little Advertising

Look over the list of your customers who are likely to be in the market for perennials next Fall, and send them a bunch of Delphiniums, Foxglove or Poppy Flowers; you couldn't possibly get a cheaper or more effective advertisement. Among the most widely known perennials and biennials, the Peonies, Delphiniums, Oriental Poppies, Aquilegias, Border Pinks, Foxglove, Sweet Williams, Canterbury Bells, Gaillardias, Iris and Pyrethrums are at their best now. Any of them adapt themselves as cut flowers. Cut them when only partly open and place them in water and in a cool place for several hours. An Oriental Poppy when full open and cut will go to pieces in a few minutes in a hot room; but cut it when just opening, and properly treated the flowers can be kept for several days. If you are among those who have a good supply of flowers of hardy stock to draw from now, you will appreciate what it means in dollars and cents. Most of our customers will not take Roses or Carnations at any price now, if outdoor flowers can be had—you can't blame them; but you can blame the man in the business, who has space and facilities for not having them on hand. I remember when it was almost impossible to sell Peony flowers, they were considered common. People would take a bunch of Tuberoses in preference every time; and today with the thousands upon thousands of Peonies grown everywhere, two dollars for a dozen well grown flowers of Festiva maxima isn't anything unusual. By the way, don't invest in too many of the different sorts of Peonies advertised; they are all beautiful, everyone of them, even if certain varieties do go under half a dozen different well sounding names. Festiva maxima is one of the grandest and best, for the retail grower especially. It is to him what Killarney is among the Roses today, or what S. A. Nutt has been among Geraniums since the '70's. Grow perennials; there is more money in them than in a lot of the bedding stock we handle.

HUNTSVILLE, ALA.—John Scott, who was with the Joy Floral Co. Nashville, for sometime, has purchased the John T. Fisher business here, and will erect several new greenhouses.

The Burnham GRATES

Grates are ridged on top—double trussed underneath, so that they smash the clinckers and not the grate. They dump to the front, which makes ash removal easy.

THINK IT OVER!!!

When it comes to exhibiting your stock or sending it to the wholesaler, or placing it in your store window, then is when it means something if you have built the right kind of a greenhouse. Don't try to grow first-class stock with a house that should have been torn down years ago—it's a waste of money and time. Let us furnish you new material for some new houses and then go ahead and do business in the right kind of a way. By all means be successful—the first step is to get our catalogs:

OUR CURVED EAVE HOUSE IS THE HOUSE

There are three reasons why—any one of them just as plain as the nose on your face: First, their attractiveness impresses you, for that gutterless eave with its graceful curve certainly does appeal to one.

Second, you like the idea of its increased lightness and know at a glance that it must be a great growing house.

Third, you like the way it is constructed and believe that at last here is a Curved Eave house that is practical in every way and without a question as to its durability.

Hooking these facts up to a concern in whom you can place full confidence, gives you a guarantee of securing a house without the usual disappointments.

Perhaps the best thing for you to do, is write us a line, stating the size of house you have been thinking of and so on; then we can send you some advance pages from our new catalog, or a photo or two that will help you in deciding things. This is a good time to build.
